The roll call was concluded.

Mr. McLAURIN (after having voted in the negative). I desire to withdraw my vote.

The result was announced—yeas 53, nays 9, as follows:

YEAS—53.

Aldrich	Clark, Wyo.	Gary	Platt
Ankeny	Cullom	Guggenheim	Scott
Bacon	Curtis	Hale	Simmons
Bailey	Daniel	Hemenway	Smoot
Beveridge	Depew	Heyburn	Stephenson
Borah	Dick	Hopkins	Stewart
Brandegee	Dillingham	Johnston	Sutherland
Briggs	Dixon	Kean	Teller
Bulkeley	du Pont	Long	Warner
Burkett	Elkins	Nelson	Warren
Burnham	Flint	Nixon	Wetmore
Burrows	Foraker	Owen	
Carter	Fulton	Paynter	
Clapp	Gallinger	Piles	

NAYS—9.

Brown	Gore	Milton	Stone
Culberson	La Follette	Newlands	Taylor
Frazier			

NOT VOTING—30.

Allison	Foster	McCumber	Rayner
Bankhead	Frye	McEnery	Richardson
Bourne	Gamble	McLaurin	Smith, Md.
Clarke, Ark.	Hansbrough	Martin	Smith, Mich.
Clay	Kittredge	Money	Taliaferro
Crane	Knox	Overman	Tillman
Davis	Lodge	Penrose	
Dolliver	McCreary	Perkins	

So Mr. LA FOLLETTE's appeal from the decision of the Chair was laid on the table.

Mr. FORAKER. I renew my motion to lay on the table the motion to reconsider, and I call for the yeas and nays.

The VICE-PRESIDENT. The Senator from Ohio moves to lay upon the table the motion to reconsider the vote by which the conference report was agreed to, and upon that motion he demands the yeas and nays.

The yeas and nays were ordered, and the Secretary proceeded to call the roll.

Mr. CLAY (when his name was called). I again announce my pair with the senior Senator from Massachusetts [Mr. LODGE].

Mr. CULLOM (when his name was called). I announce my general pair with the junior Senator from Virginia [Mr. MARTIN] and the transfer of my pair to the Senator from South Dakota [Mr. KITTREDGE]. I vote "yea."

Mr. FRAZIER (when his name was called). I again announce my pair with the junior Senator from South Dakota [Mr. KITTREDGE] and the transfer of my pair to the junior Senator from Virginia [Mr. MARTIN], and I will vote. I vote "nay."

Mr. OVERMAN (when his name was called). I again announce my pair with the senior Senator from California [Mr. PERKINS].

Mr. SCOTT (when his name was called). I again announce my pair with the senior Senator from Florida [Mr. TALIAFERRO] and the transfer of my pair to the junior Senator from Pennsylvania [Mr. KNOX]. I vote "yea."

Mr. TELLER (when his name was called). I again announce my pair with the senior Senator from Iowa [Mr. ALLISON]. I know that he would vote "yea" if present. Under the arrangement I made with him I will vote. I vote "yea."

The roll call was concluded.

Mr. BACON. I make the same announcement upon this vote that I made upon the former one in behalf of the Senator from Florida [Mr. TALIAFERRO]—that he is paired, as announced by the Senator from West Virginia [Mr. SCOTT], and that if he were present he would vote "nay."

Mr. LA FOLLETTE. I wish to inquire whether I am recorded on this vote?

The VICE-PRESIDENT. The Senator is not recorded.

Mr. LA FOLLETTE. I should like to have the question stated, so that I may vote understandingly. My attention was diverted for a few moments.

The VICE-PRESIDENT. The Senator from Ohio [Mr. FORAKER] moved to lay upon the table the motion of the Senator from Rhode Island [Mr. ALDRICH] to reconsider the vote by which the conference report was agreed to.

Mr. LA FOLLETTE. On that vote, if my name is called, I will vote "nay."

The result was announced—yeas 45, nays 17, as follows:

YEAS—45.

Aldrich	Clark, Wyo.	Gallinger	Scott
Ankeny	Cullom	Guggenheim	Smoot
Beveridge	Curtis	Hale	Stephenson
Borah	Depew	Hemenway	Stewart
Brandegee	Dick	Heyburn	Sutherland
Briggs	Dillingham	Hopkins	Teller
Bulkeley	Dixon	Kean	Warner
Burkett	du Pont	Long	Warren
Burnham	Elkins	Nelson	Wetmore
Burrows	Flint	Nixon	
Carter	Foraker	Piles	
Clapp	Fulton	Platt	

NAYS—17.

Bacon	Daniel	La Follette	Stone
Bailey	Frazier	McLaurin	Taylor
Bankhead	Gary	Milton	
Brown	Gore	Paynter	
Culberson	Johnston	Simmons	

NOT VOTING—30.

Allison	Frye	McEnery	Rayner
Bourne	Gamble	Martin	Richardson
Clarke, Ark.	Hansbrough	Money	Smith, Md.
Clay	Kittredge	Newlands	Smith, Mich.
Crane	Knox	Owen	Tallaferro
Davis	Lodge	Overman	Tillman
Dolliver	McCreary	Penrose	
Foster	McCumber	Perkins	

So the motion to reconsider was laid on the table.

On motion of Mr. KEAN, it was

Ordered, That the Sergeant-at-Arms be discharged from the further execution of the order of the Senate requesting the presence of absentees.

Mr. HEYBURN. Mr. President, I sought to address myself to the attention of the Senate before the vote was taken. The haste with which the roll call was commenced prevented me from doing so. I do not desire that the vote which I cast against the adoption of this report shall go out unexplained, and when I say "unexplained," I do not mean apologized for.

I have been an active worker in the Republican party for more than thirty-six years, and during that time I have shared the burden of its battles wherever I have been. I do not propose to be held up here or elsewhere as one who ever swerved for one moment in his allegiance to that party. Had I regarded this as a party question, under the control of the organization of the party represented by its caucus, I would have supported the action of the party. But I do not regard myself bound to the party caucus except that I am a participant in the counsels and deliberations of the party.

I had and I have my objections to this bill, which are based not upon party grounds, founded not in opposition to the will of the party, but founded upon my judgment, as to the effect which this legislation, of a purely economic nature, will have upon that part of the country which I in part represent and which, in my judgment, it will have upon every portion of the country.

I objected to measures which were contained in the bill and which were formulated for us for consideration in the Aldrich bill, because I did not believe then and I do not believe now that there is any necessity for financial legislation at this time. That which was termed a panic was a brief nightmare in the business world. It has passed away with the awakening of the dawn of prosperity which we now enjoy. In that part of the United States lying to the west, there is not even a remembrance of the panic except as a tradition. There is no remnant of it or of its effects. I do not believe in taking medicine in anticipation that you may have some disease in the future of which you have no premonitions now.

I have before the country for more than thirty-five years boasted that the wisdom of the Republican party was sufficient to provide and it had provided a safe, sound, and reliable financial policy upon which the business concerns of this country could rest. I shall continue to boast of it, because I do not believe that any provision in this bill is necessary at this hour, and I shall treat it as merely surplusage growing out of the combined fears and the enthusiasm of some of our statesmen. I know that I speak within the sentiments of a majority of the Republicans of the United States in the vote which I cast to-day and in what I am saying.

Mr. President, I am not here to attack the Republican party. All the Senators in this body combined and all the Senators who ever sat in this body are not strong enough to drag it down; their States are not strong enough or potent enough to destroy it; and I say that with no disrespect to any member of this body. But that old party is bigger and greater than all the men who represent it in the legislative halls. In our section of country we have no necessity or occasion whatever for financial legislation. The provisions of this bill do not apply to more than one-third, almost one-half, of the area of the United States. This legislation, by its terms and within its terms, is excluded in its operation from more than one-third of the United States—from nearly one-third of it in one solid block, without a break. The provision for the creation of a national currency association will have no application to seventeen States in the Union, because such associations are limited to States having \$5,000,000 of unimpaired capital and surplus. There are seven States in the Union, and unfortunately they all lie, or nearly all of them lie, in one great area upon the Pacific coast.

Mr. President, I am not willing to give my voice or my vote or my assent to legislation for one-third of the country as against two-thirds of the country, or for two-thirds of the

country as against one-third of the country. I want the laws to be applicable, not only in their principles, but in their terms, in every respect to every part of the country. That we should become a vassal to the financial world of the East is intolerable, and will be intolerable to the people of the great West.

I do not believe in sectional legislation at all, and if there were no other obnoxious provisions in this bill than those, I would have voted against it. But I opposed the Aldrich bill when it was before the Senate for consideration, and I voted against it then, as now, because, in my judgment, there was no necessity for any legislation, and now more emphatically because there has been eliminated from the Aldrich bill every provision relative to the reserves in national banks.

I could elaborate these reasons, but I shall not do so. I have stated enough reasons, and good enough reasons, to account for the vote which I have cast. The casting of that vote does not cast me outside of breastworks of the Republican party. There is no man in this Chamber who has been in the Republican party longer than I have been, for I am older than the Republican party, and I was born into the very atmosphere and patriotism upon which that party was founded and has ever since rested. I have never swerved for an hour in my fealty, my loyalty, and my support to that party, and I intend that it shall not go out to the country that I stood here voting with the Democratic party. I did not cast my vote to-day because of my love for the Democratic party. I respect its members individually; but I know its principles and disapprove of them. With these words my vote can go to the country.

Mr. BACON. Mr. President, some things have occurred while this measure has been under consideration which, possibly, it might be well should not be entirely passed by and acquiesced in as with a recognition of propriety. The opportunity in the heat and ardor of debate was not presented to properly advert to them.

Mr. LA FOLLETTE. Mr. President, I ask that order be maintained in the Senate Chamber, so that we may hear what the Senator from Georgia has to say.

The VICE-PRESIDENT. The Senate will be in order. Audible conversation will cease in the Chamber. The Chair asks Senators to kindly resume their seats.

Mr. BACON. I was endeavoring to state that several things had occurred during the progress of the debate upon this question which I am unwilling should pass by as having met with general recognition, through acquiescence, by the Senate, because of the fact that in the Senate a precedent is a matter of gravity and importance, and occasions may arise hereafter where these questions may be of very much more vital importance than they have been while the pending question has been under discussion.

Of course, Mr. President, I recognize the fact that, in the heat of controversy, Senators, as well as others, will do and say things which will be conducive to the particular end which they then have in view, which, from a more conservative standpoint and under other circumstances, they would neither say nor approve.

One precedent was made last night to which I wish to enter my dissent. That precedent was made by a vote of the Senate. It was to the effect that after a roll call had been had upon the suggestion of the want of a quorum, and after the roll call had disclosed the presence of a quorum, it was out of order, when nothing else had transpired but debate, to again suggest the absence of a quorum and again having a roll call for the purpose of determining whether or not a quorum was present. In other words, the Senate determined, by a vote, that a continuance of debate after a roll call did not amount to the intervention of other business, and that no business having intervened—debate not being recognized as business—regardless of the time which had elapsed, or regardless of the fact that there were, perhaps, only ten Senators present, there could be no suggestion of the absence of a quorum, and that the Senate must proceed with the ascertained fact that there had been a quorum, and without power to inquire whether or not there was then a quorum.

Mr. President, I did not vote upon that question when it was submitted to the Senate for this simple reason: The Senator from Rhode Island [Mr. ALDRICH] had read what he alleged was a precedent in that matter, and had read from the CONGRESSIONAL RECORD a ruling which had been made by the Chair on March 3, 1897, which the Senator from Rhode Island contended established that proposition. It so happened, although the fact was not known, I think, to the Senator from Rhode Island at the time that he cited the precedent, that I was the Senator temporarily occupying the chair on the 3d of March, 1897, who made the ruling which was cited by the Senator from Rhode Island last night. I was unwilling to cast a vote last night which might appear to be in antagonism to that ruling, as there would then be no opportunity for me to show that the vote thus

cast would not have been in contravention of that ruling made by myself when in the chair.

I recollect the incident well out of which the ruling grew. It occurred during a night session, and the then senior Senator from Pennsylvania, Mr. Quay, was the Senator who demanded the roll call upon the suggestion of the lack of a quorum. He had previously demanded several such roll calls. The point had been made between the two previous successive roll calls that no business had intervened and that therefore the second roll call was not in order. The Chair ruled that business had intervened, from the fact that in the interval the bill then under consideration had been reported from the Committee of the Whole to the Senate. Immediately after that roll call, which was then authorized by the decision of the Chair, the Senator from Pennsylvania, without waiting for any debate or any other action on the part of the Senate, immediately again suggested the absence of a quorum. That matter was taken up at once by the then senior Senator from Massachusetts, Mr. Hoar, and by the then Senator from New York, Mr. Hill, and the question was finally reduced to this point—whether or not business had intervened.

The Chair ruled that business had not intervened, and that therefore the second roll call was not in order. There had been no debate after the roll call, and there was no suggestion that debate was not the intervention of business. There was no question raised that the debate following a roll call did not constitute business which had intervened after the roll call. There was no question whether debate did or did not constitute business.

The question last night was whether debate constituted business. There confessedly had been debate last night after the roll call, and the question decided by the Senate last night was that the occurrence of debate did not constitute business.

Mr. President, I deemed it due to myself to state why I did not vote on the question, because I do not avoid any vote that comes along; but I wished to call the attention of the Senate to the fact that the precedent cited last night by the Senator from Rhode Island was not a controlling precedent upon the question raised by him, because in one case there was no question whether debate constituted business, and in the case last night the sole question was whether debate constituted business.

I desired, Mr. President, to say this much, because I was unwilling that what occurred last night should pass as an unchallenged precedent. I regard it as a revolutionary precedent, and, if so considered by the Senate, I am willing for it to pass as one adopted under the heat of contest for the purpose of effecting a particular end; but it will be a most grievous mistake, in my opinion, if that rule should be adopted as the rule or precedent to hereafter govern the action of the Senate. In fact, frequently here, in cases of protracted contests, for days and days there is nothing practically but debate. It is true we have the morning hour, and some measures may be considered; but so far as the main body of the work of the Senate during the whole day is concerned, frequently there is nothing but debate. To say that it having once been disclosed that there is a quorum there can be thereafter no challenge of the question as to whether or not there is a quorum, it seems to me, must be a very grave mistake.

Mr. FORAKER. Mr. President, will the Senator allow me to ask him a question?

The VICE-PRESIDENT. Does the Senator from Georgia yield to the Senator from Ohio?

Mr. BACON. With pleasure.

Mr. FORAKER. The question that occurs to me as proper to ask is, If debate merely be the transaction of business, how much debate would there have to be?

Mr. BACON. Mr. President, that question, like a great many other questions, brings back this proposition, that in the Senate, as in every other body, but more particularly in the Senate, matters have to be adjusted upon a conservative and well-ordered determination on the part of Senators to observe the rules of the Senate, not simply in letter, but in spirit. I will say, with the permission of the Senator from Ohio, that, in my judgment, there should be some rule adopted upon that subject, and, so far as I am concerned, I will be very glad to see at the next session this matter taken up and put in such shape that there may be a proper regard for the procedure of the Senate and, at the same time, not an undue restriction of the rights of Senators and of the Senate in regard to this question of a roll call upon the suggestion of the lack of a quorum.

Mr. FORAKER. If the Senator will allow me to interrupt him again, I will do so only to say that I heartily agree with him that this matter should be taken under consideration by the Committee on Rules, and there should be some rule adopted, because if mere debate be a transaction of business no one can sit in judgment as to how much debate there shall be to amount

to a transaction of business, and merely addressing the Chair and uttering one sentence with respect to any subject would be debate, I suppose, and then immediately, within less than a minute, because there has been another transaction of business, another roll call might be granted.

Mr. BACON. I quite agree with the Senator, Mr. President. It only illustrates the idea which I had in my mind, and that is that the liberal rules of the Senate are, of course, liable to abuse; but wherever we find a disposition to abuse the rules of the Senate to an extent which will impair the usefulness of the Senate, of course rules will be made to meet such emergencies.

Now, Mr. President, I am going to ask that, with the permission of the Senate, the entire colloquy—a part of which was read last night by the Senator from Rhode Island, in which the ruling was made to which he alluded—may be inserted in the Record, in order that it may be in consecutive order. I will indicate to the Reporter the point at which it begins and where it ends.

The VICE-PRESIDENT. Without objection, permission is granted.

Mr. CULBERSON. Mr. President, I will state to the Senator from Georgia that the entire colloquy was inserted in the Record last night, at my suggestion, by the Senator from Wisconsin [Mr. LA FOLLETTE].

Mr. BACON. Does the Senator know how far back it began? Because I desire it to be in consecutive order with several other motions which had been made by the then Senator from Pennsylvania [Mr. QUAY], prior to the ruling in that particular case. It was with a desire to have the entire colloquy in the Record that I made the suggestion. Where does it begin?

Mr. LA FOLLETTE. I will show the Senator.

Mr. BACON. Now, Mr. President, I am informed by the Senator from Wisconsin that it began on page 2736 and went over to a point on page 2737. I would simply ask, then, that instead of inserting all of it again—I understand it has not yet been published—at the point in the Record where the Senator from Wisconsin made the insertion, it may be corrected to the extent of beginning at the top of page 2735, and, without repeating what he has already inserted, that it may be prefixed to what he has inserted.

Mr. President, if I may have just a word, I want to say this: Of course the debate on this bill is over. The circumstances were such that those of us who desired to be heard or to have a word or two to say about it did not conveniently have the opportunity. I simply desire to say, as a thought called forth by the remarks of the Senator from Idaho [Mr. HEYBURN], that the point in which I differ from him is this:

The Senator from Idaho, if I understood him correctly, said that if he had regarded this bill as a party measure, he would have supported it. I desire to say that I regard this bill as so pernicious a bill that if every Democrat on this side of the Chamber had supported it—which is an unsupportable case—I should have voted against it. I favor emergency-currency legislation as the business interests of the country agree in demanding it. But I do not favor this particular measure. I favor other measures that I think safer and better.

Mr. HEYBURN. Mr. President—

The VICE-PRESIDENT. Does the Senator from Georgia yield to the Senator from Idaho?

Mr. BACON. Yes.

Mr. HEYBURN. The Senator did not hear me clearly. I said that if I regarded a measure as a party measure—I did not point my suggestion to this bill, because I did not care to extend my remarks to that extent, as that would have made it necessary to reconsider this bill, and I was speaking of my general principle of action—

Mr. BACON. I understood, Mr. President, the Senator to be stating why he did not vote for this particular bill, and he went on to say that he did not regard it as a party measure.

Mr. HEYBURN. I did say that.

Mr. BACON. And immediately, in the same connection, as I understood him, he said that a measure which was a party measure would have his support, leaving the indisputable conclusion, to my mind, that if this were a party measure it would have his support.

Mr. HEYBURN. No, Mr. President, I meant that if a party measure comes from a party caucus, I would make my contest in the party caucus, and I would undertake to see, so far as I could, that no measure I did not approve of came out of that party caucus. That is what I meant.

Mr. BACON. Well, Mr. President, I have no dispute or contention with the Senator as to what his relations are to his party. I only used what I understood him to say as a predicate for what I announced as my position.

Mr. ALDRICH. Will the Senator allow me to ask him a question there?

The VICE-PRESIDENT. Does the Senator from Georgia yield to the Senator from Rhode Island?

Mr. BACON. Yes.

Mr. ALDRICH. I suppose the Senator from Georgia, when he uses the term "pernicious" as applied to the currency bill, means from a political standpoint?

Mr. BACON. No; from a business standpoint; and I will state, Mr. President, for the gratification, I may say, of the Senator from Rhode Island, that the pernicious feature of it, or the one which called for that probably extreme adjective on my part, is not the part of the bill for which he was directly responsible; but I do think that to authorize the issue of money, leaving out the fundamental question as to whether or not the banks may be allowed to issue money at all, or whether it should not be confined to the action of the Government—leaving that out and assuming for the purpose of the argument that it would be proper under any circumstances for banks to be delegated the power to issue currency notes, for which the Government should be ultimately responsible—leaving all that out, and assuming that it would be proper, to my mind, it is an extremely obnoxious proposition that currency for which the Government of the United States is to be responsible should be issued upon every class of securities or commercial paper that the Secretary of the Treasury might approve.

I say that is pernicious to the last degree. There is no limitation upon the provision. I will not go over it, however, Mr. President. It has been most eloquently and graphically described to-day by the Senator from Oklahoma [Mr. GORE].

There is but one limitation upon the question as to whether or not the security currency notes will be a sound security or a safe security, and that is the approval of the Secretary of the Treasury. Now, Mr. President, we know the fact—it is a historical fact—that the Secretaries of the Treasury are, as a general rule, transferred from the portfolio of the Treasury to some highly lucrative position in New York, given to them by the favor of Wall street.

Wall street is the locality in which this particular provision of the bill is to be taken advantage of; and here we have the remarkable proposition that with so wide and unlimited a range of securities and commercial paper, subject only to the approval of the Secretary of the Treasury, the man who is to approve the security is the man who, as a general rule, is to look for favors thereafter from those who offer the security and who ask his approval of it. I say, Mr. President, it is a monstrous proposition; it is a pernicious provision, and no sligher word will reach it.

Mr. President, I want to give an illustration. I did not intend to bring this in now. I did intend to do it during the debate; but as it has passed, I merely want to make a little statement here and point to what extent the country can rely upon the discretion of the Secretary of the Treasury when matters are left to his discretion. I want to speak of a most remarkable matter in which the Secretary of the Treasury has exercised his discretion.

I should like to have every Senator present hear what I am about to narrate, not that it is new—because it has been told before—but I want to call it to the attention of all who are here as an illustration of the way in which Secretaries of the Treasury sometimes exercise discretion.

Some eight or ten years ago the Government of the United States determined to sell the custom-house in New York and to build a new custom-house. It has been building a new custom-house, and I believe it is now about completed. It did sell the old custom-house to the National City Bank. I might make some comment upon who some of the officers of the National City Bank are, and some comment on what relation some of them formerly bore to the United States Treasury Department; but I will not say anything about that, as I do not wish to be unduly personal.

The purchase price stated or agreed upon was \$3,265,000. That purchase and sale was effected by an agreement made on the part of the Secretary of the Treasury that no money should be paid by the bank, but that there should be entered upon the books of the National City Bank a credit to the Government for \$3,215,000, and that there should be an indebtedness on the part of the bank to the Government of the United States of \$50,000 in addition to that, making a total price of \$3,265,000; in other words, upon the face, it was a cash transaction of \$3,215,000, with a credit transaction of \$50,000; but the cash was represented simply by a credit entered upon the books of the bank in favor of the Government of the United States. Immediately thereupon, and I doubt not as a part of the same transaction, it was agreed that the Government should become a tenant of the National City Bank, although no deed had passed, no title had passed, no money had passed, and the Government of the United States contracted to pay to, and has

paid to, the National City Bank a rental of \$125,000 or \$130,000 a year for some eight years. In the meantime, the \$50,000 being an indebtedness and no title passing, the title remaining in the Government of the United States, the bank had no taxes to pay in New York by reason of that fact.

Here, Mr. President, is a transaction, sanctioned by a Secretary of the Treasury of the United States; and I will say that it not only had the sanction of the Secretary of the Treasury who made this agreement, but that under more than one Administration it has continued and has had the approval and consent of every Secretary of the Treasury from that day to the present.

Mr. McLAURIN. Mr. President—

The VICE-PRESIDENT. Does the Senator from Georgia yield to the Senator from Mississippi?

Mr. BACON. Let me get through with my figures, and I will answer the Senator's question with a great deal of pleasure.

Now, how does that account stand? The old custom-house was sold to the National City Bank, and an indebtedness of \$3,215,000 simply created to the Government of the United States on the books of the bank.

A conservative estimate is that the interest on the \$3,215,000 for eight years or more would amount, in the aggregate, to between one and two million dollars.

But in addition to that they have had a rental from the United States of a hundred and twenty-five or a hundred and thirty thousand dollars for seven or eight years. They have had exemption from taxation for that length of time, amounting to at least a half a million dollars. So without the expenditure of a dollar the National City Bank of New York has received certainly more than a million dollars out of this transaction with the Government of the United States. It is a malodorous transaction. That is not the same thing we have before us, but it illustrates what is the influence of Wall street upon the discretion of the Secretary of the Treasury.

Mr. HALE. Mr. President—

The VICE-PRESIDENT. Does the Senator from Georgia yield to the Senator from Maine?

Mr. BACON. Certainly.

Mr. HALE. I am interested in the Senator's statement, because the Committee on Appropriations had up this matter and went thoroughly into it some years ago. I am bound to say that it disclosed a transaction which did not, I suppose, involve any corruption or wrongdoing, but of which nobody ought to be very proud.

Mr. BACON. And of which everybody connected with it ought to be ashamed. I will add to the Senator's statement, without hesitation—everybody ought to be ashamed of it.

The fact is, as I say, that it is not a transaction of a day or a year. It is not the transaction of one man or one official, but it is the transaction of eight or ten years' continuance and a transaction with a succession of officials.

The Senator from Texas [Mr. BAILEY] has called my attention to a matter which I should state, and that is that it is improper to charge both rent and interest against the gains of the bank. I agree to that. That was a mistake. If interest is chargeable, rent ought not to be chargeable. I withdraw that. But at the very lowest calculation there has been something from a million and a half to two million dollars improperly made out of this transaction with the Treasury under the form of law, in the exercise of discretion by several successive Secretaries of the Treasury.

Therefore when you come to talk about the Secretary of the Treasury being a safeguard to see that no inferior securities are accepted as a basis for the issuance of currency, and that his discretion when exercised will guard the Government, when the unlimited and uncontrolled power is given, I put against it this action to show what can be done under the discretion of the Secretary of the Treasury. I repeat, Mr. President, the startling monstrosity of the provision is found in the fact that the very officer who is to pass upon the question of the sufficiency of the securities is the officer who, judging the future by the past, is to look for rewards and emoluments to the very parties interested in having him approve the securities.

PETITIONS.

Mr. PILES presented a memorial of the Chamber of Commerce of Spokane, Wash., remonstrating against the passage of the so-called "currency bill," which was ordered to lie on the table.

Mr. ANKENY presented petitions of sundry citizens ofavenport, Wash., praying that an appropriation be made for the opening of the upper Columbia River in that State from Wenatchee to Kettle Falls, which were referred to the Committee on Commerce.

He also presented a petition of sundry citizens of Seattle, Wash., praying for the adoption of certain amendments to the so-called "Sherman antitrust law" relating to labor organizations, which was referred to the Committee on the Judiciary.

Mr. TELLER presented petitions of the Chamber of Commerce and sundry citizens and business firms of Denver, Colo., praying for the enactment of legislation to provide for an increased coinage of silver and for the remonetization of silver upon a fair and reasonable ratio to gold, which were referred to the Committee on Finance.

BILLS INTRODUCED.

Mr. DICK introduced a bill (S. 7270) to establish a Board of Visitors to the United States Naval Academy, which was read twice by its title and referred to the Committee on Naval Affairs.

Mr. FRAZIER (for Mr. TAYLOR) introduced a bill (S. 7271) for the relief of the estate of Jane Newell, deceased, which was read twice by its title and, with the accompanying paper, referred to the Committee on Claims.

Mr. HEYBURN introduced a bill (S. 7272) for the relief of Frank B. Crosthwaite, which was read twice by its title and referred to the Committee on Claims.

He also introduced a bill (S. 7273) to incorporate the New Washington Center Market Company, which was read twice by its title and, with the accompanying paper, referred to the Committee on the District of Columbia.

HULL CITY PLACER MINING CLAIM.

Mr. TELLER submitted the following resolution, which was considered by unanimous consent and agreed to:

Whereas on the 5th day of February, 1898, patent was issued to W. S. Montgomery et al. for the Hull City Placer Mining Claim, situate in the Pueblo, Colo., land district; and

Whereas it is alleged said patent was secured through bribery, perjury and subornation of perjury, and other wrongful acts on the part of those securing said patent; and

Whereas the attention of the Interior Department and Department of Justice has been called to the aforesaid charges and proof of said wrongful acts furnished said Departments and no action has been taken thereon: Therefore be it

Resolved, That the Secretary of the Interior Department and the Attorney-General of the United States be, and they are hereby, directed to transmit to the Senate of the United States all correspondence of every kind and description between any officer, agent, or employee of the United States Government and any other person or persons whomsoever pertaining or appertaining to said matter.

BEET-SUGAR INDUSTRY.

Mr. DICK. I present certain addresses delivered by Mr. Truman G. Palmer, secretary of the American Beet Sugar Association, on the progress of the industry, its economic value to the nation, its special importance to arid America, and the legislation which threatens its destruction. I move that they be printed as a document.

The motion was agreed to.

AFFAIRS IN THE PHILIPPINES.

Mr. DICK. I present certain papers, being notes and observations upon the conditions in the Philippine Islands. I move that they be printed as a document.

The motion was agreed to.

COMPENSATION OF CERTAIN TREASURY OFFICIALS.

The VICE-PRESIDENT laid before the Senate the action of the House of Representatives disagreeing to the amendments of the Senate to the bill (H. R. 21003) fixing the compensation of certain officials in the customs service, and for other purposes, and requesting a conference with the Senate on the disagreeing votes of the two Houses thereon.

Mr. ALDRICH. I move that the Senate insist upon its amendments, agree to the conference asked for by the House, and that the conferees be appointed by the Chair.

The motion was agreed to; and the Vice-President appointed Mr. ALDRICH, Mr. HALE, and Mr. TELLER as the conferees on the part of the Senate.

BUREAU OF IMMIGRATION AND NATURALIZATION.

The VICE-PRESIDENT laid before the Senate the action of the House of Representatives agreeing to the amendments of the Senate numbered 1, 2, 3, 4, and 6 and disagreeing to amendment numbered 5 to the bill (H. R. 21052) to amend sections 11 and 13 of an act entitled "An act to establish a Bureau of Immigration and Naturalization, and to provide for a uniform rule for the naturalization of aliens throughout the United States."

Mr. DILLINGHAM. I move that the Senate insist upon its amendment numbered 5 and request a conference with the House on the disagreeing votes of the two Houses thereon, and that the conferees be appointed by the Chair.

The motion was agreed to; and the Vice-President appointed Mr. DILLINGHAM, Mr. PENROSE, and Mr. McLAURIN as the conferees on the part of the Senate.

FORT PECK INDIAN RESERVATION.

The VICE-PRESIDENT laid before the Senate the amendments of the House of Representatives to the bill (S. 208) for the survey and allotment of lands now embraced within the limits of the Fort Peck Indian Reservation, in the State of Montana, and the sale and disposal of all the surplus lands after allotment, which were to strike out all of section 2; to strike out all of section 3; to strike out all of section 4; to strike out all of section 5.

On page 7, after line 4, to insert:

SEC. 2. That as soon as all the lands embraced within the said Fort Peck Indian Reservation shall have been surveyed the Commissioner of Indian Affairs shall cause allotments of the same to be made under the provisions of the allotment laws of the United States to all Indians belonging and having tribal rights on said reservation; and there shall be allotted to each such Indian 320 acres of grazing land, and there shall also be made an additional allotment of not less than 2½ acres nor more than 20 acres of timber land to heads of families and single adult members of the tribe over 18 years of age: *Provided*, That should it be determined as feasible, after examination, to irrigate any of said lands, the irrigable land shall be allotted in equal proportions to such only of the members of said tribe as shall be living at the day of the beginning of the work of allotment on said reservation by the special allotting agent, and such allotment of irrigable land shall be in addition to the allotments of grazing and timber lands aforesaid, but no member shall receive more than 40 acres of such irrigable land; and to pay the costs of examination provided for herein and for the construction of irrigation systems to irrigate lands which may be found susceptible of irrigation, there is hereby appropriated \$200,000, to be immediately available, the said sum and any and all additional sums hereafter appropriated to pay the cost of such examination and irrigation systems to be reimbursed from proceeds of sales of lands within the said reservation: *Provided*, however, That any land irrigable by any system constructed under the provisions of this act may be disposed of subject to the following conditions: The entryman or owner shall, in addition to the payments required by section 8 of this act, be required to pay for a water right the proportionate cost of the construction of said system in not more than fifteen annual installments, as fixed by the Secretary of the Interior, with a view to the return of all moneys expended thereon, the same to be paid at the local land office, and the register and receiver shall be allowed the usual commissions on all moneys paid.

The entryman of lands to be irrigated by said system shall, in addition to compliance with the homestead laws, reclaim at least one-half of the total irrigable area of his entry for agricultural purposes, and before receiving patent for the lands covered by his entry shall pay the charges apportioned against such tract, nor shall any such lands be subject to mineral entry or location. No right to the use of water shall be disposed of for a tract exceeding 160 acres to any one person, and the Secretary of the Interior may limit the areas to be entered at not less than 40 nor more than 160 acres each.

A failure to make any two payments when due shall render the entry and water-right application subject to cancellation, with the forfeiture of all rights under this act, as well as of any moneys paid thereon. The funds arising hereunder shall be paid into the Treasury of the United States and be added to the proceeds derived from the sale of the lands. No right to the use of water for lands in private ownership shall be sold to any landowner unless he be an actual bona fide resident on such land or occupant thereof residing in the neighborhood of such land, and no such right shall permanently attach until all payments therefor are made.

All applicants for water rights under the systems constructed in pursuance of this act shall be required to pay such annual charges for operation and maintenance as shall be fixed by the Secretary of the Interior, and the failure to pay such charges when due shall render the water-right application and the entry subject to cancellation, with the forfeiture of all rights under this act as well as of any moneys already paid thereon.

The Secretary of the Interior is hereby authorized to fix the time for the beginning of such payments and to provide such rules and regulations in regard thereto as he may deem proper. Upon the cancellation of any entry or water-right application, as herein provided, such lands or water rights may be disposed of under the terms of this act and at such price and on such conditions as the Secretary of the Interior may determine, but not less nor more than the cost as originally fixed.

In every case in which a forfeiture is enforced and the land and rights of an entryman are made the subject of resale then, after the payment of the balance due from the entryman and the cost and charges, if any, attendant on the forfeiture and resale, any surplus remaining out of the proceeds of such sale shall be refunded to said entryman or his heirs.

The land irrigable under the systems herein provided, which has been allotted to Indians in severalty, shall be deemed to have a right to so much water as may be required to irrigate such land without cost to the Indians for the construction of such irrigation systems. The purchaser of any Indian allotment purchased prior to the expiration of the trust period thereon shall be exempt from any and all charge for construction of the irrigation system incurred up to the time of such purchase. All lands allotted to Indians shall bear their pro rata share of the cost of operation and maintenance of the irrigation system under which they lie; and the Secretary of the Interior may withhold from any Indian a sufficient amount of his pro rata share of any moneys subject to distribution to pay any charge assessed against land held in trust for him for operation and maintenance of the irrigation system.

When the payments required by this act have been made for the major part of the unallotted lands irrigable under any system, and subject to charges for construction thereof, the management and operation of such irrigation works shall pass to the owners of the lands irrigated thereby, to be maintained at their expense, under such form of organization and under such rules and regulations as may be acceptable to the Secretary of the Interior.

All appropriations of the waters of the reservation shall be made under the provisions of the laws of the State of Montana.

SEC. 3. That the Secretary of the Interior may reserve such lands as he may deem necessary for agency, school, and religious purposes, to remain reserved as long as needed, and as long as agency, school, or religious institutions are maintained thereon for the benefit of said Indians: *Provided*, however, That the Secretary of the Interior is hereby authorized and directed to issue a patent in fee simple to the duly authorized missionary board, or other proper authority of any religious organization heretofore engaged in mission or school work on said reservation, for such lands thereon (not included in any town

site herein provided for) as have been heretofore set apart to such organization for mission or school purposes: And provided further, That the Secretary of the Interior is hereby authorized and directed to reserve 2.07 acres of land in the town of Poplar, on said reservation, now occupied for public school purposes, and issue patent in fee for the same to the school trustees of the school district in which said land is situated.

The Secretary of the Interior is hereby authorized and directed, when the said lands are surveyed, to issue to the Great Northern Railway Company a patent or patents conveying for railroad purposes such lands at such point or points as in the judgment of the said Secretary are necessary for the use of said railway company in the construction and maintenance of water reservoirs, dam sites, and for right of way for water pipe lines for use by said railway company in operating its line of railroad over and across said reservation; the said lands so to be conveyed not to exceed 40 acres at any one point and not to exceed one tract for each 10 miles of the main line of said railway as now constructed within said reservation, and said lands shall be selected in such manner as not to unnecessarily injure or interfere with the selection and location of town sites hereinafter provided for; the said patent or patents to be delivered to said company upon payment by said company, within thirty days after notification of the issuance of patent, of the reasonable value of said lands, not less than \$2.50 per acre, and also upon payment by said company to said Secretary of any and all damages sustained by individual members of said tribe by reason of the appropriation of said lands for the purposes aforesaid; all moneys so paid for the value of said lands to be deposited in the Treasury of the United States to the credit of said Indians, and the moneys received by said Secretary as damages sustained by individual members of said tribe shall be by him paid to the individuals sustaining said damages.

SEC. 4. That upon the completion of said allotments the President of the United States shall appoint a commission consisting of three persons to inspect, classify, appraise, and value all of said lands that shall not have been allotted in severalty to said Indians or reserved by the Secretary of the Interior, said commission to be constituted as follows: One of said commissioners shall be a person holding tribal relations with said Indians, one a representative of the Indian Bureau, and one a resident citizen of the State of Montana.

SEC. 5. That within thirty days after their appointment said commissioners shall meet at some point within the Fort Peck Reservation and organize by election of one of their number as chairman. Said commission is hereby empowered to select, subject to the approval of the Secretary of the Interior, such clerks and assistants as may be necessary in the performance of their duties herein specified, the compensation of each such clerk and assistant to be fixed by said Secretary. In no case shall any such clerk or assistant receive a salary exceeding \$6 per day. In addition to the compensation of said clerks and assistants and in addition to the salaries hereinafter provided for the said commissioners, they shall each receive their actual necessary expenses incurred during such time only as they shall be engaged in the performance of their respective duties on said reservation.

Mr. DIXON. I move that the Senate concur in the amendments of the House of Representatives.

The motion was agreed to.

INJURIES TO GOVERNMENT EMPLOYEES.

Mr. DEPEW. I ask unanimous consent to call up the bill (H. R. 21844) granting to certain employees of the United States the right to receive from it compensation for injuries sustained in the course of their employment.

The VICE-PRESIDENT. Is there objection to the request of the Senator from New York?

Mr. BAILEY. I object.

Mr. DEPEW. Then I move that the bill be taken up.

The VICE-PRESIDENT. The Senator from New York moves that the Senate proceed to the consideration of the bill.

Mr. HALE. I suppose the Senator, after getting up the bill, will not object to yielding a short time to Senators.

Mr. DEPEW. Certainly not.

Mr. BAILEY. He is not going to get it up unless he gets a quorum and keeps it here. I suggest the absence of a quorum.

The VICE-PRESIDENT. The Senator from Texas suggests the absence of a quorum. The Secretary will call the roll.

Mr. BAILEY. If I can have the indulgence of the Senate, I understand the Senator from Mississippi has a motion pending to recommit the bill to the committee.

Mr. McLAURIN. No; I have not. I have an amendment pending to the bill.

The VICE-PRESIDENT. The Secretary will call the roll.

The Secretary called the roll, and the following Senators answered to their names:

Ankeny	Culberson	Gallinger	Paynter
Bacon	Cullom	Gary	Piles
Bailey	Curtis	Guggenheim	Scott
Bankhead	Daniel	Hale	Simmons
Beveridge	Depew	Heyburn	Stephenson
Borah	Dick	Hopkins	Stewart
Brandegee	Dillingham	Kean	Stone
Briggs	Dixon	Long	Sutherland
Bulkeley	du Pont	McLaurin	Teller
Burkett	Elkins	Milton	Warner
Burnham	Flint	Nelson	Warren
Carter	Foraker	Newlands	
Clark, Wyo.	Frazier	Nixon	
Clay	Fulton	Overman	

The VICE-PRESIDENT. Fifty-three Senators have answered to their names. A quorum is present. The question is on the motion of the Senator from New York [Mr. DEPEW] to proceed to the consideration of House bill 21844.

Mr. HALE. Will the Senator from New York yield to me to make a statement?

Mr. DEPEW. I yield to the Senator from Maine.

BUSINESS OF THE SESSION.

Mr. HALE. Mr. President, I desire to make a statement to the Senate as to the present condition of the public business.

Several days ago I stated that the only remaining conference report on the large appropriation bills is that on the deficiency bill. I stated then that I was awaiting the action of the House to pass the public-buildings bill, in order to bring in the deficiency appropriation bill, which has upon it the appropriations for the coming year contained in the provisions of the public-buildings bill. The matter has continued in that condition for the last three days. I am now informed that the House at the present moment is voting upon accepting the report upon the public-buildings bill, which, if accepted, makes that the law and is the foundation of the appropriations to be made in the deficiency bill.

As soon as that report reaches the Senate, I shall present the last conference report on an appropriation bill—the report on the deficiency appropriation bill—which carries, as I have said, the appropriations for public buildings for the year to come. It has all been made up by the Treasury Department in the Supervising Architect's office. That will be the last appropriation bill in any form to bring before the Senate. It will go at once to the House, and it is believed it will take no time there.

The feeling in the House is naturally very strong that we should adjourn this evening, and I may say the Speaker believes that only a few hours will be needed to wind up all the business after the report on the deficiency appropriation bill here.

There will be less delay than usual in enrolling the appropriation bills for the reason that in the time that has elapsed in the last three or four days, while the Senate has been busy with the measure before it, all of the great appropriation bills have been already substantially enrolled. So there will be no waiting on that account.

I present this consideration to the Senate because if we are to adjourn this evening, sometime about 9 o'clock, of course Senators should stay to make a quorum. If we do not do that we will go over until Monday and adjourn at that time.

I know Senators are very weary, and that last night was very prostrating in its effect. While I will make no decided prediction, which I ventured upon the other day rather rashly, I believe from what the authorities in the House, including the Speaker, have told me we can clean up all the business by about 9 o'clock this evening and reach a final adjournment.

Mr. BAILEY. That is, if we vote down the motion of the Senator from New York.

Mr. HALE. Of course the Senator understands that if that motion is voted up and is before the Senate, it will give way to the conference report on the appropriation bill.

Mr. BAILEY. Provided the conferees see fit to present the report while that bill is pending.

Mr. HALE. I have just stated that as soon as the word comes that the public-buildings bill has passed the House, I shall submit the report on the deficiency appropriation bill, no matter what is before the Senate.

Mr. BAILEY. I very much doubt whether the public-buildings bill can pass the House, they having so little interest in that measure.

Mr. HALE. Of course it is subject to the doubt which is thrown about the feeling in the House with reference to that bill; but I am told that the House is becoming each day more and more reconciled to the public-buildings bill, and it is likely to pass and by a substantial majority.

Mr. BACON. I should like to make one suggestion to the Senator from Maine.

Mr. HALE. I am informed that word has come from the House that the conference report on the public-buildings bill has been agreed to there. I will ask a messenger to bring me the conference report on the deficiency appropriation bill.

INJURIES TO GOVERNMENT EMPLOYEES.

Mr. DEPEW. Mr. President, I ask that the question be put on my motion.

The VICE-PRESIDENT. The question is on the motion of the Senator from New York to proceed to the consideration of House bill 21844.

Mr. BAILEY. On that I ask for the yeas and nays.

The yeas and nays were ordered.

Mr. BORAH. May I inquire what is the question we are voting on?

The VICE-PRESIDENT. The question is on proceeding to the consideration of the bill (H. R. 21844) granting to certain employees of the United States the right to receive from it compensation for injuries sustained in the course of their employment.

The Secretary will call the roll.

The Secretary proceeded to call the roll.

Mr. CLAY (when his name was called). I am paired with the senior Senator from Massachusetts [Mr. LODGE].

Mr. CULLOM (when his name was called). I am paired with the junior Senator from Virginia [Mr. MARTIN].

Mr. DILLINGHAM (when his name was called). Owing to my general pair with the senior Senator from South Carolina [Mr. TILLMAN] I withhold my vote. If he were present, I would vote "yea."

Mr. OVERMAN (when his name was called). I again announce my pair with the senior Senator from California [Mr. PERKINS].

Mr. TELLER (when his name was called). I announce my pair with the senior Senator from Iowa [Mr. ALLISON].

Mr. WARREN (when his name was called). I announce the same arrangement as to the pair that I have already announced, and it may stand for the day. I vote "yea."

The roll call was concluded.

Mr. DILLINGHAM. By an arrangement my general pair with the senior Senator from South Carolina [Mr. TILLMAN] has been transferred to the Senator from South Dakota [Mr. GAMBLE] and I vote "yea." This announcement will stand for the day. Therefore it releases the Senator from Nevada [Mr. NEWLANDS] from his pair.

Mr. CULLOM. I have a general pair with the junior Senator from Virginia [Mr. MARTIN]. I transfer that pair to the Senator from South Dakota [Mr. KITTREDGE] and vote "yea."

Mr. TELLER. I have the right to vote to make a quorum, and I will vote as I believe the Senator from Iowa would vote if he were here. I vote "yea."

The result was announced—yeas 48, nays 1, as follows:

YEAS—48.

Aldrich	Clark, Wyo.	Gallinger	Nixon
Ankeny	Cullom	Gary	Piles
Bacon	Curtis	Guggenheim	Scott
Beveridge	Depew	Hale	Smoot
Borah	Dick	Hemenway	Stephenson
Brandegee	Dillingham	Heyburn	Stewart
Briggs	Dixon	Hopkins	Stone
Bulkeley	du Pont	Kean	Sutherland
Burkett	Elkins	La Follette	Teller
Burnham	Flint	Long	Warner
Burns	Foraker	Nelson	Warren
Carter	Fulton	Newlands	Wetmore

NAYS—1.

Bailey

NOT VOTING—43.

Allison	Dolliver	McCreary	Perkins
Bankhead	Poster	McCumber	Platt
Bourne	Frazier	McEnery	Rayner
Brown	Frye	McLaurin	Richardson
Clapp	Gamble	Martin	Simmons
Clarke, Ark.	Gore	Milton	Smith, Md.
Clay	Hansbrough	Money	Smith, Mich.
Crane	Johnston	Owen	Tallafiero
Culberson	Kittredge	Overman	Taylor
Daniel	Knox	Paynter	Tillman
Davis	Lodge	Penrose	

So the motion was agreed to, and the Senate, as in Committee of the Whole, resumed the consideration of the bill (H. R. 21844) granting to certain employees of the United States the right to receive from it compensation for injuries sustained in the course of their employment.

The VICE-PRESIDENT. The pending question is on the amendment proposed by the Senator from Mississippi [Mr. McLAURIN].

Mr. BAILEY. Mr. President, I never was more certain of anything in my life than I am that this is a bad bill. It is vicious in principle in that it sends men for the determination of what ought to be a legal right to an officer of the Government who need not be, and generally is not, a lawyer.

But in view of the very decisive vote of the Senate—something like forty-seven in favor of taking the bill up to my single vote against taking it up—I am going to let the Senate make this mistake without any further protest on my part.

The VICE-PRESIDENT. Is the Senate ready for the question on agreeing to the amendment of the Senator from Mississippi?

Mr. McLAURIN. I should like to have it read.

The VICE-PRESIDENT. The amendment will be read.

The SECRETARY. On page 2 of the bill, line 10, where the words "Secretary of Commerce and Labor" were restored in the bill, it is proposed to strike out those words and insert:

Judges of the circuit court of the United States for the district in which the injury shall have been inflicted, from whose decision an appeal may be taken by the injured person to the circuit court of appeals, to which appeals may be taken in said district.

Mr. BORAH. This is the amendment which was offered by the Senator from Mississippi, and which refers a certain part of this matter to a court for determination?

Mr. McLAURIN. This is the amendment which proposes to

allow the judge of the district in which the injury is inflicted to pass upon the question of negligence and that alone, giving the man an opportunity when he is injured to be heard right at his home, without coming to Washington to be heard, or instead of sending the case to Washington and having to combat a report, which probably may be an unfavorable report, by his superior in authority. I think it is a good amendment.

Mr. BORAH. I am not going at this late hour, and in view of the strain under which we have been laboring for some time, to discuss the amendment. But it has occurred to me that it sends a man to two different places in order to receive his compensation, and it is a considerable burden upon a man who has received an injury first to send him to a court and then send him to the Secretary of Commerce and Labor in order to have the question finally determined as to whether he shall be paid. I think in view of that fact the amendment ought not to be adopted.

Mr. McLAURIN. The Senator from Idaho entirely misunderstands the amendment. If it were adopted, then the judge of the district would pass upon the question of negligence; and if the judge determined that there was no negligence on the part of the employee who was injured, he is entitled to his pay without a reference of the case for the decision of the Secretary of Commerce and Labor.

If the judge should decide against him, under this amendment he would have an opportunity to appeal to the circuit court of appeals of that district. There is no provision in the amendment for the Government to appeal, but for the injured employee to appeal. So it is not in the arbitrary power of any one man to cut him out.

By the provisions of this bill, if the officer, whoever he may be, just superior to the injured employee should send to the Secretary of Commerce and Labor an unfavorable report, the injured employee would have to come with that report before the Secretary of Commerce and Labor, and he would have no way of combating it, except at the distance of a thousand or two thousand or three thousand miles—certainly a long distance in the case of an employee in the State of Idaho, the Senator's State. But if the amendment is adopted the injured employee would have an opportunity to combat that report, if it were unfavorable to him, right at his home in almost every instance.

Mr. BORAH. I understand the position of the Senator.

The VICE-PRESIDENT. The question is on agreeing to the amendment proposed by the Senator from Mississippi.

The amendment was rejected.

Mr. McLAURIN. I have one more amendment that I propose to offer, and I ask the attention of the Senate to the amendment. I hope that the Senator from New York who is in charge of the bill will not combat this amendment. I move to strike out section 6. I ask the attention of the Senate to the reading of section 6.

Mr. DEPEW. Mr. President, I accept the amendment.

Mr. McLAURIN. That is all right.

The VICE-PRESIDENT. The amendment will be stated.

The SECRETARY. On page 5, strike out section 6, in the following words:

SEC. 6. That to seek to obtain by fraudulent means or to accept benefits under this act to which the person is not entitled shall be deemed a misdemeanor on his part and punishable by a fine of not more than \$1,000 or by imprisonment for not more than two years, or both.

The amendment was agreed to.

Mr. GORE. I send to the desk an amendment which I desire to offer to the bill.

The VICE-PRESIDENT. The amendment submitted by the Senator from Oklahoma will be stated.

The SECRETARY. It is proposed to add at the end of section 1 the following additional proviso:

Provided further, That whenever such injury shall result from the negligence, incompetency, or misconduct of some other employee of the Government such other employee shall be discharged from the public service as soon as the fact of his negligence, incompetency, or misconduct has been determined, and he shall not be reemployed by the Government for the period of two years thereafter.

Mr. DEPEW. I move to lay the amendment on the table.

The motion to lay on the table was agreed to.

The bill was reported to the Senate as amended, and the amendments were concurred in.

The amendments were ordered to be engrossed and the bill to be read a third time.

The bill was read the third time, and passed.

DEFICIENCY APPROPRIATION BILL.

Mr. HALE submitted the following report:

CONFERENCE REPORT.

The committee of conference on the disagreeing votes of the two Houses on the amendments of the Senate to the bill (H. R. 21946) making appropriations to supply deficiencies in the ap-

appropriations for the fiscal year ending June 30, 1908, and for prior years, and for other purposes, having met, after full and free conference have agreed to recommend and do recommend to their respective Houses as follows:

That the Senate recede from its amendments numbered 5, 30, 32, 33, 34, and 38.

That the House recede from its disagreement to the amendments of the Senate numbered 1, 2, 3, 4, 6, 7, 8, 10, 11, 12, 13, 14, 15, 16, 17, 18, 19, 22, 23, 24, 25, 26, 27, 28, 31, 35, 36, 37, 39, 40, 41, 42, 43, 44, 45, 46, 47, 48, 49, 50, 51, 52, 53, 54, 55, 56, 57, 58, 59, 60, 61, 62, 63, 64, 65, 66, 67, 68, 69, 70, 71, 72, 73, 74, 75, 76, 77, 78, 79, 80, 81, and 82, and agree to the same.

That the House recede from its disagreement to the amendment of the Senate numbered 9, and agree to the same with an amendment as follows: In lieu of the matter inserted by said amendment insert the following:

"Toward amounts requisite for public buildings, authorized under the provisions of an act entitled 'An act to increase the limit of cost of certain public buildings, to authorize the enlargement, extension, remodeling, or improvement of certain public buildings, to authorize the erection and completion of public buildings, to authorize the purchase of sites for public buildings, and for other purposes,' passed at the first session of the Sixtieth Congress, namely:

"Under the provisions and limitations of section 1 of said act, as follows:

"Rome, Ga., post-office and court-house, fifteen thousand dollars.

"Burlington, Iowa, post-office, five thousand dollars.

"Council Bluffs, Iowa, post-office and court-house, six thousand two hundred and fifty dollars, for the purchase of additional land.

"Duluth, Minn., post-office, etc., ninety-five thousand dollars.

"St. Joseph, Mo., post-office and court-house, twelve thousand dollars.

"Johnstown, Pa., post-office, twenty thousand dollars.

"Murfreesboro, Tenn., post-office, ten thousand dollars.

"Tyler, Tex., post-office, fifteen thousand dollars.

"Salt Lake City, Utah, post-office, etc., sixty thousand dollars.

"Fairmont, W. Va., post-office, ten thousand dollars.

"Wheeling, W. Va., post-office and court-house, twenty thousand dollars.

"Platteville, Wis., post-office, fifteen thousand dollars.

"Under the provisions and limitations of section 2 of said act, as follows:

"Montgomery, Ala., post-office and court-house, fifteen thousand dollars.

"Hot Springs, Ark., post-office, twenty thousand dollars.

"Sacramento, Cal., post-office and court-house, thirty thousand dollars.

"San Jose, Cal., post-office, two thousand dollars.

"New London, Conn., post-office, twenty thousand dollars.

"Wilmington, Del., post-office and court-house, forty thousand dollars.

"Athens, Ga., post-office and court-house, twenty thousand dollars.

"Augusta, Ga., post-office and court-house, two thousand dollars.

"Boise, Idaho, post-office and other governmental buildings, forty thousand dollars.

"Elgin, Ill., post-office, twenty thousand dollars.

"Peoria, Ill., post-office and court-house, ten thousand dollars.

"Quincy, Ill., post-office and court-house, twenty-five thousand dollars.

"Rock Island, Ill., post-office, twenty-five thousand dollars.

"Davenport, Iowa, post-office and court-house, twenty-five thousand dollars.

"Fort Dodge, Iowa, post-office, twenty-five thousand dollars.

"Emporia, Kans., post-office, fifteen thousand dollars.

"Kansas City, Kans., post-office, forty thousand dollars.

"Lexington, Ky., post-office, twenty-five thousand dollars.

"Frankfort, Ky., post-office and court-house, twenty thousand dollars.

"Paducah, Ky., post-office and court-house, fifteen thousand dollars.

"Richmond, Ky., post-office and court-house, ten thousand dollars.

"Bath, Me., post-office and custom-house, twenty thousand dollars.

"Belfast, Me., post-office and custom-house, twenty thousand dollars.

"Ellsworth, Me., post-office and custom-house, twenty thousand dollars.

"Jackson, Mich., post-office, fifteen thousand dollars.

"Meridian, Miss., post-office and court-house, twenty thousand dollars.

"Beatrice, Nebr., post-office, twenty thousand dollars.

"Fremont, Nebr., post-office, fifteen thousand dollars.

"Manchester, N. H., post-office and court-house, fifteen thousand dollars.

"Hoboken, N. J., post-office, twenty thousand dollars.

"New Brunswick, N. J., post-office, twenty thousand dollars.

"Trenton, N. J., post-office and court-house, ten thousand dollars.

"Goldsboro, N. C., post-office, ten thousand dollars.

"Newbern, N. C., post-office and court-house, fifteen thousand dollars.

"Raleigh, N. C., post-office and court-house, ten thousand dollars.

"Lima, Ohio, post-office, twenty thousand dollars.

"Chester, Pa., post-office, twenty thousand dollars.

"Reading, Pa., post-office, twenty-five thousand dollars.

"Pawtucket, R. I., post-office, twenty thousand dollars.

"Sioux Falls, S. Dak., post-office and court-house, twenty thousand dollars.

"Bristol, Tenn., post-office and court-house, twenty thousand dollars.

"Under the provisions and limitations of section 29 of said act, as follows:

"Washington, D. C., court-house, fifty thousand dollars.

"Under the provisions and limitations of section 30 of said act, as follows:

"Washington, D. C., site for buildings for Departments of State, Justice, and Commerce and Labor, two million five hundred thousand dollars, or so much thereof as may be necessary.

"Under the provisions and limitations of section 31 of said act, as follows:

"Denver, Colo., post-office, court-house, etc., fifty thousand dollars.

"Under the provisions and limitations of section 32 of said act, as follows:

"Point Pleasant, W. Va., monument, ten thousand dollars."

And the Senate agree to the same.

That the House recede from its disagreement to the amendment of the Senate numbered 20, and agree to the same with an amendment, as follows: In lieu of the matter inserted by said amendment insert the following:

"For payment of twenty-four approved claims, exclusive of claim numbered two hundred and thirty-one thousand eight hundred and sixty-one, provided for in the preceding paragraph, for damages to and loss of private property belonging to citizens of the United States and the Philippine Islands, estimated for on page four hundred and six, House Document numbered twelve, Sixtieth Congress, first session, four thousand five hundred and fifty-two dollars and thirty-five cents."

And the Senate agree to the same.

That the House recede from its disagreement to the amendment of the Senate numbered 21, and agree to the same with an amendment as follows: In lieu of the matter inserted by said amendment insert the following:

"Claims for property taken from Confederate officers and soldiers after surrender: The time for filing claims under the provisions of the act of February twenty-seventh, nineteen hundred and two, and amendments thereto, for horses, saddles, and bridles taken from Confederate soldiers in violation of terms of surrender, and for the payment thereof is extended for twelve months from the passage of this act; and all claims not presented within this time shall be forever barred."

And the Senate agree to the same.

That the House recede from its disagreement to the amendment of the Senate numbered 29, and agree to the same with an amendment as follows: After the last line of said amendment insert the following as a separate paragraph:

"In computing the pay of retired officers of the Navy, the ten per cent additional pay allowed for sea duty or for shore duty beyond the continental limits of the United States shall not be included, and the pay of commodore shall be the same in all respects as that of rear-admiral, second nine."

And the Senate agree to the same.

EUGENE HALE,

W. B. ALLISON,

H. M. TELLER,

Managers on the part of the Senate.

JAMES A. TAWNEY,

EDWARD B. VREELAND,

S. BRUNDIDGE, JR.,

Managers on the part of the House.

The report was agreed to.

MESSAGE FROM THE HOUSE.

A message from the House of Representatives, by Mr. W. J. BROWNING, its Chief Clerk, announced that the House had passed the following bills:

S. 5983. An act authorizing certain life-saving apparatus to be placed at the Farallone Islands, off the coast of California; and

S. 6358. An act to amend an act entitled "An act to incorporate The Masonic Mutual Relief Association of the District of Columbia."

The message also announced that the House had agreed to the concurrent resolution of the Senate No. 50, providing for the printing of 10,000 copies of the preliminary report of the Inland Waterways Commission, with illustrations.

The message further announced that the House had passed the following bills and joint resolution, in which it requested the concurrence of the Senate:

H. R. 20658. An act authorizing the issue of equipment of arms, ammunition, and such accouterment as accompany same, for target practice, to the Memorial University, Mason City, Iowa;

H. R. 22212. An act granting an increase of pension to Byron C. Mitchell, Calvin P. Lynn, and Harry S. Lee, formerly Albert Lee Alleman; and

H. J. Res. 197. Joint resolution authorizing the employment of clerical services in the Department of Justice.

ENROLLED BILLS SIGNED.

The message also announced that the Speaker of the House had signed the following enrolled bills, and they were thereupon signed by the Vice-President:

H. R. 21871. An act to amend the national banking laws; and
H. R. 21897. An act to increase the limit of cost of certain public buildings, to authorize the enlargement, extension, remodeling, or improvement of certain public buildings, to authorize the erection and completion of public buildings, to authorize the purchase of sites for public buildings, and for other purposes.

HOUSE BILL REFERRED.

H. R. 20658. An act authorizing the issue of equipment of arms, ammunition, and such accouterment as accompany same, for target practice, to the Memorial University, Mason City, Iowa, was read twice by its title and referred to the Committee on Military Affairs.

DEFENSE IN INDIAN DEPREDAATION CLAIMS.

The joint resolution (H. J. Res. 197) authorizing the employment of clerical services in the Department of Justice was read twice by its title.

Mr. CULLOM. I ask unanimous consent that the joint resolution may be put on its passage. It is simply to correct a mistake that was made in the Record.

There being no objection, the Senate, as in Committee of the Whole, proceeded to consider the joint resolution. It authorizes the Attorney-General to continue the employment of clerical services during the fiscal year 1909, under the appropriation for "Defense in Indian Depredation Claims," and to pay therefor out of said appropriation, not to exceed the sum of \$6,000.

The joint resolution was reported to the Senate without amendment, ordered to a third reading, read the third time, and passed.

BYRON C. MITCHELL AND OTHERS.

The bill (H. R. 22212) granting an increase of pension to Byron C. Mitchell, Calvin P. Lynn, and Harry S. Lee, formerly Albert Lee Alleman, was read twice by its title.

Mr. CURTIS. I ask unanimous consent for the present consideration of the bill. A similar bill passed the Senate.

There being no objection, the Senate, as in Committee of the Whole, proceeded to consider the bill. It proposes to place on the pension roll the name of Byron C. Mitchell, late of Company F, One hundred and thirty-seventh Regiment Ohio Volunteer Infantry and to pay him a pension of \$24 per month in lieu of that he is now receiving; the name of Calvin P. Lynn, late of Company G, One hundred and fortieth Regiment Illinois Volunteer Infantry, and to pay him a pension of \$30 per month in lieu of that he is now receiving; and the name of Harry S. Lee, formerly Albert Lee Alleman, late of Company F, One hundred and twenty-fourth Regiment Ohio Volunteer Infantry, and to pay him a pension of \$30 per month in lieu of that he is now receiving.

The bill was reported to the Senate without amendment, ordered to a third reading, read the third time, and passed.

ORDER FOR RECESS.

Mr. HALE (at 6 o'clock and 10 minutes p. m.). I ask unanimous consent that at half past 6 the Senate take a recess until half past 8. If this order is made, I will then move that the Senate proceed to the consideration of executive business.

The VICE-PRESIDENT. The Senator from Maine asks unanimous consent that the Senate take a recess from half past 6 o'clock until half past 8 o'clock this evening. Is there objection?

Mr. NEWLANDS. I ask the Senator from Maine whether he will not withhold his request for a moment that I may move—

Mr. HALE. I have declined to yield to several Senators. Senators desire to have time to get their dinner and get back here by half past 8.

The VICE-PRESIDENT. Is there objection to the request of the Senator from Maine? The Chair hears none, and it is so ordered.

EXECUTIVE SESSION.

Mr. HALE. I move that the Senate proceed to the consideration of executive business.

The motion was agreed to, and the Senate proceeded to the consideration of executive business. After five minutes spent in executive session the doors were reopened.

RECESS.

Mr. BACON (at 6 o'clock and 16 minutes p. m.). Mr. President, I move that the Senate now take a recess until half past 8 o'clock.

The motion was agreed to; and the Senate took a recess until half past 8 o'clock p. m., at which hour it reassembled.

AFFAIRS IN THE TERRITORIES.

Mr. BEVERIDGE. I ask unanimous consent for the present consideration of House bill 21957.

The VICE-PRESIDENT. The Senator from Indiana asks unanimous consent for the present consideration of a bill, the title of which will be stated.

The SECRETARY. A bill (H. R. 21957) relating to affairs in the Territories.

The VICE-PRESIDENT. Is there objection to the present consideration of the bill?

Mr. CULBERSON. Mr. President, I ask the Senator from Indiana if that is the same bill which has been pending here, off and on, for a week?

Mr. BEVERIDGE. It has been up twice, and it has been amended in several particulars, I think. I do not think, so far as I am informed, that any Senator on either side has any further amendment to offer. If so, I shall be glad to hear it. I repeat, the bill has been up twice, once for an hour and the other time for fifteen minutes.

The VICE-PRESIDENT. Is there objection to the request made by the Senator from Indiana?

Mr. TELLER. I suggest to the Senator from Indiana that he wait for a few minutes.

Mr. BEVERIDGE. I am glad to do so; but I want to get the bill up. I make the request merely—

Mr. CLAY. I believe the Senator from Indiana stated the other day that he desired to have the bill passed with certain features stricken out. Is that correct?

Mr. BEVERIDGE. Yes. There was one feature, I will say to the Senator from Georgia, in reference to Hawaii which was stricken out.

Mr. CLAY. The other features, then, go out?

Mr. BEVERIDGE. They go out.

Mr. HALE. What is the bill?

Mr. CLAY. It is the omnibus Territorial bill.

Mr. HALE. The provision in relation to Hawaii goes out, I understand?

Mr. BEVERIDGE. The part in relation to Hawaii goes out. The part which was inserted upon the motion of the Senator from Wyoming [Mr. WARREN]—

Mr. CLAY. That simply related to a military reservation?

Mr. BEVERIDGE. To a military reservation.

Mr. CLAY. I have no objection, so far as I am concerned, to that feature of the bill; but, as I understand, it was the Hawaiian matter that went out.

Mr. BEVERIDGE. All concerning Hawaii was first stricken out. Then, on motion of the Senator from Wyoming, that portion concerning the military reservation was reinserted. That is the present state of the bill, as I understand it.

Mr. SCOTT. Mr. President, I would suggest, if we are going to have the bill taken up, that the bill be read. There is none of us who knows what is in the bill.

Mr. BEVERIDGE. I will state for the benefit of the Senator from West Virginia that the bill, with the committee amendments, has been read and thoroughly considered.

The VICE-PRESIDENT. The Senator from West Virginia [Mr. SCOTT] asks that the bill may be read.

Mr. BEVERIDGE. Very well.

The VICE-PRESIDENT. Without objection, the Secretary will read the bill.

Mr. BEVERIDGE. If the Senator has any objection to the bill I will withdraw it.

The VICE-PRESIDENT. The Secretary will read the bill as requested by the Senator from West Virginia.

The Secretary proceeded to read the bill (H. R. 21957) relating to affairs in the Territories.

Mr. BEVERIDGE. Mr. President, if the Senator from West Virginia has any objection to the Territories bill I shall not press it, because it is perfectly clear that if there is going to be any objection or debate on the bill it can not pass.

Mr. SCOTT. I withdraw my objection to the bill if other members of the Senator's committee are in favor of it. I wanted to hear what the Senator from Wyoming had to say about it.

Mr. BEVERIDGE. I will say, with reference to the Committee on Territories, that no bill is brought in here from that committee where they are not in favor of it. I will repeat that the bill has been before the Senate once for an hour and another time for fifteen minutes.

By unanimous consent, the Senate, as in Committee of the Whole, resumed the consideration of the bill.

Mr. CLARK of Wyoming obtained the floor.

Mr. CLAPP. Mr. President—

The VICE-PRESIDENT. Does the Senator from Wyoming yield to the Senator from Minnesota?

Mr. CLAPP. I will say—

Mr. CLARK of Wyoming. Mr. President, I want to make an inquiry of the Senator from Indiana. I think he answered the same inquiry from the Senator from Georgia [Mr. CLAY], but I could not hear him. There was some question in regard to laws passed by the Territorial legislature of Hawaii. I understand that provision is now out of the bill.

Mr. BEVERIDGE. All of the provisions of the bill concerning Hawaii were first stricken out on the motion of a member of the Committee on Territories, the Senator from Washington [Mr. PILES]. After that the second provision—I think it is section 36—was reinserted upon the motion of the colleague of the Senator from Wyoming [Mr. WARREN].

Mr. CLARK of Wyoming. I will say that I think that is perfectly proper. I have two amendments, however, which I wish to propose.

Mr. BEVERIDGE. Very well.

Mr. CLARK of Wyoming. I think they will not be objectionable to the Senator from Indiana.

The VICE-PRESIDENT. The Senator from Wyoming proposes an amendment, which will be stated by the Secretary.

Mr. CLARK of Wyoming. The amendment which I propose is on page 5.

The VICE-PRESIDENT. The Chair would suggest that there are some committee amendments which have not been disposed of. The Secretary will first state the committee amendments.

The SECRETARY. In section 4, line 8, after the word "Valdez," the Committee on Territories report to strike out the words "lithographed or printed thereon" and to insert the words "and also bear the seal of said town."

The amendment was agreed to.

The next amendment of the Committee on Territories was, in section 9, page 11, line 4, after the word "blood," to insert "who have not become citizens of the United States," so as to read:

That the term "Indian" in this act shall be construed to include the aboriginal races inhabiting Alaska when annexed to the United States, and their descendants of the whole or half blood, who have not become citizens of the United States.

The amendment was agreed to.

The VICE-PRESIDENT. The amendment proposed by the Senator from Wyoming [Mr. CLARK] will now be stated.

Mr. GALLINGER. There are other committee amendments, Mr. President.

Mr. CLARK of Wyoming. There are other committee amendments, I think, Mr. President.

The VICE-PRESIDENT. The Chair understands that this completes the consideration of the committee amendments.

Mr. CLARK of Wyoming. In section 8, page 5, line 5, after the word "years," I move to strike out "other than Indians."

Mr. BEVERIDGE. Those words, I believe, have already been stricken out. If they have not been stricken out, I am perfectly willing that they shall be.

Mr. GALLINGER. They were stricken out on my motion.

Mr. BEVERIDGE. That is my recollection.

The VICE-PRESIDENT. That is correct.

Mr. CLARK of Wyoming. In section 8, on page 5, line 20, I move to strike out the word "at" and to insert the word "for."

Mr. BEVERIDGE. Upon the motion of the Senator from New Hampshire [Mr. GALLINGER] that also has been entirely changed along the lines that the Senator is about to move.

Mr. GALLINGER. On my motion the language was changed, so that it reads properly now.

Mr. SUTHERLAND. I called the attention of the Senator from Indiana [Mr. BEVERIDGE] the other day, when this bill was under consideration, to page 7, the paragraph beginning in line 14 and ending in line 20. I think the Senator at that time agreed with me that the amendment I suggested was necessary.

Mr. BEVERIDGE. I did.

Mr. SUTHERLAND. I therefore move, on page 7, line 14, before the word "material," to strike out the word "false;" in the same line, after the word "statement," to strike out the word "is," and in line 15, after the word "affidavit," to insert the words "is willfully false;" so that the paragraph, if amended as I suggest, will read:

That if any material statement made in any part of such petition or affidavit is willfully false—

And so forth.

Mr. BEVERIDGE. That was in the original law, I will say to the Senator, and for that reason the committee brought it in in that way. I think, however, his amendment is appropriate.

The VICE-PRESIDENT. The amendment will be stated.

The SECRETARY. On page 7, line 14, after the word "any," it is proposed to strike out "false;" in the same line, after the word "statement," to strike out "is;" and in line 15, after the word "affidavit," to insert the words "is willfully false;" so as to read:

That if any material statement made in any part of such petition or affidavit is willfully false the petitioner or petitioners shall be deemed guilty of perjury, and upon conviction thereof said license shall be revoked and said licensee shall be subject to the penalties provided by law for the crime of perjury.

The VICE-PRESIDENT. The question is on agreeing to the amendment proposed by the Senator from Utah.

The amendment was agreed to.

Mr. CLAPP. Mr. President, the Senator from Indiana advises me that, either on the suggestion of the committee or otherwise, sections 10, 11, 12, 13, 14, 15, 16, 17, and 18 were stricken out.

Mr. BEVERIDGE. Yes; that is correct. The entire medical-practice provision as to the district of Alaska was stricken out.

The bill was reported to the Senate as amended, and the amendments were concurred in.

Mr. BEVERIDGE. I understand that the bill has been entirely read for committee amendments. Is that correct?

The VICE-PRESIDENT. The committee amendments have been disposed of.

Mr. BEVERIDGE. I thought so.

The amendments were ordered to be engrossed and the bill to be read a third time.

The bill was read the third time and passed.

MESSAGE FROM THE HOUSE.

A message from the House of Representatives, by Mr. W. J. BROWNING, its Chief Clerk, announced that the House had passed the bill (S. 5581) pensioning the surviving officers and enlisted men of the Texas volunteers employed in the defense of the frontier of that State against Mexican marauders and Indian depredations from 1855 to 1860, inclusive, and for other purposes.

The message also announced that the House had agreed to the report of the committee of conference on the disagreeing votes of the two Houses on the amendments of the Senate to the bill (H. R. 21946) making appropriations to supply deficiencies in the appropriations for the fiscal year ending June 30, 1908, and for prior years, and for other purposes.

The message further announced that the House had agreed to the report of the committee of conference on the disagreeing votes of the two Houses on the amendments of the Senate to the bill (H. R. 21897) to increase the limit of cost of certain public buildings, to authorize the enlargement, extension, remodeling, or improvement of certain public buildings, to authorize the erection and completion of public buildings, etc.

ENROLLED BILLS SIGNED.

The message also announced that the Speaker of the House had signed the following enrolled bills and joint resolution, and they were thereupon signed by the Vice-President:

S. 208. An act for the survey and allotment of lands now embraced within the limits of the Fort Peck Indian Reservation, in the State of Montana, and the sale and disposal of all the surplus lands after allotment;

S. 5581. An act pensioning the surviving officers and enlisted men of the Texas volunteers employed in the defense of the frontier of that State against Mexican marauders and Indian depredations from 1855 to 1860, inclusive, and for other purposes;

S. 5983. An act authorizing certain life-saving apparatus to be placed at the Farallone Islands, off the coast of California;

S. 6358. An act to amend an act entitled "An act to incorporate the Masonic Mutual Relief Association of the District of Columbia";

H. R. 21946. An act making appropriations to supply deficiencies in the appropriations for the fiscal year ending June 30, 1908, and for prior years, and for other purposes;

H. R. 22212. An act granting an increase of pension to Byron C. Mitchell, Calvin P. Lynn, and Harry S. Lee, formerly Albert Lee Aleman; and

H. J. Res. 197. Joint resolution authorizing the employment of clerical services in the Department of Justice.

AMENDMENT OF NATIONAL BANKING LAWS.

Mr. OWEN. Mr. President, when the Senate two days since began the consideration of the currency bill, I stated on the floor of the Senate that I should feel constrained to give my vote for that measure if my vote were necessary to its passage,

but should emphasize my dissent for its defective and deficient character by an adverse vote. Since the debate has proceeded and the measure has been criticised with great severity upon the floor, I desire to explain in a few words the reasons that led me to make the statement that I should give my vote, if necessary, for the passage of that bill.

Mr. President, in 1900 I drew a provision for the prevention of panics, which was submitted on the floor of the Senate by the then leader of the Democratic Senators, Hon. James K. Jones, and which contained the essential principles which afterwards were embodied in the so-called "Aldrich bill," with the exception that the Aldrich bill provided for the issuance of national-bank notes instead of Treasury notes. Otherwise the principles are identical.

The Aldrich bill, like many of the recent reforms adopted by leaders of the Republican party, is therefore merely the adoption of principles already presented by Democrats.

This method of preventing panics is, however, only an adaptation of the method of the German Empire, by whose statutes the Imperial Bank of Germany is authorized to issue legal tender notes against other securities than gold, under an interest charge higher than the normal rate of interest, which, by that device, automatically provides the contraction of such emergency currency when the exigency requiring its issue no longer exists.

I have heretofore stated the reasons, with great precision and care, why I did not approve the form of the so-called "Aldrich bill." I shall not weary the Senate with a repetition of the criticisms which I then made upon the bill—I pointed out both its good features and its bad features—but when the bill itself has no defense upon the floor of the Senate, and when the bill is assailed without defense, I feel myself compelled to put in record the plain reason why I should have given it my support if my support had been absolutely necessary to make it a law.

The reason, in brief, is that the commerce of this country requires to be protected against panic; and, whatever may be said in criticism of the Aldrich bill or of the Vreeland-Aldrich bill, it does give some measure of protection against panic, and that suffices to justify its passage. It is not what it ought to be, but it is vastly better than no protection at all.

So far as the Vreeland section is concerned, while it has not been defended on this floor, I think it proper to call the attention of the country to this important proposition, that while the phrase "any securities" will indeed cover "railroad bonds and railroad stocks," still "railroad bonds and railroad stocks" are not the only security proposed, even by the Vreeland proposition, as a basis for the proposed emergency currency. In addition to the "railroad bonds and the railroad stocks," which may be included under the term "any securities," there lies behind the issue of such currency as security therefor the entire capital and surplus of a group of banks whose capital and surplus must aggregate at least \$5,000,000; and, in addition to that, if I correctly interpret the Vreeland proposition, it embraces the further security of every dollar of their assets, including their deposits.

Therefore the security for a currency issue under the Vreeland proposition is probably from five to one to ten to one, and I am not willing to allow this record remain without a word in defense of the Vreeland proposition upon this floor, since I myself would have voted for it if necessary, and this question shall not be made a subject of political controversy between the two great parties of this country if I can prevent it.

I am a Democrat, a life-long Democrat, and one of the great reasons why I favored a bill to prevent panics in this country was because the threat of a panic was twice invoked to defeat the man who, in my opinion, is one of the greatest living statesmen in the world—William J. Bryan.

I remember perfectly well when he was the nominee of his party in 1896 and in 1900 that those who had negotiable notes (and that means all the business men in the country) were threatened with a panic from one end of the country to the other, and many a life-long Democrat, because he feared a panic and because he dared not face the personal jeopardy which a panic would involve, voted the Republican ticket. I think probably the most valuable service which has been rendered to the pending candidacy of Bryan has been rendered to-day by the party in power, for with the fear of panic removed and with no threat of a panic available as a club over the heads of business men an impartial verdict may be rendered without the intimidation heretofore resorted to.

Mr. CLAPP. Mr. President—

The VICE-PRESIDENT. Does the Senator from Oklahoma yield to the Senator from Minnesota?

Mr. OWEN. With great pleasure.

Mr. CLAPP. Would the Senator, in connection with his statement regarding this bill, make clear a matter which, it seems

to me, has been greatly confused in the discussion of the bill, namely, that when it comes to the bonds that are to be deposited with the Treasurer of the United States as the basis of a currency issue under what we call the Aldrich part of this bill, those bonds are specifically limited. Under no circumstances could railroad bonds be used for that purpose, and the only place in the bill where there is not a limitation upon the character of bonds, is where bonds, like any other collateral, may be a part of the additional security which is tendered in the creation of currency by the banking associations.

Mr. OWEN. I will reply to the Senator and say that that is entirely true and that the bonds to which he refers are simply additional security. The Vreeland provision for "any securities," of course would give the bonds as additional collateral for the issue of currency; and I call attention to the fact that even so far as these bonds are concerned as collateral security behind the paper held by the banks and put up with their associations as security, only 75 per cent of currency can be issued against such security. In addition to that, 10 per cent of the 75 per cent is to be held by the United States for redemption purposes, leaving a net 67½ per cent of currency issued against 100 per cent of collaterals approved first by the individual bank's board of management, then approved by the management of the associated banks, and finally by the Treasury itself. The security is abundant.

The reason I am opposed to the Vreeland proposition is because I do not approve the precedent of asset currency; because it is a cumbersome and awkward method; because it is a method which will be available only to a certain particular section of the country; because it is only available in the big cities, and not available throughout the country, which I think would be better. But it has seemed to be impossible to make this bill all that I thought it ought to have been. Of necessity it is a compromise bill. In my opinion, it ought to have been a bill which should have provided, first, for the issuance of Treasury notes directly, and not national-bank notes, so that such Treasury notes might have been issued to any bank, whether it was a national bank or whether it was a State bank or savings bank or trust company, which might put up securities of a proper quality and quantity so as to make the United States perfectly safe in the issuance of this emergency currency, and so as to diffuse the benefits of this currency to each and every bank, no matter how small and and no matter where located.

The little banks in Idaho and the little banks in Oklahoma ought to have been taken care of in this bill. As it is, the small banks will be taken care of, perhaps, by being able to get accommodations from the larger banks if a supply of emergency currency is afforded. But I do not believe in the theory of special privilege. I do not believe in giving the benefits of the provisions of this bill to special strong banks and compelling the smaller banks to rely on and pay for the protection of the favored ones. Its benefits should have been freely extended to the weaker elements of the community. I can not but feel, Mr. President, that the greatest weakness of the party at present trusted with power is its complete subservience to the forces of special privilege.

Mr. President, I rose merely for the purpose of explaining why I should have supported this measure if my vote had been necessary to enact it. It is better than no measure at all; it is a measure which will, in my judgment, measurably protect the country from panics, although it is badly drawn and very defective. Yet, it is a beginning, and can hereafter be perfected.

Mr. FLINT. Mr. President—

The VICE-PRESIDENT. Does the Senator from Oklahoma yield to the Senator from California?

Mr. OWEN. With pleasure.

Mr. FLINT. A few days ago the Senator from Oklahoma made a statement in reference to this same bill. I asked him at that time how this bill discriminated against the small banks, and he answered the question to my satisfaction. I desire to say at this time that if at the next session of this Congress he does not offer an amendment providing that clearing-house associations may be formed so as to include one State, no matter what the capitalization may be of the banks of that State, I shall do so.

Mr. OWEN. Mr. President, I think the Congress has made a great advance in providing a method for controlling panics, and that the patriotism and intelligence of this country will be easily able to perfect this measure so as to hereafter make it all that it should be.

Mr. FLINT. I simply want to make one further statement. The only discrimination that I can find from examination of the bill is not in the provision known as the "Aldrich bill," but in that part of it which is known as the "Vreeland bill."

Mr. OWEN. Now, Mr. President, I simply want to say a word more, and I am done. I do not think that it is a wise thing to confuse the counsels of the Senators in this Chamber by giving a partisan aspect to a great economic proposition. This is a very important bill to the country, and I believe it will be a very useful bill. I do not believe that it ought to be made a matter of controversy between the two great parties, because I call the attention of the country and of the opposition party to the fact that James K. Jones, then a Senator in this body, introduced into this Chamber such a proposition in 1900 which contained every element of value which this bill now contains. There ought to be no controversy on this subject between the two parties, except a generous rivalry as to which party can be most useful to our beloved Republic.

RECESS.

Mr. ALDRICH (at 8 o'clock and 55 minutes p. m.). I move that the Senate take a recess until half past 9 o'clock.

The motion was agreed to; and at the expiration of the recess (at 9 o'clock and 30 minutes p. m.) the Senate reassembled.

MESSAGE FROM THE HOUSE.

A message from the House of Representatives, by Mr. W. J. BROWNING, its Chief Clerk, announced that the House had passed a concurrent resolution authorizing the President of the Senate and the Speaker of the House of Representatives to close the present session by adjourning their respective Houses on the calendar day, 30th of May, 1908, at 11 o'clock and 50 minutes p. m., and that a committee of three Members be appointed, to join a similar committee of the Senate, to wait upon the President of the United States and inform him that the two Houses had completed the business of the present session and are ready to adjourn.

The message also announced that the House had agreed to the amendment of the Senate to the bill (H. R. 21844) granting to certain employees of the United States the right to receive from it compensation for injuries sustained in the course of their employment.

ENROLLED BILL SIGNED.

The message further announced that the Speaker of the House had signed the enrolled bill (H. R. 21844) granting to certain employees of the United States the right to receive from it compensation for injuries sustained in the course of their employment.

FINAL ADJOURNMENT.

Mr. HALE. I ask that the concurrent resolution from the House of Representatives fixing the time for final adjournment be laid before the Senate and referred to the Committee on Appropriations.

The VICE-PRESIDENT laid the concurrent resolution before the Senate, and it was referred to the Committee on Appropriations, as follows:

Resolved by the House of Representatives (the Senate concurring), That the President of the Senate and the Speaker of the House of Representatives be authorized to close the present session by adjourning their respective Houses on the calendar day 30th of May, 1908, at 11 o'clock and 50 minutes post meridian.

Resolved, That a committee of three Members be appointed by the Chair to join a similar committee to be appointed by the Senate to wait upon the President of the United States and inform him that the two Houses have completed the business of the present session and are ready to adjourn, unless the President has some other communication to make to them.

Mr. HALE, from the Committee on Appropriations, reported the foregoing resolution favorably without amendment, and it was considered by unanimous consent and agreed to.

NOTIFICATION TO THE PRESIDENT.

Mr. HALE submitted the following resolution, which was considered by unanimous consent and agreed to:

Resolved, That a committee of two Senators be appointed by the Vice-President, to join a similar committee appointed by the House of Representatives, to wait upon the President of the United States and inform him that the two Houses, having completed the business of the present session, are ready to adjourn unless the President has some other communication to make to them.

The VICE-PRESIDENT appointed Mr. HALE and Mr. TELLER as the committee on the part of the Senate under the resolution.

MESSAGE FROM THE HOUSE.

A message from the House of Representatives, by Mr. W. J. BROWNING, its Chief Clerk, announced that the House had passed the bill (S. 3495) to authorize the transfer of books from the Treasury Department library to life-saving stations of the United States.

The message also announced that the Speaker had appointed as members of the National Monetary Commission on the part of the House, and in compliance with the provisions of section 17 of an act entitled "An act to amend the national

banking laws," approved May 30, 1908, Mr. VREELAND, Mr. OVERSTREET, Mr. BURTON of Ohio, Mr. WEEKS, Mr. BONYNGE, Mr. SMITH of California, Mr. PADGETT, Mr. BURGESS, and Mr. PUJO.

ENROLLED BILL SIGNED.

The message further announced that the Speaker of the House had signed the enrolled bill (S. 3495) to authorize the transfer of books from the Treasury Department library to life-saving stations of the United States, and it was thereupon signed by the Vice-President.

RECESS.

Mr. HALE (at 9 o'clock and 32 minutes p. m.). I move that the Senate take a recess for one hour.

The motion was agreed to; and at the expiration of the recess (at 10 o'clock and 32 minutes p. m.) the Senate reassembled.

NOTIFICATION TO THE PRESIDENT.

Mr. HALE and Mr. TELLER, the committee appointed on the part of the Senate to wait upon the President of the United States, appeared, and

Mr. HALE said: Mr. President, the committee of the two Houses have waited upon the President, who has informed them that he has at present no further communication to make to Congress.

NATIONAL MONETARY COMMISSION.

The VICE-PRESIDENT appointed Mr. ALDRICH, Mr. ALLISON, Mr. BURROWS, Mr. HALE, Mr. KNOX, Mr. DANIEL, Mr. TELLER, Mr. MONEY, and Mr. BAILEY members on the part of the Senate of the National Monetary Commission, under section 17 of the act to amend the national banking laws.

RECESS.

Mr. HALE (at 10 o'clock and 34 minutes p. m.). I move that the Senate take a recess until half past 11 o'clock.

The motion was agreed to; and at the expiration of the recess (at 11 o'clock and 30 minutes p. m.) the Senate reassembled.

THE RAMIE INDUSTRY.

Mr. HEYBURN. I ask to have printed for the use of the Senate 500 additional copies of Senate Document No. 392, Fifty-ninth Congress, second session, being statements by S. H. Slaughter in behalf of the ramie industry and its promotion in the United States.

The VICE-PRESIDENT. Without objection, it is so ordered.

Mr. OWEN. I ask to have printed for the use of the Senate 500 additional copies, pages 1 to 40 inclusive, and 91 to 127 inclusive, of Senate Document No. 392, Fifty-ninth Congress, second session, being a statement on the ramie industry, in order to make it correspond with document No. 392, which has just been ordered printed. There are some pages missing from an issue of 500 copies, and I should like to have the additional pages printed in order to make the number complete, if there be no objection.

The VICE-PRESIDENT. Without objection, it is so ordered.

STATEMENTS OF APPROPRIATIONS AND EXPENDITURES.

Mr. HALE. Mr. President, in the absence of the Senator from Iowa [Mr. ALLISON], I present to the Senate very carefully prepared statements of appropriations and expenditures for the fiscal year ending July 1, 1909. These statements, covering all of the appropriations and expenditures for that year, present what will be an interesting study to any person who will carefully examine them. They are compared with the corresponding appropriations and expenditures for the previous year, and they demonstrate the great and, I might say, alarming increase of the expenditures of the National Government as contrasted with the preceding year.

I do not propose at this late hour to take up the time of the Senate in descending upon the statements and figures and the lesson which they have for anyone who gives them proper examination. We shall know better when Congress assembles again in December how these great appropriations from the Treasury answer to the receipts from which they must be paid, and we can then better than now take a view of the future as to any danger which we may be found running into with extravagant appropriations and dwindling revenues.

It is not a picturesque subject, and it is hard to bring the public mind and public attention and the attention and interest of Congress to it, compared with other more attractive subjects, but some day such figures as I now present, when submitted in the future, will awaken an interest that I hope will result in some halt being called in the enormous expenditures that are being made year after year by Congress.

I ask that the statements with the brief remarks which I have made be printed as a document and that the statements also be printed in the Record.

The VICE-PRESIDENT. Without objection, permission is granted.

The statements are as follows:

APPROPRIATIONS.

Total appropriations, Sixtieth Congress, first session	\$1,008,804,894.57
Deduct from this amount deficiency appropriations payable during the fiscal year 1908	\$44,500,000.00
Deduct items in appropriations which will require no expenditures from the Treasury for the fiscal year 1909, as follows:	
Sinking fund	58,000,000.00
National bank note redemption fund	25,000,000.00
Amounts for Panama Canal payable from the proceeds of sale of bonds	29,187,000.00
	156,687,000.00

Total amount of appropriations which will be payable from the Treasury for the fiscal year 1909	\$52,117,894.57
Total estimated revenues for 1909	\$78,123,011.30
Estimated revenues exceed appropriations required to be paid from the Treasury for fiscal year 1909	26,005,116.73
Total appropriations for fiscal year 1908	\$20,798,143.00
Increase of total appropriations 1909 over 1908	\$8,006,750.77

The principal increases in amounts of appropriations as passed at this session over last session are as follows:

Agriculture	\$2,224,816.00
Army	16,747,664.86
Diplomatic and consular	485,130.19
Fortification	2,419,134.00
Legislative	707,487.20
Navy	23,708,977.97
Pensions	26,910,000.00
Post-Office	10,871,199.00
Panama Canal (net)	14,200,000.00
Public buildings act	12,466,750.00
Arming and equipping the militia	2,000,000.00

A decrease of \$37,100,000 is made by the omission of a river and harbor bill at this session.

Comparison of appropriations, fiscal years 1908 and 1909.

Title of bill.	Fiscal year 1908.	Fiscal year 1909.	Increase 1909 over 1908.	Decrease 1909 under 1908.

Amount of estimated revenues for fiscal year 1909. \$658,000,000.00
 Amount of estimated postal revenues for fiscal year 1909. 220,123,011.30

Total of estimated revenues for fiscal year 1909.

\$78,123,011.30

^a One-half of the amounts for the District of Columbia payable by the United States, except amounts for the water department (estimated for 1909 at \$130,890), which are payable from the revenues of the water department.

^b Includes all expenses of the postal service payable from postal revenues and out of the Treasury.

^c No amount is estimated for rivers and harbors for 1909 except the sum of \$27,142,744 to meet contracts authorized by law for river and harbor improvements included in the sundry civil estimates for 1909.

^d No river and harbor act passed for 1909.

^e In addition to this amount the sum of \$6,392,730 is appropriated to the sundry civil act to carry out contracts authorized by law for river and harbor improvements for 1908.

^f This amount includes \$27,142,744 to carry out contracts authorized by law for river and harbor improvements and \$33,183,143.00 for construction of the Isthmian Canal for 1909.

^g This amount includes \$17,806,645 to carry out contracts authorized by law for river and harbor improvements and \$29,187,000 for construction of the Isthmian Canal for 1909.

^h This amount includes \$6,392,730 to carry out contracts authorized by law for river and harbor improvements and \$27,161,367.50 for construction of the Isthmian Canal for 1908.

ⁱ This amount is approximated. Under Deficiency Estimates there is included \$12,466,750 for public buildings under the new public-buildings act.

^j This amount includes \$12,178,900 for construction of the Isthmian Canal.

^k This amount includes \$10,000,000 for payment of pensions and \$12,466,750 for construction of public buildings under the new public-buildings act.

^l This is the amount submitted by the Secretary of the Treasury in the annual estimates for the fiscal year 1909, the exact amount appropriated not being ascertainable until two years after the close of the fiscal year. This amount includes estimated amount of \$58,000,000 to meet sinking-fund obligations for 1909 and \$25,000,000 estimated redemption of national bank notes in 1909 out of deposits by banks for that purpose.

^m In addition to this amount, contracts are authorized to be entered into, subject to future appropriations by Congress, as follows: By the naval act \$15,750,000; by the river and harbor act, \$40,829,349; by the sundry civil act, \$2,355,000; in all, \$57,934,349.

EXECUTIVE SESSION.

Mr. KEAN. Mr. President, it is necessary to have a brief executive session. I dislike very much to disturb the occupants of the galleries, but it is necessary to have such a session. I therefore move that the Senate proceed to the consideration of executive business.

The motion was agreed to, and the Senate proceeded to the consideration of executive business. After five minutes spent in executive session the doors were reopened.

THANKS TO THE VICE-PRESIDENT.

Mr. CULBERSON. Mr. President, it affords me much pleasure to present at this time the resolution which I send to the desk, and I ask for its immediate consideration.

The PRESIDING OFFICER (Mr. GALLINGER in the chair). The Senator from Texas offers the following resolution, for which he asks present consideration. The resolution will be read.

The Secretary read the resolution, as follows:

Resolved, That the thanks of the Senate are hereby tendered to Hon. CHARLES W. FAIRBANKS, Vice-President of the United States and President of the Senate, for the dignified, impartial, and courteous manner in which he has presided over its deliberations during the present session.

The PRESIDING OFFICER. The question is on the adoption of the resolution which has been read by the Secretary. The resolution was unanimously agreed to.

PRESIDENTIAL APPROVALS.

A message from the President of the United States, by Mr. M. C. LATTI, one of his secretaries, announced that the President had approved and signed the following joint resolution and acts:

On May 29:

S. R. 6. Joint resolution directing the selection of a site and the erection of a pedestal for a bronze statue in Washington, D. C., in honor of John Witherspoon;

S. 6163. An act to authorize the Secretary of the Interior to sell and dispose of the surplus unallotted agricultural lands of the Spokane Indian Reservation, Wash., and for other purposes;

S. 1385. An act to authorize the sale and disposition of a portion of the surplus and unallotted lands in the Cheyenne River and Standing Rock Indian reservations in the States of South Dakota and North Dakota, and making appropriation and provision to carry the same into effect;

S. 6190. An act authorizing a resurvey of certain townships in the State of Wyoming, and for other purposes;

S. 2295. An act to extend the time within which the Washington and Western Maryland Railroad Company shall be required to complete the road of said company, under the provisions of an act of Congress approved March 2, 1889, as amended by an act of Congress approved June 28, 1906; and

S. 6200. An act granting certain rights of way and providing for certain exchanges of the same.

On May 30:

S. 642. An act to establish an assay office at Salt Lake City, State of Utah;

S. 3405. An act to amend an act to authorize the Baltimore and Washington Transit Company, of Maryland, to enter the District of Columbia, approved June 8, 1896;

S. 208. An act for the survey and allotment of lands now embraced within the limits of the Fort Peck Indian Reservation,

in the State of Montana, and the sale and disposal of all the surplus lands after allotment;

S. 5581. An act pensioning the surviving officers and enlisted men of the Texas volunteers employed in the defense of the frontier of that State against Mexican marauders and Indian depredations from 1855 to 1860, inclusive, and for other purposes;

S. 5983. An act authorizing certain life-saving apparatus to be placed at the Farallone Islands, off the coast of California; and

S. 6358. An act to amend an act entitled "An act to incorporate the Masonic Mutual Relief Association of the District of Columbia."

ADDRESS OF THE VICE-PRESIDENT.

The VICE-PRESIDENT having resumed the chair and the hour of 11 o'clock and 50 minutes p. m. having arrived,

The VICE-PRESIDENT. Senators, I am unable adequately to express the full measure of my appreciation of the resolution which you have been pleased to adopt. I thank you for it and shall always hold it in grateful remembrance.

Permit me to congratulate the members upon both sides of the Chamber upon their devotion to the important work which has engaged the attention of the Senate during the session now closing. No one knows better than the Chair with what singleness of purpose and ability they have addressed themselves to the important public business. Much of the work which has been done has been beyond the reach of the public eye. It has been done in the committee room and in executive session, but whether it has been done in the open Senate with the entire country as witness, or in the unreported executive session, or in the committee room, it has been done with tireless zeal and conscientious fidelity. Many important measures have been debated with that power, fairness, and dignity which should always be observed among the nation's lawmakers and which should always be maintained in this great forum.

You have well earned the commendation of the people by your fulfillment of the oath you solemnly took well and faithfully to discharge the duties of your office. It is a reassuring fact that the nation's lawmakers are as able, patriotic, and worthy of the popular confidence to-day as they have been at any time since our fathers created the Congress as one of the three coordinate departments of the Government.

I trust that good fortune may attend you, and that you may return to the discharge of your important work at the ensuing session.

Pursuant to the terms of the concurrent resolution, the Chair now declares the Senate adjourned without day. [Applause on the floor and in the galleries.]

HOUSE OF REPRESENTATIVES.

SATURDAY, May 30, 1908.

[Continuation of legislative day of Tuesday, May 12, 1908.]

The recess having expired, the House was called to order by the Speaker at 11 o'clock a. m.

MESSAGE FROM THE SENATE.

A message from the Senate, by Mr. CROCKETT, its reading clerk, announced that the Senate had disagreed to the amendment of the House of Representatives to the amendment of the Senate to the bill (H. R. 13851) providing for the purchase of a site and the erection of a new immigration station thereon at the city of Boston, Mass., had asked a conference with the House on the disagreeing votes of the two Houses thereon, and had appointed Mr. DILLINGHAM, Mr. LODGE, and Mr. McLAURIN as the conferees on the part of the Senate.

ENROLLED BILLS PRESENTED TO THE PRESIDENT FOR HIS APPROVAL.

Mr. WILSON of Illinois reported from the Committee on Enrolled Bills that this day they presented to the President of the United States, for his approval, the following bills:

H. R. 19795. An act to promote the safety of employees on railroads;

H. R. 11778. An act to amend an act approved June 11, 1906, entitled "An act to provide for the entry of agricultural lands within forest reserves;"

H. R. 19462. An act to amend section 5438 of the Revised Statutes;

H. R. 17228. An act to promote the safe transportation in interstate commerce of explosives and other dangerous articles, and to provide penalties for its violation;

H. R. 16757. An act for the incorporation of the Brotherhood of St. Andrew; and

H. R. 22029. An act to incorporate the Congressional Club.

CLERICAL SERVICES IN THE DEPARTMENT OF JUSTICE.

Mr. TAWNEY. Mr. Speaker, I offer the following joint resolution, and move to suspend the rules and pass the resolution.

The SPEAKER. The gentleman from Minnesota moves to

suspend the rules and pass the joint resolution, which the Clerk will report.

The Clerk read as follows:

Joint resolution (H. J. Res. 197) authorizing the employment of clerical services in the Department of Justice.

Resolved, etc., That the Attorney-General is authorized to continue the employment of clerical services during the fiscal year 1909 under the appropriation for "Defense in Indian depredation claims," and to pay therefor out of said appropriation not to exceed the sum of \$6,000.

Mr. FITZGERALD. I demand a second.

The SPEAKER. Under the rule, a second is ordered. The gentleman from Minnesota [Mr. TAWNEY] is entitled to twenty minutes, and the gentleman from New York [Mr. FITZGERALD] is entitled to twenty minutes.

Mr. TAWNEY. Mr. Speaker, the joint resolution which I have just offered is made necessary because in submitting the estimates at this session of Congress for specific appropriations for the clerical services for the various bureaus of the Department of Justice, which service was heretofore paid out of a lump sum for that Department, they neglected to submit specific estimates for a law clerk, stenographer, and another clerk in the bureau known as "Defense of Indian depredation claims." Unless this authority is given for a continuation of the services of these three employees in that bureau, their services will have to be dispensed with, and they are very necessary. In fact, it may materially delay the progress of the work if the officer in charge of the defense of Indian depredation claims can not avail himself of their services during the next fiscal year. It is absolutely essential—

Mr. CRUMPACKER. Will the gentleman answer a question? The resolution describes the services as "personal" services. I want to inquire of the gentleman if that description is appropriate?

Mr. TAWNEY. That is the term that has always been used in the lump sum for "personal" services in that bureau.

Mr. CRUMPACKER. It may be regarded, of course, as distinct from official services. It is a very peculiar way to authorize an expenditure of money, it seems to me. It ought to be described as "official" or "clerical" services. I think that the resolution ought to be amended in that way.

Mr. TAWNEY. Mr. Speaker, if there is any question about the word "personal," I would ask unanimous consent to change the word to that of "clerical." I do not think it is necessary.

Mr. MANN. Will the gentleman yield to a question? I did not hear the whole statement of the gentleman; but why is this not carried in the appropriation bill? There is no appropriation in this resolution.

Mr. TAWNEY. There is no appropriation for these services.

Mr. MANN. The money is appropriated; why can not they expend it?

Mr. TAWNEY. Because they are not authorized to expend it for this purpose.

Mr. MANN. For what purpose are they authorized to expend it?

Mr. TAWNEY. They are authorized to expend the appropriation for services outside of the city of Washington. They are not authorized to expend any, at least, of this appropriation here at Washington. They have heretofore been authorized to do it, but the Committee on Appropriations inserted in the legislative appropriation bill a year ago a provision requiring the Department of Justice to submit detailed estimates for all clerical services employed here in Washington paid out of this lump-sum appropriation. That was done. They submitted their estimates, but they entirely omitted the clerical services referred to in this joint resolution, heretofore and now employed in this particular bureau. Why it was done I do not know. The gentleman in charge of this work says he did not know it until yesterday.

Mr. MANN. How many more people are employed in the Department of Justice where no record has been made in transmitting the information to Congress?

Mr. TAWNEY. These are the only ones I know anything about. How many more will turn up by the 1st of July, as a result of the neglect to send in the detailed estimates, I do not know.

Mr. MANN. Here is a lump sum appropriated to pay expenses. They discover that it is not available for this service. But they did not include provision for the service in the estimates. I presume there are a great many other people up there in whose cases they have not complied with the requirements of the law in presenting detailed estimates. Give a chance to ascertain who they are.

Mr. TAWNEY. I do not think there are any other cases where they were required to submit detailed estimates where the estimates were not submitted.

Mr. MANN. Were they not required to submit detailed estimates of everything?

Mr. TAWNEY. Yes, sir; and they have done that with this exception.

Mr. MANN. They get a lump-sum appropriation and expend the money.

Mr. TAWNEY. But out of it they can not spend a dollar for clerical services in the city of Washington.

Mr. MANN. That is what is done in this case.

Mr. TAWNEY. That is so.

Mr. MANN. Suppose this resolution should not be passed—

Mr. TAWNEY. Oh, well, I hope the gentleman will not compel me to use all of my time.

Mr. STEPHENS of Texas. Do I understand that the matter is with reference to the payment of Indian depredation claims?

Mr. TAWNEY. It is for the clerical expense here at Washington of defending these Indian depredation claims.

Mr. STEPHENS of Texas. Is not that covered in the general appropriation for carrying on the Department of Justice?

Mr. TAWNEY. No; it is specifically appropriated for.

Mr. STEPHENS of Texas. Then these men have been performing the duty under existing law, and will have to continue to do so, because I know personally that a great many suits are pending now under the old law, and it is necessary that the Government be represented. They have able attorneys, and, I think, they ought to be paid.

Mr. TAWNEY. They have an assistant attorney in charge of the work, and then he has a law clerk, who assists in briefing these cases. He has a stenographer and another clerk, and these are not provided for for the next fiscal year. This joint resolution is for the purpose of taking care of that service for the next fiscal year.

Mr. STEPHENS of Texas. I see no reason why it should not be done.

Mr. MANN. Is this for clerical service?

Mr. TAWNEY. Clerical and other service.

Mr. HACKNEY. I should like to ask the gentleman whether he has any information as to the amount of work that is now being done by these clerks whom he speaks of?

Mr. TAWNEY. I have. They are working under the Assistant Attorney-General, Mr. Thompson, who, I think, is known to most of the gentlemen here. They are all employed and their employment is absolutely necessary.

Mr. HACKNEY. Is it not a fact that the Indian depredation claims that are now pending have been filed for a number of years? Is there any way of telling when we will get through with these claims that have been filed there?

Mr. TAWNEY. I do not know that there is.

Mr. STEPHENS of Texas. These suits have been pending for several years and have been continued because the court could not reach them. A great deal of evidence has to be taken. That evidence is all in the West, in the possession of old persons who have to be hunted up, and the Government has sent these assistant attorneys to various points in my State and all over these various States and Territories to take depositions of witnesses, in order to ascertain the facts and defend the case of the Government.

Mr. HACKNEY. That was true when the claims were filed a good many years ago, but it seems to me there ought to be some limit to this expense.

Mr. TAWNEY. The work of collecting the evidence in cases of this kind involves a great deal of time as well as labor. The witnesses are scattered all over the West, and the testimony must be taken, and it can only be taken by visiting those people who are supposed to be in possession of evidence. That is the way in which it is collected.

Mr. HACKNEY. I do not understand that this appropriation is to pay men in the field for looking up evidence.

Mr. TAWNEY. That is in the general appropriation.

Mr. HACKNEY. I have my doubts as to the necessity for so much clerical force right here in Washington.

Mr. TAWNEY. If the gentleman has not investigated it, I can not see upon what his doubts rest.

Mr. HACKNEY. That came up in the hearings on the effort to amend the law so as to broaden its scope and take in other claims.

Mr. STEPHENS of Texas. The work to be done consists in briefing cases and hunting up cases and also the law.

Mr. DOUGLAS. What is the nature of these claims?

Mr. STEPHENS of Texas. When Indians situated on the reservations break away from the reservations and depredate upon private property, the Government, by an act of Congress, permits citizens who have been damaged to sue the General Government and recover.

Mr. DOUGLAS. The Government pays for the depredations of these drunken Indians?

Mr. STEPHENS of Texas. It pays for the depredations of these Indians.

Mr. CRUMPACKER. The payment is made out of the fund belonging to the Indians, however.

Mr. FITZGERALD. Mr. Speaker, this is a very important resolution. Unless it be passed two or three employees of the Government will be separated from the pay roll, and of course that would be a dire calamity at this time of year, when they are preparing to take advantage of the thirty days' leave provision of the statute. It is awful to contemplate separating anybody from the pay roll under this Administration. It would be so contrary to the whole record of the Administration that it would be a shock to the sensibilities of everyone. I am surprised that Members of the House should seriously discuss the necessity of having these employees. They are on the pay roll now, and they should continue there, no matter what else happens. Of course it is true we could devote the time we now devote to taking care of two or three employees who may or may not be necessary to the consideration of important legislation for the people of the country. If I had any hope that half a dozen bills which I should like to see considered could be called up I should not occupy the time of the House on this matter; but I fear that when we conclude the consideration of this resolution somebody will be aroused to suggest that we take a recess, thereby depriving the people and the people's representatives of an opportunity to have considered proper legislation in the interests of the whole people. Here we must devote eighty minutes to the important task of preventing three employees from being separated from the pay roll. Everybody who has examined this joint resolution and inquired into the reasons for its necessity knows that if it were not for the fact that the Attorney-General has been so busy suppressing all the bad trusts in the United States there would be no necessity for the resolution. He would in that event have complied with the direction of Congress and submitted estimates in detail for the complete service of his Department; but this particular bureau was of so little importance in the estimation of the Attorney-General that he entirely overlooked it, never called on the head of the bureau to submit estimates, and Congress passed all of the appropriations bills without making provision for this important bureau in his Department!

Of course if there had been one more bad trust to suppress, it is entirely possible that he would have forgotten to submit an estimate for his own salary, even. Fortunately that contingency did not arise, and it will be gratifying to everyone to know that the estimates for the salaries of all of the assistants to the Attorney-General were regularly submitted and fully provided by the Congress. These few unfortunate clerks who have some of the important work in the Department to do—though so unimportant in the estimation of the Attorney-General as to be even not thought about—have been omitted. Mr. Speaker, I hope that everybody will vote for this resolution and prevent this atrocious situation occurring under this Administration, that through the oversight of one of the Cabinet officials, or of somebody delegated to do his work, some two or three officials important from the public standpoint, but unimportant from the official standpoint, should be dropped unceremoniously from the pay roll. That never should happen at this time.

Mr. DOUGLAS. Mr. Speaker, is it possible that the gentleman is facetious on so serious a subject as this?

Mr. FITZGERALD. Oh, never so serious in my life. My recollection of the investigation of this bureau is to this effect: That if these clerks be not kept at work in this bureau, the energy, the ingenuity, the avarice of these claimants in the so-called "Indian depredation cases" would soon empty the Treasury. Of course it is immaterial now, because the Treasury is empty anyway [laughter]; but some time or other, when a Democratic Administration comes into power, there will be plenty of money in the Treasury. I hope I have made clear to everybody in the United States the importance and necessity of having this resolution passed and of keeping these three employees on the pay roll.

Mr. MADDEN. How long does the gentleman think the money would stay in the Treasury after the Democrats came into power?

Mr. BURLERSON. Oh, we never find any in when we first come in. [Laughter.]

Mr. FITZGERALD. Oh, the money will be there for the whole people and it will not be squandered on unimportant matters or wasted helping special interests. [Applause on the Democratic side.] It will be appropriated properly under the Constitution to maintain economically the Government and to advance the interests of all the people. That is what a Democratic government means and that is the kind of an administration the Democrats always give [applause on the Democratic side]—much different from the reckless, extravagant, spasmodic, sporadic—if I had a dictionary I would go on indefinitely—administration of affairs which we get under the present régime. ■

Mr. Speaker, I see that the gentlemen about me have become deeply impressed with the importance of this resolution. [Applause.] There may be some others who desire to obtrude some observations as to the propriety and necessity of retaining these employees. If so, I shall reluctantly yield some time, but if not, and upon the assurance of the Speaker that if this be out of the way, we may be able to consider some other really great and meritorious measure, something that will result in good to the whole country, I shall not be inclined to occupy further time—although I know it would be very enlightening to Members, particularly on the other side of the House. However, if the House feels ready to vote, and there be no Member here yet unconvinced, I am prepared to surrender the balance of my time and to take a vote; and in order that there may be no question that every Member in the House is convinced of the propriety and advisability of quickly passing this resolution, I hope everybody will be recorded in the Journal on a roll call, and everybody recorded as in favor of this much-needed legislation. [Applause.]

Mr. TAWNEY. Mr. Speaker, I call for a vote.

Mr. WILLIAMS. Mr. Speaker, let us have the yeas and nays. The SPEAKER. The gentleman from Mississippi demands the yeas and nays.

Mr. FITZGERALD. Mr. Speaker, I think we should have a quorum when we are passing this important resolution, and I would respectfully suggest the absence of a quorum.

The SPEAKER. The gentleman from New York makes the point of order that there is not a quorum present. The point of order is sustained. The Doorkeeper will close the doors; the Sergeant-at-Arms will notify absent Members. As many as favor the motion will, when their names are called, answer "aye;" as many as are opposed will answer "no," and those present and not voting will answer "present;" and the Clerk will call the roll.

The question was taken, and there were—yeas 163, nays 31, answered "present" 15, not voting 179, as follows:

YEAS—163.

Adair	Dalzell	Howard	Overstreet

So the joint resolution was agreed to.

The Clerk announced the following pairs:

Until 2 o'clock:

Mr. ESCH with Mr. MURPHY.

For the day:

Mr. HENRY of Connecticut with Mr. CRAWFORD.

Until Monday morning:

Mr. LAFEAN with Mr. KIPP.

Until Monday:

Mr. CALDER with Mr. LINDSAY.

Until further notice:

Mr. POWERS with Mr. PRATT.

Mr. MADDEN with Mr. HARDWICK.

Mr. TOWNSEND with Mr. SHACKLEFORD.

Mr. BROWNLOW with Mr. BRUNDIDGE.

Mr. LANDIS with Mr. DIXON.

Mr. MOUSER with Mr. SHERWOOD.

Mr. SPERRY with Mr. HARRISON.

Mr. FAIRCHILD with Mr. ROBINSON.

Mr. KÜSTERMANN with Mr. LEAKE.

Mr. DRAPER with Mr. EDWARDS of Georgia.

Mr. HUGHES of West Virginia with Mr. HILL of Mississippi.

Mr. ACHESON with Mr. BURGESS.

Mr. CURRIER with Mr. LEE.

Mr. FULLER with Mr. DENVER.

Mr. MCGUIRE with Mr. STANLEY.

Mr. LORIMER with Mr. HUMPHREYS of Mississippi.

Mr. COOPER of Wisconsin with Mr. CARLIN.

Mr. DIEKEMA with Mr. WEBB.

Mr. AMES with Mr. BARTLETT of Georgia.

Mr. BINGHAM with Mr. LIVINGSTON.

Mr. BRADLEY with Mr. GRIGGS.

Mr. BIRDSALL with Mr. LAMAR of Missouri.

Mr. HULL of Iowa with Mr. CLAUDE KITCHIN.

Mr. CHANEY with Mr. FOSTER of Illinois.

Mr. DUNWELL with Mr. LAMAR of Florida.

Mr. FOSTER of Vermont with Mr. POU.

Mr. HINSHAW with Mr. LENAHA.

Mr. KNOPF with Mr. WEISSE.

Mr. ALLEN with Mr. LEVER.

Mr. MUDD with Mr. TALBOTT.

Mr. HASKINS with Mr. RUCKER.

For the session:

Mr. BENNET of New York with Mr. FORNES.

Mr. DENBY with Mr. HOESON.

Mr. JENKINS with Mr. LAMB.

Mr. DAVES with Mr. TAYLOR of Alabama.

Mr. COUSINS with Mr. FLOOD.

Mr. SHERMAN with Mr. RIORDAN.

Mr. WATSON with Mr. SHEPPARD.

Mr. CONNER with Mr. JOHNSON of South Carolina.

Mr. HIGGINS with Mr. KIMBALL.

Mr. FOSS with Mr. PADGETT.

Mr. MCGAVIN with Mr. McDERMOTT.

Mr. BANNON with Mr. OLLIE M. JAMES

The result of the vote was announced as above recorded.

The doors were opened.

APPOINTMENT.

The SPEAKER. The Chair announces the following appointment, if there be no objection.

There was no objection.

The Clerk read as follows:

The SPEAKER, W. P. HEPBURN, and J. J. FITZGERALD, to constitute, on and after July 1, 1908, the Commission to approve and direct the Superintendent of the Capitol Building and Grounds in his control and supervision of the House of Representatives Office Building, authorized by the sundry civil appropriation act, approved March 4, 1907.

[Applause].

RECESS.

Mr. PAYNE. Mr. Speaker, I move that the House do now take a recess until 3 o'clock p. m.

The SPEAKER. The gentleman from New York moves that the House take a recess until 3 o'clock p. m. to-day.

The question was taken and the Speaker announced that the ayes seemed to have it.

Mr. HEFLIN. The yeas and nays, Mr. Speaker.

Mr. WILLIAMS. Mr. Speaker, I demand the yeas and nays.

The yeas and nays were ordered.

Mr. PAYNE. Mr. Speaker, I make the point of order that no quorum is present.

Mr. WILLIAMS. Mr. Speaker, I make the point of order that the call of the roll has just disclosed the presence of a quorum, and that the point of order made by the gentleman from New York [Mr. PAYNE] is therefore dilatory.

Mr. PAYNE. I call the Chair's attention to the fact that a large number of Members have left the Hall since the roll call.

Mr. WILLIAMS. Mr. Speaker, some time ago I went through that performance, and the Speaker ruled I was dilatory. Members had left the Hall in exactly the same way.

The SPEAKER. The Chair will state to the gentleman from Mississippi [Mr. WILLIAMS] that it is perfectly evident to the Chair that the present point of order is dilatory. The Chair has counted the Members present and there are 135—no quorum. The Doorkeeper will close the doors; the Sergeant-at-Arms will notify absent Members. As many as favor the motion will, as their names are called, answer "yea;" as many as are opposed will answer "nay," and those present and not voting will answer "present;" and the Clerk will call the roll.

The question was taken, and there were—yeas 118, nays 76, answered "present" 16, not voting 178, as follows:

YEAS—118.

Ellis, Oreg.	Kinkaid	Parsons	
Englebright	Kipp	Pearse	

The SPEAKER. On this vote the yeas are 118, the nays 76, answering "present" 16—a quorum. The Doorkeeper will open the doors.

Pending the announcement of the vote, the Chair lays before the House the following request:

The Clerk read as follows:

WITHDRAWAL OF PAPERS.

Mr. EDWARDS of Kentucky asks leave to withdraw from the files of the House, without leaving copies, the papers in the case of A. B. Gilliland (H. R. 13124), Fifty-ninth Congress, no adverse report having been made thereon.

Mr. WILLIAMS. A point of order, Mr. Speaker. The Speaker has just announced the vote upon the proposition of taking a recess, and the vote shows that the House has taken a recess. Now, how can the House even have power to give unanimous consent after it has voted itself into recess?

The SPEAKER. It is not as yet declared. But the unbroken practice of the House has been, pending the announcement of the vote, to lay enrolled bills—

Mr. WILLIAMS. I understand it has been the practice.

The SPEAKER. And personal requests before the House pending the announcement of the vote. It is announced that a quorum is present. Of course, a single objection—

Mr. WILLIAMS. I understand that. I am not seeking to make an objection. I am endeavoring to secure a ruling. I know what the practice has been, and I believe that it has been loose, and I believe it has been wrong. I do not believe after a vote has been announced, showing the House has recessed itself, it is necessary to have any declaration from the Speaker at all.

The SPEAKER. Still, the Chair, without further examination, will adhere for the present, at least, to the uniform practice of the House for many decades.

Mr. WILLIAMS. Then I will ask the Chair to take that matter under consideration, because I propose at a future time to bring it to the attention of the Chair again, as I do think it a well-founded point of order. I do not make any objection to this request.

The SPEAKER. One moment. The Chair hears no objection to the request. Here is an additional request.

The Clerk read as follows:

Mr. GRIGGS of Georgia requests leave of absence for one week, on account of important business.

The SPEAKER. Is there objection?

Mr. WILLIAMS. I renew the point of order, but do not object.

The SPEAKER. The Chair hears none.

The result of the vote was then announced as above recorded, and accordingly (at 12 o'clock and 16 minutes p. m.) the House was declared in recess until 3 p. m.

AFTER RECESS.

The recess having expired, the House was called to order by the Speaker at 3 o'clock p. m.

INCREASE OF PENSIONS.

Mr. CALDERHEAD. Mr. Speaker, I ask unanimous consent for the consideration and passage of the bill which I send to the desk.

The SPEAKER. The gentleman from Kansas asks unanimous consent for the passage of the bill which was read this morning. The Clerk read as follows:

A bill (H. R. 22212) granting an increase of pension to Byron C. Mitchell, Calvin P. Lynn, and Harry S. Lee, formerly Albert Lee Allemen.

The SPEAKER. Is there objection?

Mr. WILLIAMS. Reserving the right to object, if the gentleman will ask unanimous consent for the consideration of the bill, I shall interpose no objection. If he insists on requiring consideration and passage both, I will be compelled to object.

The SPEAKER. The gentleman from Mississippi will recognize that if unanimous consent be given for the consideration of the bill, then the question of the passage may give possibility of a roll call. If the gentleman is of the same opinion about this bill as he was about the bill that was considered yesterday—

Mr. WILLIAMS. The Chair can draw its own conclusions from the past conduct of the "gentleman from Mississippi" in connection with bills like this. I will not object to the request for unanimous consent for consideration.

The SPEAKER. The Chair will recognize the gentleman from Kansas to move to suspend the rules.

Mr. CALDERHEAD. I move to suspend the rules and pass the bill.

The SPEAKER. The gentleman from Kansas moves to suspend the rules and pass the bill which has been read.

Mr. FITZGERALD. I demand a second.

The SPEAKER. Under the rule, a second is ordered. The gentleman from Kansas [Mr. CALDERHEAD] is entitled to twenty minutes, and the gentleman from New York [Mr. FITZGERALD] is entitled to twenty minutes.

Mr. CALDERHEAD. Mr. Speaker, this bill demands very little explanation. It provides for increasing the pensions of three old soldiers on the pension roll. Separate bills were passed by the Senate and a mistake was made in one case in the number of the regiment. In order to correct that the bill would have to be amended and be passed again by the Senate. In order to save the time of the House and of the Senate under present conditions, these three cases were included in one omnibus bill. I want to state concerning these three soldiers there are exceptional circumstances in behalf of each of them. They each require the constant attention of some other person; they are each of them dependent upon their pensions alone for their support and for their care and attention, and I thought it was right they should have this special consideration even after we had closed the regular pension work of the session.

Mr. HOLLIDAY. Will the gentleman allow me to ask him a question? I simply desire to inquire whether the House Committee on Invalid Pensions have reported upon this case?

Mr. CALDERHEAD. They reported on the case. A majority of the members of the committee have been seen upon the matter, and they deemed the report was proper.

Mr. HOLLIDAY. Well, I was not consulted, and never heard of it.

Mr. KEIFER. Have bills in favor of these persons passed the House before?

Mr. CALDERHEAD. They passed the Senate, but not the House.

Mr. KEIFER. Do the Committee on Invalid Pensions now recommend them?

Mr. CALDERHEAD. Yes, sir.

Mr. KEIFER. Then, do I understand this bill places upon the pension rolls three worthy soldiers?

Mr. CALDERHEAD. Yes, sir; it increases their pensions.

Mr. KEIFER. That is the only purpose?

Mr. CALDERHEAD. That is the only purpose.

Mr. FITZGERALD. Mr. Speaker, I regret very much that it is not possible also to pass a joint resolution in this House to provide for the payment of the pensions of 630,000 pensioners. I understand the gentleman from Minnesota [Mr. TAWNEY] has issued a statement that on account of the conditions in the House and the Senate, unless we finish up to-night there will be a stoppage of payment to the pensioners of the country. We have been in session twice to-day. On one occasion we took the time of the House to pass a joint resolution to prevent three employees from being separated from the pay roll. Now, we are about to put the names of three soldiers on the pension roll, properly, I think. We have been doing nothing else; we have been in recess. The Senate has so little to

do that it took a recess for thirty minutes. So that, as a matter of fact, if the Republicans of the two Houses of Congress, instead of taking recesses, had brought in a joint resolution to make available the money necessary to pay the pensioners and to provide funds for any other public service, there would not have been the slightest possibility of the Government breaking down because of anything that the Democrats have done. Everybody knows that the Democrats have done nothing and have not been permitted to do anything.

If we had been permitted to do things here, there are a number of beneficial bills pending that we would have gladly passed, thereby bringing relief to great hordes of the people. But, Mr. Speaker, this pending resolution is an important one. Through some oversight similar, I suppose, to the one that necessitated the joint resolution this morning, three men who faithfully served their country at some period of stress have not been provided with pensions in any of the bills passed at this session.

Mr. DALZELL. The gentleman is mistaken. This bill does not put these men on the pension roll for the first time. It is for an increase of pension. They are all of them helpless.

Mr. FITZGERALD. That is all the more reason why it should pass; and the only reason I was under a misapprehension as to whether it placed them on the pension roll or increased their pensions was that, owing to the size of this Hall and the feebleness of the voice of the gentleman in charge of this bill, I was unable to understand exactly what he was saying in explanation.

Mr. PAYNE. I should like to ask my colleague if he does not intend to vote for this bill as soon as he gets an opportunity?

Mr. FITZGERALD. As soon as I am able to arrive at that condition when I feel that a vote should be taken I hope to vote for it. I am sure every Democrat will vote for it, whatever may be the disposition of the followers of my distinguished colleague.

Mr. OLMSTED rose.

Mr. FITZGERALD. Does the gentleman from Pennsylvania [Mr. OLMSTED] intend to ask me a question or to make a point of order?

Mr. OLMSTED. If I had any intention at all, it was to ask the gentleman whether, being apparently in favor of the bill, he had demanded a second merely for the purpose of consuming the valuable time of the House in discussing a bill that everybody is anxious to vote for?

Mr. FITZGERALD. If the gentleman from Pennsylvania is opposed to this meritorious bill—

Mr. OLMSTED. No; I am not.

Mr. FITZGERALD. Or if he feels that he should have time to utilize in opposition to it, I will gladly surrender my right to control the time to the gentleman from Pennsylvania.

Mr. OLMSTED. I accept that privilege, Mr. Speaker, and I do not desire to occupy time further, but call for a vote. [Laughter.]

Mr. FITZGERALD. I said I should yield if the gentleman would state that he was opposed to the measure. But my purpose in detaining the House in session longer than the few minutes necessary or contemplated when we met was not only to accelerate the passage of this bill, but to prevent useless questions being asked of the gentleman in charge of it and to emphasize the fact that the distinguished chairman of the Committee on Appropriations, evidently in desperation, trying to blame the Democrats for so many things that have happened, has gone far out of the way to put upon what he calls a "filibuster" the responsibility for the failure of the Printing Office being open on Monday morning or of pensioners getting their pensions on the 4th of June.

Surely, with this House not in session, with the Members wondering how to kill time, and the Senate not detained, but taking a recess of thirty minutes, Congress could easily have passed all the resolutions that were necessary, and I hope that nobody will again charge the Democrats with filibustering. I know that the Record is going to be piled high with speeches of men who indulge in talk about a filibuster.

Mr. OLMSTED. Mr. Speaker, I really feel that I ought to raise the point of order that the gentleman is not discussing the bill before the House.

Mr. DOUGLAS. Does not the gentleman from New York think that this day, set apart by national law as a day dedicated to the memories of the war—

Mr. FITZGERALD. And of peace—

Mr. DOUGLAS (continuing). And the soldiers of the Union, would be a good time for the distinguished gentleman from Mississippi [Mr. WILLIAMS] not to call for the yeas and nays upon this vote, but by unanimous consent to permit these three heroes of the war to be pensioned without any delay?

Mr. FITZGERALD. Mr. Speaker, were it not for the point

of order made by the gentleman from Pennsylvania, I should favor him by answering that question, and hoping that he will be constrained to withhold it—

Mr. OLMSTED. I withhold the point.

Mr. FITZGERALD. I will yield five minutes to the gentleman from Mississippi to speak for himself, John. [Laughter.]

Mr. WILLIAMS. Mr. Speaker, I shall not take three minutes to say what I want to say in regard to this bill. There seems to be a strange inability in gentlemen to understand the difference between a request asking for consideration of a bill and a request asking for consideration and passage of a bill. Yet any man of intellectual honesty and common ability can understand the difference. The House has a right to know before it agrees to the passage of the measure what the measure is. Men may frequently be willing to grant unanimous consent to consider a measure, and subsequently vote for it, without being willing to grant consent beforehand to consider and pass the same bill. I shall continue to insist that no unanimous consents to consider and pass bills will be agreed to by the House. When a request for unanimous consent to consider is made, I shall grant it or not, in my discretion, and shall afterwards act on the other question concerning its passage as I think best when the question comes up for the passage of the bill.

In this particular matter this is a question of charity. This is a matter, as I understand it, of absolute need in connection with these men, and although I declined to tell the Speaker beforehand that I would not call for the yeas and nays, I have never had the slightest idea of doing so, and I have no idea of doing so now. [Applause.]

The SPEAKER. The question is on suspending the rules and passing the bill.

The question was taken, and the rules were suspended and the bill was passed.

MASONIC MUTUAL RELIEF ASSOCIATION OF DISTRICT OF COLUMBIA.

Mr. SMITH of Michigan. Mr. Speaker, I ask unanimous consent for the present consideration of the bill S. 6358.

The SPEAKER. The gentleman from Michigan asks unanimous consent to consider and pass the bill, or to pass the bill; the Chair will put it that way. The Clerk will report the bill.

The Clerk read as follows:

A bill (S. 6358) to amend an act entitled "An act to incorporate the Masonic Mutual Relief Association of the District of Columbia."

Mr. WILLIAMS. Mr. Speaker, it is useless to take up the time of the House to read the bill if that is the form of the request. I object.

Mr. SMITH of Michigan. Mr. Speaker, I move to suspend the rules and pass the bill.

The SPEAKER. The gentleman from Michigan moves to suspend the rules and pass the following Senate bill, which the Clerk will report.

The Clerk read as follows:

Be it enacted, etc., That the act entitled "An act to incorporate the Masonic Mutual Relief Association of the District of Columbia," approved March 3, 1869, be amended by striking out the word "Relief" and substituting therefor the word "Life" in the name of the association, so that as amended it shall read: "The Masonic Mutual Life Association of the District of Columbia."

The SPEAKER. Is a second demanded?

Mr. SIMS. Mr. Speaker, I demand a second.

The SPEAKER. Under the rule a second is ordered. The gentleman from Michigan is entitled to twenty minutes and the gentleman from Tennessee to twenty minutes.

Mr. SIMS. Mr. Speaker, I do not wish to take up any time. I demanded a second simply to ask an explanation of what the amendment was. There is so much confusion here I could not hear.

Mr. SMITH of Michigan. I will not take but a moment of the time of the House. The matter is very clearly stated in a letter contained in the report, and I would ask that the Clerk read the letter in my time.

The SPEAKER. The Clerk will read the letter in the time of the gentleman.

The Clerk read as follows:

THE MASONIC MUTUAL RELIEF ASSOCIATION
OF THE DISTRICT OF COLUMBIA,
Washington, D. C., May 13, 1908.

DEAR SIR: Complying with your request of yesterday, I send you herewith Senate bill No. 6358, together with copy of the report thereon by the Senate committee, referred to you as chairman of the subcommittee. In this connection I might add that changing the word "Relief" in the name of this association to the word "Life" does not in any way affect the mode of doing business by the association or its corporate powers or give it any additional rights or privileges.

In the District of Columbia we have the Masonic Board of Relief, and the Masonic Relief Association of the United States and Canada, in addition to this association. We find people confusing the three associations and also confusion in the mail. The purpose in the change in the name of this association is simply to avoid confusion and to more accurately designate the association. As the two other associations are for the purpose of granting temporary assistance to needy

brethren or their families and this association is an insurance organization, it is felt that the word "Life" would more clearly describe the nature of its business and sufficiently distinguish it from the other two associations; hence the request for the change.

We trust you will see your way clear to making favorable report upon the bill and securing its early passage.

Thanking you for your uniform courtesy,

Very truly, yours,

THE MASONIC MUTUAL RELIEF ASSOCIATION,
By WM. MONTGOMERY, Secretary.

Hon. JULIUS KAHN,
United States House of Representatives.

Mr. SIMS. Mr. Speaker, now that I understand what it is, I have no objection, and I do not desire to occupy any time.

Mr. SMITH of Michigan. Mr. Speaker, I do not desire to say anything further beyond what is stated in the letter, and unless some one desires to be heard I ask for a vote.

The question was taken.

The SPEAKER. In the opinion of the Chair, a majority having voted—

Mr. HEFLIN. Mr. Speaker, I ask for the yeas and nays.

The SPEAKER. In the opinion of the Chair, a majority having voted—

Mr. HEFLIN. Mr. Speaker, I withdraw the demand. I did not understand what it was, and therefore I call for the yeas and nays.

The SPEAKER. In the opinion of the Chair, a majority having voted in favor thereof, the rules are suspended and the bill is passed.

LEAVE OF ABSENCE.

By unanimous consent, Mr. GAINES of Tennessee was granted leave of absence for ten days, on account of sickness.

PRINTING REPORT OF INLAND WATERWAYS COMMISSION.

Mr. LANDIS. Mr. Speaker, I ask unanimous consent for the present consideration of the following Senate concurrent resolution.

The SPEAKER. The Chair will recognize the gentleman to suspend the rules.

Mr. LANDIS. Then, Mr. Speaker, I move to suspend the rules and pass the following Senate concurrent resolution.

The SPEAKER. The Clerk will report the same.

The Clerk read as follows:

Senate concurrent resolution 50.

Resolved by the Senate (the House of Representatives concurring). That there be printed and bound at the Government Printing Office 10,000 copies of the preliminary report of the Inland Waterways Commission, with illustrations, of which 5,000 copies shall be for the House of Representatives, 2,500 copies for the Senate, and 2,500 copies for the use of the Commission.

The SPEAKER. Is a second demanded?

Mr. WILLIAMS. Mr. Speaker, upon that I demand a second.

The SPEAKER. Under the rule a second is ordered. The gentleman from Indiana is entitled to twenty minutes and the gentleman from Mississippi to twenty minutes.

Mr. LANDIS. Mr. Speaker, I have no desire to occupy any time of the House.

Mr. WILLIAMS. Mr. Speaker, I merely want to consume a sufficient part of the time to inform this side of the House what the resolution is, so that they may understand why I shall not call the roll upon it. It is merely a resolution for certain printing of documents ready to be printed, so that they may be printed, bound, and circulated amongst Senators, Members of the House, and others. I merely wanted to take that much time to explain why I shall not call the roll.

The SPEAKER. The question is on agreeing to the concurrent resolution.

The question was taken, and the rules were suspended, and the concurrent resolution was agreed to.

PRINTING OF CERTAIN DOCUMENTS.

Mr. LANDIS. Mr. Speaker, I ask unanimous consent that the following documents be printed as public documents: A report of Mr. William S. Rossiter upon conditions prevailing in the Government Printing Office, and reply thereto by Charles A. Stillings, Public Printer, and a report by Mr. George C. Havenner on comparative costs of printing for the Executive Departments.

The SPEAKER. The gentleman from Indiana asks unanimous consent for the printing of two documents as public documents. The Clerk will give the title of the first report.

The Clerk read as follows:

"Report to the President by W. S. Rossiter upon conditions in the Government Printing Office." "Comparative cost of printing for the Executive Departments, etc."

The SPEAKER. Is there objection?

Mr. WILLIAMS. Mr. Speaker, reserving the right to object, I would like to ask what this is. We do not know what we are doing. What is the Havenner matter you are talking about?

Mr. LANDIS. This is a report made by Mr. Havenner, the chief of the division of printing in the Department of Commerce and Labor, in response to a request of the President, because of complaints made by the Departments that the cost of printing at that time, last January, was much in excess of what it was a year ago. He made a very exhaustive report.

Mr. WILLIAMS. Upon what authority of Congress or of law was it done? Was it done just by the order of the President?

Mr. LANDIS. By order of the President.

Mr. WILLIAMS. By what authority of law did the President issue that order?

Mr. LANDIS. I think the President—

Mr. WILLIAMS. Has a right to appoint commissions and investigate the Departments whenever he pleases? Mr. Speaker, I object to the latter part of that. The Chair might put the request separately—the Rossiter report and the other.

The SPEAKER. Is there objection to printing, as a public document, the Rossiter report? [After a pause.] The Chair hears none.

Mr. MANN. I would like to ask the gentleman what he means by saying, "to print as a public document the usual number?"

Mr. LANDIS. The usual number as a document.

The SPEAKER. The Chair hears no objection to the printing of the Rossiter report, but does hear objection to the other.

LIFE-SAVING APPARATUS, FARALLONE ISLANDS.

Mr. KAHN. Mr. Speaker, I ask to suspend the rules and pass the Senate bill which I send to the Clerk's desk.

The SPEAKER. The gentleman from California [Mr. KAHN] moves to suspend the rules and pass the following Senate bill, which the Clerk will report.

The Clerk read as follows:

An act (S. 5983) authorizing certain life-saving apparatus to be placed at the Farallone Islands, off the coast of California.

Be it enacted, etc. That the Secretary of the Treasury is hereby authorized to cause a Lyle gun and the necessary beach apparatus used in connection with it to be placed at the Farallone Islands, off the coast of California, at such point as the General Superintendent of the Life-Saving Service may recommend, and to furnish ammunition for said gun and make repairs to the apparatus from time to time as necessary.

SEC. 2. That the Secretary of the Treasury is hereby authorized to detail an experienced surfman from one of the life-saving stations on the coast of California for duty at the Farallone Islands for a sufficient time to instruct and drill the inhabitants of the islands as to the proper use and care of the life-saving apparatus.

Mr. WILLIAMS. Mr. Speaker, I demand a second.

The SPEAKER. Under the rules, a second is ordered. The gentleman from California [Mr. KAHN] is entitled to twenty minutes and the gentleman from Mississippi [Mr. WILLIAMS] is entitled to twenty minutes.

Mr. KAHN. Mr. Speaker, this bill provides for life-saving apparatus on the Farallone Islands. These islands are 20 miles distant from the Golden Gate. At the present time there is no life-saving station on those islands. There have been four wrecks there, but fortunately there has been no loss of life up to the present time. However, at the time of the last wreck the life-saving crew at Point Lobos had to row a distance of 29 miles to take the men off the vessel and row back 29 miles to a place of safety. There are enough men on the island to man one of these life-saving outfits, and they are willing to do it. All that is asked is that an experienced surfman be allowed to go there and instruct this volunteer crew how to handle the apparatus. That is all there is to the bill.

I yield to the gentleman from Illinois [Mr. MANN] such time as he may desire.

Mr. MANN. Mr. Speaker, this bill received, I may say, very careful consideration by the Committee on Interstate and Foreign Commerce. Objection was made to it when it first came in, but after an examination of the facts in connection with the matter the committee was unanimously of the opinion that in this case the Government might well furnish to the islands the life-saving apparatus, to be used by people on the islands, in place of establishing a new life-saving station at that place. The furnishing of the life-saving apparatus will probably accomplish the needed purposes, and of course is far less expensive to the Government than the establishment and maintenance of a life-saving station there. Undoubtedly something needs to be done by the Government at that place.

Mr. KAHN. Mr. Speaker, I reserve the balance of my time.

Mr. WILLIAMS. Mr. Speaker, this seems, from the encomiums passed upon it by the gentleman from California [Mr. KAHN] and by the report given of its committee course by the gentleman from Illinois [Mr. MANN], to be a very deserving bill. I shall reserve the balance of my time.

Mr. KAHN. I call for a vote, Mr. Speaker.

The question was taken, and the Speaker announced that the ayes seemed to have it.

Mr. WILLIAMS. Mr. Speaker, I ask for the yeas and nays. It is such a good bill that I want to vote for it on the record.

The yeas and nays were ordered.

Mr. KAHN. Mr. Speaker, I make the point of order that no quorum is present.

The SPEAKER. The point of order is sustained. The Doorkeeper will close the door; the Sergeant-at-Arms will notify absent Members; as many as favor the motion will, as their names are called, answer "yea;" as many as are opposed will answer "nay;" those present and not voting will answer "present," and the Clerk will call the roll.

The question was taken, and there were—yeas 185, answered "present" 16, not voting 187, as follows:

YEAS—185.

The following additional pairs were announced:

Until further notice:

Mr. SOUTHWICK with Mr. UNDERWOOD.

Mr. KNOWLAND with Mr. GAINES of Tennessee.

For the balance of the session:

Mr. WASHBURN with Mr. SHERLEY.

The SPEAKER pro tempore (Mr. GAINES of West Virginia). On this question the yeas are 185, the nays are 0, present 16; a quorum; the Doorkeeper will open the doors; the ayes have it; the rules are suspended and the bill is passed.

MESSAGE FROM THE SENATE.

A message from the Senate, by Mr. CROCKETT, its reading clerk, announced that the Senate had agreed to the report of the committee of conference on the disagreeing votes of the two Houses on the amendment of the Senate to the bill (H. R. 21871) to amend the national banking laws.

MEMORIAL UNIVERSITY, IOWA.

Mr. HAUGEN. Mr. Speaker, I move to suspend the rules, discharge the Committee of the Whole House on the state of the Union from the further consideration of the bill H. R. 20658, and that the bill be passed.

The SPEAKER pro tempore. The gentleman from Iowa moves to suspend the rules and pass the bill which the Clerk will report.

Mr. WILLIAMS. A parliamentary inquiry, Mr. Speaker.

The SPEAKER pro tempore. The gentleman will state it.

Mr. WILLIAMS. I understood the gentleman from Iowa to move to suspend the rules, discharge the Committee of the Whole House on the state of the Union from the further consideration of the bill, and pass the bill.

The SPEAKER pro tempore. The Chair was unable to hear the gentleman from Iowa.

Mr. WILLIAMS. I submit that the Chair stated only the first and last propositions.

The SPEAKER pro tempore. What was the motion of the gentleman from Iowa?

Mr. HAUGEN. To suspend the rules, discharge the Committee of the Whole House on the state of the Union from the further consideration of the bill H. R. 20658, and to pass the bill.

The SPEAKER pro tempore. The gentleman from Iowa moves to suspend the rules, discharge the Committee of the Whole House on the state of the Union from the further consideration of the bill which the Clerk will report, and pass the bill.

The Clerk read as follows:

A bill (H. R. 20658) authorizing the issue of equipment of arms, ammunition, and such accoutrement as accompany same, for target practice, to the Memorial University, Mason City, Iowa.

Be it enacted, etc., That the Secretary of War is hereby authorized to issue, without cost of transportation to the United States, to the Memorial University, of Mason City, Iowa, 125 guns, with suitable equipment and ammunition, for target practice and for the purpose of drill and instructions. And the Secretary of War shall require from said institution a bond double the value of the property issued, for the care and safe-keeping thereof, and for the return of the same to the United States when required.

The SPEAKER pro tempore. Is a second demanded?

Mr. WILLIAMS. I demand a second.

The SPEAKER pro tempore. Under the rule a second is ordered. The gentleman from Iowa [Mr. HAUGEN] is entitled to twenty minutes, and the gentleman from Mississippi [Mr. WILLIAMS] is entitled to twenty minutes.

Mr. HAUGEN. Mr. Speaker, the bill authorizes the Secretary of War to furnish the Memorial University at Mason City, Iowa, with 125 guns, with suitable equipment and ammunition, for target practice, for drill and instruction, without cost to the Government for transportation.

Mr. WILLIAMS. With the usual bond?

Mr. HAUGEN. With the usual bond.

Mr. FITZGERALD. What kind of guns are they? Are they Springfield rifles, Krag-Jörgenssens, or new Army rifles?

Mr. HAUGEN. The regular Krag-Jörgenssens rifles.

Mr. FITZGERALD (continuing). Or 16-inch guns?

Mr. HAUGEN. I am informed by the Department that it has available for issue and that it can accommodate this institution in this way. The act of June 30, 1906, authorizes the Secretary of War to furnish them to State and Territorial institutions.

Mr. WILLIAMS. The gentleman from New York this morning made the point of order against me that I was occupying a Senatorial attitude which Members of the House should not attempt. I make that point against the gentleman.

Mr. MANN. But the gentleman from Iowa is not subject to that point of order, as he had both feet on the floor.

Mr. DAWSON. May I ask my colleague a question?

Mr. HAUGEN. Certainly.

Mr. DAWSON. This Memorial University was instituted by Sons of Veterans, was it not?

Mr. HAUGEN. This institution was founded by Sons of Veterans and maintained largely by the Grand Army of the Republic and Women's Relief Corps, and is a matter of national interest, and there should be no opposition to the passage of the bill. The institution will have to give the usual bond required in cases where arms and ammunition go to the State institutions, and there is a provision in the bill that they shall be returned whenever required. I yield to my colleague.

Mr. DAWSON. Mr. Speaker, it seems to me that on this 30th day of May it would be peculiarly fitting to pass this measure without one dissenting vote. [Applause.]

Mr. HAUGEN. I will not at this time detain the House by making a speech. I reserve the balance of my time and ask for a vote.

Mr. WILLIAMS. Mr. Speaker, I go further than the gentleman who last spoke. On this Memorial Day, in order to show all succeeding generations our patriotism, we ought not only to pass this bill but we ought to go on record in favor of it, and I hope when the roll is called, for which an opportunity will be given, it will disclose the fact that every Member present is in favor of the passage of the bill. [Laughter.]

The SPEAKER pro tempore. As many as favor suspending the rules and discharging the Committee of the Whole House on the state of the Union from the further consideration of the bill and passing the bill will say "aye," those opposed "no."

Mr. WILLIAMS. Mr. Speaker, I demand the yeas and nays. The yeas and nays were ordered.

Mr. HEFLIN. Mr. Speaker, I make the point of order that there is no quorum present.

The SPEAKER pro tempore. The gentleman from Alabama makes the point of order that there is no quorum present. Evidently there is no quorum present. The Doorkeeper will close the doors, the Sergeant-at-Arms will notify absent Members; as many as are in favor of the motion will answer "aye," those opposed will answer "no," those present and not voting will answer "present," and the Clerk will call the roll.

The question was taken, and there were—yeas 188, answered "present" 18, not voting 182, as follows:

YEAS—188.

Adair	Driscoll	Howell, N. J.	Payne
Adamson	Dwight	Howell, Utah	Pollard
Aiken	Edwards, Ky.	Howland	Porter

The Clerk announced the following additional pair:

Until further notice:

Mr. LOUDENSLAGER with Mr. BURLESON.

Mr. BANNON. I voted "aye," but I am paired with the gentleman from Kentucky [Mr. OLLIE M. JAMES] and I desire to change my vote to "present."

The SPEAKER. On this vote the yeas are 188, present 18—a quorum. The Doorkeeper will open the doors; the yeas have it, and the bill is passed.

CONFERENCE REPORT, PUBLIC-BUILDINGS BILL.

Mr. BARTHOLDT. Mr. Speaker, I move to suspend the rules and agree to the conference report on the bill (H. R. 21897) to increase the limit of cost of certain public buildings, to authorize the enlargement, the extension, remodeling, and improvement of certain public buildings, to authorize the erection and completion of public buildings, to authorize the purchase of sites for public buildings, and for other purposes, which I send to the desk. I ask unanimous consent that the reading of the report may be dispensed with and the statement read in lieu thereof.

Mr. WILLIAMS. I object to that.

Mr. BARTHOLDT. It is well known to all of the Members, and I ask unanimous consent to make a statement in order to explain it.

Mr. WILLIAMS. To that I object.

The SPEAKER. The Clerk will read the conference report. The Clerk read as follows:

CONFERENCE REPORT.

The committee of conference on the disagreeing votes of the two Houses on the amendments of the Senate to the bill (H. R. 21897) to increase the limit of cost of certain public buildings, to authorize the enlargement, extension, remodeling, or improvement of certain public buildings, to authorize the erection and completion of public buildings, to authorize the purchase of sites for public buildings, and for other purposes, having met, after full and free conference have agreed to recommend and do recommend to their respective Houses as follows:

That the Senate recede from its amendments numbered 2, 6, 9, 18, 31, 41, 50, 55, 57, 58, 67, 78, 79, 81, 84, 92, 109, 111, 112, 125, 127, 136, 138, 169, 173, 174, 176, 183, 184, 197, 198, 199, 200, 203.

That the House recede from its disagreement to the amendments of the Senate numbered 1, 4, 5, 7, 11, 12, 14, 15, 16, 17, 22, 23, 24, 26, 30, 32, 35, 37, 38, 39, 40, 42, 43, 45, 46, 47, 49, 51, 52, 53, 59, 61, 62, 63, 64, 65, 70, 72, 73, 76, 77, 80, 88, 89, 91, 93, 94, 95, 96, 97, 98, 99, 100, 101, 102, 106, 110, 116, 118, 120, 121, 126, 128, 130, 131, 132, 133, 134, 135, 137, 139, 140, 141, 142, 143, 144, 146, 147, 148, 149, 150, 151, 152, 153, 155, 156, 157, 158, 159, 160, 161, 162, 163, 164, 165, 166, 167, 168, 170, 171, 172, 177, 178, 179, 194, 201, and agree to the same.

Amendment numbered 19: That the House recede from its disagreement to the amendment of the Senate numbered 19, and agree to the same with an amendment, so that same shall read as follows: "United States post-office and court-house at Cleveland, Ohio, seven hundred and seventy-five thousand dollars;" also, on page 9 of the bill, in line 4, strike out the word "eighty" and insert in lieu thereof the words "one hundred;" and the Senate agree to the same.

Amendment numbered 20: That the House recede from its disagreement to the amendment of the Senate numbered 20, and agree to the same with an amendment, so that same shall read as follows: "United States post-office at Toledo, Ohio, fifty thousand dollars;" and the Senate agree to the same.

Amendment numbered 21: That the House recede from its disagreement to the amendment of the Senate numbered 21, and agree to the same with an amendment, so that same shall read as follows: "United States post-office at Charleroi, Pa., forty thousand dollars;" and the Senate agree to the same.

Amendment numbered 25: That the House recede from its disagreement to the amendment of the Senate numbered 25, and agree to the same with an amendment, so that same shall read as follows: "United States post-office and court-house at Salt Lake City, Utah, one hundred and seventy-five thousand dollars: *Provided*, That not to exceed forty thousand dollars may be available for the acquisition of additional ground;" and the Senate agree to the same.

Amendment numbered 27: That the House recede from its disagreement to the amendment of the Senate numbered 27, and agree to the same with an amendment, so that same shall read as follows: "*Provided*, That of the amount heretofore authorized so much as may be necessary shall be available for the acquisition of a suitable site;" and the Senate agree to the same.

Amendment numbered 3: That the House recede from its disagreement to the amendment of the Senate numbered 3, and agree to the same with an amendment, so that same shall read as follows: "United States post-office and court-house at Colorado Springs, Colo., fifteen thousand dollars, said increase to be employed in substituting granite for sandstone;" and the Senate agree to the same.

Amendment numbered 8: That the House recede from its disagreement to the amendment of the Senate numbered 8, and agree to the same with an amendment, so that same shall read as follows: "*Provided*, That not to exceed six thousand two hundred and fifty dollars may be available for the acquisition of additional ground;" and the Senate agree to the same.

Amendment numbered 10: That the House recede from its disagreement to the amendment of the Senate numbered 10, and agree to the same with an amendment, so that same shall read as follows: "United States post-office at Portland, Me., ninety thousand dollars: *Provided*, That not to exceed twenty thousand dollars may be available for the acquisition of additional ground;" and the Senate agree to the same.

Amendment numbered 13: That the House recede from its disagreement to the amendment of the Senate numbered 13, and agree to the same with an amendment to read as follows: "United States post-office and court-house at Duluth, Minn., \$95,000, for additional ground: *Provided*, That if at any time, should any portion of the ground now owned or hereafter to be acquired by the Government be used for street, park, or other purposes by the city of Duluth, the Secretary of the Treasury be, and he is hereby, authorized, in his discretion, to sell to said city any part of such ground, on such terms as he may deem to be for the best interests of the United States, and to deposit the proceeds of said sale in the Treasury of the United States, as a miscellaneous receipt: *Provided further*, That in no case shall any portion of the ground now owned or hereafter to be acquired by the Government be sold for less than its fair market value."

(On page 7 of the bill strike out lines 1, 2, and 3, and on page 42 insert the above section after line 2.)

And the Senate agree to the same.

Amendment numbered 28: That the House recede from its disagreement to the amendment of the Senate numbered 28, and agree to the same with an amendment, so that same shall read as follows: "United States post-office at Grafton, W. Va., fifteen thousand dollars, in addition to ten thousand dollars heretofore authorized."

(On page 11 of the bill strike out line 25; on page 12 strike out lines 1 to 9, both inclusive, and insert the above section on page 49 of the bill after line 4.)

And the Senate agree to the same.

Amendment numbered 29: That the House recede from its disagreement to the amendment of the Senate numbered 29, and agree to the same with an amendment, so that same shall read as follows: "United States post-office and court-house at

Wheeling, W. Va., twenty thousand dollars: *Provided*, That the Secretary of the Treasury be, and he is hereby, authorized, in his discretion, to sell the old post-office, court-house, and custom-house building, and the site thereof, situate at the corner of Market and Sixteenth streets, in the city of Wheeling and State of West Virginia, at public or private sale, after proper advertisement, at such time and on such terms as he may deem to be to the best interests of the United States, and to execute a quitclaim deed to the purchaser thereof, and to deposit the proceeds of said sale in the Treasury of the United States as a miscellaneous receipt: *Provided*, That said building and site shall not be sold for any less sum than one hundred thousand dollars;" and the Senate agree to the same.

Amendment numbered 33: That the House recede from its disagreement to the amendment of the Senate numbered 33, and agree to the same with an amendment, so that same shall read as follows: "United States post-office and court-house at Wilmington, Del., one hundred and twenty thousand dollars;" and the Senate agree to the same.

Amendment numbered 34: That the House recede from its disagreement to the amendment of the Senate numbered 34, and agree to the same with an amendment, so that same shall read as follows: "United States post-office and court-house at Augusta, Ga., two thousand dollars;" and the Senate agree to the same.

Amendment numbered 36: That the House recede from its disagreement to the amendment of the Senate numbered 36, and agree to the same with an amendment, so that same shall read as follows: "United States post-office and court-house at Quincy, Ill., one hundred thousand dollars;" and the Senate agree to the same.

Amendment numbered 44: That the House recede from its disagreement to the amendment of the Senate numbered 44, and agree to the same with an amendment, so that same shall read as follows: "United States post-office at Hoboken, N. J., sixty thousand dollars: *Provided*, That not to exceed twenty thousand dollars may be available for the acquisition of additional ground;" and the Senate agree to the same.

Amendment numbered 48: That the House recede from its disagreement to the amendment of the Senate numbered 48, and agree to the same with an amendment, so that same shall read as follows: "United States post-office and court-house at Danville, Va., sixty thousand dollars;" and the Senate agree to the same.

Amendment numbered 54: That the House recede from its disagreement to the amendment of the Senate numbered 54, and agree to the same with an amendment, so that same shall read as follows: "United States post-office at Peru, Ind., seventy-five thousand dollars;" and the Senate agree to the same.

Amendment numbered 56: That the House recede from its disagreement to the amendment of the Senate numbered 56, and agree to the same with an amendment, so that same shall read as follows: "United States post-office at Shenandoah, Iowa, fifty thousand dollars;" and the Senate agree to the same.

Amendment numbered 60: That the House recede from its disagreement to the amendment of the Senate numbered 60, and agree to the same with an amendment, so that same shall read as follows: "United States post-office at Missoula, Mont., one hundred and fifteen thousand dollars;" and the Senate agree to the same.

Amendment numbered 66: That the House recede from its disagreement to the amendment of the Senate numbered 66, and agree to the same with an amendment, so that same shall read as follows: "United States post-office at Jonesboro, Ark., eighty thousand dollars;" and the Senate agree to the same.

Amendment numbered 68: That the House recede from its disagreement to the amendment of the Senate numbered 68, and agree to the same with an amendment, so that same shall read as follows: "United States post-office at Riverside, Cal., one hundred and ten thousand dollars;" and the Senate agree to the same.

Amendment numbered 69: That the House recede from its disagreement to the amendment of the Senate numbered 69, and agree to the same with an amendment, so that same shall read as follows: "United States post-office at Bristol, Conn., ninety thousand dollars, of which amount not to exceed thirty thousand dollars may be available for the acquisition of a suitable site: *Provided*, That the requirement herein contained that all sites selected under the provisions of this act shall be bounded on at least two sides by streets shall not be applicable to the acquisition of a site at Bristol;" and the Senate agree to the same.

Amendment numbered 71: That the House recede from its disagreement to the amendment of the Senate numbered 71, and agree to the same with an amendment, so that same shall read as follows: "United States post-office, court-house, and

custom-house at Miami, Fla., one hundred and seventy-five thousand dollars;" and the Senate agree to the same.

Amendment numbered 74: That the House recede from its disagreement to the amendment of the Senate numbered 74, and agree to the same with an amendment, so that same shall read as follows: "United States post-office at Independence, Kans., seventy-five thousand dollars;" and the Senate agree to the same.

Amendment numbered 75: That the House recede from its disagreement to the amendment of the Senate numbered 75, and agree to the same with an amendment, so that same shall read as follows: "United States post-office at Parsons, Kans., seventy-five thousand dollars;" and the Senate agree to the same.

Amendment numbered 82: That the House recede from its disagreement to the amendment of the Senate numbered 82, and agree to the same with an amendment, so that same shall read as follows: "United States post-office at Maryville, Mo., fifty thousand dollars;" and the Senate agree to the same.

Amendment numbered 83: That the House recede from its disagreement to the amendment of the Senate numbered 83, and agree to the same with an amendment, so that same shall read as follows: "United States post-office at Goldfield, Nev., seventy-five thousand dollars;" and the Senate agree to the same.

Amendment numbered 85: That the House recede from its disagreement to the amendment of the Senate numbered 85, and agree to the same with an amendment, so that same shall read as follows: "United States post-office at Plainfield, N. J., one hundred thousand dollars;" and the Senate agree to the same.

Amendment numbered 86: That the House recede from its disagreement to the amendment of the Senate numbered 86, and agree to the same with an amendment, so that same shall read as follows: "United States post-office and court-house at Roswell, N. Mex., one hundred and twenty-five thousand dollars;" and the Senate agree to the same.

Amendment numbered 87: That the House recede from its disagreement to the amendment of the Senate numbered 87, and agree to the same with an amendment, so that same shall read as follows: "United States post-office at Wilson, N. C., sixty thousand dollars;" and the Senate agree to the same.

Amendment numbered 90: That the House recede from its disagreement to the amendment of the Senate numbered 90, and agree to the same with an amendment, so that same shall read as follows:

"That for the purpose of beginning the construction of a suitable and commodious fireproof building for the accommodation of the United States post-office, United States courts, and other governmental offices at Muskogee, Okla., fifty thousand dollars: *Provided*, That this authorization shall not be construed as fixing the limit of cost of said building at the sum hereby named, but the building hereby provided for shall be constructed or planned so as to cost, complete, including fireproof vaults, heating and ventilating apparatus, and approaches, but exclusive of site, not exceeding two hundred thousand dollars.

"The Secretary of the Treasury be, and he is hereby, authorized and directed to enter into contracts for the construction of a suitable building for said purposes, to be designated by said Department, within the ultimate limit of cost above mentioned: *Provided*, That of the amount fixed as the ultimate limit of cost not to exceed fifty thousand dollars may be expended during the fiscal year ending June thirtieth, nineteen hundred and nine."

On page 33 of the bill strike out all of lines 3 and 4, and insert the section on page 63, after line 25.

And the Senate agree to the same.

Amendment numbered 103: That the House recede from its disagreement to the amendment of the Senate numbered 103, and agree to the same with an amendment so that same shall read as follows: "United States post-office and court-house at Big Stone Gap, Va., one hundred thousand dollars."

Also, on page 36, in line 1, after the word "post-office," insert the words "and court-house."

And the Senate agree to the same.

Amendment numbered 104: That the House recede from its disagreement to the amendment of the Senate numbered 104, and agree to the same with an amendment, so that same shall read as follows: "United States post-office and custom-house at Everett, Wash., one hundred and thirty thousand dollars;" and the Senate agree to the same.

Amendment numbered 105: That the House recede from its disagreement to the amendment of the Senate numbered 105, and agree to the same with an amendment, so that same shall read as follows: "United States post-office and court-house at Walla Walla, Wash., one hundred and forty thousand dollars;" and the Senate agree to the same.

Amendment numbered 107: That the House recede from its disagreement to the amendment of the Senate numbered 107,

and agree to the same with an amendment, so that same shall read as follows: "*Provided*, That of this amount so much as may be necessary shall be available for the acquisition of a suitable site;" and the Senate agree to the same.

Amendment numbered 108: That the House recede from its disagreement to the amendment of the Senate numbered 108, and agree to the same with an amendment, so that same shall read as follows: "United States post-office at Rock Springs, Wyo., seventy-five thousand dollars;" and the Senate agree to the same.

Amendment numbered 113: That the House recede from its disagreement to the amendment of the Senate numbered 113, and agree to the same with an amendment, so that same shall read as follows: "United States post-office at Greeley, Colo., fifteen thousand dollars;" and the Senate agree to the same.

Amendment numbered 114: That the House recede from its disagreement to the amendment of the Senate numbered 114, and agree to the same with an amendment, so that same shall read as follows:

"United States post-office at Live Oak, Fla., seven thousand five hundred dollars.

"United States post-office at Lewes, Del., five thousand dollars."

And the Senate agree to the same.

Amendment numbered 115: That the House recede from its disagreement to the amendment of the Senate numbered 115, and agree to the same with an amendment, so that same shall read as follows: "United States post-office and court-house at Augusta, Ga., thirty-five thousand dollars;" and the Senate agree to the same.

Amendment numbered 117: That the House recede from its disagreement to the amendment of the Senate numbered 117, and agree to the same with an amendment, so that same shall read as follows: "United States post-office at Cartersville, Ga., seven thousand five hundred dollars;" and the Senate agree to the same.

Amendment numbered 119: That the House recede from its disagreement to the amendment of the Senate numbered 119, and agree to the same with an amendment, so that same shall read as follows: "United States post-office at Chicago, Ill., one million two hundred and fifty thousand dollars;" and the Senate agree to the same.

Amendment numbered 122: That the House recede from its disagreement to the amendment of the Senate numbered 122, and agree to the same with an amendment, so that same shall read as follows: "United States post-office at Abilene, Kans., seven thousand five hundred dollars;" and the Senate agree to the same.

Amendment numbered 123: That the House recede from its disagreement to the amendment of the Senate numbered 123, and agree to the same with an amendment, so that same shall read as follows: "United States post-office at Bardstown, Ky., ten thousand dollars;" and the Senate agree to the same.

Amendment numbered 124: That the House recede from its disagreement to the amendment of the Senate numbered 124, and agree to the same with an amendment, so that same shall read as follows: "United States post-office at Cynthiana, Ky., ten thousand dollars;" and the Senate agree to the same.

Amendment numbered 129: That the House recede from its disagreement to the amendment of the Senate numbered 129, and agree to the same with an amendment, so that same shall read as follows: "United States post-office at Aurora, Mo., ten thousand dollars;" and the Senate agree to the same.

Amendment numbered 145: That the House recede from its disagreement to the amendment of the Senate numbered 145, and agree to the same with an amendment, so that same shall read as follows: "United States post-office at Bellaire, Ohio, twenty thousand dollars;" and the Senate agree to the same.

Amendment numbered 154: That the House recede from its disagreement to the amendment of the Senate numbered 154, and agree to the same with an amendment, so that same shall read as follows: "United States post-office at Brookings, S. Dak., seven thousand five hundred dollars;" and the Senate agree to the same.

Amendment numbered 175: That the Senate recede from its disagreement to the amendment of the Senate numbered 175, and agree to the same with an amendment, so that same shall read as follows:

"Sec. 12. That the provision contained in the act approved June 30, 1906, authorizing and directing the Secretary of the Treasury to acquire, by purchase, condemnation, or otherwise, such additional land as he may deem necessary for the enlargement of the present site and to enter into contracts for the enlargement, extension, remodeling, or improvement of the United States subtreasury building at San Francisco, Cal., at a limit

of cost of three hundred and seventy-five thousand dollars, be, and the same is hereby, amended so as to authorize and direct the Secretary of the Treasury, in his discretion, to acquire, by purchase, condemnation, or otherwise, a suitable new site for or to enlarge the present site of the United States subtreasury at San Francisco, Cal., at a cost not to exceed the said sum of three hundred and seventy-five thousand dollars."

And the Senate agree to the same.

Amendment numbered 180: That the House recede from its disagreement to the amendment of the Senate numbered 180, and agree to the same with an amendment, so that same shall read as follows: "Provided, That such plans and estimates be prepared under the direction of the Secretary of the Treasury;" and the Senate agree to the same.

Amendment numbered 181: That the House recede from its disagreement to the amendment of the Senate numbered 181, and agree to the same with an amendment, so that same shall read as follows:

"SEC. 17. That a commission consisting of the Assistant Secretary of War, the general commanding the militia of the District of Columbia, the officer in charge of public buildings and grounds at Washington, D. C., and the Superintendent of the United States Capitol Building and Grounds be, and is hereby, created, which shall cause plans and estimates to be prepared for a suitable armory for the National Guard of the District of Columbia, and report the estimated cost thereof to the Congress: *Provided*, That such plans and estimates be prepared under the supervision of the Secretary of the Treasury.

"And for the expense of said commission a sum not to exceed two thousand five hundred dollars is hereby appropriated, out of any money in the Treasury not otherwise appropriated, to be expended on vouchers approved by the chairman of said commission."

And the Senate agree to the same.

Amendment numbered 186: That the House recede from its disagreement to the amendment of the Senate numbered 186, and agree to the same with an amendment, so that same shall read as follows: "Two hundred and fifty thousand dollars;" and the Senate agree to the same.

Amendment numbered 192: That the House recede from its disagreement to the amendment of the Senate numbered 192, and agree to the same with an amendment, so that same shall read as follows: "Three hundred thousand dollars;" and the Senate agree to the same.

Amendment numbered 202: That the House recede from its disagreement to the amendment of the Senate numbered 202, and agree to the same with an amendment as follows: On page 82, in line 16, strike out the number "31" and insert in lieu thereof the number "27;" and the Senate agree to the same.

Amendment numbered 204: That the House recede from its disagreement to the amendment of the Senate numbered 204, and agree to the same with an amendment, so that same shall read as follows:

"SEC. 28. That the Secretary of the Treasury be, and he is hereby, authorized and directed to acquire, by purchase, condemnation, or otherwise, for the use and accommodation of the United States Departments of State, Justice, and Commerce and Labor, the whole of squares numbered two hundred and twenty-six, two hundred and twenty-seven, two hundred and twenty-eight, two hundred and twenty-nine, and two hundred and thirty, in the city of Washington, D. C., and the sum of two million five hundred thousand dollars, or so much thereof as may be necessary to pay for the land so acquired, is hereby authorized.

"That part of C street, Ohio avenue, D street, and E street lying between the squares named herein is hereby made a part of the site authorized by this act. That should the Secretary of the Treasury decide to institute condemnation proceedings in order to secure any or all of the land herein authorized to be acquired, such proceedings shall be in accordance with the provisions of the act of Congress approved August thirtieth, eighteen hundred and ninety, providing a site for the enlargement of the Government Printing Office (United States Statutes at Large, volume twenty-six, chapter eight hundred and thirty-seven)."

And the Senate agree to the same.

Amendment numbered 205: That the House recede from its disagreement to the amendment of the Senate numbered 205, and agree to the same with an amendment as follows: On page 84 of the bill, in line 15, after the word "million," strike out the word "eight" and insert in lieu thereof the word "six," so that said section shall read as follows:

"SEC. 29. That for the purpose of beginning the construction of a suitable and commodious fireproof building for the accommodation of the United States post-office, United States courts, and other governmental offices at Denver, Colo., fifty thou-

sand dollars: *Provided*, That this authorization shall not be construed as fixing the limit of cost of said building at the sum hereby named, but the building hereby provided for shall be constructed or planned so as to cost, complete, including fireproof vaults, heating and ventilating apparatus, and approaches, but exclusive of site, not exceeding one million six hundred thousand dollars.

"That the Secretary of the Treasury be, and he is hereby, authorized and directed to enter into contracts for the construction of a suitable building for said purposes, to be designated by said Department, within the ultimate limit of cost above mentioned: *Provided*, That of the amount fixed as the ultimate limit of cost not to exceed fifty thousand dollars may be expended during the fiscal year ending June thirtieth, nineteen hundred and nine."

And the House agree to the same.

Amendment numbered 206: That the House recede from its disagreement to the amendment of the Senate numbered 206, and agree to the same with an amendment, so that same shall read as follows:

"SEC. 30. That the sum of ten thousand dollars be, and the same is hereby, authorized, out of any money in the Treasury not otherwise appropriated, to be expended under the direction of the Secretary of War, to aid in the erection and completion of a memorial structure at Point Pleasant, W. Va., to commemorate the battle of the Revolution fought at that point between the colonial troops and Indians October tenth, seventeen hundred and seventy-four: *Provided*, That no part of said appropriation shall be expended until the site and plans for said monument or memorial shall be approved by the Secretary of War and the grounds on which said monument or memorial is to be located shall be dedicated to the use of the public and provisions is made for opening and maintaining an open highway thereto."

And the Senate agree to the same.

Amendment numbered 182: That the Senate recede from its disagreement to the amendment of the Senate numbered 182, and agree to the same with an amendment as follows: Strike out "16" and insert "18;" and the House agree to the same.

Amendment numbered 185: That the Senate recede from its disagreement to the amendment of the Senate numbered 185, and agree to the same with an amendment as follows: Strike out "17" and insert in lieu thereof "18;" and the House agree to the same.

Amendment numbered 187: That the Senate recede from its disagreement to the amendment of the Senate numbered 187, and agree to the same with an amendment as follows: Strike out "18" and insert "19;" and the House agree to the same.

Amendment numbered 188: That the Senate recede from its disagreement to the amendment of the Senate numbered 188, and agree to the same with an amendment as follows: Strike out "19" and insert "20;" and the Senate agree to the same.

Amendment numbered 189: That the Senate recede from its disagreement to the amendment of the Senate numbered 189, and agree to the same with an amendment as follows: Strike out "20" and insert "21;" and the House agree to the same.

Amendment numbered 190: That the Senate recede from its disagreement to the amendment of the Senate numbered 190, and agree to the same with an amendment as follows: Strike out "21" and insert "22;" and the House agree to the same.

Amendment numbered 191: That the Senate recede from its disagreement to the amendment of the Senate numbered 191, and agree to the same with an amendment as follows: Strike out "22" and insert "23;" and the House agree to the same.

Amendment numbered 193: That the Senate recede from its disagreement to the amendment of the Senate numbered 193, and agree to the same with an amendment as follows: Strike out "23" and insert "24;" and the House agree to the same.

Amendment numbered 195: That the Senate recede from its disagreement to the amendment of the Senate numbered 195, and agree to the same with an amendment as follows: Strike out "24" and insert "25;" and the Senate agree to the same.

Amendment numbered 196: That the Senate recede from its disagreement to the amendment of the Senate numbered 196, and agree to the same with an amendment as follows: Strike out "25" and insert "26;" and the House agree to the same.

Amendment numbered 207: That the Senate recede from its disagreement to the amendment of the Senate numbered 207, and agree to the same with an amendment as follows: Strike out the number "36," in line 14, on page 85, and insert in lieu thereof the number "31;" and the Senate agree to the same.

Amendment numbered 208: That the Senate recede from its disagreement to the amendment of the Senate numbered 208, and agree to the same with an amendment as follows: Strike out number "37," on page 85, in line 21, and insert in lieu thereof the number "32;" and the House agree to the same.

Amendment numbered 209: That the Senate recede from its disagreement to the amendment of the Senate numbered 200, and agree to the same with an amendment as follows: On page 86, in line 6, strike out the number "38" and insert in lieu thereof the number "33;" and the House agree to the same.

Amendment numbered 210: That the Senate recede from its disagreement to the amendment of the Senate numbered 210, and agree to the same with an amendment as follows: On page 86, in line 22, strike out the number "39" and insert in lieu thereof the number "34;" and the House agree to the same.

Amendment numbered 211: That the Senate recede from its disagreement to the amendment of the Senate numbered 211, and agree to the same with an amendment as follows: On page 87, in line 15, strike out the number "40" and insert in lieu thereof the number "35;" and the House agree to the same.

Amendment numbered 212: That the Senate recede from its disagreement to the amendment of the Senate numbered 212, and agree to the same with an amendment as follows: On page 87, in line 24, strike out the number "41" and insert in lieu thereof the number "36;" and the Senate agree to the same.

Amendment numbered 213: That the Senate recede from its disagreement to the amendment of the Senate numbered 213, and agree to the same with an amendment as follows: On page 88, in line 1, strike out the number "42" and insert in lieu thereof the number "37;" and the House agree to the same.

RICHARD BARTHOLDT,
E. C. BURLEIGH,
W. G. BRANTLEY,

Managers on the part of the House.

N. B. SCOTT,
F. E. WARREN,
C. A. CULBERSON,

Managers on the part of the Senate.

The SPEAKER. Is a second demanded?

Mr. WILLIAMS. Mr. Speaker, I demand a second.

The SPEAKER. Under the rule a second is ordered. The gentleman from Missouri is entitled to twenty minutes and the gentleman from Mississippi to twenty minutes.

Mr. BARTHOLDT. Mr. Speaker, I have here a statement signed by the three conferees of the House, and out of consideration for the gentlemen who are acting as reading clerks, and whose voices have been ruined, whose health and life have been impaired by the filibuster, I propose to read it myself—

Mr. WILLIAMS. Mr. Speaker, I either make the point of order or suggest that the gentleman proceed and that I be allowed to proceed upon the same line after he is through.

The SPEAKER. The Chair understands that the gentleman is addressing himself to the question before the House?

Mr. WILLIAMS. Then I shall not make the point of order, but will call the attention of the House to the fact, so that when I follow him along the same line nobody will make the point of order against me.

The SPEAKER. The Chair understands from the gentleman from Missouri [Mr. BARTHOLDT] that he is proceeding to read the statement, inasmuch as his request that the statement be read in lieu of the report was refused. The statement does not have to be read, except as the gentleman may elect.

Mr. WILLIAMS. That is very true, but the gentleman was going on to give his reasons—

The SPEAKER. The gentleman from Missouri is entitled to read the statement, or any portion thereof, if he sees proper to do so in his own time, in debate.

Mr. WILLIAMS. I have made no objection to that, nor have I suggested that there possibly could be a point of order made against it.

The SPEAKER. Then what was the suggestion?

Mr. WILLIAMS. The gentleman was going on and talking about what he chooses to call a filibuster, which has nothing to do with reading the statement.

The SPEAKER. The gentleman will proceed in order.

Mr. BARTHOLDT. Mr. Speaker, I submit in all candor that instead of sending this report to the Clerk's desk I merely proposed to read it myself out of consideration for the reading clerks.

The SPEAKER. The gentleman from Missouri must understand that he reads it in his twenty minutes' time.

Mr. BARTHOLDT. I understand that, Mr. Speaker. The statement is as follows:

STATEMENT.

The main items in the public building bill on which the two Houses disagreed were those relating to the erection of a new Department building in the city of Washington, the purchase

of an embassy building at Paris, France, the acquisition of certain tracts of land for public parks in the city of Washington, and the amount of the appropriation to complete the Federal building at Cleveland, Ohio. Upon all these points the Senate receded. The provision for a new Department building was amended so as to provide merely for the acquisition of a site and the authorization for that purpose was reduced from \$3,000,000 to \$2,500,000. The authorization relative to the embassy building at Paris was stricken out, as were all of the provisions in regard to the purchase of land for public parks. The authorization for the Cleveland building, which was \$850,000 in the House bill, and which was reduced by the Senate to \$500,000, was fixed at \$775,000. With these questions settled in the manner indicated a complete agreement was reached.

The House yielded to the individual demands of Senators which were embodied as Senate amendments for building facilities in their respective States.

It should also be stated that in nearly all cases in which items contained in the original House bill had been reduced or stricken out the original authorizations were restored, but the House receded in the case of Denver, where a general public building was authorized at an ultimate limit of cost of \$1,600,000, and Muskogee, Okla., where, the same as in the case of Denver, a small authorization was made for the beginning of a Federal building at an ultimate limit of cost of \$200,000. The House had originally declined to take action with regard to these authorizations.

The House also receded in the matter of the extension of the court-house at Washington, D. C., and the Senate agreed with respect to the erection of an armory building in the Capital City to the creation of a commission for that purpose, leaving out the designation of a site.

Leaving out of consideration the matter of the authorization for the site for the new Department building, the reductions of the bill as a result of the conference amount to over \$2,250,000.

RICHARD BARTHOLDT,
E. C. BURLEIGH,
W. G. BRANTLEY,

Managers on the part of the House.

I desire to add to this statement that this bill carries no appropriation whatsoever, and if the provisions of the bill are to be given effect and carried out it will be necessary to carry an item in the general deficiency appropriation bill, which is still to be acted upon by this House. I reserve the balance of my time.

Mr. WILLIAMS. Mr. Speaker, before I begin I would like to ask the gentleman upon what date this conference agreement was entered into between the House and Senate conferees.

Mr. BARTHOLDT. On May 23.

Mr. WILLIAMS. I would like to ask the gentleman where the conference report has been from May 23 until to-day?

Mr. BARTHOLDT. The conference report has been in the hands of the chairman of the House conferees.

Mr. WILLIAMS. And has not been in the possession of either House—has been in the personal possession of the chairman of the House conferees?

Mr. BARTHOLDT. As is customary.

Mr. WILLIAMS. And is to-day reported for the first time?

Mr. BARTHOLDT. Yes.

Mr. WILLIAMS. Seven days ago it was agreed upon. Mr. Speaker, I suppose that at some time in the remote future, when most of the parties to the transaction are dead, just precisely why this conference report was kept seven days will be known to the world. If the President should veto the bill, inquiry will be active. I saw, the other day, what seemed to me so improbable a statement of the reason for it that I attached no credence to it. I did not attach any credence to it, because I knew the gentleman from Missouri [Mr. BARTHOLDT] so well, and his kindly disposition, his indisposition to bulldoze anybody—he is so mild-mannered a man—that I could not believe the report.

The report was to the effect that the gentleman from Missouri had gone to the Speaker and coerced the Speaker of this House by telling him that unless some currency legislation was enacted at this session that he, the gentleman from Missouri, would not permit the conference report upon the public buildings bill to come before the House at all. [Laughter and applause.] I could imagine the gentleman from Missouri bulldozing me, because I am a little man and dressed in no brief authority, but I did not believe that the gentleman from Missouri had gone to that august personage who holds this entire House in the hollow of his hand, and had been making him walk a straight line upon a proposition of that sort.

But, Mr. Speaker, if that report were true, what a horrible thing it would be to contemplate in its consequences. Think

of it? The gentleman from Missouri would hereafter be held solely responsible for the double iniquity which a moment ago passed the Senate in the shape of the Aldrich-Cannon currency bill. I am not inclined to put the whole burden of that iniquity upon him. I am inclined to think the Speaker of the House of Representatives could have gotten the conference report on the public buildings bill before the House in spite of the gentleman from Missouri if he had been desirous of doing so. I am a little bit inclined to think that another charge made in the public prints to the effect there was some running partnership between those two high potencies—the Speaker and Mr. BARTHOLDT—must have existed at the same time. But, Mr. Speaker, if either of those statements were true—and I can not believe that either is, because I have too much respect for the opinion which I believe the Speaker and the gentleman from Missouri must entertain for the House to believe either one of them—but if either of those two statements were true, into what contempt in the opinion of the Speaker or the opinion of the gentleman from Missouri, or the opinion of both, must we, the Members of the American House of Representatives, have come. To be coerced into the enactment of legislation that was not desired in order that we might recommend ourselves to our constituencies by the appropriations contained in a public buildings bill! To be set before the entire world as a set of bribe takers who, for the sake of what newspapers call “a pork barrel,” would be willing to vote anything up or down!

Mr. Speaker, I for one believe that these yellow journals must have been slandering our Speaker or the gentleman from Missouri, or both, for I can not believe that the Speaker or the gentleman from Missouri, either one, would have slandered the manhood and the honor and the independence and the integrity of the Members of the American House of Representatives. [Applause.] If such a thing had been done, it would be a new departure in legislation—to coerce Members into expressing views by their vote upon the most delicate of all great questions, affecting 80,000,000 of people in their currency, and hence in their prosperity and their business, for the sake of a few little public buildings in the various districts in the United States. Mr. Speaker, I do not believe there will be any great opposition to this bill. [Laughter.] As far as I am able to learn, the bill is very well—

Mr. RODENBERG. They are willing to be coerced.

Mr. WILLIAMS. As the gentleman from Illinois [Mr. RODENBERG], who is always witty even when he does not rise to his feet, says, I suppose the Members of the House are willing to be coerced as far as this particular bill is concerned. There may have been some who, if the policy that was charged as having been pursued had been pursued, would not otherwise have been willing to have been coerced upon the other, the currency, bill, and there may have possibly been some who voted upon the currency bill in a way they did not want to vote, because this bill had not yet been returned to the House and was held back as a club in the air that might at any time swiftly descend upon their devoted heads.

I am not ready altogether to believe that either. The methods of legislating in the House of Representatives are beginning to attract public attention, and if this charge, which can not be true unless Members are false, be true it would, perhaps, attract more attention than any other to which public attention has been recently called. It would show a degree of degradation in the House of American Representatives that would deprive the American people of the right to claim the character, which they have hitherto borne, of being thus far capable of self-government; that they were capable of selecting independent, honest, and intelligent Representatives to serve in the National House of Representatives. [Applause.]

Mr. Speaker, I reserve the balance of my time.

Mr. BARTHOLDT. How much time have I left, Mr. Speaker?

The SPEAKER. Sixteen minutes. [Cries of “Vote.”]

Mr. BARTHOLDT. I yield three minutes to the gentleman from Minnesota [Mr. TAWNEY].

Mr. TAWNEY. Mr. Speaker, I want simply to call to the attention of the House the fact and to emphasize the statement made by the gentleman from Missouri [Mr. BARTHOLDT] that this bill, while authorizing the construction of public buildings, carries no appropriation whatever for executing the authorizations covered in the bill. The appropriations necessary to carry out the authorizations are contained in the general deficiency appropriation bill. The conferees between the two Houses on the general deficiency appropriation bill have reached a final agreement. The report has been signed and is now in the Senate and, I understand, is being considered at this time. Therefore, in order to carry out the authorizations that are carried in this bill, it will be necessary for us to adopt the conference report on the general deficiency bill, and also neces-

sary for Members of the House to remain in the House until the conference report is received from the Senate, when it will be adopted, and then the appropriations for the authorizations carried in this bill will have been made.

Mr. BARTHOLDT. Does the gentleman from Mississippi [Mr. WILLIAMS] want any more time on his side? I do not care to detain the House beyond saying in reply to the few remarks of the gentleman from Mississippi that the little personal filibuster which I inaugurated here was a sensible one, in my judgment, in contradistinction to certain other filibusters. [Laughter.] At least a hundred Members of this House have come to me during the last ten days and stated that if it was not for this public buildings bill they would have to go home, because other important business was hardly to be expected.

Mr. FITZGERALD. Were they Republicans, mostly?

Mr. BARTHOLDT. So the gentleman from Mississippi [Mr. WILLIAMS] can see that there might be a little difference as between theory and practice. In reply to the gentleman from New York [Mr. FITZGERALD], I will say that they were Members from both sides of the House. And for the purpose of enabling this House to do business to the end, I have inaugurated this filibuster upon my own responsibility, and I want to be held responsible for it. [Applause.] I ask for a vote, Mr. Speaker.

The SPEAKER. Does the gentleman reserve the remainder of his time?

Mr. BARTHOLDT. Yes.

Mr. WILLIAMS. In response to the gentleman from Missouri [Mr. BARTHOLDT]: One remark which he made seems to me to reflect more upon the House than anything I had supposed or anything that I had referred to as being mentioned in the newspapers.

He solemnly stated that a hundred Members of this House, more or less—of course he does not intend to be mathematically correct—have been to him to compliment him upon indulging in what he calls “his little personal filibuster,” and they have agreed with him in this: That a majority or quorum could not be kept in the House of Representatives here except for a public building bill; that you could not keep a quorum of the House here to consider a currency bill affecting eighty millions of people of the United States; that you could not have kept a House if you had given them a chance to vote upon an anti-injunction bill; that you could not have kept a House here to consider a pre-election campaign contribution publicity bill nor to consider injunction legislation; that you could not have kept a House here for any real public and unselfish purpose; but that you had to have a bill with public buildings or something else in it appealing to the selfishness of the individual Members in order to make the Members stay at their post of duty and attend to the public business.

Now, if the gentleman from Missouri [Mr. BARTHOLDT] intends to brand this Republican House as a House of that sort, that is his affair. It is not mine. Now, Mr. Speaker, the gentleman from Missouri need not have bothered himself about keeping a quorum.

We were going to keep a quorum here. The Democratic side was going to keep a quorum here [applause on the Democratic side], or furnish its part and make you furnish the balance, because you could not fix the date to adjourn without it; you could not pass any other bill without it. And all this idea that a public-buildings bill had to be kept in the pocket of a Member seven days without consideration by the House, and thus run the risk of a Presidential veto, so that Members of Congress, who are honorable gentlemen and industrious public servants and devoted to the public interests and the affairs of their constituents, could be kept at the post of duty, is a reflection upon the entire House, including the gentleman himself.

Now, Mr. Speaker, I do not think that the American House of Representatives has sunk so low that it can not be kept at its post of duty in order to attend to public affairs of general interest without any regard to the fact as to whether the particular Member has a particular appropriation in some particular bill or not. Or, if that be true, then let you gentlemen who form a majority of this House, and who upon your side of the Chamber constitute a quorum, and who could, by simply doing your duty, furnish a quorum of your own selves without the assistance of a single Democrat, go home and explain to your constituents why it is true.

Mr. CLAYTON. May I interrupt the gentleman from Mississippi?

Mr. WILLIAMS. Certainly.

Mr. CLAYTON. It is true that it would be possible for the Republican side of this House to furnish a quorum here, but is it not true that for the last ten days or two weeks, frequently there would not have been a quorum had it not been for the patriotism of the Democrats in keeping a quorum? [Laughter]

and applause on the Democratic side. Derisive laughter on the Republican side.]

Mr. WILLIAMS. It is not only true that "frequently" in the last two or three weeks the Republicans of this House, although in a large majority, have not furnished a quorum to do business in the House of Representatives; but it is furthermore true, in my opinion, that there have not been two days during the last two or three weeks that they furnished a quorum of themselves without Democratic assistance. [Applause on the Democratic side.]

Now, the gentleman has gone out of his way to talk about a filibuster, as he calls it. A filibuster is a thing where Members try to break a quorum, and where you attempt, by resorting to tampering methods, to prevent legislation. We have been doing but the one thing we started out to do—to rivet attention upon the fact that certain legislation had not passed and would not pass, and, although called Roosevelt or Republican policies, were not desired by Republicans here or in the White House to pass. Mr. Speaker, the newspapers stated this morning that last night there were only twenty Members more than a quorum in the city.

Now, Mr. Speaker, I do not care to say anything more, and I reserve the balance of my time. Unless some time is consumed upon the other side, I have done. [Cries of "Vote!"]

Mr. BARTHOLOTT. Before a vote is taken, Mr. Speaker, I merely wish to say this in reply to the gentleman: Unless my friend from Mississippi questions the truthfulness of my statement that a large number of the Members of this House, on both sides of the Chamber, have come to me and made the statement that they would have gone home but for the public building bill—unless he questions that statement, then we are simply confronted by a condition and not a theory.

Mr. WILLIAMS. Of course I question the truthfulness of no statement made by the gentleman from Missouri or anybody else. But what I said was, that being true, it was a horrible reflection upon the character of this Republican House.

Mr. BARTHOLOTT. And the Democratic Members of it.

Mr. WILLIAMS. Well, this House; and it is a Republican House. [Cries of "Vote!"]

Mr. BARTHOLOTT. I want to say, further, that if the lecture which the gentleman has just now administered is applicable, it is as well, if not more strongly, applicable to the Democratic side than to the Republican side [Cries of "Oh, oh!" on the Democratic side], for the reason that, proportionately, there have always been more Republicans in their seats than Democrats.

Mr. WILLIAMS. That I question.

Mr. BARTHOLOTT. Now, Mr. Speaker, I call for a vote.

The SPEAKER pro tempore (Mr. CAPRON). The gentleman from Missouri moves to suspend the rules and agree to the conference report.

Mr. WILLIAMS. Mr. Speaker, in order to save the time of the House, I demand the yeas and nays.

The yeas and nays were ordered.

Mr. FOSTER of Indiana. I make the point of no quorum.

The SPEAKER pro tempore. The Chair will count. [After counting.] Two hundred and sixteen present; a quorum. The Clerk will proceed to call the roll.

The question was taken, and there were—yeas 216, nays 4, answered "present" 8, not voting 160, as follows:

YEAS—216.

So the conference report was agreed to.

Mr. FOSTER of Illinois. I have a pair with the gentleman from Indiana, Mr. CHANEY, but I am informed that if present he would vote "aye," and I have voted "aye."

Mr. PADGETT. Did the gentleman from Illinois, Mr. Foss, vote?

The SPEAKER. He did not.

Mr. PADGETT. I desire to say that I have a general pair with the gentleman from Illinois, Mr. Foss, but I am informed by his colleagues that if present he would vote "aye." I voted "aye," and I allow my vote to stand.

The result of the vote was announced as above recorded.

MESSAGE FROM THE SENATE.

A message from the Senate, by Mr. CROCKETT, its reading clerk, announced that the Senate had agreed to the report of the committee of conference on the disagreeing votes of the two Houses on the amendments of the Senate to the bill of the following title:

H. R. 21946. An act making appropriations to supply deficiencies in the appropriation for the fiscal year ending June 30, 1908, and prior years, and for other purposes.

The message also announced that the Senate had insisted upon its amendment to the bill (H. R. 21052) to amend sections 11 and 13 of the act entitled "An act to establish a Bureau of Immigration and Naturalization, and to provide for a uniform rule for the naturalization of aliens throughout the United States," numbered 5, disagreed to by the House of Representatives, had agreed to the conference asked by the House on the disagreeing votes of the two Houses thereon, and had appointed Mr. DILLINGHAM, Mr. PENROSE, and Mr. McLAURIN as the conferees on the part of the Senate.

The message also announced that the Senate had passed without amendment bill and joint resolution of the following titles: H. R. 22212. An act granting an increase of pension to Byron

C. Mitchell, Calvin P. Lynn, and Harry S. Lee, formerly Albert Lee Allemen; and

H. J. Res. 197. Joint resolution authorizing the employment of clerical services in the Department of Justice.

The message also announced that the Senate had agreed to the amendments of the House of Representatives to the bill (S. 208) for the survey and allotment of lands now embraced within the limits of the Fort Peck Indian Reservation, in the State of Montana, and the sale and disposal of all the surplus lands after allotment.

The message also announced that the Senate had insisted upon its amendment to the bill (H. R. 21003) fixing the compensation of certain officials in the customs service, and for other purposes, disagreed to by the House of Representatives, had agreed to the conference asked by the House on the disagreeing votes of the two Houses thereon, and had appointed Mr. ALDRICH, Mr. HALE, and Mr. TELLER as the conferees on the part of the Senate.

PENSION TO TEXAS VOLUNTEERS.

Mr. LOUDENSLAGER. Mr. Speaker, I move to take from the Speaker's table the bill (S. 5581) pensioning the surviving officers and enlisted men of the Texas volunteers employed in the defense of the frontier of that State against Mexican marauders and Indian depredations from 1855 to 1860, inclusive, and for other purposes; and I move to suspend the rules and pass the bill.

The SPEAKER. The gentleman from New Jersey moves to suspend the rules and take from the Speaker's table and pass a Senate bill, which the Clerk will report.

The Clerk read as follows:

Be it enacted, etc., That the provisions, limitations, and benefits of an act entitled "An act granting pensions to survivors of the Indian wars of 1832 to 1842, inclusive, known as the 'Black Hawk war,' 'Creek war,' 'Cherokee disturbances,' and the 'Seminole war,'" approved July 27, 1892, be, and the same is hereby, extended from the date of the passage of this act to the surviving officers and enlisted men of the Texas volunteers who served in the defense of the frontier of that State against Mexican marauders and Indian depredations from the year 1855 to the year 1860, inclusive; and also to include the surviving widows of such of said officers and enlisted men: Provided, That such widows have not remarried: Provided further, That where there is no record of enlistment or muster into the service of the United States in the service mentioned in this act the fact of reimbursement to Texas by the United States, as evidenced by the muster rolls and vouchers on file in the War Department, shall be accepted as full and satisfactory proof of such enlistment and service: And provided further, That all contracts heretofore made between the beneficiaries under this act and pension attorneys and claim agents are hereby declared null and void.

The SPEAKER. Is a second demanded?

Mr. MANN. I demand a second.

The SPEAKER. The gentleman from Illinois demands a second. Under the rule a second is ordered. The gentleman from New Jersey [Mr. LOUDENSLAGER] is entitled to twenty minutes and the gentleman from Illinois [Mr. MANN] to twenty minutes.

Mr. LOUDENSLAGER. Mr. Speaker, I do not desire to consume much of the time of the House. This bill is identical, word for word, with a bill (H. R. No. 1) introduced by the gentleman from Texas [Mr. BURLESON] reported from the Committee on Pensions unanimously, and it simply extends the provisions of the act of July 27, 1892, to the veterans and survivors of the Texas volunteers against Mexican marauders and against Indian depredations in the Southwest, which occurred during the period from 1855 to 1860. It is purely a dependent pension bill for the survivors of that service. It is forty-eight years since the last of the service was rendered, and in the line of precedents that have long been established in the general pension laws, forty years is about as soon as any such pension law has been passed after the close of the service. This is a period of forty-eight to fifty-three years from the time of the service.

I reserve the balance of my time.

Mr. MANN. I yield five minutes to the gentleman from Texas [Mr. BURLESON].

Mr. BURLESON. Mr. Speaker, I have waited for nearly two months in order to secure recognition for the passage of this bill. Sometimes I have felt that I would have an attack of nervous prostration occasioned by the intense anxiety and repeated disappointments to which I have been subjected, because I could not get the bill before the House.

This bill is drawn in the usual form. It is in the exact language of H. R. No. 1, introduced by me immediately after the Federal Government reimbursed Texas for the amount expended for frontier defense, which reimbursement was necessary to give these veterans a pensionable status, and same has been unanimously reported from the Committee on Pensions by its distinguished chairman [Mr. LOUDENSLAGER]. It does for the few survivors of the Indian wars who fought on the frontiers of Texas exactly what has been done for the veterans of the Black Hawk war, the Creek war, the Cherokee disturbances, and the Seminole war; it accords to these Texans exactly the

same treatment that was accorded to the veterans in the Florida and Georgia Seminole wars, in the Fevre River Indian war in Illinois, the Sac and Fox wars in Illinois, the Sabine Indian disturbances in Louisiana, the Cayuse war in Oregon, the Texas and Mexico war of 1849-1856, and the California, Utah, Washington, and Oregon Indian wars which occurred, some of them, as late as 1856.

For fifty-three years these Texans have been without recognition, as far as the Federal Government is concerned, of the great service they rendered in that trying period in the history of our State between 1854 and 1861. I sincerely hope that the request which I intend to submit will not be objected to. Mr. Speaker, since the inauguration of the tactics adopted by the distinguished gentleman from Mississippi [Mr. WILLIAMS], which I thoroughly approve, and to which I have given my hearty support—

Mr. MANN. In every other case except this.

Mr. BURLESON. No; in every case where the gentleman has insisted upon his policy since its adoption, and I ask no exception be made here, as I shall show. Recently the gentleman from New Jersey [Mr. LOUDENSLAGER] has brought before the Congress three pension measures, and the gentleman from Kansas to-day brought in another pension matter, and upon the submission of a statement of the facts in connection with those bills to the House, and unanimous consent being asked, those pension bills, in every case, were passed by unanimous consent, or without the call of the roll.

I now ask that the same treatment be accorded these grizzled veterans who served so valiantly and honorably upon the frontier of Texas that was accorded the soldiers that were cared for and provided for in the bills submitted to this House by the gentleman from New Jersey [Mr. LOUDENSLAGER] and the bill of the gentleman from Kansas [Mr. CALDERHEAD] which was passed to-day. I now ask that this bill be permitted to pass by unanimous consent or that the call of the roll be dispensed with.

Mr. MANN. But the gentleman from Mississippi [Mr. WILLIAMS] said a while ago that he would not permit a bill to be passed by unanimous consent.

Mr. WILLIAMS. Mr. Speaker, reserving the right to object—

Mr. MANN. But the gentleman can not make that reservation.

Mr. WILLIAMS. Does the gentleman from New Jersey reserve his time? Of course if the request is not put, there is nothing before the House.

Mr. MANN. Mr. Speaker, this is Memorial Day. It may be that it is proper to pass this bill, and yet I think it is wise that the House should know something in regard to the circumstances of the case. The Texas Rangers, to which this bill applies, have been widely celebrated for their heroic deeds and somewhat celebrated for other things. It was these gentlemen whom we now propose to pension who at the outbreak of the civil war as Texas Rangers seized all of the forts and supplies and munitions of war of the United States in Texas and turned them over to the Confederacy, or to the State of Texas, rather.

Mr. CAPRON. Will the gentleman yield for a moment?

Mr. MANN. In just a moment. A year ago, I think it was, after the State of Texas had paid the Texas Rangers while they were performing this service for Texas and the Confederate government and not for the United States Government, the State of Texas presented a claim to Congress to have the State of Texas reimbursed for the amount paid out to the Texas Rangers.

Mr. BURLESON. Will the gentleman yield?

Mr. MANN. In just a moment. That claim was finally agreed upon in conference, having been inserted as an item in, I think, the general deficiency bill in the Senate. Mr. Speaker, it is a long time ago. I have often wondered as I sat in my seat in this House at the patience, at the kindness, at the courtesy of the gentlemen on the Democratic side of the aisle, as these great numbers of special pension bills were passed through this House, where the benefits chiefly went to the old soldiers in Northern States; and I think now that while I would not have voted to reimburse the State of Texas for money which she paid out, not for the benefit of the General Government, but for the benefit of the rebellion, I would not draw the line against these old soldiers who, through patriotism, as they believed, and through fealty to their State, did seize the property of the United States, but who in addition to that did offer their lives in defense of the people of the State of Texas and against the Indians. We often hear of heroic deeds. I doubt, Mr. Speaker, whether there is written anywhere in history such heroic deeds as have been performed by the white settlers of the country in combat with the Indians. I hope, like the gentleman from Texas [Mr. BURLESON], that the bill may be passed unanimously. [Applause.]

Mr. BURLESON. Will the gentleman yield for a moment?

Mr. MANN. I yield to the gentleman.

Mr. BURLESON. Mr. Speaker, in the interest of the accuracy of history, I desire to state that every dollar of the claim that was paid to Texas last year by the Federal Government, which is the basis of this bill for pensions, accrued and was presented to Congress by the Hon. John H. Reagan before the ordinance of secession was adopted by the State of Texas on February 23, 1861. It is doubtless true that an overwhelming majority of the men who served in these Indian wars afterwards enlisted in the Confederate army. It is true that probably a large number of them died during the bloody period between 1860 and 1865, but the gentleman from Illinois [Mr. MANN] is laboring under a misapprehension when he says that the men who are sought to be pensioned by this bill belonged to the ranger companies which seized the property that belonged to the United States at the outbreak of the civil war. This action was taken the year after the period of their service ended, and a few of them may have been still in the service, but not many.

The records of the Congress will disclose the facts, as I have stated them—that is, that every dollar of the claim that Texas presented against the Government of the United States for the service of these veteran soldiers accrued and had been presented to the Congress by Judge Reagan and payment urged before the ordinance of secession had been adopted by the State of Texas.

I thank the gentleman from Illinois for the generous sentiment of head and heart that moved him to acquiesce in the request made by me that this bill be passed by unanimous consent or without roll call.

Mr. WILLIAMS. Mr. Speaker, I would like somebody to yield me about three minutes.

Mr. MANN. I yield to the gentleman three minutes.

Mr. WILLIAMS. Mr. Speaker, of course there is nobody on this floor more in favor of this bill than I. I had three great uncles who fought in the Texas war of independence, for the independence of the Texas Republic. I feel tied to the people of Texas in every way, but in carrying out a policy that we on this side have thought it wise to inaugurate, and which I have veered from only in certain particular cases, classified beforehand, I can not make fish of one and flesh of another, and as this bill comes under no classification designated, I shall be compelled to call for the yeas and nays upon its passage.

Mr. BURLESON. Will the gentleman permit me to interrupt him for a moment?

Mr. WILLIAMS. Yes.

Mr. BURLESON. I direct the gentleman's attention to the fact that an omnibus pension bill including three or four hundred cases passed here the other day by unanimous consent or without roll call, and to-day the gentleman from Kansas [Mr. CALDERHEAD] presented a bill here and secured unanimous consent to place three old soldiers—

Mr. WILLIAMS. But did the omnibus pension bill pass by unanimous consent the other day?

Mr. BURLESON. It did, and—

Mr. GARNER. And without a roll call.

Mr. WILLIAMS. If it did, it was because I was negligent, Mr. Speaker, and if it did, I will let this go through without it. [Applause.]

Mr. MANN. Mr. Speaker, I think there is nothing very pressing before the House just now. In the interest of historical accuracy, in regard to the State, of the gentleman from Texas, it may be well that the House should also know that the Texas Rangers, when the war of the rebellion approached, by the action of the legislature of the State of Texas and the authorities of that State, were at once greatly enlarged in numbers in preparation for the war; that the action caused the resignation, as I remember it, of the governor of the State, and that it was the pay of those rangers which Congress made in the general deficiency bill a year ago. I do not propose to argue that question now.

Mr. BURLESON. You are mistaken about the facts.

Mr. MANN. No; the gentleman is mistaken. At that time I secured every book on the subject relating to the history of Texas, secured a number of private papers, and if I could have gotten the floor on that deficiency bill I do not believe that item would ever have been agreed to in the House—but that is dead and gone so far as I am concerned.

Mr. BURLESON. Now, will the gentleman permit me?

Mr. MANN. Certainly.

Mr. BURLESON. I was thoroughly advised that the gentleman had those documents, and I also stood ready with documents to refute every single charge contained in those books and papers.

Mr. MANN. I have not any doubt of that.

Mr. BURLESON. I assure the gentleman that I can show by the CONGRESSIONAL RECORDS here that John H. Reagan pre-

sented those claims before the articles of secession were adopted by the State of Texas; that while he was yet a Member of the United States Congress, before Texas seceded, he upon this floor made a speech urging the payment of those claims, and that before the outbreak of the war a unanimous report was made recommending the payment of a large portion of those claims. The feeling growing out of the civil war after the termination of that bloody conflict was such that it was impossible for Texas to secure consideration of these claims, and she waited forty-seven years before the United States finally did her justice, even partial justice, but I thank God that the time came when she did recognize the justness of those claims. [Applause.]

Mr. MANN. And that is right, and put a Senate item in the general deficiency bill where the item never was discussed in either House.

Mr. BURLESON. Yet it was the most virtuous item in that bill. [Applause.]

Mr. MANN. Mr. Speaker, now, I yield two minutes to the gentleman from Texas [Mr. SLAYDEN].

Mr. SLAYDEN. Mr. Speaker, I think it very likely that no member of the delegation from my State possibly can have more, probably not so many, constituents who will become the beneficiaries of this legislation as I. I rejoice to see that the era of good feeling with which this Congress is closing makes it extremely probable that the bill will go through without opposition. It will be a tardy act of justice to a deserving class of men who, in spite of the opinion of my distinguished friend from Illinois [Mr. MANN] to the contrary, served the State of Texas and served the Union as well for some years prior to the period of the civil war. I rejoice in the fact that the Committee on Pensions has seen fit to recognize the services of these particular soldiers, because for years they have been discriminated against in the pension legislation of the United States.

Organizations in other parts of the country doing identical service have been recognized by being placed upon the pension rolls.

Soon after I came to Congress, twelve years ago, I prepared a bill—awkward and insufficient, perhaps—but a bill intending to accomplish what this bill does on this occasion. I introduced that bill in four subsequent Congresses, and now I am delighted to know that—owing largely to the energy and to the persistence of one of my colleagues—the bill has been put through, or is practically through the Congress, and that the great service, the efficient service, the heroic work done by these old frontier soldiers is to be recognized and their declining years to be made in a degree comfortable by the largess of the Government. [Applause.] [Cries of "Vote!"]

The SPEAKER. The gentleman from New Jersey [Mr. LOUDENSLAGER] asks unanimous consent that the bill be passed. Is there objection?

Mr. WILLIAMS. Mr. Speaker, I did not understand that. I just understood that they would take a vote on it.

The SPEAKER. The question is on suspending the rules and passing the bill.

The question was taken, and a majority having voted in favor thereof, the rules were suspended and the bill was passed.

ENROLLED BILLS SIGNED.

Mr. WILSON of Illinois, from the Committee on Enrolled Bills, reported that they had examined and found truly enrolled bills and joint resolution of the following titles, when the Speaker signed the same:

H. R. 22212. An act granting an increase of pension to Byron C. Mitchell, Calvin P. Lynn, and Harry S. Lee, formerly Albert Lee Allemen;

H. R. 21871. An act to amend the national banking laws;

H. R. 21897. An act to increase the limit of cost of certain public buildings, to authorize the enlargement, extension, remodeling, or improvement of certain public buildings, to authorize the erection and completion of public buildings, to authorize the purchase of sites for public buildings, and for other purposes; and

H. J. Res. 197. Joint resolution authorizing the employment of clerical services in the Department of Justice.

The SPEAKER announced his signature to enrolled bills of the following titles:

S. 208. An act for the survey and allotment of lands now embraced within the limits of the Fort Peck Indian Reservation, in the State of Montana, and the sale and disposal of all the surplus lands after allotment;

S. 5983. An act authorizing certain life-saving apparatus to be placed at the Farallone Islands, off the coast of California; and

S. 6358. An act to amend an act entitled "An act to incorporate The Masonic Mutual Relief Association of the District of Columbia."

GENERAL DEFICIENCY BILL.

Mr. TAWNEY. Mr. Speaker, I call up the conference report on the bill H. R. 21946, the general deficiency bill, making appropriations to supply deficiencies in the appropriations for the fiscal year ending June 30, 1908, and for prior years, and for other purposes, and I ask unanimous consent that the reading of the report be dispensed with and that the statement be read in lieu of the report.

Mr. WILLIAMS. Mr. Speaker, to that I object, of course.

The SPEAKER. Does the gentleman from Minnesota [Mr. TAWNEY] move to suspend the rules?

Mr. TAWNEY. I call up the conference report and ask that the reading of the report be dispensed with and that the statement be read in lieu of the report.

Mr. WILLIAMS. To that I object.

The SPEAKER. The gentleman objects. The Clerk will read the conference report.

The Clerk read as follows:

CONFERENCE REPORT.

The committee of conference on the disagreeing votes of the two Houses on the amendments of the Senate to the bill (H. R. 21946) making appropriations to supply deficiencies in the appropriations for the fiscal year ending June 30, 1908, and for prior years, and for other purposes, having met, after full and free conference have agreed to recommend and do recommend to their respective Houses as follows:

That the Senate recede from its amendments numbered 5, 30, 32, 33, 34, and 38.

That the House recede from its disagreement to the amendments of the Senate numbered 1, 2, 3, 4, 6, 7, 8, 10, 11, 12, 13, 14, 15, 16, 17, 18, 19, 22, 23, 24, 25, 26, 27, 28, 31, 35, 36, 37, 39, 40, 41, 42, 43, 44, 45, 46, 47, 48, 49, 50, 51, 52, 53, 54, 55, 56, 57, 58, 59, 60, 61, 62, 63, 64, 65, 66, 67, 68, 69, 70, 71, 72, 73, 74, 75, 76, 77, 78, 79, 80, 81, and 82, and agree to the same.

Amendment numbered 9: That the House recede from its disagreement to the amendment of the Senate numbered 9, and agree to the same with an amendment as follows: In lieu of the matter inserted by said amendment insert the following:

"Toward amounts requisite for public buildings, authorized under the provisions of an act entitled 'An act to increase the limit of cost of certain public buildings, to authorize the enlargement, extension, remodeling, or improvement of certain public buildings, to authorize the erection and completion of public buildings, to authorize the purchase of sites for public buildings, and for other purposes,' passed at the first session of the Sixtieth Congress, namely:

"Under the provisions and limitations of section 1 of said act, as follows:

"Rome, Ga., post-office and court-house, fifteen thousand dollars.

"Burlington, Iowa, post-office, five thousand dollars.

"Council Bluffs, Iowa, post-office and court-house, six thousand two hundred and fifty dollars, for the purchase of additional land.

"Duluth, Minn., post-office, etc., ninety-five thousand dollars.

"St. Joseph, Mo., post-office and court-house, twelve thousand dollars.

"Johnstown, Pa., post-office, twenty thousand dollars.

"Murfreesboro, Tenn., post-office, ten thousand dollars.

"Tyler, Tex., post-office, fifteen thousand dollars.

"Salt Lake City, Utah, post-office, etc., sixty thousand dollars.

"Fairmont, W. Va., post-office, ten thousand dollars.

"Wheeling, W. Va., post-office and court-house, twenty thousand dollars.

"Platteville, Wis., post-office, fifteen thousand dollars.

"Under the provisions and limitations of section 2 of said act, as follows:

"Montgomery, Ala., post-office and court-house, fifteen thousand dollars.

"Hot Springs, Ark., post-office, twenty thousand dollars.

"Sacramento, Cal., post-office and court-house, thirty thousand dollars.

"San Jose, Cal., post-office, two thousand dollars.

"New London, Conn., post-office, twenty thousand dollars.

"Wilmington, Del., post-office and court-house, forty thousand dollars.

"Athens, Ga., post-office and court-house, twenty thousand dollars.

"Augusta, Ga., post-office and court-house, two thousand dollars.

"Boise, Idaho, post-office and other governmental buildings, forty thousand dollars.

"Elgin, Ill., post-office, twenty thousand dollars.

"Peoria, Ill., post-office and court-house, ten thousand dollars.

"Quincy, Ill., post-office and court-house, twenty-five thousand dollars.

"Rock Island, Ill., post-office, twenty-five thousand dollars.

"Davenport, Iowa, post-office and court-house, twenty-five thousand dollars.

"Fort Dodge, Iowa, post-office, twenty-five thousand dollars.

"Emporia, Kans., post-office, fifteen thousand dollars.

"Kansas City, Kans., post-office, forty thousand dollars.

"Lexington, Ky., post-office, twenty-five thousand dollars.

"Frankfort, Ky., post-office and court-house, twenty thousand dollars.

"Paducah, Ky., post-office and court-house, fifteen thousand dollars.

"Richmond, Ky., post-office and court-house, ten thousand dollars.

"Bath, Me., post-office and custom-house, twenty thousand dollars.

"Belfast, Me., post-office and custom-house, twenty thousand dollars.

"Ellsworth, Me., post-office and custom-house, twenty thousand dollars.

"Jackson, Mich., post-office, fifteen thousand dollars.

"Meridian, Miss., post-office and court-house, twenty thousand dollars.

"Beatrice, Nebr., post-office, twenty thousand dollars.

"Fremont, Nebr., post-office, fifteen thousand dollars.

"Manchester, N. H., post-office and court-house, fifteen thousand dollars.

"Hoboken, N. J., post-office, twenty thousand dollars.

"New Brunswick, N. J., post-office, twenty thousand dollars.

"Trenton, N. J., post-office and court-house, ten thousand dollars.

"Goldsboro, N. C., post-office, ten thousand dollars.

"Newbern, N. C., post-office and court-house, fifteen thousand dollars.

"Raleigh, N. C., post-office and court-house, ten thousand dollars.

"Lima, Ohio, post-office, twenty thousand dollars.

"Chester, Pa., post-office, twenty thousand dollars.

"Reading, Pa., post-office, twenty-five thousand dollars.

"Pawtucket, R. I., post-office, twenty thousand dollars.

"Sioux Falls, S. Dak., post-office and court-house, twenty thousand dollars.

"Bristol, Tenn., post-office and court-house, twenty thousand dollars.

"Jackson, Tenn., post-office and court-house, twenty thousand dollars.

"Charlottesville, Va., post-office, thirty-five thousand dollars.

"Danville, Va., post-office and court-house, twenty thousand dollars.

"Charleston, W. Va., post-office and court-house, twenty-five thousand dollars.

"Huntington, W. Va., post-office and court-house, five thousand five hundred dollars.

"La Crosse, Wis., post-office and court-house, twenty thousand dollars.

"Under the provisions and limitations of section 3 of said act, as follows:

"Demopolis, Ala., post-office, fifteen thousand dollars.

"Troy, Ala., post-office, twenty thousand dollars.

"Santa Cruz, Cal., post-office, twenty thousand dollars.

"Griffin, Ga., post-office, twenty thousand dollars.

"Newnan, Ga., post-office, twenty thousand dollars.

"Way Cross, Ga., post-office, fifteen thousand dollars.

"Lewiston, Idaho, post-office and land office, twenty thousand dollars.

"Centralia, Ill., post-office, twenty thousand dollars.

"Litchfield, Ill., post-office, twenty thousand dollars.

"Columbus, Ind., post-office, twenty thousand dollars.

"Connersville, Ind., post-office, twenty thousand dollars.

"Greencastle, Ind., post-office, twenty thousand dollars.

"Jeffersonville, Ind., post-office, fifteen thousand dollars.

"Kokomo, Ind., post-office, twenty thousand dollars.

"Peru, Ind., post-office, etc., twenty thousand dollars.

"Decorah, Iowa, post-office, fifteen thousand dollars.

"Estherville, Iowa, post-office, fifteen thousand dollars.

"Shenandoah, Iowa, post-office, fifteen thousand dollars.

"Catlettsburg, Ky., post-office and court-house, twenty thousand dollars.

"Beverly, Mass., post-office, fifteen thousand dollars.

"Marlboro, Mass., post-office, twenty thousand dollars.

"Plymouth, Mass., post-office, twenty-five thousand dollars.

"Webster, Mass., post-office, fifteen thousand dollars.

"Woburn, Mass., post-office, fifteen thousand dollars.

"Pontiac, Mich., post-office, twenty thousand dollars.

- "Austin, Minn., post-office, fifteen thousand dollars.
 "Brainerd, Minn., post-office, ten thousand dollars.
 "Rochester, Minn., post-office, fifteen thousand dollars.
 "Hattiesburg, Miss., post-office, twenty thousand dollars.
 "West Point, Miss., post-office, no site.
 "Carrollton, Mo., post-office, fifteen thousand dollars.

"Under the provisions and limitations of section 29 of said act, as follows:

"Washington, D. C., court-house, fifty thousand dollars.

"Under the provisions and limitations of section 30 of said act, as follows:

"Washington, D. C., site for buildings for Departments of State, Justice, and Commerce and Labor, two million five hundred thousand dollars, or so much thereof as may be necessary.

"Under the provisions and limitations of section 31 of said act, as follows:

"Denver, Colo., post-office, court-house, etc., fifty thousand dollars.

"Under the provisions and limitations of section 32 of said act, as follows:

"Point Pleasant, W. Va., monument, ten thousand dollars."

And the Senate agree to the same.

Amendment numbered 20: That the House recede from its disagreement to the amendment of the Senate numbered 20, and agree to the same with an amendment as follows: In lieu of the matter inserted by said amendment insert the following:

"For payment of twenty-four approved claims, exclusive of claim numbered two hundred and thirty-one thousand eight hundred and sixty-one, provided for in the preceding paragraph, for damages to and loss of private property belonging to citizens of the United States and the Philippine Islands, estimated for on page four hundred and six, House Document numbered twelve, Sixtieth Congress, first session, four thousand five hundred and fifty-two dollars and thirty-five cents."

And the Senate agree to the same.

Amendment numbered 21: That the House recede from its disagreement to the amendment of the Senate numbered 21, and agree to the same with an amendment as follows: In lieu of the matter inserted by said amendment insert the following:

"Claims for property taken from Confederate officers and soldiers after surrender: The time for filing claims under the provisions of the act of February twenty-seventh, nineteen hundred and two, and amendments thereto, for horses, saddles, and bridles taken from Confederate soldiers in violation of terms of surrender, and for the payment thereof, is extended for twelve months from the passage of this act; and all claims not presented within this time shall be forever barred."

And the Senate agree to the same.

Amendment numbered 29: That the House recede from its disagreement to the amendment of the Senate numbered 29, and agree to the same with an amendment as follows: After the last line of said amendment insert the following as a separate paragraph:

"In computing the pay of retired officers of the Navy, the ten per cent additional pay allowed for sea duty or for shore duty beyond the continental limits of the United States shall not be included, and the pay of commodore shall be the same in all respects as that of rear-admiral, second nine."

And the Senate agree to the same.

JAMES A. TAWNEY,
 EDWARD B. VREELAND,
 S. BRUNDIDGE, JR.

Managers on the part of the House.

EUGENE HALE,
 W. B. ALLISON,
 H. M. TELLER,

Managers on the part of the Senate.

STATEMENT.

The managers on the part of the House at the conference on the disagreeing votes of the two Houses to the bill (H. R. 21946) making appropriations for deficiencies, submit the following written statement in explanation of the effect of the action agreed upon and recommended in the accompanying conference report, namely:

Aside from amendments made by the Senate supplying deficiencies in appropriations ascertained since the bill passed the House and the paying of judgments and amounts ascertained by the accounting officers and certified since the bill reached the Senate, the agreements recommended by the conference committee are as follows:

The appropriations of \$13,000 for rent of space in the Union Building for the Auditor for the Interior Department and of \$10,500 for expenses incident to the removal of that office, proposed by the Senate, are agreed to.

In lieu of the indefinite appropriation proposed by the Senate for public buildings and sites for public buildings authorized in the public-buildings act passed at this session there is inserted in the bill specific appropriations for each building or site, as recommended by the Treasury Department, and aggregating \$12,466,750.

For the removal of the Greenough Washington statue to the Smithsonian Institution, the sum of \$5,000 is appropriated, as proposed by the Senate.

An appropriation of \$4,552.35 for claims for damage to and loss of private property belonging to citizens of the United States and the Philippine Islands, proposed by the Senate, is made in the bill.

The provision proposed by the Senate extending for twelve months the time within which claims for property taken from Confederate officers and soldiers after surrender may be submitted is inserted in the bill, as proposed by the Senate.

The appropriation of \$21,395.95 for payment to the State of Texas is inserted in the bill, as proposed by the Senate.

The provision with reference to proceeding with the construction of general depot for the United States Army supplies at Fort Mason, Cal., is inserted in the bill, as proposed by the Senate.

In connection with the appropriation to supply a deficiency on account of pay of the Navy, a provision is inserted providing that in computing the pay of the retired officers of the Navy the 10 per cent pay allowance for sea duty or for shore duty beyond the United States shall not be included.

The appropriation of \$10,000 in the bill as it passed the House for expert agents, to be appointed by the Secretary of the Interior, is stricken out, as proposed by the Senate.

The appropriation of \$5,000 proposed by the Senate for establishing international methods of testing petroleum is stricken out.

An appropriation of \$26,950 to close the account of the Doremus Machine Company is inserted in the bill, as proposed by the Senate.

Section 2 of the bill as it passed the House, relating to the payment of salaries of officers and employees of the Government, is stricken out, as proposed by the Senate.

Section 3 of the bill, relating to the purchase of supplies for the Executive Departments, is stricken out, as proposed by the Senate.

J. A. TAWNEY,
EDWARD B. VREELAND,
S. BRUNDIDGE, Jr.,

Managers on the part of the House.

Mr. TAWNEY. Mr. Speaker, I move that the report be agreed to.

The SPEAKER. The gentleman from Minnesota [Mr. TAWNEY] moves that the report be agreed to.

Mr. TAWNEY. Mr. Speaker, I will say for the information of the Members of the House that there is but one Senate amendment that is of any material consequence, which the House has agreed to with an amendment. That amendment is the one which provides for the appropriation of money to carry out the authorizations in the public-buildings bill. During the consideration, or after the passage, of the public-buildings bill in the House the Supervising Architect was in constant touch with the committee, and by the time the bill had passed both Houses and had been agreed to by the conferees between the two Houses the Supervising Architect of the Treasury Department was prepared to submit, and did submit, the estimates necessary to carry out the authorizations in the public-buildings bill. These authorizations are for the purchase of new sites, of extension of old sites, authorizations for the construction of new buildings, and the extension of buildings heretofore au-

thorized. The estimates for the purchase of sites is for the full amount authorized in this bill.

Mr. MANN. That is the public buildings bill?

Mr. TAWNEY. The public buildings bill. That is, the amount is between \$6,000,000 and \$7,000,000 which this Senate amendment carries, and which the conferees on the part of the House have agreed to, appropriating the full authorization for the purchase of new sites, for the purchase of additional land, and for the extension of sites heretofore authorized and heretofore purchased. The appropriations carried toward the construction of the buildings that have been authorized in the public buildings bill are in amount equal to the amount which the Department estimates it can expend in the making of the contracts and in the construction of the buildings during the next fiscal year. So that every item that is carried in the public buildings bill will be provided for, whether it is the purchase of a site, the extension of an old site, or the construction of a new building. Every item in the public buildings bill is provided for in this amendment by an appropriation either for the entire authorization, as it is in the case of sites, or an appropriation of the amount which the Department estimates it can expend during the next fiscal year.

Mr. MANN. Will the gentleman yield to a question?

Mr. TAWNEY. Yes, sir.

Mr. MANN. Will the gentleman say what the amendment was in reference to the tuberculosis congress?

Mr. TAWNEY. In reference to the tuberculosis congress the amendment was to omit the authorization for the use of the municipal building and agree to the Senate amendment appropriating \$40,000 to defray the expenses incident to the preparation for housing the International Tuberculosis Congress. The President of the United States, under the amendment, is authorized to make suitable provision. It was the thought of the conferees that, with the amount appropriated, if the International Tuberculosis Congress required more room than is provided in the National Museum and in the unoccupied rooms of the Agricultural Department, there would be an ample amount appropriated for the purpose of securing that additional space.

Mr. MANN. The District Commissioners objected very vigorously to the use of the municipal building, as I understand.

Mr. TAWNEY. They did.

Mr. MANN. To my mind, very selfishly. Is there any authority, in case the rooms should not be used in the municipal or other public building, for the President or anybody else to authorize different sections of the tuberculosis congress to hold their section meetings in those rooms?

Mr. TAWNEY. I think there is no doubt that under the provision which has been agreed to there will be ample authority contained and given to the President for the purpose of setting aside any public buildings of the District of Columbia or United States buildings in the District of Columbia for the use of this congress, or any section thereof.

Mr. SCOTT. Will the gentleman permit me to ask him a question?

Mr. TAWNEY. Certainly.

Mr. SCOTT. The gentleman made a statement that the unoccupied rooms in the Agricultural Department building might be used for the purposes of the tuberculosis congress. As a matter of fact, there are no unoccupied rooms in the Agricultural building, and I would like to ask the gentleman whether the bill is worded in such a way as to make it possible that some of those rooms which are now occupied may have to be vacated.

Mr. TAWNEY. The President will have no power to require the vacation of any rooms, unless he gets it under his general power of Chief Executive. The provision only includes unoccupied rooms. Of course if they are occupied, that would preclude their occupancy by any department of the tuberculosis congress.

Mr. MANN. Of course the right to set apart any unoccupied space, as the gentleman understands, would not permit anyone to set aside any portion of the House Office Building or the Capitol Building, both of which are exclusively under the control of Congress.

Mr. TAWNEY. None whatever. It would be only those buildings under the control of the Executive. I yield to the gentleman from Mississippi.

Mr. WILLIAMS. Does this bill carry any appropriation to carry out the employers' liability bill?

Mr. TAWNEY. None whatever.

Mr. WILLIAMS. Does any bill carry any?

Mr. TAWNEY. None that I know of. You mean the Government employees' liability act?

Mr. MANN. It has not, as I understand it, passed the Senate.

Mr. WILLIAMS. I do not mean the Government employees' liability act, but the general employees' liability act.

Mr. TAWNEY. The appropriation made for the Interstate Commerce Commission will be ample to afford the Commission all the money necessary for the purpose of administering that act.

Mr. WILLIAMS. I asked the gentleman that question for the reason that I have received communications to-day telling me that there was no provision made. I thought it was an error, and I also thought that the general appropriation for the Interstate Commerce Commission would be available.

Mr. TAWNEY. They are available.

Mr. WILLIAMS. The purpose of my question was that that idea in the mind of the public might be disabused.

Mr. TAWNEY. The general appropriation is available for that purpose and amply sufficient to accomplish the object by the Interstate Commerce Commission.

Mr. MANN. I am told that the other employers' liability bill has just passed the Senate.

Mr. DAVIS of Minnesota. Will the gentleman allow me to ask him a question?

Mr. TAWNEY. Certainly.

Mr. DAVIS of Minnesota. In the case of provision for a public building where there is a certain sum for the building, what is the amount appropriated for the site under this bill?

Mr. TAWNEY. The full amount of the authorization.

Mr. DAVIS of Minnesota. For both building and site?

Mr. TAWNEY. No; not for both building and site. Where the building and the site have been authorized, the full amount necessary for the purchase of the site has been appropriated, and so much as, in the judgment of the Department, can be expended in the preparation of the plans and the beginning of the work after the site has been procured is carried and authorized in this appropriation.

Mr. DAVIS of Minnesota. Is there any special percentage of the appropriation?

Mr. TAWNEY. None whatever. We have taken the estimates in each case.

Mr. FINLEY. Will this appropriation be available on and after the 1st of July next?

Mr. TAWNEY. It will.

Mr. FINLEY. Not before that time?

Mr. TAWNEY. Not before that time. It is not a deficiency appropriation, and for that reason the conferees did not feel justified in making this immediately available. It will become available on the 1st of July.

Now, Mr. Speaker, if there are no further questions, I desire, if I may have the attention of the House for a few moments, to submit a summary of the work of this session in respect to the appropriations.

Mr. Speaker, the annual expenditures of our Government exceed those of any other government in the world. The work of analyzing the estimates for them, of inquiring into their necessity, together with the needful inquiry into the methods of the Departments in administering and in expending previous appropriations, is rapidly becoming the most important duty and the most prodigious task to be performed in connection with the legislative department of the Government, a task whose magnitude is not appreciated, nor is the labor necessary in its performance understood. It requires constant application from the beginning until the close of the session and the most careful discrimination to prevent needless appropriations for the Federal Government or unauthorized appropriations for the exercise of governmental functions belonging to the States or for the doing of that which belongs exclusively to private interests.

So far as this work has devolved at this session upon the committees of this House having appropriating jurisdiction, I know it has been performed conscientiously and faithfully. Speaking for the Committee on Appropriations, I can say that it has been performed with no other thought or purpose than to supply the actual needs of the public service within the prescribed functions of the Federal Government, without reference to the personal desires of those from whom the increased estimated expenditures or the recommendations for increased appropriations emanated. I would not be worthy of the position I occupy on the Committee on Appropriations if I did not acknowledge the gratitude I owe to its members for their loyal support and the efficient and intelligent service they have rendered in the committee's endeavor to prevent needless or extravagant appropriations or the authorization of new services outside of the legitimate functions of the Federal Government.

Mr. Speaker, with the passage of this bill all the great supply bills of the Government for the fiscal year 1909 will have been passed, and the session will practically end. It is a custom as well as a duty we owe to the people to state, at the close of each session, the amounts appropriated and the estimated revenues for the fiscal year for which the appropriations have been made. In doing so the people are afforded an oppor-

tunity to know and compare our appropriations with those of previous sessions, and to determine whether or not they have been wisely or unwisely made; whether or not they are extravagant in amount, or are no larger than are necessary to meet the needs of the public service.

The responsibility of the House of Representatives in respect to the appropriation of money from the Federal Treasury is a direct responsibility we owe to the people. It is a non-partisan responsibility. No political party, when in control of the Government, can have any other policy in respect to appropriations than that of appropriating no more and no less than is necessary for the exercise of the constitutional functions of the Government. To us, as the direct representatives of the people, the Constitution intrusts the power and the duty of originating the bills that authorize the distribution of the public revenue.

THE DEMOCRATIC FILIBUSTER.

It is a matter of sincere regret that, to accomplish a political purpose or to gain some partisan advantage in the coming Presidential campaign, the minority in this House deemed itself justified in disregarding its responsibility in this respect by pursuing the policy it has followed for almost two months, under the leadership of the distinguished gentleman from Mississippi [Mr. WILLIAMS], a policy which made it necessary for the majority, in order to transact any public business, to adopt rules of procedure under which nonpartisan questions in relation to the appropriation of public moneys could not be considered with that freedom of discussion and action that otherwise would have enabled this House to have prevented many of the increases that were finally agreed to. As the result of these increases, the aggregate of the appropriations made at this session is larger by many millions than it otherwise would be.

The constitutional right of one-fifth of the membership of the House to have a yea-and-nay vote on any measure, invoked by the minority and applied to every important and unimportant step in legislation in order to make effective their prolonged and unprecedented filibuster, instituted two months ago and persisted in until these very last hours of the session, compelled us of the majority to resort to the drastic rule under which we have operated in order to enact before the close of the fiscal year the requisite supply bills to maintain the life of the Government. Without the rule and policy thus forced upon us the appropriation bills, containing enormous increases by Senate amendments, particularly for the Army and Navy, would have received from the membership of this body deliberate and, I believe, different and more effective consideration. We could devise a rule that would compel the minority to permit a vote and conclusion on these absolutely necessary measures for support of the Government, but we could not deprive them of their power, in the exercise of a constitutional prerogative, to so consume the time of the House as to effectually preclude discussion and deliberate consideration of many of the appropriation bills.

UNUSUAL DEMANDS FOR APPROPRIATIONS.

While the action of the minority in this House is not responsible for the increased estimates and the demands for increased appropriations, the policy which that minority has pursued is responsible to a greater extent than any other cause for the lack of complete success which has attended the efforts of those who resisted these demands for increased appropriations.

The extent of these demands and the sources from which they came should also be stated, in justice to this House. A review of these demands as they appear in official documents presented to Congress will show that the estimates for the established public service and for previously authorized public works for the next fiscal year were more than \$156,000,000 in excess of appropriations made for the same purposes during the last session of the Fifty-ninth Congress. These demands or increased estimated expenditures, many of us believe, did not rest in fact upon the necessities of the public service. They were supported mainly by official recommendations to Congress backed by the approval of the press of the country, and they consisted largely of increased compensation to those in the civil and military branches of the public service.

In addition to the demands for increased appropriations for the established public service came the demand for the authorization and establishment of many new services and new activities upon the part of the Federal Government. Many of these were wholly without the constitutional functions of the Federal Government. Demands of this character are rapidly increasing. They are the result of, and are supported by, a general tendency throughout the country to increase the power of the Federal Government where the exercise of that increased power would relieve the States and private interests of the expense incident thereto. These demands come from all of the States, but more particularly from the States south of Mason and Dixon's

line. The many bureaus and offices of the Executive Departments here at the seat of Government are always eager to take on new services and the exercise of new powers whenever there arises among the States or the people of any section of the country a demand that they should do so. Demands of this character were greater at this session of Congress than ever before, and they may be expected to increase in the future unless the executive and legislative branches of the Government unite in resisting propositions for the exercise of these extra constitutional powers and the consequent encroachment upon the revenues of the Federal Government.

EFFORTS FOR ECONOMY RECEIVED SCANT SUPPORT.

Because of the nature of the demands and the sources from which these demands emanated, prominent Members of both Houses of Congress, and especially on both sides of this Chamber, whose voice and influence otherwise would have been most potential in checking these increased appropriations, sat here silent or aided those who sought their fulfillment. I am not criticising anyone. I am only stating for the record an indisputable fact. I do not deny that some of the increases made were just, but I do say that, in view of the present and prospective condition of our revenues, these increases in pay and increased expenditures on account of newly authorized Federal services could well have been postponed, and that, too, without detriment to the public service.

In our endeavor to check and keep down these increased expenditures and increased appropriations, we were throughout this session without support either from the public, from the press, from the minority, or from the Executive Departments of the Government. The increased appropriations of more than \$43,000,000 on account of the Army and Navy, or for preparation for war to the end that we may have peace, were not, in the judgment of many, necessary, and yet this increase was not as great as the amount demanded. The demand for these enormous increases in war expenditures did not originate with the representatives of the people. It originated elsewhere, and was supported largely by a misdirected public sentiment, to such an extent that a majority of this House and a majority in the other branch of Congress, including representatives of both political parties, supported them because they did not dare oppose them, while those who did oppose them were restricted in their efforts by the meaningless filibuster by the minority.

ANALYSIS OF APPROPRIATIONS.

The total appropriations made at this session of Congress, including those known as permanent appropriations, for the ordinary conduct of the Government during the fiscal year beginning July 1, 1908, and ending June 30, 1909, amount to \$851,088,670.92.

The total revenues of the Government, estimated to Congress as required by law by the Secretary of the Treasury in his annual report in December last, are placed at \$878,123,011.30.

In justice to the Secretary of the Treasury, who made this estimate, it should be said that the estimate was made up in September, before there was any indication of a decline in revenues as a result of the financial stringency which came upon the country the latter part of October last.

In addition to the authorized expenditures of \$851,088,672.92 for the operation of the Government during the next fiscal year, appropriations are also made as follows:

In deficiency acts, exclusive of \$12,466,750 for public buildings authorized at this session, \$44,529,223.65, which sum is payable from current and former revenues.

For requirements of the sinking fund, under the permanent appropriation made therefor by the act passed February 25, 1852, estimated at \$58,000,000.

For redemption of national-bank notes, under the permanent appropriation of the deposits made by the banks for that purpose, estimated at \$25,000,000.

For construction of the Panama Canal, which by law is payable or reimbursable from the proceeds of bonds authorized to be issued for the construction of the canal, \$29,187,000.

For miscellaneous and special objects, \$1,000,000, including \$250,000 for the relief of storm and flood sufferers in Mississippi and other Southern States and \$403,000 for the payment of claims of the Catholic Church in the Philippine Islands for the use and occupation of their property by the military forces.

These five sums, added to the appropriations made for ordinary expenses of the Government during the next fiscal year, make a grand aggregate of \$1,008,804,894.57.

The history of the appropriation bills for the session, which I will print, shows in detail and in aggregates the estimates of appropriations submitted to the Congress; the bills, as reported by the House committees, as passed by the House, as reported by the Senate committees, as passed by the Senate, and, finally, as they became laws after the differences between the two Houses were reconciled in conferences; and also for purposes of comparison the appropriations made for 1908 are shown.

The estimates submitted to Congress by the executive as a basis for the appropriations made, including regular annual expenses, deficiencies, miscellaneous, and permanent charges, amounted to \$1,079,449,288.96, or an excess over the total of all appropriations as finally approved by Congress during this session of \$70,644,394.39, and \$158,651,145.16 excess over all appropriations made at the last session of Congress.

The twelve regular annual appropriation bills for 1909, as passed by the House, appropriated only \$743,907,820.97. The last sum is a reduction under the regular estimates submitted to Congress at the beginning of the session of \$98,847,172.87.

Adding to the latter sum the additional estimates submitted to Congress since the session began, and carried in the table under estimates as miscellaneous at \$25,500,000, a total reduction by the House is shown in estimates for the ordinary operating expenses of the Government of \$124,347,172.87.

The Senate passed the twelve regular annual appropriation bills by increasing them over what they carried as passed by the House to the amount of \$73,453,553.76.

The twelve regular annual appropriation bills as finally enacted appropriate—

Less than the estimates, including additional or miscellaneous estimates, \$73,640,368.04;

More than as passed by the House, \$50,706,804.83;

Less than as passed by the Senate, \$22,746,748.93; and

More than the regular appropriation acts for the current fiscal year \$36,850,701.53.

The grand total of all appropriations made at this session, including the regular annual bills, deficiencies, miscellaneous, and permanent, exceed those of last session by \$88,006,750.77.

A comparison of each of the general appropriation bills and other general titles of appropriations with those of the last session of Congress is shown in the following table:

Differences in the appropriation measures of this session, compared with those of the last session of Congress.

Title of bill.	Increase.	Reduction.
Agriculture.....	\$2,224,816.03	
Army.....	16,747,664.83	
Diplomatic and consular.....	485,130.19	
District of Columbia.....		\$322,920.78
Fortifications.....	2,410,134.00	
Indian.....		871,728.28
Legislative.....	707,487.20	
Military Academy.....		1,084,008.55
Navy.....	23,703,977.97	
Pension.....	16,910,000.00	
Post-office.....	10,871,199.00	
River and harbor (none this session).....		87,108,083.00
Sundry civil.....	2,168,101.92	
Deficiencies.....	44,586,974.74	
Miscellaneous.....	2,261,099.38	
Permanents.....	4,307,975.12	
Total.....	127,393,560.38	89,386,809.61
Net increase.....	39,386,809.61	
	88,006,750.77	

DEFICIENCIES IN APPROPRIATIONS NOT LARGE.

The total appropriations made apparently on account of deficiencies at this session, amounting to \$56,995,973.65, exceed the amount of the last session by \$44,586,974.74. This unusual sum is due not to any violation of the antideficiency legislation so recently enacted, or to ill-advised or inadequate appropriations made last session, but is more than accounted for by the sum of \$12,466,750 for public buildings authorized at this session, and by two other sums, one of \$10,000,000 for the payment of pensions required on account of the law passed at this session to increase the pensions of widows of soldiers, and another of \$12,178,900 to continue the work on the Panama Canal. At the last session of Congress all the money was appropriated that was asked for or that could, under the expectations then entertained, be expended during the current fiscal year in the construction of the canal; but the rapid progress under the splendid organization at work on the Isthmus made it necessary to supply as a deficiency in the current appropriations the sum given in order to avoid a suspension of the work.

Deducting the three sums named, together with \$11,791,342 for the Army and Navy expenditures, to which the prohibitive deficiency legislation does not apply, and the sum left for deficiencies, only \$10,558,981.65, is gratifyingly small, and much less than the ordinary deficiencies for any of the recent years.

RELATION OF EXPENDITURES TO WEALTH.

At the request of the Committee on Appropriations the Director of the Census has recently prepared and furnished, for their information, tables showing the actual expenditures of the Federal Government from 1791 to 1907, by fiscal years, and by four-year periods corresponding to the several Administrations.

In connection with these statistics Director North has furnished an analysis so valuable and informing to all who are interested in the problem of governmental expenditures that I shall ask its insertion in the RECORD as a part of my remarks.

The most significant fact to be derived from an inspection of the relationship of expenditures for the maintenance of government to the aggregate wealth of the nation is the uniformity for a long series of years of the proportion shown. This uniformity, as indicated in the tables and analysis, exists not only in the expenditures for the Federal Government, but also in the tax levies for State, municipal, and local government. Practically no variation whatever appears in the proportion of expenditure for the Federal Government per \$1,000 of national wealth, but such increase as appears is indicated in the tax levies made for government other than Federal. The figures presented suggest a tendency to increase expenditures for State or local government more rapidly than for the Federal Government.

The truth of this apparent tendency is confirmed by the fact that the census report of 1890, the first to present the aggregate payment for all expenditures of all classes, as distinguished from mere tax levies, for States, counties, cities, and minor civil divisions, including schools, amounted to \$569,252,634, or \$9.30 per \$1,000 of national wealth. In 1902, however, the year in which the next census inquiry upon this subject was made, the aggregate payment for expenditures of this class had nearly doubled, amounting to \$1,156,447,085, or \$12.80 per \$1,000 of national wealth.

In general, therefore, it appears to be an established fact that while the expenditures for the maintenance of the National Government have steadily increased during the whole period of national existence, and latterly much more than I believe they should, they have maintained an almost uniform proportion, except during the period of the civil war, in comparison with each \$1,000 of national wealth; but that the expenditures made for the maintenance of State and local governments of all kinds

have shown a decided tendency to increase in proportion to each \$1,000 of national wealth, thus reflecting the general tendency of the age and of the nation, as wealth increases, to make more liberal expenditures for the maintenance of various classes of government and governmental institutions.

The actual per capita expenditure for the maintenance of the Federal Government during the first period, from 1791 to 1796, as shown by the Census Office, was \$1.34. It would be natural to contrast this figure with the per capita of annual expenditure for the last fiscal year, amounting to \$8.91; but it will be evident upon reflection that there is no comparison possible between the mere per capita themselves without consideration of the resources of the nation at the two periods mentioned. Except in time of war or in periods of great depression, there is of necessity in every nation a rough relation between the expenditures for the maintenance of government and the ability of the nation to furnish such resources. Unfortunately, there exists no information concerning the aggregate wealth of the United States at the beginning of the nineteenth century. The earliest data upon the subject was collected at the Seventh Census in 1850.

THIS CONGRESS DESERVES PRAISE.

Mr. Speaker, in conclusion I want to commend this Congress as it is concluding the labors of its first session, and pay tribute to the courage it has manifested in its acts of commission as well as those of omission. Whatever the unthinking or the superficial critic may now say, the impartial and nonpartisan historian will hereafter record and truthfully state that, in the affirmative work performed and in contending against and successfully resisting unconstitutional demands upon the powers and the Treasury of the Federal Government, the work of no previous session is comparable with the work of the first session of the Sixtieth Congress. [Great applause on the Republican side.]

The history of the appropriation bills of this session and the analysis of public expenditures made by the Census Office to which I have referred follow:

History of appropriation bills, first session of the Sixtieth Congress; estimates and appropriations for the fiscal year 1908-9, and appropriations for the fiscal year 1907-8.

[Prepared by the clerks to the Committees on Appropriations of the Senate and House of Representatives.]

Title.	Estimates, 1909.	Reported to the House.	Passed the House.	Reported to the Senate.	Passed the Senate.	Law, 1908-9.	Law, 1907-8.

Amount of estimated postal revenues for fiscal year 1909.....

220,123,011.30

Total of estimated postal revenues for fiscal year 1909.....

878,123,011.30

* One-half of the amounts for the District of Columbia payable by the United States, except amounts for the water department (estimated for 1909 at \$130,800), which are payable from the revenues of the water department.

† Includes all expenses of the postal service payable from postal revenues and out of the Treasury.

‡ No amount is estimated for rivers and harbors for 1909 except the sum of \$27,142,744 to meet contracts authorized by law for river and harbor improvements included in the sundry civil estimates for 1909.

§ No river and harbor act passed for 1909.

|| In addition to this amount the sum of \$6,392,730 is appropriated by the sundry civil act to carry out contracts authorized by law for river and harbor improvements for 1908.

¶ This amount includes \$27,142,744 to carry out contracts authorized by law for river and harbor improvements and \$33,183,143.60 for construction of the Isthmian Canal for 1909.

‡ This amount includes \$17,806,645 to carry out contracts authorized by law for river and harbor improvements and \$29,187,000 for construction of the Isthmian Canal for 1909.

§ This amount includes \$6,392,730 to carry out contracts authorized by law for river and harbor improvements and \$27,161,367.50 for construction of the Isthmian Canal for 1908.

¶ This amount is approximated. Under deficiency estimates there is included \$12,466,750 for public buildings under the new public-buildings act.

‡ This amount includes \$12,178,900 for construction of the Isthmian Canal.

|| This amount includes \$10,000,000 for payment of pensions and \$12,466,750 for construction of public buildings under the new public-buildings act.

¶ This is the amount submitted by the Secretary of the Treasury in the annual estimates for the fiscal year 1909, the exact amount appropriated not being ascertainable until two years after the close of the fiscal year. This amount includes estimated amount of \$38,000,000 to meet sinking-fund obligations for 1909 and \$25,000,000 estimated redemption of national-bank notes in 1909 out of deposits by banks for that purpose.

‡ In addition to this amount, contracts are authorized to be entered into, subject to future appropriations by Congress, as follows: By the naval act, \$15,750,000; by the river and harbor act, \$49,829,349; by the sundry civil act, \$2,355,000; in all, \$67,934,349.

ANALYSIS OF PUBLIC EXPENDITURES.

The following table summarizes the expenditures shown in detail in the table on pages 7 to 36. (Document prepared for House Committee on Appropriations.) Expenditures are there presented by years in four-year or administration periods, from 1791 to 1907, and in the table which follows by specified groups of years. Per capita annual expenditures, both in amount and ratio, are also presented. The figure given in the column "ratio" is the quotient secured by dividing the per capita expenditures of the period under consideration by the corresponding per capita for the years from 1791 to 1796.

TABLE 1.—A.—Total and per capita expenditures of the National Government for all purposes for specified periods, 1791–1907.

Period.	Average annual expenditures.	Per capita annual expenditures.	
		Amount.	Ratio.
1791–1796.....	\$5,854,172	\$1.34	1.00
1821–1828.....	17,081,344	1.59	1.19
1846–1853.....	49,137,138	2.23	1.66
1878–1885.....	294,855,816	5.66	4.22
1898–1905.....	658,082,414	8.17	6.10
1906.....	736,717,502	8.72	6.51
1907.....	762,488,752	8.91	6.65

B.—Paid from general revenues for specified periods, 1791–1907.

Period.	Average annual expenditures.	Per capita average expenditures.	
		Amount.	Ratio.
1791–1796.....	\$5,832,509	\$1.32	1.00

The expenditures in not only the Federal Government but all State and local governments, are met in part from public taxes and in part from other revenues. In the Federal Government the latter class comprises principally revenues received as compensation for services rendered by the Post-Office.

The postal expenditures in 1907 were 112 times greater than those of the six years of Washington's Administration for which the table presents data. Comparison of the expenditures for postal service in 1907 with similar expenditures in 1791 (but \$36,697) shows that such ex-

penditure increased 248 times as rapidly as population, while all governmental expenditures increased about 6.3 times.

The increase of national expenditures actually met from taxation is reflected fairly well by the figures given above, although the reported expenditures include payments for other purposes than the cost of government and payments that are not met from the proceeds of national taxation. Among the payments of the first class so included are those for the expenditures of the District of Columbia disbursed through the National Treasury, the payments of trust moneys, and duplications of many kinds. Among the payments of the second class are those for governmental expenditures which are met from fees for services, such as those of the Patent Office and of the General Land Office. The payments for both of these classes, like the expenditures of the Post-Office, have increased much faster than the expenditures met from public taxation. The data for an exact exhibit of these payments are, however, not readily available. If they were, it would be found that the actual increase of expenditures payable from national taxes was slightly less than indicated by the table.

EXPENDITURES WITH RELATION TO POPULATION.

National expenditures payable from taxes have increased in one hundred and eleven years something over five times as fast as population. The relative increase was much slower in the first sixty years of national life than in the last fifty. The greatest increase was in the period which includes the civil war, and largely represents the increase in the governmental payments for interest and pensions. Just prior to the civil war these payments were only 13 cents per capita per annum. This was the lowest in the national history, and was less than one-fifth the corresponding per capita payment of 1796 to 1800. The per capita annual payments for interest and pensions in the four years ending June 30, 1869, were \$4.22, and by 1907 had declined to \$1.92. This decline was balanced by a relative increase of other costs of government, so that in 1907 the per capita for all expenditures payable from taxes was not far from five times what it was in Washington's time. The same statement can also be made of all such expenditures, exclusive of those for interest and pensions.

The average annual per capita expenditures of the National Government payable from taxes for the eight years 1846 to 1853 was \$2.02; for the eight years ending June 30, 1905, it was \$6.65; and for the year ending June 30, 1907, \$6.77. The average for the eight years 1893 to 1905 was 3.29 times, and that for 1907 was 3.35 times, the corresponding average for the period 1846 to 1853. To the extent represented by these numbers did the expenditures payable from taxes increase faster than population.

EXPENDITURES WITH RELATION TO NATIONAL WEALTH.

The per capita of national taxable wealth was \$308 in 1850 and \$1,234 in 1904. In the latter year it was four times what it was in 1850, indicating that the relative ability of the nation to pay taxes had increased in fifty-four years four times, while the national expenditures payable from taxes had increased in the fifty-seven years ending in 1907 only 3.35 times. The national wealth, or the ability to meet governmental expenditures, increased at least 20 and possibly 25 per cent more than did the national expenditures to be met from taxation. Considering the number of people in the country to be taxed, the present National Administration makes the Government 3.35 times as costly to the taxpayer as did the Government of 1846 to 1853. But taking account of the wealth of the citizens or their ability to support the Government, the Administration of the United States in 1907 was only 75 or 80 per cent as burdensome as that which controlled the country at the middle of the last century.

INCREASE IN THE EXPENDITURES OF THE NATIONAL GOVERNMENT AS COMPARED WITH THOSE OF STATE, MUNICIPAL, AND LOCAL GOVERNMENTS.

The following table presents the actual expenditures of the Federal Government by decades, from 1850 to 1907, a period of fifty-seven years, and the amount which such expenditures represents per \$1,000 of national wealth as compiled at the various census periods mentioned. The proportion per \$1,000 of national wealth of the taxes levied to meet the expenditure, including schools, for government other than Federal, from 1860 to 1902, and the grand total of expenditure for government, exclusive of Federal, compiled only at the Eleventh and Twelfth Censuses, are also presented.

Total national wealth and expenditures of the Federal Government and of State, county, municipal, and all local governments, per \$1,000 of wealth, 1850 to 1907.

Year.	Total national wealth.	Total expenditures of National Government (taxable).		Tax levy for expenditures for States, counties, cities, minor civil divisions, including schools.		Payment for expenditures for States, counties, cities, minor civil divisions, including schools.	
		Amount.	Per \$1,000 of national wealth.	Amount.	Per \$1,000 of national wealth.	Amount.	Per \$1,000 of national wealth.

* Estimated on basis of increase 1900–1904.

The expenditures of the National Government payable from taxation may be compared with the general property taxes levied for the support of State and municipal governments. The tax levies for State and municipal governments were ascertained by the Bureau of the Census for 1880, 1890, and 1902. For 1880 the per capita of such levies was \$6.26, and in 1902, \$9.22. In twenty-two years it increased 47.3 per cent. The per capita of national expenditures payable from taxation in 1880 was \$5.28, and in 1902, \$5.91, and in 1907, \$6.77. The percentage of increase from 1880 to 1902 was 12, and from 1880 to 1907 only 28.2. The former was only a fourth and the latter barely 60 per cent of the corresponding percentage of increase of State and local taxation for twenty-two years. State and local taxation is increasing proportionately with national wealth and the ability of the people to meet the

added costs of local government, while national expenditures—though growing rapidly—do not keep pace with the increasing national wealth; and so the burden of National Government becomes smaller and smaller with the passing of the decades—at least, that has been the general trend of affairs since the middle of the nineteenth century, in spite of the cost of the civil war with its legacy of heavy interest and pension charges.

I yield five minutes to the gentleman from Kansas [Mr. SCOTT].

Mr. SCOTT. The gentleman from Minnesota has been kind enough to show me a copy of the table to which he has re-

ferred in his statement, in which he has presented in detail the estimates and appropriations for the current session of Congress. This statement, in its reference to the estimates and appropriations for the support of the Department of Agriculture, is technically correct. In point of fact, however, it creates a wrong impression, and it is to correct this that I have asked for this brief time.

The table shows the estimates for the Department of Agriculture to be \$10,666,351, and the appropriation to be \$11,672,106, making it appear that the appropriation is in excess of the estimates something over \$1,000,000. But this statement takes no account of the supplemental estimates that were submitted after the Book of Estimates was printed. There were five of those supplemental estimates as follows:

One in the sum of \$25,000, to cover the necessary expenses for collecting evidence and securing the enforcement of the act of June 29, 1906 (34 Stat., p. 607), entitled "An act to prevent cruelty to animals while in transit by railroad or other means of transportation."

One of \$60,000 for the erection of a main observatory building at Mount Weather, Virginia, to replace the observatory building destroyed by fire February 23, 1907, and for the erection of a central heating and power plant, and so forth, thereat.

One of \$100,000, to provide for the necessary expenses in carrying out the provisions of the act of June 11, 1906.

One of \$2,000,000, for protection and permanent improvement of the national forests.

Altogether the supplemental estimates amounted to the sum of \$2,185,000, making a total amount of estimates submitted for the support of the Department of Agriculture, \$12,851,351.

The amount carried in the bill as reported from the House Committee on Agriculture was \$11,431,346, showing a reduction below the estimates of \$1,420,005. As passed by the House the bill carried \$11,508,806, still showing a reduction below the estimates of \$1,342,545. As the bill passed the Senate it carried \$12,152,406, an increase over the House bill of \$643,600. As the bill finally became law it carried \$11,672,106, showing a reduction from the estimates of \$1,179,245, instead of an increase of something above \$1,000,000, as shown by the comparison of the Book of Estimates with the final statement. I thought it was only fair to the Committee on Agriculture, Mr. Speaker, that this statement should be made.

Mr. MONDELL. Will the gentleman yield for a question?

Mr. SCOTT. Yes.

Mr. MONDELL. I desire to ask the gentleman if the supplemental estimates to which he refers were in fact all of them supplemental estimates in regular form, transmitted through the regular channels?

Mr. SCOTT. Two of them were. Three of them were not; and I wish to say very frankly that if the present chairman of the Committee on Agriculture had been as well posted as he ought to have been upon the law covering the submission of supplemental estimates, this error would have been corrected. As a matter of fact, the law was never called to his attention until after the estimates had come in, in the shape of letters direct from the Secretary of Agriculture, and they were therefore not sent back, as they perhaps should have been, to be presented in the regular way as required by the law; but they were considered by the committee and in that way became a part, it seemed to us, of the regular estimates from the Department.

Mr. MONDELL. One of the irregular estimates, as I understand it, was the estimate of \$2,000,000 for the work of the Forestry Service.

Mr. SCOTT. Referring to that, the gentleman will permit me to make this statement: In the Book of Estimates there appeared this note in connection with the Bureau of Forestry:

The SPEAKER pro tempore (Mr. WASHBURN). The time of the gentleman has expired.

Mr. TAWNEY. I yield the gentleman two minutes more to answer the question.

Mr. SCOTT. There appeared this note in connection with the Bureau of Forestry:

NOTE.—The appropriation of \$500,000 for the administration, protection, and development of the national forests, together with its several provisions, have been omitted, as the provisions are continuing legislation and as a separate estimate will be submitted for such money as may be necessary for the administration, protection, and development of the national forests.

Notice was thus given in the Book of Estimates that a supplemental estimate would be sent in later, and that supplemental estimate came, and I hold it now in my hand in the shape of a letter from the Secretary of Agriculture to the chairman of the Committee on Agriculture.

Mr. MONDELL. I know the gentleman now appreciates that these irregular estimates mislead the Members in that they are not fully informed in regard to them, as they would be in regard to a regular estimate.

Mr. SCOTT. Nobody appreciates that better than I do, and I think I can promise the gentleman that there will be no offenses committed in this direction next year if it is within the power of the Committee on Agriculture to prevent.

Mr. STEPHENS of Texas. I desire to inquire if the item to provide for the Appalachian Forest Reserve survey was contained in the bill finally?

Mr. SCOTT. There was no estimate for such a survey. That appropriation was made last year and was not repeated this year because the work had been completed.

Mr. STEPHENS of Texas. Has the report been made?

Mr. SCOTT. Yes; and it is published as a Senate document.

Mr. FITZGERALD. Mr. Speaker, speaking for the Democratic members of the Committee on Appropriations and at their direction, I desire to present the following review of our appropriations and of the country's financial condition:

It is a prodigious task to examine the Departmental estimates. The gentleman from Minnesota [Mr. TAWNEY] has not overstated the difficulties of those upon whom the burden is placed. The country would have been benefited had the recommendations of the committees charged with the preparation of the supply bills been more generally heeded by the House. The importunities of those outside are sufficiently difficult to resist, without having the membership of the House take sides against its committees on questions of expenditure.

The gentleman from Minnesota [Mr. TAWNEY] enunciated a new doctrine. It will be a surprise to the country to hear his explanations of the enormous appropriations of this Congress. He attributes the wastefulness, the recklessness, and the extravagance of his own party, in complete control of the Government, to the fact that the Democratic minority of the House has exercised its constitutional right to call the roll upon every question submitted to the House. The purpose of the minority was to center the attention of the country on the work of Congress, and that purpose has been successfully accomplished.

Mr. Speaker, I recall when the naval appropriation came back from conference it was not to the vigilance of the majority, but to the vigilance of the minority that it was discovered that the conferees on that bill, in violation of all rules of parliamentary law, had inserted a provision carrying a large sum of money. It was not the action of the minority that prevented that report being rejected, but it was the partisan action of a Republican Speaker who permitted the conference report to come up under a motion to suspend the rules instead of being brought up as the conference report on this bill is in the regular and orderly manner that enabled the Republican conferees, in violation of the rules, to insert and retain in the bill an item that was never considered in either House of Congress. The record vote upon the adoption of that report will show that more Democrats voted to reject the report, because of the improper action, as well as the unjustifiable extravagance of that bill, than did Republican Members of this House. I challenge the chairman of the Committee on Appropriations now, and I shall yield to him to answer, to name a single item of large appropriation where the RECORD does not show more Democrats recorded against it than there are Republicans recorded against it. [A pause.]

The gentleman does not care to answer. I make the assertion that in every instance when his committee was overridden, or when appropriations were improperly enlarged, more Republicans voted the reckless appropriation than did the Democrats, and more Republicans in proportion to their numbers in this House than Democrats. With a majority of fifty-seven Members in this House it is a pitiable spectacle for the chairman of the great Committee on Appropriations to have to plead that the majority of fifty-seven was unable to prevent the minority from looting the Treasury. Despite, Mr. Speaker, what I consider an extraordinary attempt of the gentleman from Minnesota to place the sins of his party upon his political opponents, and despite the extraordinary character of his statement at this time we of the minority desire to pay a highly deserved tribute to the industry, the fearlessness, the patriotism and the high purpose which have characterized the labors of the chairman of the Committee on Appropriations [Mr. TAWNEY]. It has been a source of keen gratification to have worked with him, knowing that his only ambition has been honestly to serve the country and to conserve the public interests. He deserved more loyal support from his party associates. Had he received that aid and cooperation from his own party which should have been freely given, all honest men would now have great cause to rejoice.

The Congress is now about to adjourn. This session has been the most profligate in our history. Extravagance has run riot; the Treasury has been depleted; the public money has been shamefully squandered.

On January 13 of this year I stated that "preparations have been made to squander the public treasure with a lavishness heretofore unknown." The record of this session is in complete harmony with that declaration. No other nation in the civilized world could be so reckless with its treasure and escape disaster.

The responsibility rests with the Republican party. It can not evade the issue. Every energy seems to have been concentrated upon the task of emptying the Treasury and of making imperative the issuance of bonds by the next Administration in order to defray the ordinary expenditures of the Government. The dreaded handwriting has apparently been seen upon the wall, and the Republican party is demoralized and shaken; it can not shift responsibility to a helpless minority.

The appropriations for the next fiscal year aggregate the enormous sum of \$1,008,804,894.57.

To those who have given only slight attention to the country's finances the statement will undoubtedly be startling; when contrasted with expenditures for other periods in our history amazement at Republican recklessness quickly gives way to alarm for the country's future. Expenditures have been authorized as if the wave of prosperity were still rolling high instead of having broken, as it has, and tumbling into the trough of a severe industrial depression.

The detailed statement of the appropriations compared with the estimates by the Departments, the amounts authorized at the last session and the action of the House and Senate is shown in table below.

The estimated revenues stated in the following statement are the estimates made by the Treasury Department prior to the panic. We shall demonstrate later that it is in all probability at least \$100,000,000 too large, and that not more than \$785,000,000 is likely to be realized.

Never but once in our history did the expenditures of our Government reach the thousand million dollar mark. For the fiscal year 1865, when the country was in the throes of a bitter,

bloody, and expensive civil war, the expenditures aggregated the enormous total of \$1,394,655,448. Of this sum \$1,030,690,400 were for the maintenance of the Army.

To aid in a proper appreciation of the enormity of the appropriations authorized at this session it may be well to recall that in 1862 the total expenditures were \$477,870,062; in 1863, \$729,898,066; in 1864, \$877,407,355. Despite the terrible drain of the civil war, in no year except 1865 did our expenditures even approximate the authorized appropriations made during this session.

Some other comparisons may help to fix attention upon what has been done at this session to accelerate the flow of the golden stream from the Treasury.

The total expenditures during the Buchanan Administration (four fiscal years, 1858 to 1861) were \$305,149,822.

During the four fiscal years ending in 1865, with the civil war raging, the total expenditures were \$3,394,830,931.

In the four fiscal years ending in 1869 the total expenditures were \$1,621,652,538.

In the four fiscal years ending in 1873 the total expenditures were \$1,217,337,854.

In the four fiscal years ending in 1877 the total expenditures were \$1,191,735,968.

Bear in mind, Mr. Speaker, that these are the expenditures during four-year periods. They are not much more than the sum appropriated at this session of Congress.

In the four fiscal years ending in 1881 the total expenditures were \$1,157,831,864.

In the four fiscal years ending in 1885 the total expenditures were \$1,201,014,662.

In the four fiscal years ending in 1889 the total expenditures were \$1,253,722,713.

In the four fiscal years ending in 1893 the total expenditures were \$1,655,241,809.

In the four fiscal years ending in 1897 the total expenditures were \$1,758,902,462.

History of appropriation bills, first session of the Sixtieth Congress; estimates and appropriations for the fiscal year 1908-9, and appropriations for the fiscal year 1907-8.

[Prepared by the clerks to the Committees on Appropriations of the Senate and House of Representatives.]

Amount of estimated postal revenues for fiscal year 1909.....

Total of estimated revenues for fiscal year 1909.....

* One-half of the amounts for the District of Columbia payable by the United States, except amounts for the water department (estimated for 1909 at \$130,860), which are payable from the revenues of the water department.

^b Includes all expenses of the postal service payable from postal revenues and out of the Treasury.

^c No amount is estimated for rivers and harbors for 1909 except the sum of \$27,142,744 to meet contracts authorized by law for river and harbor improvements included in the sundry civil estimates for 1909.

^d No river and harbor act passed for 1909.

^e In addition to this amount the sum of \$6,392,730 is appropriated by the sundry civil act to carry out contracts authorized by law for river and harbor improvements for 1908.

^f This amount includes \$27,142,744 to carry out contracts authorized by law for river and harbor improvements and \$33,183,143.60 for construction of the Isthmian Canal for 1909.

^g This amount includes \$17,906,645 to carry out contracts authorized by law for river and harbor improvements and \$29,187,000 for construction of the Isthmian Canal for 1909.

^h This amount includes \$6,392,730 to carry out contracts authorized by law for river and harbor improvements and \$27,161,367.50 for construction of the Isthmian Canal for 1908.

ⁱ This amount is approximated. Under deficiency estimates there is included \$12,466,750 for public buildings under the new public-buildings act.

^j This amount includes \$12,178,900 for construction of the Isthmian Canal.

^k This amount includes \$10,000,000 for payment of pensions and \$12,466,750 for construction of public buildings under the new public-buildings act.

^l This is the amount submitted by the Secretary of the Treasury in the annual estimates for the fiscal year 1909, the exact amount appropriated not being ascertainable until two years after the close of the fiscal year. This amount includes estimated amount of \$38,000,000 to meet sinking-fund obligations for 1909 and \$25,000,000 estimated redemption of national-bank notes in 1909 out of deposits by banks for that purpose.

^m In addition to this amount, contracts are authorized to be entered into, subject to future appropriations by Congress, as follows: By the naval act, \$15,750,000; by the river and harbor act, \$49,829,349; by the sundry civil act, \$2,355,000; in all, \$67,934,349.

In the four fiscal years ending in 1901 the total expenditures were \$2,444,141,683.

During these four years the war with Spain was conducted and large expenditures necessarily made by reason thereof.

The expenditures during the four fiscal years ending in 1869, immediately after the civil war, were \$1,773,178,393, less than during 1862 to 1865, a reduction of about 50 per cent.

The second four-year period after the civil war, ending in 1873, saw a reduction from the expenditures of the preceding four years of \$404,000,000, or about 25 per cent of the reduced expenditures during the four years ending in 1869.

In the four fiscal years ending in 1905 the total expenditures were \$2,679,452,799. These were the first four years of President Roosevelt's Administration. The expenditures during these four years were \$235,000,000 in excess of the expenditures during the preceding four years, when the cost of the war with Spain had to be met. After the civil war the cost of conducting the Government for the four years that followed was 50 per cent less than during the four years of the war.

After the war with Spain, under the Presidency of Theodore Roosevelt, the cost of maintaining the Government for the four following years was 10 per cent greater than during same period when the war was waged.

Evidently, Mr. Speaker, some things are expensive and come high.

Remarkable as these figures are, yet the imagination is paralyzed and patriotic sensibilities are deadened when the cost in money of a Roosevelt Administration is expressed in cold figures. During the civil-war years, 1862-1865, the total expenditures were \$3,394,830,931.

Undoubtedly it is difficult to comprehend the magnitude of these figures. The amount involved is always better appreciated by keeping in mind the stupendous character of the military operations of the times, which necessarily required unprecedented expenditures.

In these days of peace, if not of alarming prosperity, can it be other than a shock to learn that the expenditures for the two past years and the appropriations for the current fiscal year and for the one next ensuing—the four years of Theodore Roosevelt in his own right, as some are wont to say—will aggregate a sum in excess of the amount expended during civil-war years 1862-1865.

During those years the expenditures were \$3,394,830,931.

Under President Roosevelt the expenditures have been in 1906 (fiscal year), \$736,717,582; 1907 (fiscal year), \$762,488,752; appropriations for 1908 (fiscal year), \$920,798,143; appropriations for 1909, \$1,008,804,894; grand total, \$3,428,809,371; \$33,978,440 more than was expended during the four years of the civil war.

It may be said that the appropriations and expenditures are compiled upon a different basis, and comparison can not fairly be made from such figures. It can justly be said, however, that the expenditures have been used as the basis so far as it has been possible to ascertain them, and that for the current year and for the next ensuing fiscal year there can be used no figures except those which represent amounts appropriated.

The comparisons made here are not unfair. Efforts will undoubtedly be made hereafter by the Administration to create a belief that some erroneous basis of comparison has been used. It will only be for the purpose of diverting attention from the real situation and to allay the alarm that will be aroused by this startling revelation.

The country is at peace. No dangers threaten us from aggressive foreign foes; there is no menace to our peace and security from revolution or domestic disturbance. These stupendous expenditures, which stagger credulity, are unjustifiable and indefensible. They result in the piling high of burdens which will oppress the people for many years. If any compensating benefit at all commensurate with the expenditures could be shown, we should gladly applaud rather than condemn.

A painstaking study and analysis of the appropriations and a conscientious consideration of all the facts have brought us to the reluctant conclusion that for vainglorious display, to magnify unduly the military branch of the Government, for the encroachment upon rights reserved to the several States by the people, for the surreptitious extension of the powers of the Federal Government to fields never contemplated by the founders, and which, if persistently invaded, will prove destructive of our entire governmental structure, money has been lavishly, unnecessarily, injudiciously, and coercively appropriated with slight resulting compensation to the people.

The four fiscal years ending 1897 were the last during which the Democratic party controlled the Government. The following statement gives the appropriations for the Army and Navy and for fortifications and the per capita appropriations for the four-year period:

Appropriations for the Army, second Cleveland Administration.

FISCAL YEARS 1894-1897.	
1894.....	\$24,225,639.78
1895.....	23,592,884.63
1896.....	23,252,608.09
1897.....	23,278,402.73
Total.....	94,349,535.28

Estimated average population for the four years.....	69,603,000
Appropriations per capita for the four-year period.....	\$1.35

Appropriations for the Navy, second Cleveland Administration.

FISCAL YEARS 1894-1897.	
1894.....	\$22,104,061.38
1895.....	25,327,126.72
1896.....	29,416,245.31
1897.....	30,562,660.95
Total.....	107,410,094.36

Estimated average population for the four years.....	69,603,000
Appropriation per capita for the four-year period.....	\$1.54

Appropriations for fortifications—Second Cleveland Administration.

FISCAL YEARS 1894-1897.	
1894.....	\$2,210,055.00
1895.....	2,427,004.00
1896.....	1,904,557.50
1897.....	7,377,888.00
Total.....	13,919,504.50

Estimated average population for the four years.....	69,603,000
Appropriations per capita for the four-year period.....	\$0.20

Appropriations for the Army, Navy, and fortifications—Second Cleveland Administration.

FISCAL YEARS 1894-1897.	
Army.....	\$94,349,535.28
Navy.....	107,410,094.36
Fortifications.....	13,919,504.50
Total.....	215,679,134.14

Estimated average population for the four years.....	69,603,000
Appropriations per capita for the four-year period.....	\$3.09

The total appropriations and the per capita appropriations for the same services for the fiscal years 1906-1909, the second four years of President Roosevelt's Administration, are also given herewith.

Second Roosevelt Administration—Fiscal years 1906-1909.

APPROPRIATIONS FOR THE ARMY.

1906.....	\$70,396,631.64
1907.....	71,817,165.08
1908.....	78,634,582.75
1909.....	95,382,247.61
Total.....	316,230,627.08

Estimated average population for the four years.....	86,271,579
Appropriations per capita for the four-year period.....	\$3.66

APPROPRIATIONS FOR THE NAVY.

1906.....	\$100,336,679.94
1907.....	102,091,670.27
1908.....	98,958,507.50
1909.....	122,662,485.47
Total.....	424,049,343.18

Estimated average population for the four years.....	86,271,579
Appropriations per capita for the four-year period.....	\$4.91

APPROPRIATIONS FOR FORTIFICATIONS.

1906.....	\$6,747,893.00
1907.....	5,053,993.00
1908.....	6,898,011.00
1909.....	9,317,145.00
Total.....	28,017,042.00

Estimated average population for the four years.....	86,271,579
Appropriations per capita for the four-year period.....	\$0.32

Second Roosevelt Administration, fiscal years 1906-1909.

APPROPRIATIONS FOR THE ARMY, NAVY, AND FORTIFICATIONS.

Army.....	\$316,230,627.08
Navy.....	424,049,343.18
Fortifications.....	28,017,042.00
Total.....	768,297,012.26

Estimated average population for the four years.....	86,271,579
Appropriations per capita for the four-year period.....	\$8.90

Under Cleveland the per capita appropriations for the Army for four years were \$1.35; for the Navy, \$1.54; for fortifications, 20 cents; the average per capita for the four years for such service, \$3.90.

Under Roosevelt, in his second Administration, the per capita appropriations for the Army for the four-year period are \$3.66, more than two and one-half times the amount under Cleveland; for the Navy, \$4.91, more than three times the amount under Cleveland; for fortifications, 32 cents, more than 50 per cent increase over Cleveland, and the average per capita cost for the three services under Roosevelt is \$8.90, two and one-fourth times as great as under Cleveland.

The appropriations for the Army for the next fiscal year are \$16,747,664.86 more than for the present fiscal year. It has already been pointed out by the gentleman from Virginia [Mr. HAY] that \$3,000,000 additional will be required next year to meet the demands of the service, so that in reality the Army, without the addition of a single man, will cost at least \$19,747,664.86 more next year than during this year.

The appropriations for the Navy for next year are \$23,703,977.97 more than for the present year. So that in a time of profound peace our military establishments will cost, including the \$2,419,134 additional for fortifications, \$45,870,776.83 more next year than for the current year. This increase in one year is practically the total amount appropriated in 1894 to maintain the Army and Navy, to wit, \$46,329,701.16.

In other words the entire expenditure for the Army and Navy only fourteen years ago is equaled now by the increase in a single year.

In 1907 the expenditures for the British army were \$121,232,201.15, and an army at least two and one-half times as large as our Army was maintained.

In 1907 the expenditures for the French army were \$138,707,340.23; for the German army, \$176,842,187.20.

For the British navy the expenditures were \$149,364,556.75; for the French navy, \$62,732,182.88; for the German navy, \$63,165,747.40.

These nations have repeatedly been pictured to the people of this country as staggering under the burdens of militarism. It has been our boast that this free land has not been so afflicted, yet our expenditures for the two military services for the next year will be practically the same as those made by the great military nations of Europe.

The gross receipts of the United States for 1907 were \$846,725,329.62; of Great Britain, \$704,737,686.26; of Germany, \$617,941,200.80; of France, \$715,883,610.08.

Evidently the receipts of these four governments are very much alike, and the expenditures for maintenance of military establishments not widely different.

In a report prepared by the Census Bureau for the Committee on Appropriations this statement is made:

In the fiscal year ending June 30, 1907, the per capita expenditures of the United States National Government were 6.65 times as great as was the average of such expenditures during the six years of Washington's administration for which complete reports are available. National expenditures have increased in one hundred and eleven years that much faster than the population. This increase is attracting the attention of statesmen, newspaper writers, and students of public affairs.

It may be that the increasing expenditures of the Federal Government are attracting the attention of the persons mentioned in this excerpt. Evidently, however, it has completely escaped the attention of every responsible official of the administration of Theodore Roosevelt. [Applause on the Democratic side.] Surely these significant facts have not permeated the recesses of the White House nor found even a temporary lodgment in the active brain of the President. No other conclusion can satisfactorily be reached; for upon no other theory is it conceivable that the Administration would have submitted estimates, as has been repeatedly pointed out during the session, at least \$128,000,000 in excess of the revenues estimated for the coming fiscal year. Since these estimates were submitted to Congress the country has been afflicted with a panic. The business and industrial depression is growing rather than lessening. Yet in the plethora of messages to the Congress from the Chief Executive there has not been a single warning to safeguard the interests of the people by resolutely repelling all attempts to raid the Treasury. Indeed, when the history of this session is impartially and truthfully written, as it will be some day, the wielder of the "big stick" will be pictured in heroic size at the head of those who, openly encouraged or secretly abetted by him, have successfully rifled the people's strong box. [Applause on the Democratic side.]

How are these extraordinary authorizations to be met? If the Treasury were overflowing and money unnecessarily taken

from the people through various forms of taxation were being withheld from the channels of trade, it might be sufficient excuse for some to make lavish appropriations. Or if the party in power adopted the policy of the tyrants of old and expended enormous sums upon public works to keep the unemployed from awakening to the truth of the country's position, such reasons might be urged in defense of these appropriations.

But of the total of \$1,008,804,894.57 appropriated at this session not a single dollar is to be spent on new projects for the improvement of water routes and harbors and but \$30,000,000 is for newly authorized public buildings.

From the daily statement of the Treasury Department for May 23, 1908, it appears that the excess of expenditures over receipts for the fiscal year to and including that day was \$61,421,301.82.

For the same period last year the receipts exceeded the expenditures \$61,197,210.71; on that day last year a surplus of \$61,197,210.71; on the same day this year a deficit of \$61,421,301.82.

The change is due to the falling off in receipts as well as to increased expenditures.

On May 23, 1908, the receipts for the year, exclusive of postal receipts, were \$537,422,410.67; for the corresponding period in 1907, \$588,788,118.73, a falling off from last year in receipts of \$51,365,708.06.

Up to May 23, this year, the expenditures for the year, excluding postal deficit, were \$598,843,712.49; up to May 23, 1907, \$527,580,908.02, an increase of expenditures this year thus far of \$71,262,804.47.

The total receipts for the fiscal year 1907 were \$846,725,329.62.

The estimate of receipts for the present fiscal year after the panic had started was \$844,025,581.10.

On May 23, the receipts this year were \$51,365,708.06 less than last year. I pointed out on January 13 of this year that the deficit at that time was \$11,295,846.93. Since then, in four months, the deficit has increased \$40,069,861.13, an average increase of \$10,000,000 a month.

At the end of the present fiscal year the falling off in revenues from last year will be at least \$61,000,000, so that our receipts for this year, instead of being \$844,000,000, as estimated by the Secretary of the Treasury, will be about \$785,000,000.

The appropriations for the same period this fiscal year are \$920,798,143. So that the deficit for the present fiscal year will be at least \$135,000,000. If the amount appropriated for sinking fund requirements, \$57,000,000, be deducted on the theory that nothing will be used under present conditions for the reduction of the public debt, it will still leave a deficit at the end of the fiscal year of \$78,000,000.

With such a deficiency for the present fiscal year, what is the outlook for the next fiscal year?

Appropriations, \$1,008,804,894.57; receipts estimated before the panic, \$878,123,011.30.

For the present fiscal year the receipts will fall \$61,000,000 below the estimate. The industrial situation is not improving; the approach of a national election will not be a stimulant to business; the promise of revision of the tariff by its friends will tend further to accentuate a constantly growing industrial depression.

I might say as an aside that the character of the revision to be had from the friends of the present tariff was indicated when the Speaker appointed the gentleman from Indiana [Mr. CRUMPACKER] a member of the Committee on Ways and Means, and it was then disclosed that in his district the United States steel trust had just finished building the largest steel plant in the entire world. [Applause on the Democratic side.]

The condition of business is reflected in the values of our imports and exports.

In April, 1906, our imports free of duty were \$46,813,205; in 1907, \$58,245,910; in 1908, \$36,624,158. Our dutiable imports were, in April, 1906, \$60,504,876; in 1907, \$71,308,165; in 1908, \$50,857,100.

The total imports dutiable and free of duty were: April, 1906, \$107,318,081; 1907, \$129,554,075; 1908, \$87,481,258.

The value of the imports for ten months ending in April of the years 1906, 1907, and 1908 is as follows:

Imports.	Ten months ending April—			Decrease, ten months, 1907 and 1908.
	1906.	1907.	1908.	
Free of duty.....	\$458,292,484	\$541,318,486	\$446,506,767	\$84,811,719
Dutiable.....	562,580,694	654,080,618	571,838,973	82,241,645
Total.....	1,020,873,178	1,195,399,104	1,018,345,740	177,053,364

A decrease in this year of imports valued at \$177,053,364.

From 1904 to 1907, and further back, if I remember accurately, to 1893, our exports have invariably been greater in value in March than in February. This year there was a perceptible falling off in the month of March, while the falling off in April exports is much more marked this year than in former years, as appears from the following figures:

Exports of merchandise.

	1903.	1904.	1905.	1906.	1907.	1908.
	Dollars.	Dollars.	Dollars.	Dollars.	Dollars.	Dollars.
January.....	133,992,269	142,045,170	123,597,339	170,603,053	189,296,944	208,114,718
February.....	125,586,024	118,800,282	106,870,782	141,766,558	159,517,221	167,757,032
March.....	132,093,964	119,888,449	136,978,429	145,510,707	161,685,228	141,558,149
April.....	109,827,215	109,889,405	128,575,374	144,380,040	157,431,781	133,470,333

Under these circumstances it seems apparent that the country will be fortunate indeed should its receipts in the next fiscal year aggregate \$785,000,000, the probable receipts for the present year.

An impartial review of all these facts establish firmly the conviction that the repeated warnings of the gentleman from Minnesota [Mr. TAWNEY], that there will be a deficit of \$150,000,000 in the coming fiscal year, is conservative rather than extravagant.

There may be some others, like the gentleman from Illinois [Mr. BOUTELL], complacently resting in the assurance that the Treasury is in possession of more than \$1,000,000,000 in gold. If so, they live in a fool's paradise.

We listened with much interest to the happy speech of the gentleman from Illinois [Mr. BOUTELL] a few months since when he congratulated the country upon the accumulation in the Treasury of \$1,000,000,000 in gold. It reminded us of the individual who had purchased \$100,000 of real estate and given a mortgage of \$95,000 as part of the purchase price and then boasted that his real estate holdings amounted to \$100,000. [Applause on the Democratic side.]

On May 23, 1908, there was in the Treasury \$1,030,000,000 in gold. Of this \$150,000,000 was in the Division of Redemption as a reserve fund, pledged to guarantee the maintenance at parity of all the demand obligations of the United States. The necessity to disburse a single dollar of this \$150,000,000 would unsettle business and disturb financial affairs throughout the civilized world. Eight hundred and thirty-seven million two hundred and twenty-nine thousand eight hundred and sixty-nine dollars of this gold was held against outstanding gold certificates. Actually in circulation in a form more convenient than the metal itself, this gold could not be touched except to take up the outstanding certificates when presented.

Of the \$1,030,000,000 in gold coin and bullion in the Treasury, just \$43,989,034 was in the general fund and available for the necessities of the Government. It is part of the cash available on May 23, 1908, amounting to \$239,651,025.37. Twelve million dollars of this sum will be required to meet the demands in excess of the receipts for the balance of this fiscal year, so that for the \$223,804,894.57 appropriated for the next fiscal year in excess of the probable revenues, there will be \$227,000,000 in the Treasury. Apparently a surplus, but not so actually, for at least \$3,000,000 additional will be required for the War Department. There has never failed to be unforeseen emergencies requiring moneys additional to the regular appropriations. Moreover, in appropriating for the continuance of river and harbor improvements and of work on public buildings now in progress, and for many other required services, those amounts only were appropriated that would be required to carry the various works and services to the 4th of March, 1909. For the money required during the other four months of the next fiscal year Congress will appropriate at the next session after the coming election. [Applause on the Democratic side.] The apparent margin of \$4,000,000 will quickly be wiped out, and there will be insufficient funds to meet the requirements of the public service.

The gentleman from Minnesota [Mr. TAWNEY] does not prophesy idly when he warns his associates, as he has on several occasions during the past few months, that within the next fiscal year it will be necessary to issue either certificates of indebtedness or bonds to obtain the money to pay the current expenses of the Government.

It would appear as if the Republicans were preparing to repeat their conduct in the closing months of the Harrison Administration [applause on the Democratic side] of preparing the plates, as was done by Secretary Foster, for the printing of bonds for use by a Democratic Administration because of Republican folly. [Applause on the Democratic side.]

Mr. Speaker, in striking contrast with the management of the nation's finances by the Republican party is the situation in Great Britain to-day. On the 7th of this month the budget was presented to the House of Commons by the premier, Mr. Asquith, acting for the chancellor of the exchequer. A perusal of his speech would be of incalculable benefit to every Member of this House. Whatever opinions may be entertained of the British system of government, the conduct of its finances can not do other than elicit admiration.

Mr. Asquith pointed out that in presenting the budget a year previously he had estimated the revenues for the fiscal year ending March 31, 1908, at about \$765,000,000 and provided for the expenditure of \$762,510,000. The revenue had actually been \$782,690,000, \$17,000,000 in excess of his estimate, and the actual expenditures \$759,060,000, about \$3,000,000 less than provided. As a result at the end of the year there was a surplus of receipts over expenditures of \$20,000,000 and the public debt had been reduced \$85,000,000. Highly impressive when contrasted with the labors of the Republican party, which produces a deficit this year of \$78,000,000, and then in the face of falling revenues is asked by the executive officials to appropriate at least \$128,000,000 more than the estimated revenues and actually appropriates \$223,000,000 more than the reasonably anticipated revenues for which the gentleman from Minnesota [Mr. TAWNEY] puts the blame on a Democratic filibuster at this time! [Applause and laughter on the Democratic side.]

The estimated revenues of the British Government for the next fiscal year, as pointed out by Mr. Asquith, are \$788,850,000; the expenditures provided aggregate \$764,345,000, a surplus of about \$25,000,000. With this surplus revenue it is proposed to remove certain annoying stamp taxes, to initiate a system of old-age pensions, to reduce the tax on sugar 1 farthing a pound, with a consequent loss of revenue of \$17,000,000, so as to afford some relief to the masses from the burdens of taxation, and still have a surplus of receipts over expenditures available for unforeseen contingencies.

With estimated revenues practically identical with our probable revenues—Great Britain, \$788,850,000; United States, \$785,000,000—Great Britain will support an army three and one-half times as large as our Army, and a navy, estimating by the number of men, about three times as large as our Navy; will initiate a system of old-age pensions, will apply about \$75,000,000 to the reduction of its debt, will reduce substantially the tax upon sugar, a universally used foodstuff, and still have a surplus of receipts available for contingencies, while the United States proposes to expend \$223,000,000 in excess of its probable revenues, with military establishments only one-third as large as Great Britain, and without relieving the people from a single dollar of taxation.

It is little to be wondered that the British premier exultantly declared that—

When people talk about the demands of democracy, I may be allowed to say that there is not a more creditable chapter in the annals of democratic finances than that which records the fact that during three years, with a passionate desire for diminution of expenditure and for the mitigation of popular burdens, there has been the application of the enormous sum of between thirteen and fifteen millions (sterling) a year out of taxation to redeem the principal of our national debt.

Mr. Speaker, while I have not as much admiration for the British Government as for our own, I can not withhold my admiration for the manner in which their finances are conducted, particularly when contrasted with the Republican party's administration of this Government.

Within the last few days there seems to have been an awakening on the Republican side of the House. Feeble protests have been made against the extent of appropriations and some complaint against the Senate for presuming to add to the appropriation bills as passed by the House.

Mr. Speaker, with the exception of the gentleman from Minnesota [Mr. TAWNEY], there has not been a single Republican in this House with sufficient influence to be considered an important factor in the deliberations of this body who has, prior to this week, raised his voice in protest against the unjustifiable extravagance of the House and of Congress. [Applause on the Democratic side.]

There are so many so-called "leaders" upon the Republican side who might have aided in keeping the appropriations within reasonable limits had they used their influence to do so. Instead, they have either sat silently in their seats or openly aided efforts of others to increase the committee's recommendations. It is too late now to cry "wolf." It is too late to cry "Democratic filibuster" when the Republican leaders deliberately permitted the Committee on Appropriations, with its great chairman, to be overruled—I care not why—and then have him forced to come in and instead of denouncing his own party associates for their lack of loyalty and support hide behind

the Democratic filibuster. [Applause on the Democratic side.] There is a large majority upon that side of the House, and they should have stood solidly behind him. If they had, it would have been impossible to squander the public money, as has been done in this session. It is preposterous to attempt to lay the entire blame upon a Republican Senate. The Republican party is in complete control of the Government. Its leaders in this House have repeatedly announced that the Republican party had ample power to legislate in its own way and its own time; that it was prepared to accept responsibility for what would be done at this session and what would be left undone. Accept the responsibility. Justify the extravagance of this session. Explain the benefits to accrue to the people from your reckless appropriations. Demonstrate the wisdom of appropriating \$223,000,000 more than the probable receipts of the Government; of increasing the appropriations for the military establishments in a time of profound peace and with no annoying complications \$45,870,776.83 over those of the current year; defend the stupendous aggregate of your appropriations—\$1,008,804,894.57—and point out the resulting compensations to the people.

This is a Government by party. The Republican party is responsible for the results of this session. Responsibility can not be shifted from the House to the Senate nor from the Congress to the Executive. The Republican party is in control of all these and is called upon to answer for its actions. The Democracy is willing to submit the issue to the intelligence of the American people and to abide the result of their judgment. [Loud applause on the Democratic side.]

The SPEAKER pro tempore. The question is on agreeing to the conference report.

The question was taken.

Mr. WILLIAMS. I demand the yeas and nays.

The yeas and nays were ordered.

Mr. TAWNEY. I make the point of no quorum.

The SPEAKER pro tempore. The Chair sustains the point. Evidently there is no quorum. The Doorkeeper will close the doors; the Sergeant-at-Arms will notify absentees; the question will be taken on agreeing to the conference report, and the Clerk will call the roll.

The question was taken, and there were—yeas 189, nays 1, answered "present" 17, not voting 180, as follows:

YEAS—189.

So the conference report was agreed to.

The Clerk announced the following additional pairs:

On this vote:

Mr. CAULFIELD with Mr. PATTERSON.

Until further notice:

Mr. STERLING with Mr. BYRD.

Mr. HEPBURN with Mr. RICHARDSON.

Mr. GILHAMS with Mr. HEFLIN.

The result of the vote was announced as above recorded.

The doors were opened.

ADJOURNMENT SINE DIE.

Mr. PAYNE. Mr. Speaker, I ask unanimous consent for the consideration and adoption of the following resolutions, which I send to the Clerk's desk.

The SPEAKER. The gentleman from New York asks unanimous consent for the consideration and adoption of the resolutions which the Clerk will report.

The Clerk read as follows:

Resolved by the House of Representatives (the Senate concurring), That the President of the Senate and the Speaker of the House of Representatives be authorized to close the present session by adjourning their respective Houses on the calendar day 30th of May, 1908, at 11 o'clock and 50 minutes p. m.

Resolved, That a committee of three Members be appointed by the Chair to join a similar committee appointed by the Senate to wait upon the President of the United States and inform him that the two Houses have completed the business of the present session and are ready to adjourn unless the President has some other communication to make to them.

Mr. WILLIAMS. Mr. Speaker, to save the time of the House, I shall object.

The SPEAKER. The gentleman from Mississippi objects.

Mr. PAYNE. Mr. Speaker, I move to suspend the rules and adopt the resolutions.

The SPEAKER. The gentleman from New York moves to suspend the rules and agree to the resolution. Is a second demanded?

Mr. WILLIAMS. Mr. Speaker, I demand a second.

The SPEAKER. The gentleman from Mississippi demands a second. Under the rule, a second is ordered. The gentleman from New York is entitled to twenty minutes and the gentleman from Mississippi to twenty minutes.

Mr. PAYNE. Mr. Speaker, the resolutions are so plain I think the House can understand them without any further explanation. I reserve the balance of my time. [Applause.]

Mr. WILLIAMS. Mr. Speaker, I find the speech just made by the gentleman from New York no more difficult to answer than his usual speeches. I reserve the balance of my time. [Applause on the Democratic side.]

Mr. PAYNE. You mean by that that it is unanswerable?

Mr. CANDLER. Mr. Speaker, would it be in order to sing for the twenty minutes?

The SPEAKER. Better sing afterwards.

The question was taken and the Speaker announced that the "ayes" seemed to have it.

Mr. WILLIAMS. Mr. Speaker, I ask for the yeas and nays.

The SPEAKER. The gentleman from Mississippi demands the yeas and nays.

The yeas and nays were ordered.

The question was taken, and there were—yeas 127, nays 76, answered "present" 14, not voting 170, as follows:

YEAS—127.

Adair	Edwards, Ky.	Keller	Pray

The Clerk announced the following additional pairs:

Until further notice:

Mr. CARY with Mr. RUSSELL of Texas.

Mr. HALL with Mr. HAMMOND.

The SPEAKER. Upon this vote the yeas are 127, nays 76, answered "present" 14—a quorum. The ayes have it, and the resolution is agreed to.

The Chair announces as a committee to wait upon the President, Representatives PAYNE, HEPBURN, and WILLIAMS.

MESSAGE FROM THE SENATE.

A message from the Senate, by Mr. CROCKETT, its reading clerk, announced that the Senate had passed with amendments bill of the following title, in which the concurrence of the House of Representatives was requested:

H. R. 21844. An act granting to certain employees of the United States the right to receive from it compensation for injuries sustained in the course of their employment.

EMPLOYERS' LIABILITY BILL.

The SPEAKER. The Chair lays before the House from the Speaker's table the following bill (H. R. 21844) granting to certain employees of the United States the right to receive from it compensation for injuries sustained in the course of their employment, with Senate amendments. The Clerk will report the amendments.

The Senate amendments were read.

Mr. ALEXANDER of New York. Mr. Speaker, I ask unanimous consent that the House concur in the Senate amendments to the bill H. R. 21844.

Mr. CLAYTON. I object to that, Mr. Speaker.

The SPEAKER. Objection is heard.

Mr. CLAYTON. Mr. Speaker, I demand a second.

Mr. ALEXANDER of New York. Mr. Speaker, I move to suspend the rules and concur in the Senate amendments.

The SPEAKER. The gentleman from New York [Mr. ALEXANDER] moves to suspend the rules and concur in the Senate amendments.

Mr. CLAYTON. Upon that, Mr. Speaker, I demand a second.

The SPEAKER. Under the rules a second is ordered. The gentleman from New York [Mr. ALEXANDER] is entitled to twenty minutes and the gentleman from Alabama [Mr. CLAYTON] to twenty minutes.

Mr. ALEXANDER of New York. Mr. Speaker, I will take only a moment or two. Aside from a few verbal changes the Senate has made but four or five amendments that need explanation. One of these changes the time when the act shall take effect as to the right to receive compensation from July 1 to August 1, 1908. Another extends the benefits to Government employees engaged in fortification work and in hazardous employment on construction work in the reclamation of arid lands. Another withholds benefits unless the injury continues more than fifteen days. A fifth amendment strikes out section 6, which provides a penalty if anyone seeks to obtain benefits by fraudulent means. It is believed existing law is sufficient. The principle of the bill is in no wise modified.

Mr. TAWNEY. Will the gentleman from New York yield?

Mr. ALEXANDER of New York. Certainly.

Mr. TAWNEY. In case an enlisted man in the Army or the coast artillery, for example, is employed or injured while employed or engaged in any work connected with the construction of a fortification, would he be entitled to the benefits of this bill?

Mr. ALEXANDER of New York. Not under this bill. This compensates only the civil employee—the artisan or laborer. It is so named in the bill.

Mr. Speaker. I reserve the balance of my time.

Mr. TAWNEY. Suppose the enlisted man is detailed as a laborer in connection with fortification work, what then would be the construction placed upon the act?

Mr. ALEXANDER of New York. Such detail would not change the soldier's status. He would not become a civil employee. He would still be a soldier—an enlisted man.

Mr. TAWNEY. He would also be a civil employee, detailed for this particular civil service.

Mr. ALEXANDER of New York. But not for compensation under this bill. It refers to a civil employee—an artisan or laborer.

Mr. TAWNEY. If you propose going into the fortifications, you might as well take the rest of the Army.

Mr. ALEXANDER of New York. The bill applies simply to civil employees engaged in the construction of fortifications. Soldiers do not construct fortifications. Civil employees usually do that, and it is hazardous work; the same as river and harbor work and reclamation work.

Mr. Speaker. I reserve the balance of my time.

Mr. CLAYTON. Mr. Speaker, this bill, as it originally passed the House, came from the Committee on the Judiciary of the House with a unanimous report. I had the honor of serv-

ing with the gentleman from New York [Mr. ALEXANDER] on the subcommittee that reported this bill in its original form to the whole Committee on the Judiciary. This measure, or this kind of legislation, met with the approval not only of those who are in accord with me politically on that committee, but it met with the unanimous approval of those in accord with me on this side of the House.

We thought when we considered this bill in the committee, before we reported it to the House, that we had presented a good bill, but it appears from an examination of the report now made to the House that the Senate has suggested several amendments that do not affect the principle involved or the vitals of the bill, but they do improve some of its details.

Mr. Speaker, I shall mention the more important ones. In section 1 the word "thirty" was in the bill as it passed the House. That in case of incapacity for work lasting more than thirty days the injured party or his legal representative desiring to take the benefit of this act, and so forth, "fifteen" is substituted in lieu of "thirty." I think that is a distinct improvement.

Mr. ALEXANDER of New York. Mr. Speaker, will the gentleman yield?

Mr. CLAYTON. Certainly.

Mr. ALEXANDER of New York. That amendment was made because most of these employees are now allowed a sick leave of fifteen days. Their sick leave for fifteen days and their compensation for fifteen days would be equivalent to thirty days' compensation.

Mr. CLAYTON. I think that the reason assigned for the amendment is an excellent one, and I think there are other reasons for its adoption just as good.

Then coming, Mr. Speaker, to section 6 it says:

That to seek to obtain by fraudulent means or to accept benefits under this act, to which the person is not entitled, shall be deemed a misdemeanor on his part, and punishable by a fine of not more than \$1,000 or by imprisonment for not more than two years, or both.

That penalizing section is stricken out, and I do not think it ought to have been in the original measure, because this bill is so safeguarded that I can not conceive of any circumstances under which any claimant under the provisions of this bill can successfully put through a fraudulent claim for injuries received while in hazardous employment for the Government, and I believe it is an unnecessary reflection upon the skilled mechanics and the laborers of the Government engaged in hazardous employment. It is useless, and therefore it is well enough to strike it out. [Applause.]

In section 9 is stricken out the words "That this act shall only take effect as to the right to receive compensation for any damages from accidents as to those occurring on or after July 1, 1908." This section 9 is stricken out because it is not in harmony with section 1 of the bill as amended, in which we provide "That on or after August 1, 1908, any person employed by the United States as an artisan or laborer," and so forth, so that this latter section—section 9—is unnecessary and would be in conflict with section 1.

Now, Mr. Speaker, just a word in behalf of this sort of legislation. It is in accordance with the enlightened sentiment of the day; it is in accordance with humanity; it is in accordance with a just recognition of the perilous services of many of the artisans of the Government who are engaged in hazardous employments necessary for the carrying on successfully of the business of the Federal Government.

It is putting the Government employee simply upon the footing of the employee of the railroads or the employee of any corporation of the land. It is giving to him an equal footing with them, and this great Government can well afford to do this measure of justice to its employees engaged in these hazardous occupations. I trust, Mr. Speaker, and confidently believe, that this meritorious measure will pass this House in the closing hours of this session by unanimous consent. [Loud general applause.]

I am pleased to state that the first employees' compensation measure ever proposed here was introduced into this House by a Democrat from Illinois [Mr. SABATH] on February 3, and amended and reintroduced on February 10 as the bill H. R. 16739. It provides for compensation to all employees over which Congress has jurisdiction and to employees engaged in interstate and foreign commerce; but I have not time to go into the details of that bill. I may say, however, that the principle underlying the pending measure was first embodied in that bill.

I yield the balance of my time to the gentleman from Mississippi [Mr. WILLIAMS].

Mr. WILLIAMS. Mr. Speaker, I believe in the main in the amendments which the Senate has made to the bill. The bill is distinctly improved by striking out section 6, against which I protested when it was being considered in the House, and

substituting fifteen days for thirty days in section 4 of the original bill. [Applause.] I would a little bit rather that the Senate amendment had not been made as to the time in which the bill should go into effect. As originally passed July 1 was the time, and now the time for it to go into effect is August 1, but the bill is rather improved in the Senate than hurt—an unusual thing.

Now, Mr. Speaker, this is one of the recommendations of the President of the United States adopted by this side of the House as part of an attempted Democratic programme. [Applause on the Democratic side.] There was no roll call upon the bill when it was originally passed, for that reason; and now that it comes back to us bettered there will, of course, be no roll call demanded by me nor by anybody on this side. [Applause.]

The question being taken, the rules were suspended and the Senate amendments were concurred in.

OMNIBUS TERRITORY BILL.

The SPEAKER. The Chair desires to say to the House that the so-called "omnibus Territory bill," reported from the House Committee on Territories, has passed the Senate with sundry amendments. As the Chair recollects, the bill is one of much importance, and the Chair is informed that a little later the bill will come from the Senate. If it is acted upon, a quorum will probably be required.

MESSAGE FROM THE SENATE.

A message from the Senate, by Mr. CROCKETT, its reading clerk, announced that the Senate had passed without amendment the following resolution:

House concurrent resolution 45.

Resolved by the House of Representatives (the Senate concurring), That the President of the Senate and the Speaker of the House of Representatives be authorized to close the present session by adjourning their respective Houses on the calendar day 30th of May, 1908, at 11 o'clock and 50 minutes past meridian.

Resolved, That a committee of three Members be appointed by the Chair to join a similar committee to be appointed by the Senate to wait upon the President of the United States and inform him that the two Houses have completed the business of the present session and are ready to adjourn unless the President has some other communication to make to them.

The message also announced that the Senate had also passed the following resolution:

Resolved, That a committee of two Senators be appointed by the Vice-President to join a similar committee appointed by the House of Representatives to wait upon the President of the United States and inform him that the two Houses, having completed the business of the present session, are ready to adjourn unless the President has some other communication to make to them, and had appointed as said committee Mr. HALE and Mr. TELLER.

The message also announced that the Senate had passed, with amendment, bill of the following title, in which concurrence of the House of Representatives was requested:

H. R. 21957. An act relating to affairs in the Territories.

THE SPEAKER.

Mr. DWIGHT and Mr. COLE, bearing aloft a broom surmounted by a large portrait of the Speaker, marched down the aisle, followed by a large number of Members bearing American flags. Having arrived at the area in front of the desk, they sang the following:

Here's to dear old Uncle Joe,
One we love where'er we go;
He's the chief and gallant leader of us all.
North and South and East and West,
In the States we all love best,
We will sing and cheer for one the people know.

[Cheers.]

The SPEAKER. Gentlemen of the House, though it is somewhat out of order, yet by unanimous consent, the House having nothing else to do at this moment while awaiting messages from the Senate, I have not felt called upon to raise the question of order.

Gentlemen, only a word at this time, and that is to thank you for your expressions of good will, which are more prized by an old man of many years' service in this House than precious ointment. I would rather have the good will of the membership of the National House of Representatives, and to deserve it—notwithstanding the mistakes that I have made, and I have made my due share in the daily transaction of business—than to receive any tribute of praise from any other body on earth. [Applause.]

In the closing hours of a session, while the two Houses are interchanging final messages, there is in the House much of latitude, notwithstanding the rules.

Mr. BEDE. And also longitude. [Laughter.]

The SPEAKER. And longitude as well. And yet it is well enough for us to remember that the disorder should be of an orderly kind; and, with the greatest good feeling, the Chair would be glad if from now until the hour of final adjournment we would be as quiet as the disorder will let us be. [Laughter and applause.]

REPORT OF THE COMMITTEE TO WAIT ON THE PRESIDENT.

Messrs. PAYNE, HEPBURN, and WILLIAMS, the committee appointed to join a similar committee on the part of the Senate, to notify the President that the two Houses were ready to adjourn, appeared at the bar of the House.

Mr. PAYNE. Mr. Speaker, the committee appointed by the House to join a like committee on the part of the Senate and wait upon the President of the United States to inform him that the two Houses had completed their business and were ready to adjourn, report that they have performed that duty, and that the President says he has no further communication to make.

The SPEAKER. The gentleman from Rhode Island [Mr. CAPRON] will please take the chair.

Mr. CAPRON took the chair as Speaker pro tempore.

TRANSFERRING BOOKS FROM TREASURY DEPARTMENT TO LIFE-SAVING STATIONS.

Mr. PAYNE. Mr. Speaker, I move to suspend the rules and pass the bill (S. 3495), to authorize the transfer of books from the Treasury Department library to life-saving stations of the United States, which I send to the desk and ask to have read.

The Clerk read as follows:

Be it enacted, etc., That the Secretary of the Treasury be, and he is hereby, authorized, in his discretion, to transfer, from time to time, from the Treasury Department library to the life-saving stations of the United States, such books as in his judgment may be no longer needed for use in said library.

The SPEAKER pro tempore (Mr. CAPRON). Is a second demanded?

Mr. HEFLIN. Mr. Speaker, I demand a second.

Mr. WILLIAMS. Mr. Speaker, I demand a second.

The SPEAKER pro tempore. The gentleman from Alabama demands a second. Under the rules, a second is ordered.

Mr. HEFLIN. Mr. Speaker, I will yield the demand to the gentleman from Mississippi [Mr. WILLIAMS], who also demanded a second.

The SPEAKER pro tempore. The Chair will recognize the gentleman from Mississippi in opposition to the resolution. The gentleman from New York is entitled to twenty minutes and the gentleman from Mississippi to twenty minutes.

Mr. PAYNE. Mr. Speaker, this is a bill passed by the Senate. An identical House bill, as I am informed, has been recommended by the House and is now upon the Calendar. It is a bill which the Secretary of the Treasury is much interested in having passed for the good of the Life-Saving Service. It simply allows him to transfer from time to time such books from the Department's library as in his judgment are of use to the Life-Saving Service and of no further use in the Department. That is all there is in the bill, and if it is passed promptly it can become a law and give the men in the Life-Saving Service an opportunity to see books which they have not now at their disposal.

Mr. WILLIAMS. Do I understand the motion of the gentleman is to suspend the rules and pass the Senate bill?

Mr. PAYNE. Yes.

Mr. WILLIAMS. It becomes a law immediately upon its passage here.

Mr. PAYNE. Yes; when it is signed by the President.

Mr. WILLIAMS. Mr. Speaker, in that event, having ascertained what the nature of the bill is, in order to save the time of the House and get it to the President as soon as possible, I now demand the yeas and nays on the motion of the gentleman.

The SPEAKER pro tempore. The question is on the motion of the gentleman from New York to suspend the rules and pass the bill, and on that the gentleman from Mississippi demands the yeas and nays.

The yeas and nays were ordered.

The question was taken, and there were—yeas 186, answered "present" 12, not voting 189, as follows:

YEAS—186.

So the motion was agreed to.

The Clerk announced the following additional pair:

For the balance of session:

Mr. KNAPP with Mr. SPIGHT.

The result of the vote was announced as above recorded.

ENROLLED BILLS SIGNED.

Mr. WILSON of Illinois, from the Committee on Enrolled Bills, reported that they had examined and found truly enrolled bills of the following titles, when the Speaker signed the same:

H. R. 21946. An act making appropriations to supply deficiencies in the appropriations for the fiscal year ending June 30, 1908, and for prior years, and for other purposes.

H. R. 21844. An act granting to certain employees of the United States the right to receive from it compensation for injuries sustained in the course of their employment.

The SPEAKER announced his signature to enrolled bill of the following title:

S. 5581. An act pensioning the surviving officers and enlisted men of the Texas volunteers employed in the defense of the frontier of that State against Mexican marauders and Indian depredations from 1855 to 1860, inclusive.

SENATE BILLS REFERRED.

Under clause 2 of Rule XXIV, Senate bills of the following titles were taken from the Speaker's table and referred to their appropriate committees, as indicated below:

S. 5818. An act ratifying an act of the Arizona legislature

providing for the erection of a court-house at St. Johns, in Apache County, Ariz.—to the Committee on the Territories.

S. 5820. An act ratifying an act of the legislative assembly of the Territory of Arizona providing for the erection of a court-house and jail at Yuma, in Yuma County, Territory of Arizona—to the Committee on the Territories.

S. 5816. An act ratifying chapters 57 and 61 of the session laws of the twenty-third Arizona legislative assembly, providing for the issuance of bonds by Mohave County to erect court-house and jail in said county—to the Committee on the Territories.

S. 6000. An act authorizing the St. Louis, Brownsville and Mexico Railway Company to construct bridges across the Rio Grande at some point at or near the town of Brownsville, in Cameron County, Tex.—to the Committee on Foreign Affairs.

S. 6540. An act to authorize the Copper River Railway Company to construct two bridges across the Copper River, in the District of Alaska—to the Committee on Interstate and Foreign Commerce.

S. 2934. An act permitting homestead entries upon certain lands in Whatcom County, Wash., being a portion of the Point Roberts Reserve—to the Committee on the Public Lands.

S. 6437. An act authorizing the construction of a bridge across the Okanogan River, Washington—to the Committee on Interstate and Foreign Commerce.

S. 6539. An act to authorize the Copper River and Northwestern Railway Company to construct a bridge across Bering Lake, in the district of Alaska—to the Committee on Interstate and Foreign Commerce.

S. 6930. An act to pay certain Cherokee citizens moneys to which they have been found entitled by the Supreme Court—to the Committee on Indian Affairs.

S. 7184. An act for the relief of citizens of the United States and the Philippine Islands—to the Committee on War Claims.

S. R. 93. Joint resolution to pay the officers and employees of the Senate and House of Representatives their respective salaries for the month of May, 1908, on the day of adjournment of the present session of Congress—to the Committee on Appropriations.

ENROLLED BILLS PRESENTED TO THE PRESIDENT FOR HIS APPROVAL.

Mr. WILSON of Illinois, from the Committee on Enrolled Bills, reported that this day they presented to the President of the United States for his approval the following bills:

H. R. 21897. An act to increase the limit of cost of certain public buildings, to authorize the enlargement, extension, remodeling, or improvement of certain public buildings, to authorize the erection and completion of public buildings, to authorize the purchase of sites for public buildings, and for other purposes;

H. R. 21946. An act making appropriations to supply the deficiencies in the appropriations for the fiscal year ending June 30, 1908, and for prior years, and for other purposes;

H. R. 21871. An act to amend the national banking laws;

H. R. 22212. An act granting an increase of pension to Byron C. Mitchell, Calvin P. Lynn, and Harry S. Lee, formerly Albert Lee Alleman;

H. J. Res. 197. Joint resolution authorizing the employment of clerical services in the Department of Justice; and

H. R. 21844. An act granting to certain employees of the United States the right to receive from it compensation for injuries sustained in the course of their employment.

SENATE CONCURRENT RESOLUTION REFERRED.

Under clause 2, Rule XXIV, the following concurrent resolution was taken from the Speaker's table and referred to its appropriate committee as indicated below:

Senate concurrent resolution 42.

Resolved by the Senate (the House of Representatives concurring). That for the purpose of ascertaining the practicability and cost of improving navigation on Coosa and Alabama rivers by means of storage reservoirs at, near, or above the sites selected for Locks and Dams Nos. 12, 14, and 15, by cooperation with the Alabama Power Company, or any other corporation duly organized under the laws of the State of Alabama, in the development of water power for industrial purposes, the Secretary of War is hereby authorized to cause a survey to be made of that portion of Coosa River above and below the sites selected for Locks and Dams Nos. 12, 14, and 15, and to submit to Congress as early as practicable a report giving the results of said survey, including plans and estimates of the whole cost of the work and the proportion thereof which should be borne by the United States; and that the cost of said survey shall be paid from funds heretofore appropriated for examinations, surveys, and contingencies of rivers and harbors.

—to the Committee on Rivers and Harbors.

ENROLLED BILL SIGNED.

The SPEAKER announced his signature to enrolled bill of the following title:

S. 3495. An act to authorize the transfer of books from the

Treasury Department library to life-saving stations of the United States.

MESSAGE FROM THE PRESIDENT.

A message from the President of the United States, by Mr. LATTA, one of his secretaries, announced that the President had approved and signed bills and joint resolutions of the following titles:

On May 26, 1908:

H. R. 20063. An act making appropriations to provide for the expenses of the government of the District of Columbia for the fiscal year ending June 30, 1909, and for other purposes.

On May 27, 1908:

H. R. 15641. An act for the removal of restrictions from part of the lands of allottees of the Five Civilized Tribes, and for other purposes;

H. R. 21260. An act making appropriations for sundry civil expenses of the Government for the fiscal year ending June 30, 1909, and for other purposes;

H. R. 18618. An act fixing the status of the Porto Rico Provisional Regiment of Infantry;

H. R. 19355. An act making appropriations for fortifications and other works of defense, for the armanent thereof, for the procurement of heavy ordnance for trial and service, and for other purposes;

H. R. 1991. An act granting pension and increase of pension to certain soldiers and sailors of the war with Spain and other wars, and to the widows of such soldiers and sailors;

H. R. 20120. An act to authorize the construction of a railroad siding to the United States navy-yard, and for other purposes;

H. R. 17506. An act to amend an act entitled "An act to simplify the laws in relation to the collection of the revenues," approved June 10, 1890, as amended by the act entitled "An act to provide revenues for the Government and to encourage the industries of the United States," approved July 24, 1897; and

H. R. 18347. An act making appropriations for the service of the Post-Office Department for the fiscal year ending June 30, 1909, and for other purposes.

On May 28, 1908:

H. J. Res. 186. Joint resolution relating to the assignment of space in the House Office Building;

H. R. 16268. An act making appropriations for the payment of invalid and other pensions of the United States for the fiscal year ending June 30, 1909, and for other purposes;

H. R. 21815. An act to amend the laws relating to navigation, and for other purposes;

H. R. 22009. An act authorizing the Secretary of War to remove certain obstructions to navigation from the main ship channel, Key West Harbor, Florida, and for other purposes;

H. R. 21875. An act making appropriations for the support of the Military Academy for the fiscal year ending June 30, 1909, and for other purposes; and

H. R. 21410. An act granting condemned ordnance to certain institutions.

On May 29, 1908:

H. R. 21735. An act to authorize the Secretary of the Interior to issue patents in fee to purchasers of Indian lands under any law now existing or hereafter enacted, and for other purposes.

On May 30, 1908:

H. R. 16757. An act for the incorporation of the Brotherhood of St. Andrew;

H. R. 19795. An act to promote the safety of employees on railroads;

H. R. 22029. An act to incorporate the Congressional Club;

H. R. 11778. An act to amend an act approved June 11, 1906, entitled "An act to provide for the entry of agricultural lands within forest reserves;"

H. R. 17228. An act to promote the safe transportation in interstate commerce of explosives and other dangerous articles, and to provide penalties for its violation;

H. R. 19462. An act to amend section 5438 of the Revised Statutes;

H. R. 22212. An act granting an increase of pension to Byron C. Mitchell, Calvin P. Lynn, and Harry S. Lee, formerly Albert Lee Alleman;

H. R. 21871. An act to amend the national banking laws;

H. R. 21897. An act to increase the limit of cost of certain public buildings, to authorize the enlargement, extension, remodeling, or improvement of certain public buildings, to authorize the erection and completion of public buildings, to authorize the purchase of sites for public buildings, and for other purposes;

H. R. 21946. An act making appropriations to supply deficiencies in the appropriations for the fiscal year ending June 30, 1908, and for prior years, and for other purposes;

H. R. 21844. An act granting to certain employees of the United States the right to receive from it compensation for injuries sustained in the course of their employment; and

H. J. Res. 197. Joint resolution authorizing the employment of clerical services in the Department of Justice.

MESSAGE FROM THE SENATE.

A message from the Senate, by Mr. ROSE, one of its secretaries, announced that the Vice-President had appointed, in compliance with the provisions of section 17 of an act entitled "An act to amend the national banking laws," approved May 30, 1908, Mr. ALDRICH, Mr. ALLISON, Mr. BURROWS, Mr. HALE, Mr. KNOX, Mr. DANIEL, Mr. TELLER, Mr. MONEY, and Mr. BAILEY members of the National Monetary Commission on the part of the Senate.

NATIONAL MONETARY COMMISSION.

The SPEAKER. The Chair announces, in compliance with the provisions of section 17 of an act entitled "An act to amend the national banking laws," approved May 30, 1908, the appointment of the following Members on the part of the House.

The Clerk read as follows:

Mr. VREELAND of New York, Mr. OVERSTREET of Indiana, Mr. BURTON of Ohio, Mr. WEEKS of Massachusetts, Mr. BONYNGE of Colorado, Mr. SMITH of California, Mr. PADGETT of Tennessee, Mr. BURGESS of Texas, and Mr. PUJO of Louisiana.

The SPEAKER. Gentlemen of the House of Representatives, the time is here for adjournment. I want to thank the membership of the House for its uniform courtesy to its presiding officer. We all take pride in the National House of Representatives. I have served in many Congresses. The personnel of the Sixtieth Congress is quite equal to that of any in which I have had the honor to serve. We have differences in our views as to policies, and ought to have. The function of the minority is only second in importance to that of the majority. Looking at the majority side of the House I congratulate it upon its fidelity to public duty and the principles of the party which it represents for the common good.

Looking at the minority side of the House, I congratulate it for devotion to its policies. During the session at times there has been much of conflict, but with virile men, American citizens, there will always be much of conflict between earnest men of different parties, but out of that conflict comes the safety to the Republic.

I wish you a safe journey home and that you may return, one and all, in full health and vitality at the meeting of the second session of the Sixtieth Congress.

In pursuance of the concurrent resolution of the House and the Senate, it only remains for me to declare the first session of the Sixtieth Congress adjourned without day. [Loud and continued applause.]

EXECUTIVE COMMUNICATIONS, ETC.

Under clause 2 of Rule XXIV, the following executive communications were taken from the Speaker's table and referred as follows:

A letter from the Doorkeeper of the House, transmitting an inventory of typewriters belonging to the United States and under his charge in the new Office Building—to the Committee on Accounts and ordered to be printed.

A letter from W. S. Rossiter, transmitting a report to the President upon conditions in the Government Printing Office—ordered to be printed as a House document.

REPORTS OF COMMITTEES ON PUBLIC BILLS AND RESOLUTIONS.

Under clause 2 of Rule XIII, bills and resolutions of the following titles were severally reported from committees, delivered to the Clerk, and referred to the several Calendars therein named, as follows:

By Mr. WANGER, from the Committee on Interstate and Foreign Commerce, to which was referred the resolution of the House (H. Res. 410) requesting the Secretary of War to furnish certain information in regard to semibituminous coal contracts for the Panama Railroad, reported the same without amendment, accompanied by a report (No. 1790), which said bill and report were referred to the House Calendar.

PUBLIC BILLS, RESOLUTIONS, AND MEMORIALS.

Under clause 3 of Rule XXII,

By Mr. McHENRY: A bill (H. R. 22267) to prevent the sale of fraudulent mining stock; to provide additional revenue; to meet the United States Treasury deficit; to equalize the distribution of the burden of taxation; to provide additional moneys to meet the demands of public improvements within the United States—to the Committee on Ways and Means.

PRIVATE BILLS AND RESOLUTIONS.

Under clause 1 of Rule XXII, private bills and resolutions of the following titles were introduced and severally referred as follows:

By Mr. BRODHEAD: A bill (H. R. 22268) granting an increase of pension to Levi Frauenfelder—to the Committee on Invalid Pensions.

By Mr. FOCHT: A bill (H. R. 22269) granting an increase of pension to Peter Goodling—to the Committee on Invalid Pensions.

By Mr. SPARKMAN: A bill (H. R. 22270) for the relief of D. F. Duckwall—to the Committee on War Claims.

By Mr. WATKINS: A bill (H. R. 22271) to correct the military record of Edward H. Cochran—to the Committee on Military Affairs.

Also, a bill (H. R. 22272) to correct the military record of John Dean—to the Committee on Military Affairs.

PETITIONS, ETC.

Under clause 1 of Rule XXII, the following petitions and papers were laid on the Clerk's desk and referred as follows:

By Mr. BARCHFELD: Petition of the Allegheny Council, No. 285, for H. R. 7559, making the 12th of October a national holiday—to the Committee on the Judiciary.

By Mr. BENNET of New York: Petition of Alfred B. Robinson and others, favoring concurrent resolution No. 28, relative to Russian atrocities—to the Committee on Foreign Affairs.

By Mr. BURTON of Ohio: Petition of International Brotherhood of Locomotive Engineers, Devereux Division, No. 167, favoring the Rodenberg anti-injunction bill (H. R. 17137) and the Hemenway-Graff safety ash-pan bill (H. R. 19795)—to the Committee on the Judiciary.

By Mr. CAPRON: Paper to accompany bill for relief of Nathan R. Kelton—to the Committee on Invalid Pensions.

By Mr. GARDNER of New Jersey: Petition of organized labor unions of New Jersey, for the amendment to the Sherman antitrust law known as the "Wilson bill" (H. R. 20584), for the Pearre bill (H. R. 94), the employers' liability bill, and the eight-hour bill—to the Committee on the Judiciary.

By Mr. GARRETT: Paper to accompany bill for relief of C. F. Sugg—to the Committee on Claims.

By Mr. KINKAID: Petition of members of various labor unions of Alliance, Nebr., for amending Sherman antitrust law by passage of Wilson bill (H. R. 20584) and for passage of Pearre bill (H. R. 94) relating to injunctions, employers' liability bill, and eight-hour Government employee bill—to the Committee on the Judiciary.

By Mr. KNOWLAND: Petition of citizens of Oakland and Fruitvale, Cal., for the amendment to the Sherman antitrust law known as the "Wilson bill" (H. R. 20584), for the Pearre bill (H. R. 94), and the employers' liability bill—to the Committee on the Judiciary.

By Mr. LANDIS: Petition of Department of Indiana Grand Army of the Republic encampment at Kokomo, May 20, 1908, commending action of Congress for legislation increasing widows' pensions—to the Committee on Invalid Pensions.

By Mr. LOUD: Petition of Journeymen Barbers' Union, Bay City, Mich.; C. W. Daniels and others, of Essexville, Mich., and William J. Bell and others, of Bay City, Mich., for the enactment of the bills H. R. 94 and H. R. 20584, a general employers' liability law, and bill limiting a day's labor to eight hours upon work done by the Government—to the Committee on the Judiciary.

By Mr. NICHOLLS: Petition of citizens of Scranton, Pa., for amendment to Sherman antitrust law, Wilson bill (H. R. 20584), the Pearre bill (H. R. 94), employers' liability bill, and the eight-hour bill—to the Committee on the Judiciary.

By Mr. ROBERTS: Petition of citizens of Lynn, Mass., for amendment to Sherman antitrust law (H. R. 20584), and for Pearre bill (H. R. 94), employers' liability bill, and the eight-hour bill—to the Committee on the Judiciary.

Also, petition of citizens of Chelsea, Malden, and Nahant, Mass., favoring concurrent resolution No. 28, relative to Russian atrocities—to the Committee on Foreign Affairs.

By Mr. RYAN: Petition of Louis Yensen and others, of Buffalo, N. Y., for the amendment to the Sherman antitrust law known as the "Wilson bill" (H. R. 20584), for the Pearre bill (H. R. 94), the employers' liability bill, and the eight-hour bill—to the Committee on the Judiciary.

By Mr. SHERMAN: Petition of various councils of Knights of Columbus, favoring H. R. 7559, making October 12 a legal holiday—to the Committee on the Judiciary.

By Mr. WATKINS: Paper to accompany bill for relief of Edward H. Cochran—to the Committee on Military Affairs.

APPENDIX.

ALLEN

APPENDIX

TO THE

CONGRESSIONAL RECORD.

The Tariff in Its Relation to the Farmer and the Home Builder.

SPEECH

OF

HON. ROBERT M. WALLACE,
OF ARKANSAS,

IN THE HOUSE OF REPRESENTATIVES.

Thursday, December 19, 1907.

Mr. WALLACE said:

Winston Churchill, in his Crisis, puts it into the mouth of a character to say:

Wealth not yet dreamed of will flow out of this land and rot all save the pure, and corrupt all save the incorruptible. Half-hearted men will go down before that flood.

Is this fiction or fact? I need not go back to the ancients for an answer. Recently the glitter of South African diamond fields excited England's cupidity, and as an evil magnet drew down her armies on a child republic and removed it from the family of nations. Indeed, I need not look to other lands, either ancient or modern, for warning. I have but to point to the operation of laws over one class alone in my own country to apprehend that not only "half-hearted" men, but men of brawn and brain, strong-willed, whole-hearted men, may "go down in that flood"—that flood of tariff inequality which now bears down upon the farmers, the honest yeomanry of this country.

When thinkers throw out the life line is it not wise for us to grasp it and avoid the breakers ahead? Particularly so when the nation is cruising the high seas as a world power. I envy no man his wealth. I conceive it to be no crime to own property. I have little patience with the spirit that stirs hatred between the rich and the poor. I have less patience, however, for the instrumentalities of a law that foster and enrich one class to the prejudice and impoverishment of another. "Let the brother of low degree rejoice in that he is exalted; but the rich, that he is made low; because as the flower of the grass he shall pass away."

The farmers of this country are its flesh and blood—the bone and sinew of its government. They ask the least of it, contribute the most to it, and are the least protected by it. Mr. Seward said these words of the agricultural class of our country:

Farmers planted these colonies—all of them—and organized their governments. They were farmers who defied the British at Bunker Hill and drove them back from Lexington. They were farmers who reorganized the several States and the Federal Government and established all on the principles of equality and affiliation. Our nation is rolling forward to a high career, exposed to shocks and dangers.

It needs the bravest wisdom and virtue to guide it safely; it needs the steady and enlightened direction which of all others the farmers of the United States can best exercise, because, being freeholders and invested with equal rights of suffrage, they are at once the most liberal and conservative element of the country.

Years afterwards Mr. Seward stated in the Senate that the North, grown rich and powerful, was about to take possession of the Government. Senator Hammond, of South Carolina, replied:

Do not forget—it can never be forgotten; it is written on the highest page of human history—that we, the farmers of the South, took our country in her infancy, and, after ruling her sixty out of seventy years of her existence, we shall surrender her to you without a stain upon her honor, boundless in her prosperity, incalculable in her strength, the wonder and the admiration of the world! Time will show what you will make of her, but no time, sir, will ever diminish our glory or your responsibility.

And it is true. The glory of the rule of equality of our farmer fathers is the one bright page that redeems and illu-

mines our whole history. The responsibility of Mr. Seward and his party has not diminished.

But to the testimony and the law, the results, the facts, without undue coloring or effort to choke the heroics out of them with the dust of statistics.

OUR FOREIGN TRADE DEPENDENT UPON SHIPMENTS OF UNPROTECTED GOODS.

We have just experienced a panic and from it we may learn valuable lessons about the tariff.

We are forced to see, as we would not have seen but for the flurry, that the prosperity of the country depends at last not upon the tariff-protected manufacturers and the trusts, but solely and alone on the shipment of agricultural products from the unprotected class. Currency, under Republican mismanagement, contracted to the verge of bankruptcy. The Government rushed to the aid of the powerful banks, but entirely overlooked the weaker ones in the farming districts. Banks issued cashiers' checks and refused to pay depositors their money except by stated amounts each day or week; they then took the depositors to task for drawing out their own money—money for which they received no interest—and created drastic rules to prohibit a man from getting his own; they criticized and condemned the farmer for holding back his crops for higher prices and threatened not to lend money on stored cotton.

The banks were virtually bankrupt. They had all the money of the country in their coffers and refused to pay it out; they forced currency to a premium in order that they might further profit thereby; the parity we have read so much about was destroyed; gold was at a premium, but gold must be had. At this crucial moment two things were discovered:

First. The protected manufacturers and the trusts could not produce gold.

Second. Unprotected cotton and breadstuffs alone could save the national honor.

The farmer, already overtaxed by the tariff and the trusts, must be further punished by refused loans unless he patriotically sacrificed his pocketbook to the further relief of the banks. He must ship his goods at once—at low price or at any price—to bring gold to the country and to further contribute to the great prosperity of the country, which takes special care of the manufacturers and the trusts.

The Saturday Evening Post of November 9, 1907, contains these words:

WHAT WE TRADE ON.

It seems to be a kind of treason this fall for planters to withhold their cotton from market in the hope of forcing higher prices. Not only is money tight, but at this writing foreign exchange is rising, involving a threat of gold export. We must depend principally upon cotton, which Europe will buy in great quantities and which runs into money very fast, to overcome this menace and turn the tide our way. That, in view of such a public need, planters should hold cotton for merely personal gain is truly reprehensible. We read that the banks generally will keep them in the path of duty by refusing to extend loans on stored cotton.

A similar situation arises every fall. Cotton makes nearly one-quarter of our total exports. Much more than anything else, it is what keeps our trade with the world going. We must each year hurry out the great staple to meet our balances in Europe. The function of the cotton industry in financing our foreign trade is so important, indeed, that one might almost expect to see a bill in Congress—introduced by a gentleman from Pennsylvania and backed by the stand-pat league—prohibiting planters to withhold a single bale that was ready for export.

We have marvelous resources in ore and fuel for the steel industry, but we can not trade with the world very much on them. Artificial prices, made by the tariff, prevent that. Exports of iron and steel in all forms amount to only one-sixth the exports of stuff produced on the farm. It is the unprotected producer upon whom we must depend to settle for the articles we buy abroad. Unprotected cotton and foodstuffs, comprising about 60 per cent of our total exports, enable us to do business with the world.

Remarkable words for this Philadelphia journalist, located in the region of protected smokestacks and stand-pat territory. According to the Monthly Summary of Commerce and Finance

of the Department of Commerce and Labor we find the following most interesting figures, showing the exports from the farm for the year ending June 30, 1907:

The total exports of all goods amounted to \$1,880,851,078. Cotton alone amounted to \$481,277,797.

Instead of being nearly one-quarter, as stated by the editor of the Saturday Evening Post, it was something more than a quarter.

We exported grains, absolutely unmanufactured, to the extent of \$111,275,396 and live animals to the extent of \$41,203,080. The following table, which we have collated from the preceding report, will show that between 50 per cent and 60 per cent of all the exported goods come from the farm:

Exports for the year ending June 30, 1907.

BREADSTUFFS.	
Wheat	\$60,214,388
Corn	44,261,816
Oats	1,670,881
Rye	562,016
Barley	4,566,295
Total grain	111,275,396
ANIMALS.	
Cattle	\$34,577,392
Hogs	309,440
Horses	4,359,957
Sheep	750,292
Mules	850,941
Poultry and other	355,148
Total animals	41,203,080
Broom corn	268,812
Cotton	481,277,797
Eggs	1,542,789
Feathers	316,306
Fruits and nuts	17,588,432
Hides and skins	1,700,032
Hay	976,287
Honey	93,690
Hops	3,531,972
Butter	2,429,489
Milk	2,191,111
Leaf tobacco	33,377,398
Vegetables	4,007,833
Total	701,780,424
This grand total is for articles purely agricultural, and into which no tariff enters. To it we may add the following list, into which unprotected agriculture enters as the chief element:	
Corn meal	\$2,313,410
Oatmeal	1,122,162
Wheat flour	62,175,397
Bran	2,115,848
Fresh beef	26,367,287
Salted beef	3,848,158
Tallow	7,182,688
Bacon	26,470,972
Hams	23,698,207
Salted pork	15,167,058
Lard	57,497,980
Lard compounds	6,166,910
Cheese	9,012,626
Cotton seed	17,062,594
Flaxseed	8,675,877
Clover seed	420,104
Timothy	813,224
All other seeds	661,405
Logs	3,645,180
Grand total	968,771,521

NEW YORK SMART SET.

In this connection it may occur to thinking men the country over that in a certain money center on the country's border we have an exceptionally smart set, and a set, too, exceptionally set on its smartness. A type menacing to good times, good morals, and good government, and who deserve more to be bound with fetters of brass and "grind in the prison house" than Samson ever did for stampeding into the standing corn of the Philistines 300 foxes with their tails on fire! It seems recently, too, to have played the Administration as the Don Quixote of chivalry in modern finance.

It is hard indeed, sir, to observe that the time is here when private vice can have her way, and public virtue no tongue to rebuke her pride and no power to crush her infamy! But we will that it shall not be so. My countrymen, smite the rock of the public conscience and the streams of reform shall come forth; down with the putrid forms and forces of corruption and civic virtue shall spring to its feet!

Josh Billings said: "Thar is two things in this world for which we are never fully prepared, and that is twins." Looking into the Republican party's hypocrisy at every available angle I feel there is one thing at least with which it has never been fully provided, and that is an elastic currency in times of panic under a gold standard and a high tariff! I wish at this juncture to turn to a recent discovery made by a Wisconsin man in his travels through the South. He was some-

what late in his discovery, as many can attest, but here is the find that he made:

DISCOVERS THE FARMER'S UNION.

"While traveling in Texas, I was struck by the organization in that country called the 'Farmer's Union,' which is, in my opinion, a very desirable thing. The object of the union is to control the price of the product instead of allowing the commission men and trust to do it. To educate the farmers in the science of agriculture is another of the aims of the union, and to promote cooperation among the tillers of the soil. The union as now organized will not attempt to dabble in politics, and that is, in my mind, one of its greatest advantages. It will of course ask for the passage of certain laws which are beneficial to farmers and will use its influence to that end. No stores, banks, or factories will be started, but the union will endeavor to do away with middlemen as much as possible and bring about a fair price for commodities," said John Rodger Bratton, of Milwaukee.

FRUITS OF THE WORK OF THE ORGANIZATION.

Its work is manifest in the activity against futures and undesirable immigration, the establishment of warehouses for the storage and holding of cotton, advanced prices of products, better relations between spinners and growers, buyers and sellers, greater diversification of crops, better cultural methods, an impetus to improved methods of classification, handling, and baling, more stable markets, elimination of speculators and middlemen, and firmly established confidence and cooperation between local bankers and merchants on the one hand and farmers and workmen on the other. A clever start indeed for the good first fruits of the organization!

But the gamblers' earthquake struck New York, and the blow stunned the body of finance in every quarter. But remember the boys in the trenches are still at their posts. The future will develop, if the present has not already revealed, that behind its sturdy yeomanry rests the invincible power of this Government. It is futile for reckless financiers to look to the Congress for relief from all their inexcusable blunders or criminal speculations. It can go carefully so far and no farther. It is high time for men who call themselves business men to do business aright, and do it so that it will stand against the temptation for quick fortunes, and at the same time hearken unto Democratic prophecy—of the approaching hour for the bubble of Republican fictitious prosperity to "burst."

But in doing this it would be well for them at the very beginning to take into their confidence that modest though courageous type of yeomanry known as the "American farmer." For have ye not heard this scripture? "The stone which the builders rejected is become the head of the corner."

PHASE OF THE BUSINESS MAN.

We hear much of the "business man," and the term may be elastic enough to cover anything from bill collectors to captains of industry. But the man who takes unto himself a loving helpmate for life, and year by year witnesses the increase of his home rival the nest of the woods, and rising with the early dawn wends his way to shop and mill, or follows the plow through the long, hot hours of the day, and lies down to pleasant dreams at night, is stumbling on a business career. Roused at midnight by baby's demands, and with arms full of animated kicks and squalls, he paces the floor and blesses the hour he was born—that man, my friends, is strictly in business! And thus as he toils by day, and nurses his wrath and responsibilities by night, problems of grave import confront him. It is not what bounty the Government is going to provide; nor what he will win on futures or the races; nor how his little herd will grow into cattle upon a thousand hills; nor how his humble farm will spread into broad acres, or blocks of brick and mortar along the boulevards of some bustling city. His problem is, how to protect the sacred charges God has given him; how to shield the bodies of his dozen children from winter's blast, or summer's heat; how bread shall come in the sweat of his brow; how the seasons shall hit and the harvest spring forth, or insect or drought or flood mock and blight his toil. In short, his problem is, how shall he provide for his family and serve his country and his God? The walk of that man ought to be the walk of the just. The reward of that man ought to be the reward of the blest. He is one of my ideals of a business man, and may God prosper his business and his tribe never grow less. In the pure and simple words of Bobby Burns, let his epitaph be:

An honest man here lies at rest
As e'er God with His image blest;
The friend of man, the friend of truth,
The friend of age, and guide of youth;
Few hearts like his with virtue warmed,
Few hearts with knowledge so informed;
If there's another world, he lives in bliss;
If there is none, he made the best of this.

But we are not like the character of Dickens that yearned to give everything to everybody, but hope to bring everybody

together for the common good. We wish to stifle the spirit, if it ever obtained, which Shylock bore to the pound of flesh and welcome that other spirit which warned him that if one drop of blood were spilled in its cutting, Shylock himself shall be the only victim of the law. Yea, and that even higher and nobler sentiment:

Owe no one anything but to love one another; for he that loveth another hath fulfilled the law.

THE TARIFF AND THE FARMER.

The Republican party rewards the farmers with bouquets and false pretense, reserving its higher favors for the protected classes, for the manufacturers and trusts. The Republican party, rejecting the idea of a tariff for revenue only, openly boasts of its allegiance to a protective tariff, "and not only this, but a high protective tariff, and not only so, but the Dingley tariff, the highest protective tariff known to the world." This tariff exacts from all consumers of foreign goods an advance of something more than 50 per cent of their ad valorem value, thus excluding for the most part foreign-made goods and giving to our home manufacturers the entire home market at prices fully 50 per cent higher than should obtain. In this way the earnings of the farmers, laborers, and clerks, which should go to their own enrichment, are transferred by law from their pockets to the pockets of the protected manufacturers and their creature, the exorbitant trust. I can now take but casual notice of this bastard child of a crafty harlot. Economists have worked out carefully the average farmer's tariff taxes, based on his yearly consumption, showing the part which goes to the United States and the part which goes to the trusts. I have adopted one of these tables and print it in my remarks as a basis for the conclusions which I shall draw.

The average farmer's tariff taxes.

Article.	Quantity.	Cost.	Tariff tax paid.		
			To United States.	To trusts.	Total.
Sugar.....	300 pounds.....	\$18.00	\$6.50	\$1.50	\$8.00
Woolen goods.....	20.00	1.50	5.00	6.50	
Cotton goods.....	12.00	.50	2.75	3.25	
Silk goods.....	4.00	.50	1.00	1.50	
Linen goods.....	2.00	.20	.25	.45	
Leather goods.....	12.00	.40	1.60	2.00	
Hardware.....	3.00	.05	.95	1.00	
China ware.....	2.00	.10	.60	.70	
Furniture.....	10.00	.20	1.50	1.70	
Farm implements.....	30.00	.25	5.00	5.25	
Window glass.....	1 box.....	1.20	.10	.40	.50
Other glass.....	1.50	.15	.45	.60	
Lead in paints, etc.....	30 pounds.....	2.00	.15	.35	.50
Chemicals.....	2.50	.30	.90	1.20	
Tin plate.....	50 pounds.....	2.40	.05	.85	.90
Wire and other nails.....	100 pounds.....	3.00	.75	.75	
Barb and other wire.....	80 pounds.....	3.00	1.00	1.00	
Liquors, spirits, etc.....	25.00	.50	2.50	3.00	
Tobacco.....	10.00	.60	1.90	2.50	
Miscellaneous.....	74.75	5.95	7.85	13.80	
Total.....		238.35	18.00	37.10	55.10

These figures are obtained by dividing the total consumption of the United States for each article by the number of persons constituting the population. Thus the average consumption of sugar in this country is about 360 pounds per family of five persons, with a retail value of \$20. The retail value of woolen goods is about \$25 per family; silk goods, \$12; cotton goods, \$30; furniture, \$15; liquors, \$40; tobacco, \$30. It will therefore be seen how much less than its fair share has been allowed this average farmer family. It has been allowed about one-half as much for clothing and one-third or one-fourth as much for tobacco and liquors as the average for all families in the United States. As this farmer and his family are industrious and hard-working people, the law ought to be such as will provide them with the necessities, and even luxuries, of life, as well as other people.

When the righteous are in authority the people rejoice; but when the wicked rule the people mourn.

This conservative estimate, however, shows that the average farmer expends for these articles annually not less than \$238.35. That \$15 per family for tariff taxes paid to the Government is reasonable is shown by the following calculation: The entire tariff taxes collected by the Government for the year ending June 30, 1906, were \$300,657,413 and the estimated population 85,568,000. The per capita is therefore \$3.50, and for a family of five would be \$17.50. To this \$17.50 several profits were, of course, added before they reached the farmers.

The estimate, \$18, is therefore less than was actually paid and very reasonable as a basis for calculation. That \$37.10 per family for tariff trusts is not a wild estimate is apparent from the fact that 453 industrial trusts, with \$9,000,000,000 of capital,

are doing business in the United States, and that the net profits of one of these—the United States Steel Corporation—have been annually from \$135,000,000 to \$150,000,000, of which the tariff profits are at least \$75,000,000. This one trust therefore collects about \$5 per family, and it is safe to say that the other 452 will easily collect the remaining \$32.10. According to the census of the United States for 1900 there were 10,438,219 persons engaged in agricultural pursuits, of which 7,600,000 represented farmers who were heads of families. At \$37 per family, the ordinary farmer's tariff taxes, the enormous sum of \$281,000,000 per annum represents the money taken from the pockets of the farming class and transferred inequitably to the pockets of the trusts and protected manufacturers. Every time a farmer buys \$238 worth of goods under the present system he pays \$18 to the Government and \$37 to the trusts. This \$37 per annum in all fairness should remain in the pockets of the farmer. But this is not all that the farmer loses. Some one once said, "The manufacturers and trusts get the protection and the profits of the tariff—the farmer gets the husk and the humbug." The freight on farm products is great enough to cover the extra tariff on steel rails, locomotives, bridges, etc.; much of this extra freight comes out of the farmer.

In addition to this the tariff duties which keep out canning factories cost the farmers fully \$20 per family per year for wasted products. Directly through the tariff, and indirectly through freights and wasted products, the farmer loses through the tariff an average of \$60 per year per family. If this were saved to the farmers and put at interest it would in twenty years double the average farm wealth. That is to say, that if the farmers had kept the \$37 in their own pockets instead of handing it over to the trusts, the entire farming class would represent a wealth of \$10,000,000,000 to \$12,000,000,000 more than they are now able to show. And this miserable showing of aggregate wealth on the part of the rural population after fifty years' trial of the tariff is one of the best allegations in the indictment against it. The following table shows how the tariff has enriched one class and impoverished another, as shown by the census figures of 1900:

City and rural wealth of the nation.

Years.	City.	Rural.	Total.
1850.....	\$3,169,000,000	\$3,967,000,000	\$7,136,000,000
1860.....	8,180,000,000	7,980,000,000	16,160,000,000
1870.....	15,155,000,000	8,900,000,000	24,055,000,000
1880.....	31,538,000,000	12,104,000,000	43,642,000,000
1890.....	49,055,000,000	15,980,000,000	65,037,000,000
1900.....	78,786,000,000	20,514,000,000	99,300,000,000

This is a marvelous table. In 1850 the farmers owned more than one-half the country. From 1850 to 1860, during the low-tariff period, they doubled their wealth and kept pace with the city population, which is not identical with, but a fair representative of, the manufacturing population. In every decade from 1860 to 1880 the manufacturing population under high tariff doubled its wealth, while it took three decades, from 1860 to 1890, for the farmers to double their wealth again. These figures show that the profits of the manufacturing and trust classes are too high in comparison with the profits of the farming class, and that protection for the manufacturing class is no longer needed. Manufacturers are no longer "babes in arms," but full-fledged producers, able to hold their own against all the world. It is the little \$37 per annum taken from the pockets of each farmer annually and unlawfully transferred to the pockets of the manufacturers and trusts that enables the manufacturing class to double its wealth every ten years, while the farming class must wait for thirty years. The mere statement of this proposition is a strong reason for the revision of the tariff. And yet we are told from time to time between Presidential elections that the people must continue to bear the injustice and outrage until the barons elect another high-tariff President. Was horrid Republican sin ever more damned in evils to top political effrontery!

The farmers are our greatest wealth producers, as well as our greatest exporters. Having borne the burdens of extra taxation for fifty years in order that they might practically enable the manufacturing class to pass the period of tender years and become strong, they should now be given a "square deal."

But we will not forget that such phrases and words as "square deal," "paramount," "strenuous," and the like are not the coinage of current political literature and leaders. For example, "paramount" is found in some of the earlier platforms, notably the American of 1856; and "strenuous" in the Whig platform of 1844, which carried Clay for President and Theodore Freylinghuysen for Vice-President, referring to the latter as "strenuous on the part of law, order, and the Constitution." Such limitations seem now to be the paradise of

"mollycoddles" and mark no fixed boundaries to be observed by our own Theodore.

WHO ARE THE FARMERS?

The Statistical Abstract of the United States for 1905 showed the following exports:

Of agriculture	\$820,863,000
Of domestic manufactures	543,607,000
Of mining	50,968,000
Of the forest	62,122,000
Of the fisheries	7,241,000
Miscellaneous	6,941,000

That is to say, 55 per cent of all the exports of the country are agricultural. They are not protected in any way. The balance of trade in favor of the United States in 1905 was \$461,329,000. But for agriculture there would have been no balance of trade, whatever that thunderbolt in political storm centers may imply. And but for the tariff wall which forces American consumers to pay higher rates than foreigners for the same goods there would have been no export in 1905 of \$543,000,00 of manufactured goods.

From the Yearbook of the Department of Agriculture for 1905 we get the following enormous figures, showing what farmers did in 1905:

Total corn production value	\$1,216,000,000
Total hay production value	605,000,000
Total cotton production value	575,000,000
Total wheat production value	525,000,000
Total oats production value	282,000,000
Total potato production value	138,000,000
Total barley production value	58,000,000
Total tobacco production value	52,000,000
Total sugar cane and sugar beets	50,000,000
The cereals alone had a farm value of	2,123,000,000
The butter and milk amounted to	665,000,000
The farmer's hen	500,000,000

The Secretary does not stop here to comment on this extraordinary item. I suppose he took it for granted that—

The American hen trieth
To rise with the cock;
While her foreign sister lieth
Until nine of the clock.

In other words, she's up and doing her best all the time. The Secretary continues:

Dreams of wealth production could hardly equal the preceding figures into which various items of the farmers' industry have been translated, and yet the story is not done. When other items which can not find place here are included, it appears that the wealth production on farms in the years 1905-6 reached the highest amount ever attained at that time by the farmer of this or any other country, a stupendous aggregate result of brain and muscle and machine. But they are exceeded by the grand total for 1907 of \$7,412,000,000. For nine years past wealth made on the farm aggregated \$53,000,000,000.

But according to the Post, Secretary Wilson's annual report just made public, explains why the country is in condition to drive through a financial crisis as a *Lusitania* drives through a wave. How can a people "go broke" when their corn crop is worth \$1,350,000,000? Eight such crops, says the Secretary, would pay for duplicating every mile of steam railroads in the country, as well as rolling stocks, terminals, and all other property.

The railroads show increased earnings during the year, but can they show an increase of \$65,000,000 in a side issue of their business, as the farmer can with his hay crop? The cotton crop is not a record breaker, but with the exception of that of 1906 it will be the most valuable crop ever raised and the third largest in size. Nor is the wheat crop so bad, although the crops of 1901, 1902, and 1903 were worth a little more. The wheat crop this year will be worth more, however, than that of last year, and will bring about \$500,000,000. The oats crop brings \$360,000,000, more than any other crop of oats has brought in the history of the world, so far as ancient and modern records attest. Potatoes, \$190,000,000, a record breaker; barley, \$115,000,000, another record breaker; tobacco, \$67,000,000, the highest ever reached except in 1906; sugar cane, beets, molasses, and sirup, \$95,000,000; flaxseed, \$26,000,000; rye, \$23,000,000; rice, \$19,500,000; buckwheat, \$10,000,000; hops, \$5,000,000, and so on.

The several cereal crops of the United States are worth \$2,378,000,000, or \$296,000,000 more than the crops of 1906. No such aggregate value of crops has ever been reached.

The Secretary says:

During sixteen years past the farmer has secured a balance of \$5,635,000,000 to himself in his international bookkeeping, and out of this he has offset an adverse balance of \$543,000,000 in the foreign trade in products other than agricultural, and turned over to the nation from his account with other nations \$5,092,000,000.

The Secretary shows that manufacturers get their strongest support from the farmers—that is to say, 86 per cent of the materials used by them are agricultural, and 56 per cent of the products made are also agricultural. He also shows that the manufacturing establishments using agricultural materials constitute 36 per cent of all manufactured products and 42 per cent of all materials. He also showed that the manufacturing establishments using agricultural material employed 37 per cent of all persons engaged in manufacturing and that the capital of these establishments was 42 per cent of all manufacturing establishments. In other words, the farm products employed in certain manufactures were valued at \$2,679,000,000. The value

of all materials used by these establishments was \$3,087,000,000; and the products of these industries were valued at \$4,720,000,000. They employed 2,154,000 persons. None of these manufacturing establishments using agricultural products are benefited to any extent by the protective tariff. Even manufacturers themselves, in the interest of common justice, are demanding correction of tariff enormities. From these considerations it is safe to say that a revision of the tariff is not only necessary and wise, but that it must come. And come it will, to the undoing of conspirators and conspiracies—the overthrow of money changers and such as dwell in the tents of wickedness—to the entire satisfaction of those who are content to be doorkeepers in the house of the Lord.

THE TARIFF ON OUR HOMES.

The census of 1900 estimates the chief products of home building as follows:

Brick and tile	\$51,270,000
Carpentering	316,000,000
Gas and lamp fixtures	12,577,000
Gas machines and meters	4,000,000
Glass	56,500,000
Iron and steel nails and spikes	14,777,000
Iron and steel pipe	21,292,000
Ironwork	53,500,000
Lead—bar, pipe, and sheet	7,477,000
Lime and cement	28,689,000
Lumber	168,343,000
Mantels	1,100,000
Marble	85,100,000
Masonry	203,600,000
Oil, linseed	27,200,000
Painting and paper hanging	88,400,000
Paints	50,100,000
Paper hangings	10,600,000
Plumbers' supplies	14,700,000
Plumbing and gas fittings	131,800,000
Pumps	1,300,000
Roofing	29,900,000
Steam fittings and heating apparatus	22,000,000
Tin plate	31,900,000
Tinsmithing and sheet-iron working	100,300,000
Varnish	18,700,000
Wood	14,300,000

Total 1,567,000,000

These figures, obtained from the factories, are wholesale prices. Adding one-third for freight, middlemen's and retail dealers' profits, brings the total cost of the building of houses in the United States annually to something more than \$2,100,000,000. In looking over the list, it will be seen that lumber, other than planing-mill products, is not included therein; nor is foundry, machine shop, and blacksmithing products. Each of these at a low estimate would amount to \$200,000,000 per annum, which would make the total cost of our building approximately \$2,500,000,000 per annum. Deducting 20 per cent of this for business and public buildings, churches, etc., we would have the enormous sum of \$2,000,000,000 per annum paid by the people to protect them from wind and weather.

Why should a tariff tax be put on building materials? We do not need it for revenue, and it serves no purpose in the protection of manufacturers and wageworkers. Why place the following ad valorem rates in the tariff schedule?

	Per cent.
Brick and tile	32
Cement	25
Glass	68
Iron and steel nails	28
Lead	82
Lime	34
Lumber, planing-mill product	15
Marble	55
White lead	55
Paper hanging	25
Stone	50
Tin plates	33
Varnish	97

Why hinder in this way the poor man's endeavor to build a home? In 1905 something more than \$14,000,000 was collected by the Government from duties on building material. That is, less than 2 per cent of the Federal customs revenue comes from this source. It is not needed for revenue, yields comparatively little revenue, but enables those who command the home market to increase the price of home building fully 50 per cent, shielded as they are by the Dingley tariff. A \$2,000 home under the Dingley tariff would cost \$3,000, a \$1,000 home would cost \$1,500, and a \$500 home \$750. These profits make it possible to have a host of combinations that thrive unlawfully and unrighteously at the expense of American home builders. And it may be well for them who thus thrive, and for those who make it possible for them thus to thrive, to remember that, "Whosoever shall keep the whole law, and yet offend in one point, he is guilty of all."

OWN A HOME.

The removal of the tariff on building material would intensify the demand for masons, carpenters, house builders, and

workingmen generally, and, without diminishing their wages, would enable them as laborers and mechanics to become home owners. Every man should own a home, however humble. Lands in my State are rapidly increasing in value, and will soon be beyond the reach of the man of limited means. Syndicates and speculators have their eyes on Arkansas dirt, as formerly they had them on Arkansas timber. Now they control the latter and unless we are watchful will soon control the former. I have looked with pride on the numerous elements that make up the strength of the States and of this Republic. But the most comforting sight to me is the quiet dignity and independence of the American country home.

Home of the unpretentious citizen, environed with woodland and field, and fragrance and freshness, and verdure and song—the ozone of life and vigorous nature at every hand—and the master rising to catch the first breath of the morning with praises to God upon his lips for His care of the household through the slumbers of the night. With that vision before me I feel that the dream of more pretentious auguries for the future must vanish—broken the charm of their majesty and power—and from these enlightened Christian homes, from these nurseries of public virtue, shall come at last the industrial freedom of this generation, the moral exaltation of this people, and the sun-bright glory and safeguard of this country. [Prolonged applause.]

North Carolina—Her Growth and Progress in Population, Agriculture, Manufactures, and General Development in the Last Decade.

"Here's to the land of the long-leaf pine,
The summer land where the sun doth shine;
Where the weak grow strong and the strong grow great;
Here's to down home, the Old North State!"

SPEECH

OF

HON. CHARLES R. THOMAS,
OF NORTH CAROLINA,

IN THE HOUSE OF REPRESENTATIVES,

Friday, February 7, 1908.

On the bill (H. R. 15372) for the allowance of certain claims reported by the Court of Claims under the provisions of the acts approved March 3, 1883, and March 3, 1887, and commonly known as the Bowman and the Tucker acts.

Mr. THOMAS of North Carolina said:

Mr. SPEAKER: The gentleman from Louisiana [Mr. WATKINS] recently, in a brief but eloquent speech, referred to the State of Louisiana, and eloquently depicted its splendid population, fertile soil, and great resources, paying his State a most deserved tribute.

He has inspired me with the desire to present to the House and to the country a description of my own State, North Carolina, and a statement showing the wonderful growth and progress of my State in the last decade in population and industrially and commercially.

I shall enter upon no extravagant eulogy of North Carolina, for a simple statement in regard to her soil, climate, resources, growth, and progress in agriculture, manufactures, fisheries, and general development speaks with greater eloquence than any extended oration I could make. I shall speak especially with reference to that part of North Carolina of which I am a native, and in which is included my Congressional district—eastern North Carolina.

Every foot of the soil of this great Commonwealth is, of course, dear to my heart, and to the hearts of all her loyal citizens, from the "Land of the Sky," where the peaks of the Blue Ridge pierce the clouds, to where the waves of the Atlantic wash the eastern shores of the State.

It is not my purpose to speak of the glorious history of North Carolina, nor of the great men and statesmen she has produced, nor of those great historic events which have given her prestige and renown. My speech will deal with her commercial and industrial progress.

It is needless for me to recall to the minds of those familiar with the history of their country the fact that the first English settlement was upon the shores of North Carolina, at Roanoke Island; that she was among the foremost of the Colonies in the struggle for independence, and that she has produced many most eminent men, who have honored her upon the bench and in the halls of Congress, both the Senate and the House of Representatives. My time would be too limited to recall North Carolina's illustrious sons whose names are engraved upon the

scroll of fame. In yonder chair of the Speaker sat for many years a distinguished North Carolinian, Nathaniel Macon, whose statue many of us think should be placed in yonder Statuary Hall side by side with that of the great commoner, and North Carolina's best beloved son, Zebulon B. Vance. It is also needless for me to recall to your minds that North Carolina has been among the foremost in all the wars of the country, down to and including the war with Spain, in which she sacrificed the lives of some of her most gallant sons. In peace and war, in the beauty and character of her women, and in the ability and courage of her men North Carolina yields the palm to no State in the Union.

We are now considering a bill to pay certain claims reported by the Court of Claims under the provisions of the acts approved March 3, 1883, and March 3, 1887, and commonly known as the Bowman and the Tucker acts.

These claims are for stores and supplies taken by the Federal Army in the South during the late civil war, and for the occupation of churches, colleges, and lodges by the Federal troops during that war. In every case, as the chairman of the committee has said, there has been a reference of the claim to the Court of Claims, and upon the findings of fact of that court the pending bill has been based. It is a just and meritorious measure, representing an honest indebtedness of the Government adjudicated by the Court of Claims and should pass. All just and proper claims arising out of the civil war, especially those for stores and supplies seized and used by the Federal Army, and for occupation of churches and colleges and lodges, should be paid by the Government as rapidly as possible. It is appropriate upon such a bill to refer to the wonderful recuperation of the whole South since the civil war. Prostrated by that war, the South in the years since Appomattox in agriculture and industrially and commercially has arisen from devastation and poverty which that war brought upon her people. Among all the States of the South, North Carolina in the last decade has been foremost in progress.

GENERAL SKETCH OF NORTH CAROLINA.

The State of North Carolina is more than 500 miles in length. Its average breadth is about 187 miles. Its area is 52,286 square miles. The State is divided into three natural divisions, the westernmost of which is the mountain plateau. The average elevation of this plateau is 4,000 feet above the sea; its area is 6,000 square miles. It contains the highest mountain peaks to be found in all the territory of the United States east of the Rocky Mountains. It is also the source of many large rivers, which radiate to the Atlantic and to the Gulf as tributaries of the Mississippi. The mountains are covered with deep, rich soil and clothed with massive hardwood forests, inclosing fertile valleys. It is a high, cool, healthful region, the "Land of the Sky," a land without a rival in scenic beauty in the United States.

The Piedmont Plateau comprises the central part of North Carolina. It is a region of greatest development in the manufacture of cotton and wool and of furniture.

The Coastal Plain, or eastern North Carolina, stretches from the seashore into the interior of the country for nearly 200 miles and comprises practically one-half of the landed area of the State. The soil of eastern North Carolina is perhaps the most productive on the Atlantic seaboard. The soil has great value in the production of early vegetables and fruits, the season following closely upon that of Florida and being a few weeks in advance of that of the lands in the Virginia and Maryland tide water region.

The climate of North Carolina is a happy medium, being neither one of extreme heat or of extreme cold, and the State is climatically naturally divided into three regions—the three already described as Mountain, Piedmont, and Coastal Plain. The mean temperature of the State is 59° F. The normal average rainfall for the State is 52 inches, which is uniformly distributed throughout the year. The State lies outside the path of cyclonic storms; there are no blizzards, no cyclones; just a good, healthful, all-around climate.

Taxation is low, the State debt is small, the facilities for education are excellent, from the common school up to and including the University of North Carolina, which was the second university established in the Union.

AGRICULTURE IN NORTH CAROLINA.

The State, having every variety of soil as well as climate, the crops of the State are diversified and numerous. It is a land of corn and wine, of grape and fig, of sunshine and flowers, and produces all the staple crops—corn and cotton, wheat, oats, rye, barley. Perhaps the greatest progress of the State, however, agriculturally, has been in the raising of tobacco and in the progress made in the cultivation of truck crops. Eastern North Carolina is particularly favored in its climate and soil,

its nearness to great markets, and ready means of transportation, so far as the raising of truck crops is concerned. It is to-day one of the greatest, if not the greatest, truck gardens of the country, and in my Congressional District in the territory around Newbern, my home, and in the territory lying along the Atlantic Coast Line Railway from Goldsboro to Wilmington, the sums of money annually realized from the early truck crop run into millions, and the output is more readily computed in hundreds of carloads than in any other way.

A traveler along the line of the Norfolk and Southern Railroad and the Atlantic Coast Line in eastern North Carolina during the trucking season, in my Congressional District, will see a landscape which appears one huge truck garden. Everything that a fertile soil and kindly climate will produce is grown in eastern North Carolina. Every variety of early vegetable and fruit is produced, and every variety almost is a money-maker. No section of the United States has made greater progress within the last ten years in truck farming than eastern North Carolina. Men have made fortunes in raising asparagus, lettuce, strawberries, and other early vegetables and fruit. The strawberry crop in the counties along the Atlantic Coast Line from Goldsboro to Wilmington, in Wayne, Duplin, Pender, and other counties, is worth millions of dollars annually. About the towns of Mount Olive and Faison, on the Atlantic Coast Line, the strawberry business had its first start, and the soil there and all along the line of this railway has been found to be well adapted for the production of the finest fruit. The first really fine berries sent north are from this section of North Carolina. Of course, earlier in the season strawberries come from Florida and from other more southern sections, but there are none of them equal in quality to those produced in the counties of Pender, Duplin, and Wayne, in North Carolina. The Irish potato is one of the leading truck crops, grown for the early market, and from the city of Newbern alone over 100,000 bushels of early Irish potatoes are shipped annually, and the crop in the adjoining county of Pamlico and other sections is a very large one. In eastern North Carolina are also grown the finest crops of lettuce, celery, cucumbers, and other early vegetables. It is not rare to get \$3,000 an acre from the winter lettuce growing. A thousand bushels per acre is a common crop of cucumbers, and the North Carolina asparagus is a standard article in the northern markets. Besides every variety of early vegetables and fruits, including the strawberry crop, eastern North Carolina, of course, produces also the staple crops of cotton and corn. In the western part of the State and in the Piedmont section are cultivated all the staple crops of cereals, as well as tobacco. The value of the trucking industry of eastern North Carolina is well stated in the following paragraphs from a publication issued by the United States Department of Agriculture:

The Wilmington district embraces the southeastern portion of North Carolina, and the northeastern portion of South Carolina, and it is one of the sections of the country peculiarly adapted to truck gardening, owing to its light sandy soil and temperate climate.

The products of the farms of this trucking area, of which Wilmington, N. C., and Newbern, N. C., are the chief centers, are ready for market about two weeks earlier than those of Norfolk, Va. Newbern is convenient to both water and rail transportation, and the farms about that city and Elizabeth City, N. C., produce large quantities of potatoes, two crops being grown annually. It is estimated that an average of 25,000 acres of vegetables and fruits is planted each year in southeast North Carolina. The varieties grown include cabbage, potatoes, beans, peas, asparagus, cucumbers, spinach, tomatoes, melons, and grapes, strawberries, pears, peaches, and other fruits. This acreage is said to average 100 packages of vegetables per acre per annum, which would make 2,500,000 packages. Averaging the selling price of the package at \$1.50 would make the trucking and berry-growing industries of this section worth, at close market value, \$3,750,000 per annum. This would, of course, include the cost of production and transportation.

Strawberry cultivation is carried on most extensively in this district, perhaps more so than in any other section along the Atlantic seaboard. It is estimated that between 11,000,000 and 12,000,000 quarts were sent to Northern markets in refrigerator cars during the spring and early summer of 1900. The berries begin to move about the middle of April, but the shipments up to the beginning of May are light, and are generally forwarded by express. As the shipments become heavier, refrigerator and ventilated cars are substituted. From Wilmington to Goldsboro, a distance of 84 miles, nearly every station along the railroad is a shipping point for strawberries and other garden truck.

It has been estimated that the average net profits per acre on vegetables grown in this district are as follows: Asparagus, \$93.63; beets, \$95; snap beans, \$42.06; cabbage, \$113.61; cucumbers, \$175; water-melons, \$32.06; canteloupes, \$55; peas, \$57.37; Irish potatoes, \$101.60; sweet potatoes, \$106.50; spinach, \$70; tomatoes, \$94.72.

The main problem in the growth of the trucking industry of eastern North Carolina is the question of transportation and freight rates. What is needed to make the industry profitable is quick transportation and low express and freight rates. The railway facilities of eastern North Carolina are now most excellent and the railway mileage of the State has very materially increased. I include in my remarks a statement received from

the Interstate Commerce Commission, showing the increase in railway mileage of North Carolina since 1890, up to and including 1906, as follows:

Statement showing mileage owned in the United States and in North Carolina for the years 1906 to 1890.

Year ending June 30—	Total mileage United States.	Increase over pre- ceding year.	Total mileage North Carolina.	Increase over pre- ceding year.
	Miles.	Miles.	Miles.	Miles.
1906	224,363.17	6,262.13	4,409.03	152.99
1905	218,101.04	4,196.70	4,256.04	181.04
1904	213,904.34	5,927.12	4,075.00	3.61
1903	207,977.22	5,505.37	4,071.39	175.83
1902	202,471.85	5,234.41	3,895.51	43.57
1901	197,237.44	3,831.63	3,831.94	20.78
1900	193,345.78	4,051.12	3,831.16	122.28
1899	189,294.66	2,898.34	3,708.88	99.37
1898	183,396.32	1,967.85	3,609.51	75.03
1897	184,428.47	1,651.84	3,534.48	39.68
1896	182,776.63	2,119.16	3,494.80	57.79
1895	180,657.47	1,948.92	3,437.01	4.57
1894	178,708.55	2,247.48	3,432.44	4.14
1893	176,461.07	4,897.55	3,436.58	66.31
1892	171,563.52	3,160.78	3,370.27	212.92
1891	168,402.74	4,805.69	3,157.35	156.47
1890	163,597.05	5,838.22	3,000.88	346.34

*Decrease.

Every section of eastern North Carolina is now linked together by the Atlantic Coast Line and the Norfolk and Southern Railway systems, which radiate in every direction.

THE FORESTS AND LUMBER INDUSTRY OF EASTERN NORTH CAROLINA.

The Forest Service has furnished me with the following information as to the magnitude of the lumber industry of North Carolina:

The total quantity of lumber cut in North Carolina at census dates was as follows:

	Feet.
1880	241,822,000
1890	509,436,000
1900	1,278,399,000
1905	1,318,411,000
1906	1,222,974,000

The value of the lumber cut in 1906 at the mills was \$19,066,437, an average of \$15.59 per thousand. Nearly three-fourths of the lumber produced in North Carolina at present is yellow pine, the State ranking sixth in point of yellow-pine production and twelfth in point of total production among all the lumber producing States. The various kinds of lumber cut in 1906 by the 1,210 mills from which reports were received were as follows:

	Feet.
Yellow pine	899,042,000
White pine	39,637,000
Hemlock	28,727,000
Spruce	2,058,000
Cypress	21,710,000
Cedar	4,232,000
Oak	107,262,000
Maple	250,000
Poplar	58,080,000
Red gum	8,598,000
Chestnut	34,707,000
Basswood	2,029,000
Birch	2,000
Cottonwood	598,000
Beech	4,000
Elm	187,000
Ash	4,769,000
Hickory	1,789,000
Tupelo	7,454,000
All others	1,838,000

According to the Census of 1905, the investment in establishments manufacturing lumber and timber products was \$10,068,358; the average number of wage-earners employed, 14,491, and the total amount paid in wages, \$4,399,878.

THE FISHERIES OF NORTH CAROLINA.

The Department of Commerce and Labor, Bureau of Fisheries, upon my request, has furnished me the following statement as to the magnitude of the fisheries of North Carolina, showing how extensive and valuable they are:

The fisheries of North Carolina in 1902 were exceeded in value by Florida alone of the Atlantic and Gulf States south of Virginia, and this single exception is due to Florida's possession of the unique fishing for sponges. In value, North Carolina fisheries equaled those of South Carolina, Georgia, Alabama, Mississippi, and Texas combined; her capital invested was almost equal to that of the States mentioned, while the number of persons employed was greater by over 2,000.

The Commission believes that the most promising and important field of development now and in future open to the fisheries of the State relates to oyster culture. The other fisheries are, in most part, already highly developed. The Commission drafted and recommended a law which it is believed would do much to encourage and permit oyster culture on a large scale, but it failed of enactment. It is believed that if this law were put into effect and supplemented by the

same enterprise exhibited by the people of North Carolina in the development of the shad and herring fisheries it would result in a production of oysters almost equal in value to that of the entire present fisheries of the State.

GENERAL SUMMARY.

In the products of farms, forests, and waters we readily see from this brief summary that eastern North Carolina is unsurpassed by any section of the United States, and is indeed one of the garden spots of the world, the paradise of the home seeker and the home builder.

The manufacturing industries of North Carolina, as I have said, are larger in the central and western portion of the State, although there are numerous cotton factories and other manufacturing establishments in the eastern section of the State. The progress of my State in manufacturing, as well as in the products of its waters and forests and farms, has been most marvelous, perhaps exceeding that of any other State within the last decade.

I have secured from the Department of Commerce and Labor, Bureau of the Census, a most valuable compilation showing the industrial growth of North Carolina, including its growth in population, agriculture, manufacturing, mining, and railway mileage. This table, which has been prepared with the greatest care by the Census Office, shows a most marvelous growth and development in the manufacture of cotton goods, cotton-seed oil, furniture, lumber, and tobacco, and a remarkable increase in the value of all these products, as well as in the State's population and resources. The table makes a showing, I believe, which is perhaps unsurpassed by any State, and which shows in more eloquent terms than any language I could use North Carolina's growth, progress, and prosperity in the last decade.

May heaven continue to smile upon the good old State, her progress continue, and peace, plenty, and prosperity be ever within her borders. It is a land of milk and honey and oil and wine, of rivers and waters, forests, and mountains, "where thou shalt eat bread without scarceness," inhabited by a free, brave, independent people.

Here's to the land of the long-leaf pine,
The summer land where the sun doth shine;
Where the weak grow strong and the strong grow great;
Here's to down home, the Old North State!

SPEECH

OF

HON. GEORGE W. KIPP,

OF PENNSYLVANIA,

IN THE HOUSE OF REPRESENTATIVES,

Monday, February 3, 1908,

On the bill (H. R. 15653) to increase the pension of widows, minor children, etc., of deceased soldiers and sailors of the late civil war, the war with Mexico, the various Indian wars, etc., and to grant a pension to certain widows of the deceased soldiers and sailors of the late civil war.

Mr. KIPP said:

Mr. SPEAKER: I am heartily in favor of any legislation that is in the interests of the gallant men who have fought for our country, and who are entitled to the very best consideration that this great nation can give them. I am equally heartily in support of all measures that will care for their widows and orphans. I am in favor of this bill to pay the soldiers' widows \$12 a month because I believe it to be a step in the right direction. But it is only a step, Mr. Speaker. It does not go far enough. As a minority member of the committee that reported this bill I maintained that the clause limiting the widows who will benefit by this act to those who were married before 1890 was a mistake, and I still think so. I dare assert, Mr. Speaker, that there is scarcely one Member of this House who has not living within the confines of his Congressional District at least one poor, honest, deserving widow who will not be entitled to the benefits of this law because she became a soldier's bride in 1891, or later.

Death, Mr. Speaker, is no respecter of persons and neither is age, nor is illness. The soldier who married seventeen years ago and has since passed away had the right to demand from the country he served that the woman he made his wife should not be discriminated against when she became a widow, sick, and poor, and helpless, but that she be accorded the same assistance and the same protection by the United States as that given to the widows of the comrades by whose side he fought, but who had married a few years earlier than he. No discrimination should be made, Mr. Speaker, when widows and orphans of our soldiers are sick and helpless and poverty stricken, no matter what the year the soldier married. The weak, enfeebled soldier's bride of seventeen years ago, and her helpless little ones, are just as much entitled to our support and sympathy as are those of a wedlock in 1889.

If this bill provided, as it should, that this pension be paid to the widows of all soldiers who were married before the enactment of this law instead of only to those married before 1890, it would be more creditable to this body. And because it fails to do that I feel that it is not doing full justice; it is not treating our old soldiers and their families as fairly as it should, and I hope that before this session ends the majority party that controls the legislation of this body will agree to an amendment to the bill providing that all widows of honorably discharged soldiers married before February 1, 1908, be paid a pension of \$12 a month. Then we will be acting fairly to all.

It is argued, Mr. Speaker, that it would take too much money to do that; that it would not be economy to do so. I am a business man, Mr. Speaker, and I think I know the value of economy in all things. But I maintain that to deprive any widow or orphan of a departed soldier of our help because of his marriage in 1891 and allow to a soldier's relict married in 1889 what you refuse to the widow of another who fought just as bravely for his country's flag but was married in 1891, is false economy and bad principle.

I voted for this measure in committee when I realized that this bill was the best we could get, and I joined with the rest of the committee in making the report on it unanimous. I vote for it to-day, not because it is entirely satisfactory, but because I see that it is the best we can do and we must be satisfied with it until this House can see things in a more liberal light.

During my campaign, Mr. Speaker, I was accused of being a lumberman and not a public speaker, which is true. I am a lumberman and I am very proud of it. I have been in this Hall long enough to distinguish the difference between this House and a sawmill. While the sawmill is whistling and singing and making lots of noise it is cutting wood. While this House is whistling, jabbering, and making a big hurrah, it is cutting "nix."

Income and Inheritance Tax.

SPEECH

OF

HON. ROBERT M. WALLACE,

OF ARKANSAS,

IN THE HOUSE OF REPRESENTATIVES.

Thursday, December 19, 1907.

Mr. WALLACE said:

Taxation has its tragic and its comic side. In my State the dog tax at one time seemed to take both sides of the question and passed away—some of its advocates failing "to make good" on retrenchment and return—to the next assembly. A grimace or a smile, according to where the blow falls, may be provoked by the following lines from Much Ado About Nothing:

O good Lord, tax not so small a voice
To slander music any more than once.

Again, there is such a thing as taxing patience—with a speech. Taxes have the sterling quality of constancy and like fate, and the poor shall be with us always. Under the systems of taxation have grown up the taxgatherer, the taxpayer, the tax cart and the tax dodger. The tax dodger is unlike the tax cart. The distinguishing feature between them is that the cart was exempt at one time under one English law, and the dodger, as far as possible, exempts himself all the time from all law. But some years ago somebody defined the tax dodger as one who, finding that the rate of taxation in Boston was too high for his means, hid himself away with his wife and children to some rural town or retreat. But the serious, and even tragic, side of taxation must have appeared to a very large number of persons when the decree went out from Cæsar Augustus that all the world should be taxed. And it seems that "all went to be taxed, every one into his own city." It was followed, however, by the coming of the Messiah and the setting up of His kingdom. When the Pharisees or their disciples asked if it were lawful to pay tribute to Cæsar and told the Master that the image and superscription on the penny were Cæsar's, he said:

Render therefore unto Cæsar the things which are Cæsar's and unto God the things that are God's.

Here was laid down the rule of obligation on the part of the subject to his king, of the citizen to his government. With this preface I shall proceed with some observations on the subject of—

INCOME AND INHERITANCE TAX.

There is no perfect system of taxation, but the weight of opinion among thinkers on economic subjects is that a properly

adjusted income tax approaches more nearly perfection than any other. Adam Smith laid down this principle:

The subjects of every State ought to contribute toward the support of the Government as nearly as possible in proportion to their respective abilities—that is, in proportion to the revenue which they respectively enjoy under the protection of the State.

When a citizen pays taxes according to his income, from whatever source it may be derived, he is giving support to his government and receiving protection from it in a manner more nearly approaching perfection than under any other plan yet devised. If his gains increase, his tax increases, and well it may, because he is better able to pay it. If his gains decrease, so does his tax, and fortunately for him, because he is less able to pay it.

An income tax requires the rich men to pay their due proportion of the taxes, a thing which all history proves they have never been doing. The fear that an income tax would confiscate the property of the rich is not well grounded. The sense of justice among Americans would not permit it. On the other hand, it is notorious that this same sense of justice has not led the rich to voluntarily assume their share of the public burdens, but, on the contrary, by every reputable and disreputable device, to avoid or evade the payment of their proportionate part. And this fact comes from studied neglect or design to defeat the Smith maxim and produces inequality of taxation. But equality of taxation is or ought to be the object of the law.

Again, the cost of collecting an income tax is very low compared with our present excise system. According to the Treasury authorities the cost of collecting the income tax in 1866 was less than 2 per cent, being lower than the cost of collecting any tax then existing except the tax on banks, which was paid at the Treasury.

A tax upon incomes has been tried twice in the United States; (1) from 1862 to 1872; (2) from 1894 to 1895. The first series of income taxes was held to be constitutional by the Supreme Court of the United States, while the second series was held to be unconstitutional, the terms of each series of laws being almost identical. It is a strange comment upon the Supreme Court that one of the justices—Field—voted in favor of the constitutionality of the first series and against the constitutionality of the second. Under the first series there was collected from income tax, from corporations, from individuals, and from salaries of officers and employees from 1862 to 1872, the enormous sum of \$347,220,897, made up as follows:

1863	\$2,741,858
1864	20,294,731
1865	32,050,017
1866	73,434,709
1867	66,014,429
1868	41,455,508
1869	34,791,855
1870	37,775,873
1871	19,162,650
1872	14,436,861
1873	5,062,311

The difference between the first income-tax bill—that of 1862—and the second was, first, as to the exemption; the first bill exempted \$800, the second \$2,000, and of 1894 \$4,000. The Supreme Court held this exemption constitutional. The act of July 1, 1862, read as follows, placing a duty or tax upon the—annual gains, profits, or income from every person residing in the United States, whether derived from any kind of property, rents, interests, dividends, salaries, or from any profession, trade, or employment or vocation, carried on in the United States or elsewhere, or from any source whatever, etc.

This was held to be constitutional by the unanimous opinion of the court.

By the act of June 30, 1864, a tax on gains, profits, or incomes of all kinds of property, including rents, was passed, which was also held to be constitutional.

During the years 1862–1873, the following additional taxes were collected on legacies and successions and paid into the Treasury of the United States:

Year.	Legacies.	Successions.
1863	\$86,592
1864	311,161
1865	506,751	\$39,951
1866	924,823	246,154
1867	1,222,744	636,570
1868	1,518,387	1,365,023
1869	1,244,837	1,189,756
1870	1,672,582	1,419,242
1871	1,430,087	1,074,979

As to the propriety of taxing legacies and successions no one has ever questioned it. Men who without earning gifts, devises, bequests, or successions, come into great property by inheritance or succession ought to be made to pay inheritance

and succession taxes. All countries impose such taxes and the men who pay them have the least right to complain of taxation of all taxpayers. They are not taxed on the sweat of their brow but on the easy money which has come to and the conscience money that departs from their hands. The chief caution that needs to be observed along this line is that the States need revenue as well as the General Government, and the States have been using this means to raise revenue, and it might be well to leave this lever entirely in the hands of the States, unless the Federal law contains a provision adjusting its rate to a per cent that would harmonize with the State rate. If the Government should preempt every method of raising taxes the States would finally be relegated to the land and personal property tax, two very onerous taxes.

Under the law passed August 28, 1894, the second income-tax law, the one declared unconstitutional, there were collected and paid into the Treasury, and then paid back the following sums:

TAXABLE CORPORATIONS.

Companies.	Number.	Amount of tax.
Banks and trust companies.....	7,400	\$1,523,784
Manufactories and mercantile associations.....	12,027	4,158,875
Railroads.....	624	1,183,435
Express companies.....	933	455,957
Insurance companies.....	338	268,938
Mining companies.....	585	298,065
Telegraph and telephone.....	208	224,816
Gas, electric light, and water.....	2,201	715,687
All other corporations.....	5,327	985,135
Total corporations.....	29,653	9,815,697

TAXABLE PERSONS.

Persons,	Number.	Amount of tax.
Agents and employees.....	10,298	\$871,718
Manufacturers and merchants.....	16,757	2,354,446
Bankers and brokers.....	2,273	316,336
Professions.....	6,668	559,473
Farmers and stock raisers.....	885	111,012
All other occupations.....	11,791	1,915,063
Total persons.....	48,672	6,128,051

Making a grand total of income tax collected from both corporations and persons of \$15,943,748. The Supreme Court of the United States rendered its decision as to a part of this law on April 8, 1895, so that the operation of the law was interfered with from its very beginning. The Commissioner of Internal Revenue for the year 1895 said that if the law could have been enforced without any interruption the taxes from it for the fiscal year ended June 30, 1895, would have exceeded \$30,000,000.

There are three income taxes in England. First, the income tax proper, which ranges from one and a half pennies in the pounds sterling on £200 a year up to 1s. in the pound on £700 or more a year. This brought into the English treasury in 1905-6 \$6,500,000.

The second income tax is an inhabited-house duty and yielded in 1905-6 something more than \$10,000,000.

Lastly, the death duties, the chief of which is the estate duty, ranges from 1 per cent on small estates up to 8 per cent on millionaire's estates. As millionaires do not die regularly, like common people, but in groups, the yield varies considerably from year to year. In 1905-6 it yielded \$65,000,000, and in 1906-7 will yield very much more. It has yielded \$100,000,000.

Mr. Roosevelt in his message to the second session of the Fifty-ninth Congress said:

The National Government has long derived its chief revenue from a tariff on imports and from an internal or excise tax. In addition to these there is every reason why, when next our system of taxation is revised, the National Government should impose a graduated inheritance tax and, if possible, a graduated income tax. The man of great wealth owes a peculiar obligation to the State, because he derives special advantages from the mere existence of government. Not only should he recognize this obligation in the way he leads his daily life and in the way he earns and spends his money, but it should also be recognized by the way in which he pays for the protection the State gives him. On the one hand, it is desirable he should assume his full and proper share of the burden of taxation; on the other hand, it is quite as necessary that in this kind of taxation, where the men who vote the tax pay but little of it, there should be clear recognition of the danger of inaugurating any such system save in a spirit of entire justice and moderation. Whenever we as a people undertake to remodel our taxation system along the lines suggested, we must make it clear beyond peradventure that our aim is to distribute the burden of supporting the Government more equitably than at present; that we intend to treat rich man and poor man on a basis of absolute equality, and that we regard it as equally fatal to true democracy to do or permit injustice to the one as to do or permit injustice to the other.

I am well aware that such a subject as this needs long and careful study in order that the people may become familiar with what is pro-

posed to be done, may clearly see the necessity of proceeding with wisdom and self-restraint, and may make up their minds just how far they are willing to go in this matter; while only trained legislators can work out the project in necessary detail.

The principles of the income tax are admitted in England and other countries. The difference between our law and theirs was that our exemptions were higher—more liberal with capital and capitalists than those backed by thrones and enforced by kings. In 1895 a Republican member of our Supreme Court, with a hypercritical fancy for the "survival of the fittest," destroyed our statute with an hundred years of judicial precedent and saved the Constitution. The Democratic party stands for an income-tax law by act of Congress, if it can be had without conflict with the Constitution; otherwise for a constitutional amendment. The Democratic platform of 1896 pledged the party to whatever constitutional power there was to overthrow the court decision of 1895. For that pledge and criticism of the court the party was charged with the crime of high treason. The Republican platform of 1860 and Mr. Lincoln's inaugural address arraigned the court for the Dred Scott decision; and criticisms of the greenback and legal-tender decisions multiplied like leaves in Valambrosa, or boll weevils in the cotton belt. Again Mr. Roosevelt says:

The first purely income tax was passed by the Congress in 1861, but the most important law dealing with the subject was that of 1894. This the court held to be unconstitutional. The question is undoubtedly very intricate, delicate, and troublesome. The decision of the court was only reached by 1 majority. It is the law of the land, and of course accepted as such and loyally obeyed by all good citizens. Nevertheless, the hesitation evidently felt by the court as a whole in coming to a conclusion, when considered together with the previous decisions on the subject, may perhaps indicate the possibility of devising a constitutional income tax which shall substantially accomplish the results aimed at. The difficulty of amending the Constitution is so great that only real necessity can justify a resort thereto. Every effort should be made in dealing with this subject, as with the subject of the proper control by the National Government over the use of corporate wealth in interstate business, to devise legislation which without such action shall attain the desired end; but if this fails, there will ultimately be no alternative to a constitutional amendment.

So the President again goes Democratic and modestly dissents from that deliverance of the court. The Democratic party believes in the equitable distribution of responsibilities and privileges—exonerating the poor from nothing they are not too poor to bear; exacting from the rich nothing they are not rich enough to pay. Allured by no idol, dominated by no master, she will be deterred not from the truth as she sees it, nor from the right as she knows it. If she must go down in defense of such principles, let it be remembered that there is no sacrifice too great for her to make and no time too soon for her to fall on the altar of the Constitution, and she will go down holding high the flag of industrial protest and independence forever! [Loud applause.]

Increase of Pensions of Widows and Minor Children.

SPEECH

OF

HON. MARTIN D. FOSTER,

OF ILLINOIS,

IN THE HOUSE OF REPRESENTATIVES,

Monday, February 3, 1908.

On the bill (H. R. 15653) to increase the pension of widows, minor children, etc., of deceased soldiers and sailors of the late civil war, the war with Mexico, the various Indian wars, etc., and to grant a pension to certain widows of the deceased soldiers and sailors of the late civil war.

Mr. FOSTER of Illinois said:

Mr. SPEAKER: I am glad to record my vote in favor of increasing the pensions of widows and of removing the previous provisions of law requiring them to possess an income of not more than \$250 per year. Last fall, while attending the various soldiers' reunions held throughout the district which I have the honor to represent, I promised that it would be one of my pleasures and my duties after I came to Washington to do all I could for the enactment of such a law. I now have the pleasure of fulfilling that promise.

The soldiers' widows of our country often fought battles of hardship, privation, and sorrow in their own hearts as great as those which their husbands fought on the battlefields of the war. Theirs was the hardship of separation; theirs the tears and the heartaches of the nighttime; theirs the responsibility of raising the children of the home; theirs the shudder at every rustling of a leaf or swaying of a bough, lest it might bring them tidings of death on some far-away field of battle. I honor the widows of our soldiers. I sympathize with them; I want to

help them. And the least that this great Government could do is to protect them from want in the sunset of their days, until they shall again meet their loved and lost upon some brighter, more peaceful strand, where war and worry, heart-ache and loneliness, separation, and the scars of sorrow shall no longer be known forever.

I would be in favor of more pensions for the needy, deserving soldier who yet for a little time remains. In line with this conviction, I have introduced a bill into this session of Congress providing that no soldier shall receive a pension of less than \$1 per day. Is it not right that out of the great abundance of our material wealth we should amply provide for the needs of those who offered their lives upon the altar of our country that this nation should not perish before the tempest of civil strife that threatened its destruction? I think it is, and believe that this bill, too, ought to pass.

War is a fearful thing. I hope that, though we may not live to see it, our children's children shall behold the dawn of the world's peace; that they shall see realized the dream of Kipling when—

The tumult and the shouting dies,
The captains and the kings depart;
Still stands Thine ancient sacrifice,
An humble and a contrite heart.
Lord, God of Hosts, be with us yet,
Lest we forget! lest we forget!

[Applause.]

Increase of Pensions of Widows and Minor Children.

SPEECH

OF

HON. JOHN G. McHENRY,
OF PENNSYLVANIA,

IN THE HOUSE OF REPRESENTATIVES,

Monday, February 3, 1908,

On the bill (H. R. 15653) to increase the pension of widows, minor children, etc., of deceased soldiers and sailors of the late civil war, the war with Mexico, the various Indian wars, etc., and to grant a pension to certain widows of the deceased soldiers and sailors of the late civil war.

Mr. McHENRY said:

Mr. SPEAKER: This bill appeals to the best impulses of the human heart. The first duty of American citizenship is to the family. Saving the flag is grand and our obligations to the heroes who offered, if they did not give, their lives for the preservation of the Government, can never be fully discharged. But there is a higher duty—a greater obligation. It is to preserve the family, which is the fountain of patriotism as well as of virtue. The care during their declining years of the widows of our soldiers is as much the duty of Congress as providing for the wife is the duty of each individual. We can not shift this obligation. We can not satisfy our consciences with the expectation that our successors may have better opportunities to do this. As in the case of another great duty taught by Christian civilization, now is the accepted and the only time.

Mr. Speaker, there is probably no community in this broad land which is free from suffering, the result of privations. In every settlement in the State which I have the honor to represent, in part, there are soldiers' widows worn into invalidity by nursing their hero husbands through the valley of death, and without the means to procure the nourishment requisite to restore their health and strength. In my own district I have learned of instances of such destitution and I feel that I would be recreant alike as Representative and citizen if I failed to do whatever I may to mitigate their sufferings. I have in my hand a letter from one of those patient and long-suffering women. She writes—

It was just six years from the time he had his first stroke until his death, and during that time he never was able to do a stroke of work or earn five cents. During the last three years his mind was almost an entire blank, the last year he was entirely deprived of speech, as helpless as a new-born babe and a thousand times more trouble.

Pen can not describe nor can tongue tell what we endured—

Continued this good wife and mother—

Part of the time my son helped me to care for him, and the rest, my daughter and myself had the care of him. He was in such a condition that had I been rolling in money I couldn't have got anyone to care for him.

Is it any wonder that this magnificent woman believes that the Government owes her something? The maladies which caused all this suffering were contracted while her husband served in the Army. They were the result of the ex-

posures and hardships incident to his Army experience. I have been trying to get a pension for that woman, and hope I may yet succeed. But how many thousands there are who suffer to the end of their lives of wretchedness because they have no one to take up their cases, or for the more regrettable reason that, owing to no fault of their own, they are deprived by some provision of the pension laws which excludes them from the beneficence. Probably half the Members of this House can cite similar cases.

Another instance of the injustice of the pension laws to the widows of soldiers has come to my notice since my election to this body. In one of the principal towns in the district which I have the honor to represent there resides the widow of a soldier who is deprived of the beneficence of the Government because of an incident in the life of her deceased husband. She is a woman of the highest measure of refinement, as her husband was among the most popular and progressive citizens of the community in which they lived until misfortune overtook him. He enlisted as a private at the beginning of the war and was promoted in regular order until he had attained the rank of captain. At the close of hostilities the regiment to which he was attached was taken to the rendezvous to be mustered out. Every officer above the rank of captain in the regiment had been killed or wounded, and being the senior captain he was entitled to promotion if there was to be a colonel of the regiment at the mustering out. In fact he was the popular choice of his associates for the colonelcy as they indicated.

But the authorities took a different view of the matter. They took an officer from another regiment and put him in command of this body of men, which was bitterly resented. In fact, the resentment was so openly expressed that all the officers of the regiment were put under arrest for insubordination and court-martialed. After this injury had been added to insult, the husband of the widow to whom I refer left the camp and went home without waiting for his formal discharge. He had served four years most faithfully. He had discharged every obligation of a soldier most manfully in every situation during the long period of his hazardous service. But because of this unfortunate outburst of passion, and I think most of us will admit that it was at least partially justified, he was scheduled as a deserter and thus disqualified from participation in the beneficence of the Government. Until, late in life, business misfortunes overtook him, he probably had no regret for his action. But in his old age he came to want, and when his friends applied to the Government, for which he had freely offered his life, for the help to which they believed he was entitled, they discovered that he was ineligible. I am permitted to believe that he suffered no want during the closing days of his life. But I am forced to think that the worry and humiliation which came to him with the knowledge that there was a stain on his otherwise splendid military record hastened the end. If he had realized that the taint would operate to deprive his widow of comforts to which she is justly entitled, his sufferings would have been multiplied.

Mr. Speaker, I feel keenly on this subject of pensions and grow impatient when these tales of sorrow come to my ears. Out of the abundance in this land of plenty there ought to be enough to shield the widows of the heroes from the pangs of want. We are contributing with almost prodigal liberality to the building of ships and the preparation for future wars. It is only just to say that Congress has been fairly generous in both moral and material rewards to the soldiers of our several wars also, but we have not been quite just to the widows of our soldiers. To my mind there should be no discrimination in the allotment of pensions between the soldier and the widow, and if I had my way the pension of every soldier, which now ends with his death, would be continued to his widow. That is not the present proposition, however. The pending bill provides for a uniform pension of \$12 a month for the widows of soldiers of the wars, and it should be passed by the unanimous vote of Congress. It is just and proper. The wives and mothers of the country constitute the moral force which develops patriotism and makes for good citizenship. More than the men, they shape destinies for good, and their comfort, if not competence, should be the first consideration of every man. There are widows of soldiers in this broad land who have laid their strength on the altar of devotion and sacrificed every hope and comfort to lessen the pain and lighten the sorrows of their infirm husbands in the last hours of their lives. Let us, now that we have opportunity and means, provide for the declining years of these faithful women, so that—in the language of Edmund Spenser—

Her angels face,
As the great eye of heaven, shined bright,
And made a sunshine in the shady place.

Increase of Pensions to Soldiers and Their Widows.

SPEECH

OF

HON. JOHN A. M. ADAIR,

OF INDIANA,

IN THE HOUSE OF REPRESENTATIVES,

Monday, February 3, 1908.

On the bill (H. R. 15653) to increase the pension of widows, minor children, etc., of deceased soldiers and sailors of the late civil war, the war with Mexico, the various Indian wars, etc., and to grant a pension to certain widows of the deceased soldiers and sailors of the late civil war.

Mr. ADAIR said:

Mr. SPEAKER: As the accumulating years have added to the distress of a very large number of the survivors of the civil war and their widows, the consideration of legislation looking to their care and comfort has become a matter of paramount importance. There is no subject before the House that is closer to my heart and in which I feel a greater interest than that of pensions. It therefore gives me much pleasure to use my vote and influence in support of the bill now under consideration which if enacted into law will raise the pensions of 196,443 widows from \$8 to \$12 per month. It will not only do this, but it will also place on the pension rolls many thousands of widows who heretofore have been excluded on the ground that they had an income of \$250 per year. I believe the property limitation on the widows' right to pension is wrong and should have been stricken out years ago. I am sure that gross injustice has been done in all parts of the country by excluding from the bounties of the Government those widows who, for the time being, had a small amount of property, and who were turned away upon the ground that they had a competency, when in fact their income was insufficient in many instances to keep them from want. The only objection I have to this bill is that it does not go as far as I would like it to go. On the first day of the present session I introduced a bill upon this subject, granting to all widows of soldiers of the civil war and war with Mexico a pension of \$12 per month. Under the provisions of my bill every widow of a soldier who served in either of the wars mentioned would receive a pension of \$12 per month, regardless of the disease with which the soldier died, and also regardless of the date of marriage or amount of income. I labored hard to have this bill reported without amendment, but the Committee on Invalid Pensions decided to report a committee bill containing all the provisions of my bill, except as to date of marriage. While I do not desire to criticize on the floor of the House the action of this committee, yet I do regret that the bill reported will not give relief to widows who married soldiers subsequent to June 27, 1890, as well as those who were married prior to that date. I know of many instances where splendid women married soldiers of the civil war after June 27, 1890, and for ten or fifteen years nursed and cared for them in their declining years and made the closing days of their lives as pleasant and comfortable as possible.

Who would say that these widows should not be pensioned? What reason is there for fixing this date? I am certain there are numerous cases where the marriage occurred after this arbitrary date in which the evidence will show greater merit than in many cases where the marriage took place prior to June 27, 1890. While I believe this bill should apply to all widows of soldiers who were married prior to the passage of this act, yet I realize that it is impossible to amend it at this time, and after having made the best effort within my power to have it so provide, I shall nevertheless gladly vote for it, because it will increase the pensions of nearly 200,000 widows and will place upon the rolls over 20,000 who have heretofore been excluded. While voting for this bill, I want to serve notice at this time on the Members of the House that I shall continue the fight until full justice is done and all widows placed on the rolls who were married prior to the passage of this act. [Applause.] The passage of this bill is not an act of charity, but a payment of a debt we owe to the widows of the gallant soldier dead, whose service made it possible for you and me to enjoy this united country. There is not a citizen in all this broad land who will not rejoice over the fact that the widows have been at least partially provided for. It is not an act of sympathy, but an act of justice; and a grateful people who remember the heroic service, the sufferings, deprivations, sacrifice, and hardships of the Union soldier will heartily indorse our action in thus providing for their widows and orphans.

I hope this bill will pass without a dissenting vote and that the Committee on Invalid Pensions will then immediately take

up, consider, and report favorably upon another bill I introduced in the House on the first day of the present session, which in substance provides that all soldiers who served in the Mexican and civil war and who hold an honorable discharge shall be pensioned at the rate of \$20 per month, and when they reach the age of 70 years \$25 per month. This bill, now in the hands of the committee, has the indorsement of over 3,000 Grand Army posts scattered all over the country and is approved by practically everyone who has read its provisions. Who could assign a single reason why this bill should not be enacted into law? It might be urged that it would increase the appropriation for pensions several million dollars.

This is true, but the increase would be a drop in the bucket when compared with the total appropriations made by the Government. The Fifty-ninth Congress appropriated over eighteen hundred million dollars, and what a small part of this vast amount would be required to pay the increase of pensions provided for by this bill. I believe, Mr. Speaker, the time to do something for the Union soldier is now and not after he is dead. While I approve of the custom of scattering flowers on the graves of our dead heroes once a year, I would rather scatter a few flowers in the pathway of those who yet live. [Applause.] Those of us who were not old enough to participate in that memorable struggle are under eternal obligations to the survivors of that war for what they did for our country, for liberty, and for humanity. They have already reached an age when disease fastens itself upon them, and many suffer from the burden of old age; and I am sure this generation is not only willing but anxious to contribute liberally to their care and comfort. It, however, is not a contribution, not a donation, not an act of charity, but a partial payment of a debt that should have been liquidated years ago. [Applause.]

It required, Mr. Speaker, a great devotion of principle to carry on that war against Americans of our own flesh and blood. The Union soldiers were not called upon to do battle against a foreign foe, but against men of their own blood who were just as brave and just as well organized as themselves. They knew also that they were to battle father against son, brother against brother, and that they were to be the aggressors all along the line, which necessarily meant increased dangers. These conditions were met by the Union soldiers with a devotion and patriotism unexcelled in all the world's great history. And for this great service they were paid the small sum of \$13 per month, and paid in a currency that was equal to about 50 per cent of its face value, and at a time, too, when the necessities of life were necessarily high. It was all the Government could afford to pay at that time, but now that we have grown rich and stand to-day at the head of the nations of the earth, let us not forget that it was the Union soldier who laid the foundation of all our greatness, and that his service widened and deepened the current of American patriotism, and not only saved the country from the peril that threatened her existence forty-eight years ago, but infused a spirit into American citizenship that will guide and protect the American Union for centuries to come. [Applause.]

The soldiers of the civil war were not granted at the close of the war such pensions as are now allowed the soldiers of the Spanish-American war. Let us look for a moment at some of the specific disabilities.

The soldier of the civil war at the close of that war received for the loss of both hands \$25 per month. The soldier of the Philippine war receives \$100 per month for the same disability.

The soldier of the civil war received at the close of that war for the loss of both feet \$20 per month. The soldier of the Philippines receives for the same disability \$100 per month.

The soldier of the war of the rebellion received for the loss of the sight of both eyes \$20 per month. The soldier of the war with Spain receives \$100 per month.

For the loss of sight of one eye, the other eye being affected, the soldier of the war of the rebellion received \$25; of the war with Spain, \$72 per month.

For the loss of one hand and one foot the soldier of the war of the rebellion received \$20 per month. The soldier of the war with Spain receives \$60 per month.

For the loss of an arm at or above the elbow or a leg at or above the knee the soldier of the civil war received \$15 per month; the soldier of the war with Spain, \$46 per month.

For the loss of a leg at the hip joint the soldier of the first war received \$15; of the latter, \$55 per month.

For total disability in one hand or one foot the soldier of the former war received \$20; of the latter war, \$60 per month.

For an incapacity requiring regular aid and attendance the soldier of the war of the rebellion received \$25; the soldier of the recent war receives \$72.

For total deafness the soldier of the war of the rebellion received \$13; the soldier of the war in the Philippines receives \$40.

Now, Mr. Speaker, the soldiers of the civil war received no greater pensions than those I have mentioned until within a very few years. Every Union soldier entered the service with the understanding, and with the agreement on the part of the Government, that if disability occurred to him during the period of his service by reason of such service he should be pensioned. Personally I consider this obligation as sacred as the public debt, and I believe the American people feel that way about it. I am sure you can not find anywhere in the United States anyone who criticises the amount paid in the way of pensions to those who offered their lives on the altar of their country. I have always believed that the private soldier has not received his merited share in the way of pensions and that the commanding officers have received more than their share, when compared with the pensions paid to the private soldiers. I do not mean to criticise the pensions paid to the commanding officers—and so long as I am a Member of the House I shall never cast my vote to lower the pension of any man—but I would like to vote for a bill that would do justice to the private soldier, who was not so well fed, not so well clothed, and not so well sheltered as was the commanding officer, and who stood behind the gun and fought the battles that saved the Union. [Applause.]

Now, gentlemen, I want you to vote for the bill now under consideration giving relief to the widows of soldiers, and then join me in bringing about the passage of my bill, No. 3896, now in the hands of the Committee on Invalid Pensions, which will, if enacted into law, give relief to over 600,000 private soldiers and partially pay the debt we owe to the heroes of that war. If you refuse to do this, then do not go home and attempt to mislead and deceive the soldiers of your district by telling them how much you love them and how sorry you are that the Adair bill did not become a law. Speaking for myself, I shall continue to insist on more liberal pensions for the private soldiers, and if you fail to give them relief during this session of Congress, I will be back again next December more determined than ever that justice shall be done them. [Loud applause.]

Increase of Pensions of Widows and Minor Children.

SPEECH

OF

HON. EDMUND H. HINSHAW,

OF NEBRASKA,

IN THE HOUSE OF REPRESENTATIVES,

Monday, February 3, 1908.

On the bill (H. R. 15653) to increase the pension of widows, minor children, etc., of deceased soldiers and sailors of the late civil war, the war with Mexico, the various Indian wars, etc., and to grant a pension to certain widows of the deceased soldiers and sailors of the late civil war.

Mr. HINSHAW said:

Mr. SPEAKER: I am sincerely glad that this measure is to pass the House, and I believe that it will pass the Senate and become a law. I had the pleasure to introduce a bill granting to all widows of the soldiers of the civil war \$12 per month. Many other Members have introduced similar bills. The sentiment of the country seemed so much in favor of this meritorious proposition that the Committee on Invalid Pensions has unanimously reported such a measure, and, out of courtesy to the distinguished chairman of that committee [Mr. SULLOWAY], has named the bill for him. This is a custom generally followed in all matters of important legislation.

This bill makes it unnecessary hereafter for the widow of a civil-war soldier to make any proof concerning her income. This feature of the old law was very objectionable and caused an infinite amount of trouble, as it frequently happened that the amount of property which the widow possessed seemed adequate to produce an income of \$250 per annum, and the Pension Office would often so hold, when as a matter of fact, she had no such income. There are few widows of soldiers, I believe, who have a large income, and if perchance the widow of some soldier happens to be rich and not in need of the pension it is far better than a seeming injustice should be done in one such case than that thousands of deserving widows should be harassed and bothered and put to expense to get affidavits and proofs of the details of their property interests. It is estimated that this law will annually cost the Government about twelve or thirteen million dollars in addition to the payments already being made. It is a sum righteously spent. The

objection I have to this bill is that it cuts out the widows of soldiers who married since June 27, 1890, unless, of course, the widow can show that the soldier died of injuries or disease incurred in the service. After more than forty years since the close of the war it is now practically impossible to prove that the immediate cause of the soldier's death was the disabilities contracted in the war. So the women who married soldiers after 1890 are practically shut out.

There are said to be fifteen or twenty thousand of such widows. They married the soldiers with the understanding, under the existing law, that they could not be pensioned, so there was no other motive for them to marry the soldiers except a sincere wish to take care of them and be to them wives and helpmeets. But now, after seventeen years, it seems to me that justice requires that these women, who have administered to the old age of veterans, should receive the same recognition as those who married earlier. Assurances have been made by the committee in charge of this legislation that such a bill will be brought in before long and probably become a law. I do not doubt that before many months this law will be so amended that all widows of soldiers will be pensioned, irrespective of the date of marriage. While the pension legislation is not as yet in a perfect condition, it must in justice be said that the American Congress has done well by the soldier and his widow. The McCumber Act, passed last February, granted deserved relief to thousands of soldiers, and the Pension Office has been overwhelmed with the work of granting increases under this law. In my opinion the act should be still further extended, and I have introduced a bill to pension all soldiers at 62 years of age at the rate of \$15 per month and at the age of 65 years \$20 per month. I hope that this bill or one of a similar nature will pass at this session of Congress. It is meritorious and just.

The soldiers of the civil war are fast passing away. The pension roll is decreasing. There is no nation that pays to its soldiers and their widows a sum approaching the magnitude of the \$15,000,000 annually paid by this Republic. It will, however, be but a few years until every soldier of the civil war will be gone and there will be left but a few of their widows. Out of the boundless resources of our wealthy country the justice and generosity of a free people will adequately provide for the necessities of age and disability and render less hard the declining years of those who sacrificed health, happiness, and life itself for the perpetuity of the nation of States which would have been rent asunder had it not been for their heroic efforts.

APPENDIX A.

A bill (H. R. 13261) providing for certain pensions to be paid widows of civil and Mexican war soldiers.

Be it enacted, etc., That the widow of any person who served ninety days or more in the military or naval service of the United States during the late civil war or sixty days in the war with Mexico and was honorably discharged therefrom, and who was married to said soldier prior to the passage of this act, shall, upon making proof of such facts according to such rules and regulations as the Secretary of the Interior may provide, be placed upon the pension roll and be entitled to receive a pension at the rate of \$12 per month, and such pension shall commence from the date of filing of the application in the Bureau of Pensions after the passage and approval of this act: *Provided*, That no person shall receive a pension under any other law at the same time and for the same period that she is receiving a pension under this act.

APPENDIX B.

A bill (H. R. 10510) to amend an act entitled "An act granting pensions to certain enlisted men, soldiers, and officers who served in the civil war and the war with Mexico."

Be it enacted, etc., That the act approved February 6, 1907, entitled "An act granting pensions to certain enlisted men, soldiers, and officers who served in the civil war and the war with Mexico," shall be amended to read as follows:

"That any person who served ninety days or more in the military or naval service of the United States during the late civil war or sixty days in the war with Mexico, and who has been honorably discharged therefrom, and who has reached the age of 62 years or over, shall, upon making proof of such facts according to such rules and regulations as the Secretary of the Interior may provide, be placed upon the pension roll and be entitled to receive a pension as follows: In case such person has reached the age of 62 years, \$15 per month; 65 years or over, \$20 per month; and such pension shall commence from the date of the filing of the application in the Bureau of Pensions after the passage and approval of this act: *Provided*, That pensioners who are 62 years of age or over and who are now receiving pension under existing laws or whose claims are pending in the Bureau of Pensions may, by application to the Commissioner of Pensions in such form as he may prescribe, receive the benefits of this act; and nothing herein contained shall prevent any pensioner or person entitled to a pension from prosecuting his claim and receiving a pension under any other general or special act: *Provided*, That no person shall receive a pension under any other law at the same time or for the same period that he is receiving a pension under the provisions of this act: *Provided further*, That no person who is now receiving or shall hereafter receive a greater pension under any other general or special law than he would be entitled to receive under the provisions herein shall be pensionable under this act."

"Sec. 2. That rank in the service shall not be considered in applications filed hereunder."

"Sec. 3. That no pension attorney, claim agent, or other person shall be entitled to receive any compensation for services rendered in presenting any claim to the Bureau of Pensions or securing any pension under this act."

Catholic Church Claims Bill.

SPEECH

OF

HON. WILLIAM E. TOU VELLE,

OF OHIO,

IN THE HOUSE OF REPRESENTATIVES,

Friday, March 6, 1908.

On the bill (H. R. 16143) making an appropriation to the Roman Catholic Church of the Philippine Islands, and for other purposes.

Mr. TOU VELLE said:

Mr. CHAIRMAN: I have read with some care the bill introduced by the gentleman from Wisconsin from the Committee on Insular Affairs (H. R. 16143), together with the reports accompanying it (House Report 696, parts 1 and 2), being the majority and the minority reports of the Committee on Insular Affairs upon the merits of the bill. I have also read the hearings had before the Committee on Insular Affairs as printed and laid before the House, and have listened with interest to the discussion which the bill and the reports have engendered before this committee.

As to the facts of the case there is little difference between those who favor and those who oppose the bill. The facts briefly stated are these:

During the entire time of our military occupancy of the Philippine Islands, from the time when the American Army landed until the declaration of peace which ended the Spanish-American war, the United States, through its armed forces, took and continued to hold possession of the churches, contiguous parish houses, school buildings, and seminaries of the Philippine Islands, using them under the exigencies of war as hospitals, prisons, and barracks. This occupation extended not only throughout the duration of the war, but also in many cases from a few months to two years after the declaration of peace, and was so thorough during all this time as to exclude the rightful church authorities entirely from the occupancy or use of their property. Many of these churches were fine buildings, costing their owners a large amount of money, and were an honor to the islands and the church authorities who built them.

Military occupancy is not always a prudent or careful occupancy. The best disposed soldiery of the world can not occupy a church without injuring it, and the American soldiery, although admittedly among the best disciplined and most careful soldiery of the world, proved to be no exception to the rule. Careful investigation has shown that the churches and other buildings so occupied by our troops were damaged and injured, a thing which all history and the dictates of common sense would lead us to presume to be true.

It is a fact that the title to the churches and buildings so occupied by our soldiery, and for which compensation is made in this bill, was in the Roman Catholic Church of the Philippine Islands, and there is no serious dispute over this question. The use of the property by the United States gave rise to a claim for rent, and the negligence of that use gave rise to a claim for damages.

Both sets of claims were set up by the Roman Catholic Church of the Philippine Islands, the rightful owners of the property, and presented at Manila in 1905 to a board on church claims, appointed under a special order of the War Department for the sole purpose of investigating them. This board was made up of officers of the United States Army, sat in session six months, and examined all the evidence presented most thoroughly.

The total amount claimed by the Roman Catholic Church of the Philippines for use and occupancy of and damages to the buildings was \$2,442,963.13; but the board, after a most sifting examination and mature deliberation, awarded the claimants the sum of \$363,030.19.

This board, in its findings, added a paragraph which shows the present status of the Roman Catholic Church in the Philippine Islands, and the further fact that the amount so awarded was a poor compensation. The language of the board is:

The church authorities as at present constituted are our friends and helpers in the establishment and preservation of law and order in these islands and are upholders of the authority of the United States. Their work here has been made hard by the amount of damage that the church has suffered due to war, and the amount awarded by the board, \$363,030.19, will not begin to compensate for the loss so inflicted. This amount, however, is justly due from the United States and is most urgently needed by the church in its work here.

As I understand the argument of those who have preceded me favoring the bill, and the argument of the members of the Committee on Insular Affairs, no objection is made to the amount

of this finding. All seem to be agreed that the Roman Catholic Church of the Philippines should be paid the sum of \$363,030.19, and if a bill had been introduced appropriating that amount, and no more, no objection would have been made to its passage, except possibly to the character of the payees.

The question of title has been raised, and it is claimed that the Roman Catholic Church does not hold title to certain parts of the property. There can be no recognition of any church as a connection of the Roman Catholic Church, and the so-called "Independent Catholic Church of the Philippines" can found no claim on any previous connection of its members with the Roman Catholic Church. The only question for us to decide is who owned the property at the time of its use by our troops.

This point of vital importance to the argument against the bill has already been decided by the supreme court of the Philippines in several cases, in all of which the rights of the Roman Catholic Church to the property has been sustained.

The evidence also shows that the Independent Catholic Church of the Philippine Islands has never set up a claim to the actual ownership of the property. If this church has no actual ownership and claims none, it is idle for us to make and establish a claim for it.

The evidence otherwise conclusively establishes the fact that the title to all the property, for which rent and damages are claimed, was at the time it was occupied by our soldiers and is now in the Roman Catholic Church of the Philippine Islands, and the bill before us, in my opinion, takes the proper legal and moral ground, in appropriating the money to the Archbishop of Manila as the representative of the Roman Catholic Church, whose property we occupied. In my opinion the title to the property was in the Roman Catholic Church at the time of its occupancy by us, and payment for use, occupancy, and damages should be made to the lawful record owners at the time, and not to an independent schismatic body that has arisen since that time. The claim that the treaty of Paris made the United States the legal owner of this property is, to my mind, untenable for this reason: The supreme court of the Philippine Islands in November, 1906, upon a direct issue before it as to the title to the property in controversy, held in express terms that the Spanish Government at the time the treaty of Paris was signed was not the owner of this property nor of any like property situated in the Philippine Islands.

The treaty of Paris confirmed all property rights, either in title or possession, which were held under Spanish law, and it is not disputed by anyone that all the property in the islands devoted to religious purposes was under the exclusive control and in the exclusive possession and occupancy of the Roman Catholic Church. The so-called "Independent Catholic Church" had no existence at the date of the treaty of Paris, nor was it organized until after the date covered by the award of the board on church claims. This is the statement of the judge-advocate of that board and the finding of the supreme court of the Philippines, and effectually settles the question of title. In my opinion both the legal and equitable title to the property is in the Roman Catholic Church.

The difference between the amount awarded by the board on church claims in January, 1906, viz, \$363,030.19, and the amount carried by this bill, \$403,030.19, is \$40,000, which complicates the argument and demands a separate analysis.

The board on church claims made its findings on values as of the date of occupancy, 1898 to 1902, and had the money been paid then, while it only covered a small part of the actual loss sustained, would have been accepted. The actual legal finding was made in January, 1906, and expressly omitted all compensation for the deterioration of the damaged property from 1902 to 1906. The judge-advocate of the board, Colonel Hull, before the Committee on Insular Affairs, stated that an award of \$500,000 in 1906 would have been more equitable to the church. It is clear to my mind, therefore, that not only the award of \$363,030.19 should be appropriated at this time for rent and damages, but also a larger amount for deterioration growing out of the lapsed time. The only question is, How much more should be appropriated? In determining this we come to another claim made by the Catholic Church which was excluded by the board on church claims.

That board expressly excluded all compensation to the Catholic Church for the spoliation and carrying away of sacred ornaments, images, and vestments, but at the same time and in the same report recommended to the Congress of the United States, in case compensation should be made for these things, that the sum of \$40,000 be paid therefor. The bill before us carries compensation for the use, occupancy, and damage to the churches and buildings of the Roman Catholic Church of the Philippines as ascertained by the board of church claims, to the

extent of \$363,030.19, and \$40,000 for the spoliation and destruction of sacred ornaments, images, and vestment; in all, \$403,030.19. The Roman Catholic Church claimed a loss in sacred ornaments, images, and vestments, amounting to \$298,222.50, which the board on church claims did not allow but scaled down to \$40,000, which although not included in the award was recommended to Congress as a suitable amount to pay.

There is always room in these cases for error and a Congressman can not always have the exact facts before him. This matter, however, has been gone over very carefully by a legally authorized board on church claims and by a committee of this House. All the facts needed for judgment are apparently before us. The findings of all these persons, boards, and committees show an occupancy of the premises by the United States and the consequent damage; they show the legal owner of the property, and show an award of a minimum sum, setting forth, however, that a greater sum would not be exorbitant. This minimum sum was based on a value of the property from 1898 to 1902, and not of a value as of 1906 or of the present time, and expressly excluded payment for lost vestments and ornaments.

I am free to say that, in my opinion, the sacred vestments and ornaments are as much the subject for claim as the churches themselves and for want of better evidence am willing to adopt the recommendation of the board on church claims and to pay the Roman Catholic Church of the Philippines \$40,000 for this item of loss and for the damages growing out of the deterioration of the property from 1902 to the present time.

This added to the award for rent and damages will bring the appropriation up to \$403,030.19, the amount claimed by the bill.

I shall vote for the bill and hope that it will pass. I believe that every dollar of the money rightfully belongs to the Roman Catholic Church of the Philippines, and I would do injustice to my ideas of right and wrong to oppose its payment. The legal precedents for our action are numerous, and I shall not take the time of this body to enumerate them. The equity and the law unite in favor of the claimants, and as a matter of abstract justice they should be paid the amounts awarded and recommended.

In matters of justice and right we should discard party friendship, and kindred ties and approach their solution unfolded, being guided solely by the dictates of reason. Justice, as has been said by an able thinker, springs from reason, while all other virtues dwell in the blood. It awards to every man and to every church its own; a law of conduct written large in the very nature of man. Justice is the ligament binding all society together, and its destruction impairs and undermines the moral and social law.

Highway Improvement—Good Roads.

SPEECH

OF

HON. ROBERT M. WALLACE,

OF ARKANSAS,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, December 19, 1907.

Mr. WALLACE said:

I come not to praise Cæsar nor tell of his nor Napoleon's fame as a road builder. History records the facts of building, however, and generations since have profited by their example. But we have the more ancient record of Achish, who said, "Whither have ye made a road to-day?" And David said, "Against the south of Judah, and against the south of the Jerahmeelites, and against the south of the Kenites." What Congress and the States should do is to make all the roads lead to the centers of population, intelligence, and commerce, and thence against the East and the West and the North and the South of the whole country. But, to dispose of the historic phase of this subject, I may say the nations of Europe have practically united on a common policy. They regard public roads—like post-offices, public buildings, and waterways—as public property. They learned that time, labor, and money could be saved by substituting for the dirt or mud road the macadam and other improved types or grades of road. France spends eighteen to twenty millions annually for the repair of her highways. The European systems are fostered and supported by the head of each national government. Their centuries of experiment in solving the problem establishes the fact that good roads pay—that the system is a success.

PRACTICAL QUESTION.

In the good old days of Georgia, Colonel Dooley was a unique and picturesque character, and as the story goes was forever challenging, but never fighting duels. Once he met on the field of honor a man afflicted with St. Vitus's dance, which gave his weapon a jerky, unsteady aim. The Colonel promptly planted a forked stick before his antagonist, who indignantly demanded an explanation. "Well," retorted the Colonel, "I want you to take a rest, for if you shoot that pistol that way you'll fill me full of holes with one shot." We may trust the virtue of scattering to individuals of the mortar-gun type; but if we would excel in industrial and highway marksmanship, it may be well to level our fieldpiece, take a rest, and send a single charge swift flying to the mark. The good-roads proposition is extremely practical and appeals with directness to the common sense of the people.

GOVERNMENT COOPERATION.

The proposition embodied in bills before Congress may be termed a system or policy of cooperation between the States and the United States, wherein each State is to raise a good-roads fund and the Federal Government to appropriate a like sum, or apportion to each State an amount to be computed on population or other basis. That the Federal Government at an early period embarked upon a policy of road construction and improvement is matter of history. Prior to 1825 Congress in the exercise of the power of appropriation set apart something like \$14,000,000 which was expended by the Government for the improvement of the public highways, the Cumberland road being the most conspicuous example.

Since 1825 nothing has been appropriated for public highways, except in the Territories, the District of Columbia, and for military purposes. That constitutional questions were raised and the policy itself dropped into a long sleep are not to be overlooked. But about that time railroad building and other improvements began to attract public attention, and operated, at least indirectly, against the ordinary road enterprise. Some of the States have passed highway laws providing a general road tax on the taxable values of the State, but such laws have been effective in those States where a low rate of taxation would raise a large sum of money. A 1-mill levy in New York would raise more money than a 40-mill levy in Arkansas and other States, and there are more miles that need improvement in the latter than in the former. It is not because of want of interest in the measure that Arkansas has not passed such a law, but because her taxable wealth is not large enough to avoid an enormous rate of taxation in raising a sufficient sum for practical purposes. The right of Congress to appropriate has not been denied. It must be an appropriation pure and simple, without a retention of control afterwards. A bill was introduced in the Senate of the United States in 1904 providing for co-operation as before stated. It provided for a bureau of highways, composed of three commissioners, one from each of the two great political parties and one from the Engineer Corps of the United States Army. It called for an appropriation of \$24,000,000, to be distributed among the States and Territories according to population.

Under the provisions of that bill the Department of Agriculture, taking the census population of 1900, worked out the amount that would be given to each State under its provision. Arkansas had a population then of only 1,311,564, and her pro rata as assigned by the Department would have been \$421,910. The chief objection to this distribution according to population is that it gave the richer States, already provided with good roads, a sum of money out of proportion to that assigned to the poorer States with needs immensely greater. Under that bill, before a State or Territory could receive the benefits of the act it must provide for one-half the cost of construction and secure the necessary right of way. Under such a bill Arkansas would have to raise \$210,955, by taxation upon her own wealth or otherwise, which would give her a total of \$632,865 annually, which if distributed equally among the counties of the State would give each something more than \$8,000 a year. From statistics of the Agricultural Department it has been ascertained that the building of an improved road along modern methods costs from \$100 to \$400 per mile where sand and clay are used, and from \$1,000 to \$3,000 per mile for gravel, and from \$3,000 to \$9,000 per mile for macadamized road, according to the distance the material has to be transported. Eight thousand dollars per annum would build from 20 to 80 miles of clay and sand roads, up to the highest standard of modern ideas, each year; from 2 to 8 miles of gravel road per annum, and from 1 to 3 miles of macadamized road. In thirty years every county in the State, under a bill of this character,

would have a system of good roads, a system covering every part of the county and passing almost every man's door.

It has also been worked out that under the present system of road improvement in the United States—that is to say, warning out of hands, etc., an average of only \$12 a mile are expended each year. With that small amount no permanent system of road improvement can be devised.

LIKE PROJECTS BY THE GOVERNMENT.

The Government has undertaken great schemes of irrigation, of rivers and harbors improvement, constructed post and military roads, erected great buildings, given aid and acres to the railroads, and now by her rural free-delivery system is encouraging and creating greater demand for bridges and better roads, extending this auxiliary to the remote and neglected precincts of the country. Good roads should be put on an equal footing with these enterprises, for they, like the mail or postal service, touch directly the welfare and interests of every class and condition of the people.

UNITY OF ACTION AND AGENCIES.

The rapid development of the country demands unification of all facilities—canals, rivers, lakes, harbors, railroads, and domestic roads—to meet the great problem of transportation. The interest of all classes is involved. With such agencies united will come the solution of the problems of rates. The subject of drainage is sharing largely the attention of Congress and the country. It is an almost indispensable adjunct to all the rest. The reclamation of vast bodies of wet and overflowed lands will add largely to the real estate values of Arkansas, Mississippi, Louisiana, and other States. Great conventions here and yonder accentuate the demands of the people. Public spirit is stirred as never before, and in time great results must follow. But interest in overland highways is not keeping pace with other factors in this great movement. About two years ago I visited the great good roads convention at Baton Rouge. The platform was crowded with good-roads men of national, State, and local importance. Responding on behalf of the convention to the welcome addresses of Governor Blanchard and President Boyd of the university, I said: "Gentlemen, I have the honor to present to you and this civilized audience the most amiable and useful band of highwaymen that ever invested your State." I still believe the good-roads movement of equal importance with almost any other agency for the public welfare.

I think, therefore, that we need not dwell at great length on the constitutional theories of some of the early statesmen, touching the power to deal with common highways. At least it is not necessary to play the fly to the spider and entangle our feet in the web of constitutional refinements. It is better, perhaps, to erect a standard of work and salute it as Joan of Arc saluted her white standard, and said, "Go boldly among the English and I follow." It is all right for the Federal Government to give object lessons in the matter of good-roads construction and otherwise educate the people. I think, however, that the States should take the initiative in taxation, lay the foundation of the system, give it domestic significance, and bend their best efforts to making it permanent and effective. When they thus lead out and do something tangible in the premises, it is probable the General Government will be disposed to lend a helping hand. Then when her Congress and her President, supported by the judgment of her courts, authorize drafts on her treasury for aid to road improvements, it will not be considered chimerical to say that a mighty step has been taken in behalf of the public welfare. And why? Simply under a State tax alone, the burden falls heaviest as it now rests, on the farmer and the man of small means. His property is tangible—can be reached by direct taxation. The Federal system of indirect taxation falls largely in the way of duties on consumption and, in some degree, its revenue comes from all classes. Therefore in appropriating money for good roads the Government, through that channel, turns back the people's money to their own public interest—the common good.

BENEFIT AND SAVING OF GOOD ROADS.

I have told what the older governments have done and what our State and Federal governments, backed by the people, may and ought to do, perhaps. So, I will now notice some of the benefits, economy, the good to be derived from and the inducement for undertaking so vast an enterprise. By experiment and investigation, it is known that a horse or mule can pull double as much on a macadam as on a dirt road in its best form; four times as much as when the dirt road is in average condition; ten times as much as when it is soaked with spring and winter rains.

Some objectors urge that because we have railroads the need for improved country roads has been largely dwarfed if not eliminated as a national question. In 1896 the railroad

commission worked out that the cost of transporting the products of the farm, mine, and forest over dirt roads to the shipping point was in that year \$1,000,000,000, while the railroads from all sources in the same year only received \$700,000,000. It will be seen that \$300,000,000 more in the year 1896 was paid for transportation over dirt roads than on the railroads.

Careful investigation has shown that the average cost of transporting a ton over a mile of dirt road in the United States is 25 cents. From statistics gathered by our consuls in twenty-three European countries having improved roads the cost was from 10 to 12 cents a ton, or a difference of 13 cents per ton to be charged to bad roads. This saving of 13 cents per ton, after making allowances for our higher wages and highest cost of living, would have effected a saving in that year, had we been blessed with improved roads, of \$500,000,000.

The \$700,000,000 received by the railroads in 1896 was to the largest extent returned to the people. Seventy per cent of it was paid out for labor and material, and the balance in taxes and dividends. All of this vast amount benefited the whole country. On the other hand, the \$1,000,000,000 consumed in the cost of transportation over dirt roads paid not a cent in dividends, not a cent for the labor employed, and not a cent for the excessive wear and tear of wagons and animals. The condition was a source of loss to both producer and consumer. The census showed in 1900 that there were about 16,000,000 horses and mules on the farms in the United States, and in a modest estimate 2,000,000 of them could be dispensed with under a system of good roads. The cost of maintaining 2,000,000 unnecessary animals would be approximately \$115,000,000 a year, and their value \$140,000,000, which make a total of \$255,000,000 that would be saved the first year. From these two illustrations it appears that something near \$700,000,000 per annum would be saved to the people under a general system of improved roads. The manufacturers of the country are enriched by a tariff law which falls heavier upon the agricultural and consuming population than upon the general wealth of the country, notwithstanding the fact that agriculture furnishes more than half of the entire productions of the country. The Secretary of Agriculture in 1904 said:

That the farm products during the last fourteen years, no year excepted, aggregated \$4,806,000,000 in products. Other than farm products during the same period the balance of trade was adverse to this country to the extent of \$865,000,000. Our farmers not only canceled this immense obligation, but placed \$3,940,000,000 to the credit of the nation when the books of the international exchange were balanced.

Does not agriculture, then, deserve some recognition? Is it right to always make it bear unequal burdens and not give it at least equal benefits? More than one-third of our people are engaged in agricultural pursuits and live away from the centers of population. For the most part they live on their farms at from 1 to 10 miles from the nearest town. Upon this class of our people depends to a very large degree the bodily comfort of the whole country, and the wealth of the country is primarily drawn from their labor. It is self-evident, I think, that the advancement of the agricultural class should be the prime concern of every statesman and patriotic citizen. Nothing can advance them more than a better system of public highways. These will bring them into closer touch with the centers of progress and enable them to keep abreast with the times. They will no longer desire to leave the farm for the town, a serious evil now threatening the prosperity of the whole country. Improved roads will enable them to retain in their own pockets the excessive cost paid for animals and wagons, enable them to haul larger loads in shorter time, a saving probably greater than the other, which, on the whole, will add to their general wealth and increase their comforts.

A LONG APPRENTICESHIP.

We have served a long apprenticeship of running in old ruts. We have long been in the condition of having our roads bottomed with mud and paved with good intentions. Neither of these provisions guarantee a safe footing—both involve an evil tendency. It is asserted upon good authority that we have the worst roads of any civilized country. But in extenuation it can be said of us that we are also younger and territorially larger than almost any civilized power and with a population more sparse and less aroused to the importance, the necessity of good roads. But the time has come when it is considered neither good form nor good practice for us to set up a plea of confession and avoidance, particularly when youth and avoirdupois constitute the only ground for such a plea. The opportunity for good work afforded by the system would largely solve the problem of the vast armies of the unemployed which periodically menace the country. From the people's standpoint it would prove a panacea for the common idler and for "Weary Willies," too—that vagrant horde on whom we might lay odds against the feathered throngs in their annual flight

between the Torrid and Frigid zones. It would serve in some respect, too, as an antidote to obscenity, wicked revilings, disordered tempers, and perturbed spirits, excited by disastrous contact with the bogs and "bottomless pits" of our mud roads! It would stay many a cruel and barbarous lash from the backs of our "beasts of burden." It would promote healthful exercise, delightful travel, humane practices, genial spirits, good behavior, good morals, social order, and religious serenity. It would open up the arteries of life between cities and towns; stop the crowding of the former and consequent decimation of the country around; bring churches and schools, factories and mills, and farms into generous touch and rivalry; open new and convenient markets, stamp country life as the ideal one, and landowners as its nabobs—its favored beneficiaries.

But all this can not be accomplished in a day, a year, or a decade. However, we are intelligent, rich, and proud enough to insure in a few years progress in this direction, unmatched in the annals of industrial activity! As the oak may be termed an educated acorn, so training, instruction, and effort develop the educated man; and work, skill, and scientific method, the improved road—the equipped educational institution or college. They inspire wholesome growth of the intellectual and moral, the physical and the material status of communities, States, and nations!

In the spirit of cooperation, in the simple faith of reciprocal obligation and help, we look out upon a clear understanding between the citizen and the Government. We look out upon the future of our country, great not alone in rich mines and smoking furnaces, improved highways and splendid institutions, but upon a Union of States, steadfast and abiding—a union of hearts and homes and earth and sky! We look out upon the lessons of her civilization, transmitted to the homes of the Pyramids and the light of her example, flashed to the summit of the Alps.

Let the present and the future clasp hands in the buoyant prospect, let Arkansas and New Jersey, Texas and New York, Georgia and Illinois, Virginia and Massachusetts—and all the States—march to the goal of national unity and the perfection of national development! [Loud applause.]

Increase of Pensions of Widows and Minor Children.

SPEECH

OF

HON. J. DAVIS BRODHEAD,

OF PENNSYLVANIA,

IN THE HOUSE OF REPRESENTATIVES,

Monday, February 3, 1908,

On the bill (H. R. 15653) to increase the pension of widows, minor children, etc., of deceased soldiers and sailors of the late civil war, the war with Mexico, the various Indian wars, etc., and to grant a pension to certain widows of the deceased soldiers and sailors of the late civil war.

Mr. BRODHEAD said:

Mr. SPEAKER: I have read the committee's report accompanying this bill and have listened to the speeches in relation to it. As I understand the provisions of this measure it will not be such a raid on the Treasury as at first supposed. The gist of the whole bill is simply to raise the rating of widows' pensions under the act of June 27, 1890, \$4 per month, regardless of the widows' other resources. That is, this bill, like the act of June 27, 1890, only applies to women who were wives of soldiers prior to June 28, 1890, and takes away the clause which disqualifies those widows who have an income in excess of \$250 per annum. The original bill, passed over seventeen years ago, met the approbation of the country at that time, and I therefore think the country will approve at this time the increasing of the rating from \$8 to \$12 per month because the widows who will be entitled to this increase are fewer in number and almost eighteen years older.

There are a great many soldiers' widows in that garden spot of Pennsylvania—the Twenty-sixth Congressional District, which I have the honor to represent in this august body—widows, Mr. Speaker, ever since the One hundred and fifty-third Regiment of Pennsylvania Volunteers, recruited solely from my native county of Northampton, was mowed down at Gettysburg. Now, almost half a century after the war and seventeen years after the original widows' pension bill was enacted, it will not add much to the pension expenditures to allow the widows \$4 more per month, the act applying as it does, not to widows who were married after 1890, but only to those who were wed prior to

that time. The reason the committee limits the operation of this act to widows married prior to 1890 is because of the deficiency the chairman of the Appropriation Committee says is staring us in the face. Although the committee felt that the provisions of this measure should be extended to widows married after 1890, they were afraid that by so doing the whole act might fall of passage.

I also understand that the bill has been presented under such a parliamentary rule as not to admit of amendment. I will, therefore, following the example of the distinguished gentlemen from Florida [Mr. CLARK and Mr. SPARKMAN] and of other Southern as well as Northern leaders, vote for this bill and in this small way show my mindfulness of the widows' sufferings and my belief in the justice of this act.

Mr. Speaker, while we are on the subject of pensions and necessarily discussing the matter of justice and fair treatment to our soldiers and their widows and their orphans, let me take this brief opportunity to call attention to an act of justice which should be done the One hundred and fifty-third Regiment of Pennsylvania Volunteers. There is a bill now pending to create in the War Department a roll to be known as the volunteer retired list, on which is to be placed the names of surviving soldiers of the civil war who served not less than one year. In 1862, when President Lincoln called for 300,000 troops, Northampton County, Pa., responded, and the One hundred and fifty-third Regiment was recruited solely from that county and was mustered into service in September, 1862, for nine months. The time of those soldiers of the One hundred and fifty-third Pennsylvania Volunteers expired just twenty days before the battle of Gettysburg. They could have then been honorably discharged and have gone to their homes. But their State, the grand old Keystone State, was threatened with invasion, and the spirit that ever animates the brave and chivalrous to protect their homes, inspired the men of the One hundred and fifty-third to continue to fight with all the strength at their command.

And therefore, Mr. Speaker, we find the soldiers of that brave regiment voluntarily remaining in service twenty days after their time had expired to participate in the fearful fight at Gettysburg, where 39 per cent of them laid down their lives. Through those three days of awful slaughter those sons of Northampton were in the hottest of the fight. In those three days they saw as much active service, performed as glorious deeds, and did as much toward preserving the Union as did many other regiments who were enrolled for a year or more and whose names it is now proposed to place on a volunteer retired list. And they fought and bled and died at Gettysburg, these men of Northampton, twenty days after their time had expired, and after they were at liberty, had they not been men of spirit and courage and loyalty to their flag, to retire in peace to their homes.

I am not opposed, Mr. Speaker, to the creating of this volunteer retired list of officers and soldiers who served a year or more in the civil war, but I maintain that on that list should be placed the names of the officers and men of the One hundred and fifty-third Pennsylvania Volunteers who served after their time had expired, voluntarily remaining in the service to take part in the greatest battle of the war, leaving 39 per cent of their regiment dead on the field.

It is a generous impulse, Mr. Speaker, to remember the widow, but justice is of a higher order than generosity, and injustice is worse than meanness. It is in the name of justice that I will endeavor to have the names of the One hundred and fifty-third Pennsylvania Volunteers placed in that volunteer retired list and not have them excluded because they fall just short of the full year of service. Those three days of service at Gettysburg alone were worth far more than years of merely camp service.

Gettysburg! Oh, what a battle it was! Who can recall it and not marvel at the magnificent American bravery exhibited on both sides. That bravery we all now claim as a common heritage of a reunited country. The heritage of heroic example, although not reckoned in the wealth of nations, is yet essential to a nation's higher life. Who but the poltroon could contemplate the unparalleled heroism of those Southern troops, not too well equipped, and fail to see that they were impelled with the highest patriotic impulses, fighting for what they deemed right. Indeed, to-day we all resent whatever seems the invasion of the right of the State by the Federal Government. Here is a book, Mr. Speaker, called "Pennsylvania at Gettysburg," published by the State of Pennsylvania, which gives statistics of the losses at Gettysburg. The Confederate General Heth lost 2,700 men out of 7,000 in twenty-five minutes; the Twenty-sixth North Carolina lost 588 out of

800—one company of this North Carolina regiment lost all of its officers and all of its men but one. Another company, of the Eleventh North Carolina, lost 36 out of 38 men; the Second North Carolina battalion lost 200 out of 240. And then there was Pickett's charge! What American is there not proud of such a display of American valor. Who can blame me for being proud of the Southern blood in my veins and proud, too, of the Northern, for I belong to that class of native-born American citizens, ever increasing in number, who represent the North and the South amalgamated.

It was against such heroic and fearless fighting that Pennsylvania soil had to be defended at Gettysburg. When Abraham Lincoln visited that famous battlefield those who accompanied him, pointing out "Culp's Hill" and "Cemetery Ridge," remarked upon the bravery of the men who defended those heights. "Yes," he answered, "but think of the bravery of those men who tried to scale those heights." Ah! the greatest misfortune that befell the South was the assassination of that good, generous-minded man.

The Union losses at Gettysburg in three days amounted to over 23,000 men, of which number my native State of Pennsylvania furnished 6,000. Think of 23,000 dead bodies! Then think of the widows at home! All that was almost half a century ago. There are not many widows left. Yes, I will vote for this bill. And when that volunteer retired list measure comes before this body I hope all who participated in the battle of Gettysburg, without any time limit of service as a bar, will be included on its rolls.

Catholic Church Claims in the Philippine Islands.

SPEECH

OF

HON. LINCOLN DIXON,

OF INDIANA,

IN THE HOUSE OF REPRESENTATIVES,

Friday, March 6, 1908,

On the bill (H. R. 16143) to provide for payment of the claims of the Roman Catholic Church in the Philippine Islands.

MR. DIXON said:

MR. CHAIRMAN: This bill provides for the payment of the claims of the Roman Catholic Church for the use and occupancy of church property and for damages and detention of the same in the Philippines by the military forces of this Government.

After the famous victory of Dewey at Manila the American troops landed in the Philippines and took possession of the churches, schoolhouses, and parish homes belonging to the Catholic Church, and used and occupied the same for barracks, hospitals, and prisons. Many of the buildings so occupied were magnificent structures and represented large investments of money. The troops used these buildings for many months, and in some cases several years after the cessation of hostilities. Such occupancy necessarily excluded the church authorities therefrom, and thus they were unable to care for or protect the same. Military necessity compelled the use of this property, as the buildings were in fact the only suitable places for the care of troops. The churches were in many cases of fortress-like construction and were capable of successful defense, and their use was regarded by the military authorities as essential. It is easy to understand how the property would be necessarily damaged by such occupancy, while in some cases the buildings were totally destroyed. To pay for the damage caused by our troops under such circumstances is both proper and right. To refuse to do so would be both unjust and wrong.

The claims of the church for said damage were presented to our Government, and through the War Department an order was issued convening a board called "The board on church claims" for the special purpose of investigating and reporting on the same, that board consisting of Army officers, Lieut. Col. J. A. Hull, judge-advocate; Lieut. Col. Alexander A. Brodie, military secretary, and First Lieut. J. W. Moore, Second Infantry, United States Army. This board met at Manila August, 1905, and continued its investigations for nearly six months. The members visited many of the churches where damages had occurred and examined carefully into all the claims. The work of the board was thoroughly done, and the report filed gives ample proof of the painstaking and conscientious labor of its members. The board excluded compensation for damages done by the insurgents, damages incident to military operations, wanton damages by American soldiers, and for use and occupancy and damage by servants of the civil government. This board thus organized, and after said investigation, recommended the payment of the sum of \$363,030.19 for rentals and damages

to church property and also that \$40,000 additional be paid to compensate the church for the spoliation and carrying away of many ornaments, images, and vestments, making in all the sum of \$403,030.19. The award was a conservative one, many Government officials regarding the same as entirely too small.

The indebtedness of \$363,030.19 is conceded in both the majority and minority reports, the only difference being the \$40,000 for the spoliation and carrying away of sacred ornaments and the person to whom the money should be paid.

The majority and minority reports agree that the sum of \$363,030.19 is due from this Government and should be paid to the proper party. The majority report recommends the payment of the \$40,000 additional and that the money be paid to the Archbishop of Manila as the trustee for the Roman Catholic Church. The minority report says the money should be paid to the bishops of the various dioceses, limiting the use thereof to the repair and construction of the buildings in such dioceses.

The objection to the payment of the \$40,000 is that it has not always been done in the past and that technically there is a question of liability.

The committee have investigated that subject and report in favor of the payment, and I am satisfied with the report of the majority of the members of the said committee. There is no dispute, nor is the fact questioned, that the property was taken by our troops and that the same was damaged by them. Is it just that our Government should take this property from those in possession and convert it to its own use and by such use allow the same to be injured and damaged and then refuse to compensate the owners thereof for the damage? The damage would not have occurred except by our use, and the necessities of war compelled and justified the use, but equity and right demand reparation.

The amount of the award having been settled by the court appointed for that sole purpose, there remains but the question as to who should receive the money.

I believe the payment should be made to the Archbishop of Manila as the representative of the Roman Catholic Church, as provided in the bill. This church had the right of possession at the time the damage was inflicted, and the possession was undisputed. The use and occupation was prior to any schism in the church. That schism was led by Aglipay and did not occur until 1902. This independent church does not now claim ownership of this property, but contends that as a matter of law this property belongs under the terms of the Treaty of Paris to our Government as the successor of Spain, and that the money appropriated should be used by the people of the communities where the churches are situated for religious purposes. This independent church was not organized until these claims had accrued. This church has recognized this fact by stating that it makes no claim for rent for the use of the buildings. But the question as to the church property, raised by this independent church, has been before the courts for settlement. The supreme court of the Philippines has decided the exclusive right to the possession of the churches to be in the Roman Catholic Church.

In the case of *Barlin v. Ramirez* (7 Philippine Reports, 41), the court decided that the Roman Catholic Church was entitled to possession as against the claim of this independent church. A number of similar decisions have been made by the same court.

Was the title to this property, prior to the treaty of Paris, in the Spanish Government, and by that treaty is it now in the United States?

This question has also been directly before the supreme court of the islands in the case of *Barlin, Bishop, etc., v. Ramirez* and the Municipality of Laganoy. The complaint alleged ownership in the Roman Catholic Church; the defendant alleged ownership in the province of Laganoy and denied the ownership of the church. The question of ownership being directly before the court, the court said:

We have said that it (that is, the municipality of Laganoy) could have no such title or ownership even admitting that the Spanish Government was the owner of the property and that it passed by the treaty of Paris to the American Government. But this assumption is not true.

As a matter of law, the Spanish Government at the time the treaty of peace was signed was not the owner of this property nor of any other property like it situated in the Philippine Islands.

The truth is that from the earliest times down to the cession of the Philippines to the United States churches and other consecrated objects were considered outside of the commerce of man. They were not public property; nor could they be subjects of private property in the sense that any private person could be the owner thereof. They constituted a kind of property the distinctive characteristic of which was that it was devoted to the worship of God.

The possession of the churches, their care and custody, and the maintenance of religious worship therein were necessarily, therefore, intrusted to that body—the Roman Catholic Church. It was, by virtue of the laws of Spain, the only body which could under any circumstances have possession of or any control over any church dedicated to the worship of God. By virtue of those laws this possession and right of control were necessarily exclusive. It is not necessary or important to give any name to this right of possession and control exercised by the Roman Catholic Church in the church buildings of the Philippines

prior to 1898. It is not necessary to show that the church, as a judicial person, was owner of the buildings. It is sufficient to say that this right to the exclusive possession and control of the same for the purposes of its creation existed.

It therefore follows that in 1898, and prior to the treaty of Paris, the Roman Catholic Church had by law the exclusive right to the possession of this church, and it had the legal right to administer the same for the purposes for which the building was consecrated. It was then in the full and peaceful possession of the church, with the rights aforesaid. That these rights were fully protected by the treaty of Paris is very clear. That treaty, in article 8, provides, among other things, as follows:

"And it is hereby declared that the relinquishment or cession, as the case may be, to which the preceding paragraph refers, can not in any respect impair the property or rights which by law belong to the peaceful possession of property of all kinds, of provinces, municipalities, public or private establishments, ecclesiastical or civil bodies, or any other associations having legal capacity to acquire and possess property in the aforesaid territories renounced or ceded, or of private individuals, of whatsoever nationality such individuals may be."

This opinion would seem to establish fully the proposition that the right of possession and control exercised by the Roman Catholic Church prior to 1898 was complete. Indeed, the Independent Filipino Church, so called, is in no position to assert any title to these properties during the period covered by the investigation of the military board, for the reason that the Independent Filipino Church was not then in existence, it appearing from the record that the Independent Church did not come into existence until after that time.

By this decision it was held that Spain was not the owner of this property "nor of any other like it situated in the Philippine Islands." Spain never having owned this property, but the same having always belonged to the Roman Catholic Church, there is no foundation for the claim of ownership in our Government.

This appropriation will assist in repairing the damage our people have caused to the church whose authorities have ably helped us in the preservation of law and order in the Islands, who have assisted in upholding our authority, who have raised the standard of life in elevating and educating the people of the Philippines and preparing them for the day which we all hope is not far distant when absolute independence shall be granted them.

Increase of Pensions of Widows and Minor Children.

SPEECH

OF

HON. EDWARD L. TAYLOR, JR.,

OF OHIO,

IN THE HOUSE OF REPRESENTATIVES,

Monday, February 3, 1908,

On the bill (H. R. 15653) to increase the pension of widows, minor children, etc., of deceased soldiers and sailors of the late civil war, the war with Mexico, the various Indian wars, etc., and to grant a pension to certain widows of the deceased soldiers and sailors of the late civil war.

Mr. TAYLOR of Ohio said:

Mr. SPEAKER: The bill which is being discussed under suspension of the rules is the result of an insistent demand for some just and equitable legislation for the relief of the widows of veterans of the civil war. The act of 1890 worked a grave injustice to these deserving women. In the first place, the amount of pension allowed, to wit, \$8 a month, was entirely inadequate, and, in the second place, an arbitrary income clause barring all widows who had a net income of \$250 a year was unjust and unfair, and, finally, in my judgment, and I believe in the judgment of many Members of this body, that portion of the bill barring all widows from participation who had married since June 27, 1890, is eminently unfair, and the arguments in favor of it are not based upon logic or common sense.

The present bill cures the first two defects in the original legislation. It wipes out the income clause and raises the pension to \$12 per month. The committee has seen fit to continue the provision barring all widows married since June 27, 1890, and this portion of the bill does not meet with my approval, and I feel it my duty, while knowing that no amendment will be permitted, to voice my protest against the same. Because this bill does cure so much of existing legislation, I shall give it my hearty support.

Just why a former Congress saw fit to go on record as believing that any widow of a soldier should be barred if, by reason of thrift and economy, her husband had acquired an income for her in excess of \$250 per year I never understood.

I have had under my personal observation a large number of cases where the income is but a few dollars more than the income provided in the act of 1890, and these women were compelled to exist as best they could upon this pittance. Any person knows that an income of \$250 will not suffice to keep a woman in even moderately comfortable circumstances. This is

particularly true in view of the methods pursued by the Pension Department in determining whether or not such an income in fact exists. Many old soldiers have put all of their savings into a small home, and this they leave to their widow, and our Pension Department has seen fit to estimate the rental value of the home as chargeable against the \$250 income clause. In nearly every case which has come under my observation this rental charge has equaled fully one-half of the amount charged against the widow, leaving her frequently less than \$125 in actual income per year upon which to exist. Since this inequality has been discovered and wiped out by the committee in the bill now pending, it is useless to discuss it at any length, for in eradicating the income clause it would appear that the committee has realized that the law as it now exists simply penalizes thrift and puts a premium on shiftlessness. The man who left nothing left his widow in many cases better provided for than the man who by saving had managed to acquire a small estate.

The widow of a soldier who has been a faithful wife for many years, has made the home comfortable, has smoothed his path as he grew older, and has waited upon him in his last illness was entitled to more than \$8 per month, and the committee has seen this and most justly and properly brought her income up to an amount which will be of some substantial benefit in making more easy her declining years.

The only regret that I have is that that portion of the present act limiting the date of marriage to June 27, 1890, was not brought forward at least ten years—say to June 27, 1900. But, as I have said before, so many deserving widows will be benefited by the committee's action in the bill now under consideration that I will gladly support it, even if I must, for the present, yield the contention that this is not a just provision. I do not attempt to state to this House how much additional expense would be incurred by bringing the date of marriage forward ten years. I have made an effort to obtain this information, but have failed to secure reliable statistics on the subject. I do not believe it would be a great amount, but if it was, I still insist that common justice to the woman who has married and lived with a soldier since April, 1890, who has devoted from ten to seventeen years of her life to making him comfortable in his old age, to nursing him when ill, and to providing him with the comforts of a home, is entitled to be included in the general pension legislation of this country. They should not be barred by such an arbitrary time limitation. I have asked in vain for information as to the real cause for this legislation. The principal reason assigned is that it was passed to prevent adventuresses—young women—from marrying old soldiers in order to procure for themselves an income for life. The fallacy of this argument is apparent at a glance. In the district which I have the honor to represent, I know of a number of women who have married soldiers since the year 1890, and are now widows, and I have yet to learn of any who belong to that class of adventuresses, or bad women, while in every case I have found that they were middle-aged, Christian women, who married the soldier knowing that they would receive no pension, and with the sole desire for affectionate companionship and the maintenance of a home for their husband during his declining years.

If it is true that in isolated cases certain women might take advantage of this legislation, is it just to the thousands of respectable Christian women that they should be barred in order that one woman of bad character should be prevented from participating hereunder? It seems an insult to American womanhood that we must so guard them against and bar them from their just deserts, because forsooth some one, somewhere, might, from selfish motives, win the affection of a Union soldier. The very act itself can by no possibility attract an adventuress. A woman who has so far forgotten her womanhood as to seek a marriage for mere monetary consideration would not be attracted by a life income of \$8, or even \$12, per month. If she were a very young woman and became a widow while still in her youth, the chances are that she might, and probably would, remarry; and if so, our laws prevent her participating in a pension beyond that date.

I think a careful investigation of the subject would show that a large per cent of the marriages contracted since 1890 have not been between veterans and young women, but are between veterans and women of middle age. I hope in the near future to see Congress pass a law bringing forward this marriage date to at least the year 1900. Many thousand deserving women are benefited by this act, and I am deeply impressed with its merits, but we can not overlook the fact that many more deserving women are not given full justice by its provisions, and with an abiding faith in the desire of this body to properly provide for those who are justly deserving, I feel certain that another Congress will remedy what, in my opinion, is the only defect in this splendid piece of legislation.

Catholic Church Claims in the Philippine Islands.

SPEECH

OF

HON. W. F. ENGLEBRIGHT,

OF CALIFORNIA,

IN THE HOUSE OF REPRESENTATIVES,

Friday, March 6, 1908,

On the bill (H. R. 16143) to provide for payment of the claims of the Roman Catholic Church in the Philippine Islands.

Mr. ENGLEBRIGHT said:

Mr. CHAIRMAN: As one of the Representatives of the State of California, which is situated the nearest to and has close business relations with our Philippine insular possessions, we naturally take an extra amount of interest in all matters connected therewith and have the best opportunity to meet people who have business relations there, and to get in close touch with the many problems and questions that require consideration. Having listened to the remarks of the gentlemen who have thus far discussed this question, and having met people who have visited the islands who indorse the justice of the claims now being considered, I think it only fit and proper that the report of the majority of the committee be considered and that this bill be passed.

The report of the committee says, on pages 2 and 3:

From the time that the American Army landed in the Philippines, in the year 1898, until the complete return of peace in the islands, the Government of the United States, through its military forces, took possession of churches, contiguous parish houses, school buildings, seminary buildings, etc., and used them as hospitals, prisons, or barracks. After the cessation of hostilities, in many instances the occupation of the buildings had to be continued until suitable quarters could be constructed for the garrisons which remained in the archipelago, the entire time of the occupancy varying in individual cases from a few weeks to two years or more. This occupation by the Government wholly excluded the church authorities, preventing them from taking any measures for the protection of the property. Many of the buildings so occupied were fine structures. For example, the cathedral at Manila, a large stone building with high walls and a dome and possessing an interior ornamented by handsome woodwork, was used at one time to imprison between 3,000 and 4,000 Spanish soldiers. Buildings thus seized and occupied were often seriously damaged, sometimes partially or wholly destroyed.

As presented, the claims demanded compensation for occupancy and damages, not only by our own forces but also by the insurgent forces, and were of two classes, namely, claims of the church proper and claims of the friars.

This report and the accompanying bill do not at all relate to the claims of the friars, but only to those of the Catholic Church proper.

These claims of the Catholic Church were presented at Manila before a board of officers called the "board on church claims," appointed under a special order of the War Department for the sole purpose of making an investigation and report. This board, composed of Lieut. Col. John A. Hull, judge-advocate; Lieut. Col. Alexander O. Brodie, military secretary, and First Lieut. J. W. Moore, Second Infantry, United States Army, was duly convened on August 1, 1905, at headquarters Philippine Division, city of Manila, and at once entered upon what proved to be an exhaustive investigation, conducted under rigid rules and instructions prescribed therefor by the Secretary of War (see Exhibit A, post) and lasting for the better part of six months.

Your committee are convinced that the board was most painstaking and conscientious, and that it performed its duties with exceptional thoroughness and ability. All of the many witnesses before it were examined under oath. Moreover, the members of the board themselves were personally acquainted with the cities, towns, and villages in the archipelago where the structures in question were situated. Many of these they visited in order to determine as thoroughly as possible, from personal inspection, the rental value of the property and the amount of damage inflicted upon it by our troops.

The award of the board carefully excluded compensation, first, for damages done by the insurgents; second, for damages incident to military operations; third, for wanton damages by soldiers of the American Army; fourth, for use and occupancy and damages by servants of the civil government.

Fifty-nine of the cases presented by the church authorities were reported upon adversely, the board holding that no rent was due, that the damage was done by the enemy, or that it was an incident of active warfare.

The total amount claimed was \$2,442,963.13
The total amount awarded by the board was 363,030.19

They further say on page 4 of their report:

The property mentioned in the claims was that of a noncombatant, an organization devoted to charitable, educational, and religious purposes. The damages were inflicted while the property was in the exclusive occupation and control of the Government of the United States. Payment for such occupation and damages can be sustained upon the principle that private property should not be taken for public use without due compensation.

Precedents for the payment of such claims by Congressional appropriation are numerous. Congress has from time to time appropriated money to compensate for use and occupation of the property of institutions—religious, educational, or charitable—and for damages done thereto by our military forces during the civil war. The following is a list of some of these appropriations:

The committee then gives ample precedent for their action in reporting favorable consideration of this bill, and the committee further says on pages 5 and 6:

The only claimant that has ever asked compensation for damages to the property mentioned in the report of the board on church claims

or for use of the same is the Roman Catholic Church in the Philippine Islands. The only other possible claimant for compensation for damages would be the Government of the United States or its grantees, if such there were, upon the assumption or theory that prior to the war the title to the property was in Spain, and that therefore by virtue of the treaty of Paris it became vested in the United States. This assumption that the title to church property in the Philippines passed from Spain to the United States by the treaty of Paris has received attention in the supreme court of the Philippine Islands in an opinion rendered by Justice Willard in the case of Jorge Barlin, bishop, etc., plaintiff and appellee, v. P. Vincente Ramirez, ex-rector, etc., and the municipality of Lagonoy, defendants and appellant.

The plaintiff brought this action against the defendant Ramirez, alleging in his complaint that the Roman Catholic Church was "the owner" of a certain church building and other property belonging thereto, that defendant went into possession of the same as its representative, and asking that the church be restored to the possession thereof.

The answer of the defendant Ramirez, in addition to a general denial, admitted that he was in possession of the property with the authority of the municipality of Lagonoy and of the inhabitants of the same, who were the "lawful owners" of the property. The municipality of Lagonoy being permitted to intervene, filed an answer, in which it alleged that the defendant Ramirez was in possession of the property under the authority and with the consent of the municipality of Lagonoy, and that such municipality was "the owner" thereof.

The plaintiff replied to this complaint, or answer in intervention, and the case was tried and judgment entered in favor of the plaintiff and against the defendants.

In deciding the case the supreme court, Justice Willard rendering the opinion, expressly declared that the assumption that the Spanish Government was the owner of the property, and that it passed by the treaty of Paris to the American Government, is not true. Says the court:

"As a matter of law, the Spanish Government at the time the treaty of peace was signed was not the owner of this property nor of any other property like it situated in the Philippine Islands."

If, when the treaty of Paris was signed, the Spanish Government was not the owner of the property in question in that case, "nor of any other property like it situated in the Philippine Islands," it follows, of course, from this decision of the court that the Government of the United States has never had any title to the property mentioned in the claims presented before the board on church claims and appropriated for by the accompanying bill. This particular conclusion of the court was based largely, if not entirely, upon the laws of the Spanish Government defining the status of all property in the Philippines. A copy of the opinion is printed herewith. (Exhibit C, post.)

For generations before the war between the United States and Spain the exclusive right to possess, control, and occupy buildings devoted to religious purposes was in the church. If, for the purpose of argument, the decisions above cited of the supreme court of the islands were to be ignored, it, nevertheless, can not truthfully be said that the relation of the Spanish Government to the property mentioned in these claims was ever other than that of a mere trustee. The Government of the United States can not, and ought not to, hold the property as trustee of any church, Catholic or Protestant.

Without respect to the legal title to the property, there can be no question that in equity it belonged to the Catholic Church.

The board on church claims included in its report a statement that—"If Congress should in its liberality desire to compensate the church for the spoliation and carrying away of sacred ornaments, images, vestments, etc., we recommend that the sum of \$40,000 be paid, as, in the opinion of the board, this sum would be fully ample."

The aggregate of the amount claimed by the church for these articles of cult and ornamentation was \$298,222.50.

Your committee recommends the passage of the accompanying bill, as amended, providing for the payment of \$403,030.19 to the Archbishop of Manila as representative and trustee of the Roman Catholic Church in the Philippine Islands, this amount when so paid to be in full satisfaction of all claims for the use and occupation of the property of said church in said islands, and for damages done thereto, by the military forces of the United States, and also in full satisfaction for the carrying away and loss of articles of cult and ornamentation, prior to January 15, 1906, the date of the official report of said board on church claims.

The sum appropriated by the accompanying bill includes no allowance for interest, as the payment by the Government of interest on claims would reverse its uniform practice.

The report of the committee and the report of the commission of United States officers clearly shows that there was a large amount of church property damaged and destroyed. They have carefully investigated the facts of the actual damages and clearly show that this Government is responsible therefor; hence we have a proper report on which to base action. The mere fact that this was property belonging to the Catholic Church is no reason for denying to them that justice which we, as American citizens, believe should be accorded to all parties, all religions, and all creeds. There is only one subject for discussion and that is: Is this a proper claim against the Government, and are these the right parties to pay it to? No one here denies the justice of this claim, but the gentlemen in opposition to the bill lay stress on a portion of the minority report of the committee and claim that there is a large independent branch of the Catholic Church in the Philippines, of which Archbishop Gregorio is claimed to be the head, that should receive all or a portion of this money. I quote this portion of the report which says:

The Independent Catholic Church, of which Archbishop Gregorio Aglipay, who prior to the insurrection was a native priest, is the acknowledged head, observes all of the rites, ceremonies, and festivals of the Roman Catholic Church, and differs with that organization only in the fact that it does not acknowledge the control of the Vatican. It is claimed for the Independent Catholic Church that it has more than 250 priests and 20 bishops; that it has a number of seminaries located at various points in the islands, and that it has a membership of 4,000,000 souls. Its opponents do not concede that its membership is so large, and sometimes place it at 3,000,000, or even less; but Bishop Brent, of the Episcopal Church, who has resided at Manila for a num-

ber of years, and than whom there can probably be found no higher authority, has, it is reported, but recently estimated the membership of this branch of the church at 4,000,000. It can be most conservatively and safely said that it outnumbers the membership of the Roman Catholic Church two to one, and that in many of the parishes the priests and all those who hold the Catholic faith have identified themselves with the Independent Catholic Church.

On this contention argument is made that all or a portion of this money should be diverted from the parent organization, the true Catholic Church, who owned and held this property when it was damaged and destroyed, and pay it to this independent organization. That there is no merit in this contention is shown in the letter read by the gentleman from New York from Bishop Hendrick, whose letter is as follows:

GONZAGA COLLEGE,
Washington, D. C., March 5, 1908.

To the Hon. SERENO E. PAYNE.

DEAR SIR: Replying to your inquiry as to the number of Aglipayanos in the Philippines, permit me to say that the diocese of Cebu contains 2,000,000 of Christians. I have been to all the dioceses, and say that the proportion is as follows:

Cebu—700,000, Aglipayanos 1,000; Leyte—500,000, Aglipayanos 100; Bohol—250,000, Aglipayanos 75; Northern Mindanao—150,000, Aglipayanos 10,000; Siquijor—35,000, Aglipayanos none; Samar—400,000 Aglipayanos none; total—2,035,000, Aglipayanos, 11,175.

The diocese of Nueva Caceres, about 850,000, Aglipayanos 8,000. Diocese of Jaro, about 1,200,000, Aglipayanos 50,000.

Allowing 70,000 Aglipayanos in Manila and 35,000 Aglipayanos in Nueva Segovia, there appears a total of 174,175.

The dioceses of Jaro (pronounced Haro), Manila, and Vigan had a larger proportion of Aglipayanos. Say Manila, 100,000; Jaro, 75,000, and Vigan, 80,000. These figures are estimated from conversation with the bishops of these sees, and relate to the conditions four years ago. They gained adherents and money by always preaching that they were going to drive out the Americans. To do this they needed money to buy ships, arms, etc. It was absolutely not a religious but a political movement, put under the form of a religion to protect it against the government, which had previously suppressed the same movement under the forms of labor unions and social organizations. As the people found out that the money they subscribed and paid liberally was not used for the purpose, they deserted the Aglipayano organization until now it is in a dying condition. In other words, it was purely a movement for graft. The figures given are most liberal Aglipayanism at its flood tide. Probably at the present time those willing to declare themselves Aglipayanos would not number one-fifth of the figures given. See also Senate Document 170, Fifty-eighth Congress, second session, page 10.

T. A. HENDRICK.

This letter clearly shows that the claim that this independent faction of the church is a large body is absurd, and is conclusive proof that no consideration should be given that faction, and leaves the matter exactly in the shape as reported by the majority of the committee.

The report that was made by the Commission, the action of the courts, and the statements of individuals all agree that this is a just and proper claim, made by the rightful owners of the property, and that the Government of the United States is clearly responsible for the amount reported in this bill. This bill accords simple justice to the Catholic Church, and I shall vote in favor of it. The property damaged and destroyed should be paid for, so that these churches are put in proper shape and condition and that all people in the Philippine Islands shall feel and recognize the fact that they are being accorded that consideration and that justice that they should receive from the greatest nation on earth. With these views I feel that a majority of this House are in hearty accord and that you will not hesitate to pass this bill.

Increase of Pensions of Widows and Minor Children.

SPEECH

OF

HON. GEORGE W. NORRIS,

OF NEBRASKA,

IN THE HOUSE OF REPRESENTATIVES,

Monday, February 3, 1908.

On the bill (H. R. 15653) to increase the pension of widows, minor children, etc., of deceased soldiers and sailors of the late civil war, the war with Mexico, the various Indian wars, etc., and to grant a pension to certain widows of the deceased soldiers and sailors of the late civil war.

Mr. NORRIS said:

Mr. SPEAKER: I am glad, indeed, that the Congress of the United States is at last going to do justice to the widows of our civil war veterans. Ever since I have been in Congress it has been apparent to me that the widows of our soldiers were not receiving, under the law, just consideration or fair treatment.

On the 24th day of January, 1907, I offered an amendment to the pension appropriation bill which would have given, if adopted, practically the same relief that is given by this bill. At that time I gave to the House my views on the subject in a brief way and called attention to the injustice of the general

law to the soldier's widow. My amendment, however, was not adopted. At the beginning of this session I introduced a bill which provided that the widow of a soldier of the civil war in applying for pension should not be required to prove that her husband died as a result of his Army service. The bill now before us has this provision incorporated in it—in fact the principal point in the bill is this particular provision.

The real trouble of the general law that has been on the statute books since 1862 has been that the widow, in order to secure a pension, was required to prove that her husband died as a result of his Army service. Practically the only difference in effect between the bill which I have introduced and the one the committee has reported is that the committee bill contains limitations on the provisions of my bill and in that respect it seems to me that the bill of the committee now before us is unjust and unfair. It limits the effect of the bill to those widows who were married prior to June 27, 1890. If these provisions were stricken out of the bill it would give justice and fair treatment to the soldier's widow who has been so long neglected. The law should in no case require a widow to prove that her husband died as a result of his Army service, and this provision that was incorporated in the original bill in 1862 was founded upon a false idea and misunderstanding as to the real reason for granting a pension to the widow. The soldier is subject to die of all the diseases to which human flesh is heir. They are just as liable to die of the ordinary diseases that afflict all of us as from causes which originate in the service, and because a soldier dies of pneumonia, typhoid fever, or any other disease contracted since he has left the service, or because he is killed in a railroad accident or struck by lightning, is no reason why his widow should not be given a pension the same as though he died from some disease that had its origin in his Army service.

I have in mind an actual case where this injustice is well illustrated. In a small Western town there lived two old soldiers, each one drawing a pension under the general law for injury received in the line of duty. One of them was drawing a pension for stomach trouble and deafness. He was not disabled to such an extent that he could not perform any manual labor, but, as a matter of fact, had general supervision of his business. He was president of a local bank, and was worth \$75,000 or \$100,000.

The neighbor who lived just across the street was drawing pension for stomach difficulty and for the loss of eyesight; for years he was a helpless invalid. These difficulties originated in the service and there was no question but what his entire difficulty came from his service. His wife, for seven or eight years prior to his death, cared for him, looked after him, and devoted all of her time and attention to his care and his comfort. These soldiers died the same week. The first one, the banker, died as a result of his Army services. His wife had left to her the larger part of her husband's fortune and was enabled to live in comfort and luxury, and received a pension of \$12 a month.

The other soldier, while he could not have lived more than a few months at the outside, on account of his Army difficulties, died as a result of a railroad accident which happened while they were taking him to a hospital for the purpose of having an operation performed on him. His death could not, under the law, be traced to the service, but was the result of an accident, and his widow, who had given the best years of her life to the care of the soldier, was not able afterwards, under the general law, to obtain a pension.

These cases only illustrate the injustice of what is ordinarily known as the old or general law. It is true that under the act of June 27, 1890, a widow can secure a pension, even if her husband does not die from the result of Army service, but in such case she must prove that her income is less than \$250 a year, and then she can get a pension of only \$8 a month. The result is that the soldier who is so disabled on account of his service that he can not accumulate money but is practically an invalid, cared for by his faithful wife, is, on account of these circumstances and on account of the services rendered his country, a poor man, and if he dies as a result of some accident or some ordinary disease common to humanity, his widow will not be able to get a pension exceeding \$8 a month; while the soldier who was not so disabled, but was able to engage in business and accumulate property, would leave his widow in comfortable circumstances, and if he dies as a result of his Army services his widow would get a pension of \$12 a month.

In all cases where the marriage took place prior to June 27, 1890, this bill gives the proper relief and recognizes the right principle; the same principle that I advocated more than a year ago. The only criticism is that the bill contains this objectionable limitation, but even with that infirmity it will go far toward giving to the soldiers' widows of our country the consideration and justice that should have been shown years ago.

This justice comes from the American Congress at a time when it is rather tardy, but yet much good will be accomplished by the enactment of this bill into law, and Congress will certainly receive the grateful thanks of the many soldiers' widows whose suffering on account of the patriotism of their husbands has been unselfish and of long standing.

In the matter of pension legislation it is my judgment that Congress ought to go still another step forward. We ought also to liberalize the pension laws as they apply to the old soldier. The act which we passed last Congress giving a pension to the soldier on account of age, should be amended so that every old soldier who has reached the age of 65 years should receive a pension at the rate of \$20 a month; this rate ought to be increased with the age of the soldier to a maximum of at least \$25 a month.

I sincerely trust that before this session of Congress adjourns the committee having this matter in charge will report one of the many bills having this object in view. We can well afford to properly care for the old soldier and his widow in their declining years. While we have done much, while our pension laws are more liberal than those of any other civilized nation of the world, yet there are many of the old soldiers who in the closing years of their lives are suffering in poverty, and the pension now allowed will not, under present conditions, always be sufficient to keep them from want.

The many blessings that we, their descendants, enjoy, and which have been made possible by their patriotism, their fidelity and their bravery, ought to incite us to give to them in their old age a sufficient pension to provide for them in such a way that their declining years may be filled with the pleasures and comforts of life. We owe this as a token of our thankfulness and grateful appreciation, and in remembrance of the sacrifices they have made for the perpetuity of our institutions and in the establishment of real freedom and a genuine liberty in the greatest republic of modern times. [Applause.]

Catholic Church Claims in the Philippine Islands.

SPEECH

OF

HON. EATON J. BOWERS,

OF MISSISSIPPI,

IN THE HOUSE OF REPRESENTATIVES,

Friday, March 6, 1908,

On the bill (H. R. 16143) to provide for payment of the claims of the Roman Catholic Church in the Philippine Islands.

Mr. BOWERS said:

Mr. CHAIRMAN: In the consideration of this matter, as of all others of a legal or quasi-legal character, a clear and brief statement of the case is of the utmost importance. The bill proposes payment to the Roman Catholic Apostolic Church of \$403,030.19, in full satisfaction of all claims for use and occupation of church property in the Philippine Islands by the military forces of the United States prior to January 15, 1906.

From the time the American Army landed in the Philippines in 1898 until the complete restoration of peace in the Islands, the Government of the United States through its military forces took possession of churches, contiguous parish houses, school buildings, seminary buildings, etc., and used them as hospitals, prisons, or barracks. This occupation frequently continued after the cessation of hostilities and until other suitable quarters could be provided or obtained. The troops wholly excluded the church authorities, and, of necessity, prevented their taking any steps for the care or preservation of the property. In most instances the property was damaged, sometimes slightly, sometimes seriously. This damage resulted from various causes. In some cases it was necessarily incident to the use and occupation by troops of property never designed for military purposes, in others from careless and reckless use, and in still others from acts of wantonness and destruction by the soldiers. Many articles used in churches and similar structures were found missing, seriously damaged, or actually destroyed. That the damage was considerable does not admit of doubt. The evidence on that point is undisputed and conclusive, and, indeed, it is apparent without any evidence that church, school, and convent buildings can not be used for military operations without suffering great loss and damage.

A "board of church claims," duly constituted by law, has examined into the matter and has reported that for the use and occupation of the property and for the damage and depreci-

ation incident and due solely to such use the Catholic Church is entitled to receive the sum of \$363,030.19. This finding comprehends only the value of the use and occupation and the damages necessarily flowing from such use. It expressly excludes all consequential damages, all damages resulting from wanton defacement and destruction, and all claims for vestments and other sacred articles destroyed, lost, or missing. It concludes, however, with the following remark:

If Congress should in its liberality desire to compensate the church for the spoliation and carrying away of sacred ornaments, images, vestments, etc., we recommend that the sum of \$40,000 be paid, as, in the opinion of the board, this sum would be fully ample.

The bill, therefore, is made up of the sum found by the Commission, to wit, \$363,030.19 and the sum of \$40,000, stated by it as sufficient to cover the loss and destruction of articles of personal property above described.

By the majority and minority reports only two questions are presented. Both agree that the sum of \$363,030.19 is due and should be paid to some one entitled to receive it, whoever that may be. The majority report, however, recommends adding the \$40,000 to cover destruction and wanton damage and provides for payment to the Archbishop of Manila, as the trustee for the Roman Catholic Apostolic Church. The minority report insists that only the award of \$363,030.19 should be paid, and then only to the bishops of the various dioceses, limiting the use thereof to the repair and construction of the buildings in such dioceses. I shall proceed to discuss them in the order named.

The principal objection to the allowance of the sum for wanton damages and loss and destruction of sacred articles is that the United States should not hold itself responsible for the wanton acts of its soldiers in the field unauthorized by their officers, and that all precedents in considering claims of this character are against payment. Both of these propositions, as general rules, may be admitted, and still the reason for payment in this case and in all cases of this class is to my mind very clear. No one will dispute that as a general proposition acts of depredation, mischief, and wantonness committed by troops in the field, on the march, or in garrison during military operations are not chargeable against the Government, for the reason that they are the individual act of the soldier, committed without the sanction or order of his officers, and, of course, outside their presence. They are acts of the individual, and no conduct of the Government or of any officers has either contributed to his act, placed him in a position to do the wrong, placed the property injured either in his control or custody, or given it over to his power and inclination to harm it.

But the concrete case we are now considering presents a very different question. Here the United States, by virtue of its sovereign power, its governmental authority, has, because of a military necessity, dispossessed those in control of property dedicated to sacred uses, and has, without the consent and against the will of the custodians, placed that property in the care and keeping of its soldiers.

Can it be said that in cases of this character justice is done by the payment of a mere rental and of only such damages as are incident to the use of the property for a purpose other than that for which it was designed and suitable? Will it be contended that having, by virtue of its vis major, which none may resist, taken this property from those appointed to use it for the worship of the Most High God and placed it in the hands of others, agents, servants and soldiers of the United States, that the Government owed no duty to see that these agents properly cared for the buildings and other property temporarily in their keeping, or failing in that, to compensate the owners for whatever damages they sustained? Every consideration of right and natural justice cries out against such a proposition and insists that whatever loss is inflicted by those whom the United States placed in possession should be repaired by the Government. It is very clear that these damages would never have been suffered if the buildings had been left in the possession of the friars, and while it is true that the military necessity justified its taking and use, it is not true that such necessity will excuse destruction or mischief, or will absolve the Government from responsibility therefor. If an individual or corporation, public or private, possessing a right of eminent domain which would authorize the taking and temporary use of property for a public or quasi public use, should make such a defense to such a claim, it would be promptly met with derision, scorn, and reproach. Should the measure of the Government's liability be less? Can we afford as the representatives of a great and powerful Government, whose highest care should be and is the protection and safety of the lives and property of its people, to set such an example of injustice and oppression? The equity and natural right and justice seem to me too clear for argument, and to demand reparation in full. The question of prece-

dent, if it be against this position, and I frankly confess that such seems to be the case, I dismiss with a word.

If such is the precedent, it is high time that it was reversed and one more in accordance with right and justice established. Governments are not, like courts, bound by decisions or precedents. No precedent or acquiescence can make right out of that which is wrong, and the proper course with reference to an unjust and oppressive rule is to abandon it. For one I desire to erect a new precedent, more in accord with equity and right.

A few words now as to who should receive this award. The hearings before the committee and speeches to-day have raised the question of the ownership of the property and of the conflicting claims of the "Independent Philippine Catholic Church," sometimes styled, from its archbishop, Gregario Aglipay, the "Aglipayan" church. The facts are briefly as follows: The churches were originally built under the direction of the Spanish Government, partially by the labor of the Indians who were by law required to furnish it, partly by government funds, partly by the funds of the church, and partly from contributions given for that purpose. The legal title does not seem to have been expressly vested anywhere or in any person or corporation. The Roman Catholic Church was entitled to the exclusive use, occupation, and possession of the property forever. No church could be built without a license from the Crown, but when built the equitable title and the exclusive right of use and occupation for all time was vested in the Roman church. The law on this subject is interesting and necessary to a proper understanding of the matter.

Title 28 of the third partida is devoted to the ownership of things, and after discussing what can be called public property and what can be called private property, speaks in law 12 of those things which are sacred, religious, or holy. That law is as follows:

LAW 12. How sacred or religious things can not be owned by any person.—No sacred, religious, or holy thing, devoted to the service of God, can be the subject of ownership by any man, nor can it be considered as included in his property holdings. Although the priests may have such things in their possession, yet they are not the owners thereof. They hold them thus as guardians or servants, or because they have the care of the same and serve God in or with them. Hence they were allowed to take from the revenues of the church and lands what was reasonably necessary for their support; the balance, belonging to God, was to be devoted to pious purposes, such as the feeding and clothing of the poor, the support of orphans, the marrying of poor virgins to prevent their becoming evil women because of their poverty, and for the redemption of captives and the repairing of the churches, and the buying of chalices, clothing, books, and other things which they might be in need of, and other similar charitable purposes.

And then taking up for consideration the first of the classes into which this law has divided these things, it defines in law 13 consecrated things. That law is as follows:

Sacred things, we say, are those which are consecrated by the bishops, such as churches, the altars therein, crosses, chalices, censers, vestments, books, and all other things which are intended for the service of the church, and the title to these things can not be alienated, except in certain specific cases, as we have already shown in the first partida of this book by the laws dealing with this subject.

And Sanchez Roman in his commentaries on this subject says:

(a) Sacred things are those devoted to God, religion, and worship in general, such as temples, altars, ornaments, etc. These things can not be alienated except for some pious purpose and in such cases as are provided for in the laws, according to which their control pertains to the ecclesiastical authorities and, in so far as their use is concerned, to the believers and the clergy. (2 *Derecho Civil Español*, Sanchez Roman, p. 480; 8 *Manresa*, Commentaries on the Spanish and Civil Code, p. 636; 3 *Alcubilla*, *Diccionario de la Administración Española*, p. 486.)

It must be remembered that under the Spanish rule the Catholic Church was a part of the Government. There was a union of church and state, and a concordat or agreement by which the Government bound itself, among other things, to construct churches. Indeed the tithes due the church in these very provinces had been ceded by the Pope to the Spanish Crown in consideration of an agreement to erect churches, schools, convents, and parish houses; and the Spanish laws contain ample and definite provisions for carrying out these agreements. Not only were edifices commanded to be built, but ways and means were provided, and it was declared that they should not only be of sufficient number, but of comfortable and commodious character. On this point Secretary Taft, formerly civil governor of the islands, in his letter of instructions to the board which made this award, said:

Personally, after having looked somewhat into this matter of title, I have no doubt whatever that the cathedral and the various archbishops' palaces belong to the Roman Catholic Church. It is true they were constructed partly out of funds furnished by the Spanish Government and on land belonging to the Government, but they were constructed in accordance with the concordat in which the Spanish Government agreed to furnish the churches and other ecclesiastical buildings used for ecclesiastical purposes, and by the very act of construction and of delivery to the church authorities the title in equity passed, whether what we would call legal title passed or not. For that

reason I think the rents for such buildings and the damages in use and occupation ought to be paid by the Government of the United States to the Roman Catholic Church, and the board reporting, in cases where doubt arises, that such doubt exists, should nevertheless include in their award the amounts for the rent of such buildings and for damages in use and occupation.

And it must not be forgotten that the Roman Catholic Church had been in the exclusive possession of this property from its construction to the time of the American occupation.

On this record it is suggested, rather than insisted, that there is some doubt as to the title, or that the title was in the Spanish Crown at the time of the treaty of Paris, and therefore passed to the United States in trust for the use of the inhabitants of the various parishes for religious uses. I can not assent to either of these propositions.

It must be remembered that trusts, as we understand them at common law, were unknown to the civil law. Indeed, the idea of a legal title in one body, with the beneficial or equitable title in another, was directly in contravention of that jurisprudence. It was known as "fidei commissum," or "prohibited substitution." The legal title followed the equitable, and wherever the substantial right existed the title reposed. There can be no doubt whatever that the substantial right, the real ownership, the right to hold, possess, use, and enjoy—in short, what we call at common law the "equitable title"—was in the Roman Catholic Church. Through all the stately, formal language of the Spanish law, the right to hold, use, and administer the property stands out bold and clear. It is true that it is declared that no one can own the property, but that was because of the theory that, being sacred property, it belonged only to God. On that point the supreme court of the Philippines, in *Barlin v. Ramirez*, said:

The truth is that from the earliest times down to the cession of the Philippines to the United States churches and other consecrated objects were considered outside of the commerce of man. They were not public property, nor could they be subjects of private property in the sense that any private person could be the owner thereof. They constituted a kind of property the distinctive characteristic of which was that it was devoted to the worship of God.

But being material things, it was necessary that some one should have the care and custody of them and the administration thereof, and the question occurs, To whom, under the Spanish law, was intrusted that possession and administration? For the purposes of the Spanish law there was only one religion. That was the religion professed by the Roman Catholic Church. It was for the purposes of that religion and for the observance of its rites that this church and all other churches in the Philippines were erected. The possession of the churches, their care and custody, and the maintenance of religious worship therein were necessarily, therefore, intrusted to that body. It was by virtue of the laws of Spain the only body which could under any circumstances have possession of or any control over any church dedicated to the worship of God. By virtue of those laws this possession and right of control were necessarily exclusive. It is not necessary or important to give any name to this right of possession and control exercised by the Roman Catholic Church in the church buildings of the Philippines prior to 1898. It is not necessary to show that the church as a judicial person was owner of the buildings. It is sufficient to say that this right to the exclusive possession and control of the same for the purpose of its creation existed.

The right of patronage existing in the King of Spain with reference to the churches in the Philippines did not give him any right to interfere with the material possession of these buildings.

Nothing can, therefore, be clearer than that the Spanish Government had no substantial claim or right in the premises other than its right of patronage, nomination, and preferment to the various ecclesiastical places. That right ceased by the treaty of Paris, which forever disposed of all rights of the Spanish Crown and which expressly preserved the title to this, and other like property, from the provisions of the cession of Crown property to the United States, as follows:

And it is hereby declared that the relinquishment or cession, as the case may be, to which the preceding paragraph refers, can not in any respect impair the property or rights which by law belong to the peaceful possession of property of all kinds, of provinces, municipalities, public or private establishments, ecclesiastical or civil bodies, or any other associations having legal capacity to acquire and possess property in the aforesaid territories renounced or ceded, or of private individuals, of whatsoever nationality such individuals may be.

And if it had not been thus stipulated the result would have been the same, for the United States can not possess or exercise any right of patronage, nor can it hold church property in trust for religious uses. Granting that the legal title had been in the Spanish King, this treaty put an end to it, and it would have been either attracted to and merged in the equitable title held by the churches, or held in abeyance until a new trustee could have been selected. But there is another point that is conclusive of this question. The right of the Roman Catholic Church to the exclusive possession, use, occupation, and enjoyment of this property is unquestioned. Wherever the legal title may have been or may be now, the right of possession is in that church. This award is made for an injury to the possession. It is in the nature of rent for use and occupancy, and for damages for injuries in the nature of trespass or waste during that pos-

session. By every rule of law and right it follows, and should follow, the right of possession.

It is hardly necessary to notice the alleged rights of the Aglipayan, or Independent Catholic Church. That body seceded from the orthodox, or Roman Catholic Church, after the occurrences on which this claim is based. It has never made any claim to this money and makes none now. Indeed I understand that by authentic public act it has disclaimed any title to this fund. It has been referred to in this discussion only because of the fact that in some provinces its priests are in possession of the church property and are apparently supported by the inhabitants of those pueblos, and because of its contention, in litigation over the right of possession of some churches, that the legal title passed from the Spanish Crown to the United States, in trust for the use of the congregations and inhabitants of the various parishes. I have attempted to demonstrate that this claim is unfounded, but whether it is or not it can not affect the payment of this money. The party injured is the Roman Catholic Apostolic Church. The sum appropriated is hardly fair compensation. It should be speedily paid and paid to that church, or to the agent which it has nominated to receive it, the archbishop of Manila.

American Passports to Russia.

SPEECH

OF

HON. FRANK O. LOWDEN,

OF ILLINOIS,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, February 11, 1908.

The House having under consideration House resolution 223—

Mr. LOWDEN said:

Mr. SPEAKER: I shall not detain the House long, as there are not very many points of difference between the gentleman from New York [Mr. HARRISON] and myself. Those of the committee who recommended that this resolution be laid upon the table have just as much sympathy for the Russian Jews as the gentleman from New York.

As American citizens they are all the gentleman asserts of them. We believe in affording every protection to American citizens, whether native or naturalized. The main difference between us is as to the means to be employed to secure their rights. We are persuaded that the interests of this class of our citizens will be best subserved by a continuance of the peaceful negotiations already commenced by our Department of State. We believe that we can further their interests better by the action which we propose than by adopting the suggestion of the gentleman from New York.

The resolution introduced on the 4th day of February, 1908, and now before the House, is as follows:

Resolved, That the Secretary of State be, and he hereby is, requested to communicate to this House, if not incompatible with the public interests, the correspondence relating to negotiations with the Russian Government concerning American passports since the adoption of the resolution by the House of Representatives relating to that subject on the 21st day of April, 1904; and also a copy of the circular letter issued by the Department of State to American citizens, advising them that upon the Department receiving satisfactory information that they did not intend to go to Russian territory, or that they had permission from the Russian Government to return, their application for passport would be reconsidered, and also a copy of the notice accompanying such letter issued by the Department of State, dated May 28, 1907.

The subcommittee of the Committee on Foreign Affairs, to which was referred the resolution, through its chairman, the gentleman from Rhode Island [Mr. CAPRON], wrote the Secretary of State inclosing a copy of the resolution. The reply of the Secretary of State follows:

DEPARTMENT OF STATE,
Washington, February 8, 1908.

The Hon. ADIN B. CAPRON,
Chairman of the Subcommittee, Committee
on Foreign Affairs, House of Representatives.

SIR: I have the honor to acknowledge the receipt of your letter of February 5, bringing to this Department's attention a resolution introduced in the House of Representatives February 4 by Mr. Goldfogle, of New York, asking that the Secretary of State be requested to communicate, if not incompatible with the public interests, copies of correspondence with the Russian Government concerning the validity of American passports since the adoption by the House of Representatives of the resolution of April 21, 1904, on that subject; also a copy of the circular letter and notice issued by the Department to American citizens who desire to proceed to Russia.

In the volume of Foreign Relations of the United States for 1904, page 790, may be found the beginning of the correspondence between this Government and the Russian Government when the resolution of April 21, 1904, was submitted to that Government.

It is not deemed compatible with the best public interests at this time to communicate the subsequent correspondence.

I inclose a copy of the printed circular or notice now in use, and, which before the introduction had been substituted for the former circular, to which some objections were made.

I have the honor to be, sir, your obedient servant,

ELIHU ROOT.

The circular to which the Secretary of State referred in his communication is as follows:

RUSSIA—NOTICE TO AMERICAN CITIZENS FORMERLY SUBJECTS OF RUSSIA WHO CONTEMPLATE RETURNING TO THAT COUNTRY.

Under Russian law a Russian subject who becomes a citizen of another country without the consent of the Russian Government is deemed to have committed an offense for which he is liable to arrest and punishment if he returns without previously obtaining the permission of the Russian Government.

This Government dissents from this provision of Russian law, but an American citizen formerly a subject of Russia who returns to that country places himself within the jurisdiction of Russian law and can not expect immunity from its operations.

No one is admitted to Russia unless his passport has been viséed, or indorsed, by a Russian diplomatic or consular representative.

ELIHU ROOT.

DEPARTMENT OF STATE,
Washington, January 25, 1908.

Thereafter, at a meeting of the committee, the gentleman from Rhode Island [Mr. CAPRON] was instructed to report to the House the resolution with the recommendation that it lie upon the table.

It now appears from the remarks of the gentleman from New York [Mr. HARRISON] that the letter to which reference was made in the resolution is as follows:

CITIZENSHIP.

DEPARTMENT OF STATE,
Washington, ———, 190—.

SIR: The Department is in receipt of an application for a passport of ———, from which it appears that ——— born in ———. Your attention is invited to the inclosed notice to former subjects of Russia who contemplate returning to that country, from which you will perceive that it is a punishable offense under Russian law for a Russian subject to obtain naturalization in any other country without the consent of the Russian Government. While this Government dissents from this requirement, it can not encourage American citizens whom it is likely to affect to place themselves within the sphere of its operation. Upon receiving satisfactory information that ——— not intend to go to Russian territory, or that ——— permission from the Russian Government to return, the application for a passport will be reconsidered immediately.

Returning the application, the certificate of naturalization, and the sum of \$1 (—).

I am, sir, your obedient servant,

Chief, Bureau of Citizenship.

The notice of the 28th of May, 1907, complained of, is identical with the notice now in use, except that the earlier notice also provides that passports will not be issued to certain of our citizens, not of Russian origin, who are refused admission to Russia, whatever their origin. This refusal is not limited to the Jews of America, but applies equally to this class, whether citizens or subjects of any other nation. Remember that citizens of the United States are suffering no discrimination, so far as Russia is concerned, that citizens and subjects of other powers do not also suffer. Of course this is no reason why we should not continue to urge our claims. But I have not heard that any other nation has pressed negotiations with more vigor than is shown by the record in this case.

It further appears that at the time this resolution was introduced the State Department was issuing passports to all who applied for them without reference to religion or former nationality.

Objection is made to the notice to American citizens of date of the 28th of May, 1907, on two grounds. First, it is vaguely assumed that the treaty of 1832 conferred upon naturalized Russians the unlimited right to reside and travel anywhere within Russian territory. Second, it is also objected that the notice above referred to applies to certain of our citizens, whether they were formerly Russian subjects or not.

It is under the first objection, however, that most of the applications for passports were refused under the notice of last May. That notice, just as the notice now in force, provides that:

A Russian subject who becomes a citizen of another country without the consent of the Russian Government commits an offense against Russian law, for which he is liable to arrest and punishment if he returns without previously obtaining the permission of the Russian Government.

This Government dissents from this provision of Russian law, but an American citizen formerly a subject of Russia who returns to that country places himself within the jurisdiction of Russian law and can not expect immunity from its operations.

The gentleman from New York [Mr. HARRISON] stated that the treaty of 1832—

gave to Americans and to Russians the reciprocal right to travel and sojourn in the territory of the other country, and while there to have the same security and protection as natives of those countries.

The treaty of 1832, upon which the gentleman relies, it is to be noted, is simply a treaty of commerce and navigation, and in no sense purports to cover the subject of naturalization. The article of the treaty to which the gentleman refers is as follows:

There shall be between the territories of the high contracting parties a reciprocal liberty of commerce and navigation. The inhabitants of their respective States shall mutually have liberty to enter the ports, places, and rivers of the territories of each party, wherever foreign commerce is permitted. They shall be at liberty to sojourn and reside in all parts whatsoever of said territories, in order to attend to their affairs, and they shall enjoy, to that effect, the same security and protection as natives of the country wherein they reside, on condition of their submitting to the laws and ordinances there prevailing, and particularly to the regulations in force concerning commerce.

This article was construed in 1852 by Mr. Everett while Secretary of State. Mr. A. Dudley Mann complained to the State Department of the refusal of the Russian legation in Paris in the preceding July to visé his passport as a violation of Article I of the convention of December 18, 1832, and requested the Government of the United States to demand from the Emperor of Russia an indemnity for the injury which his interests had suffered by such refusal. This request was refused, and Mr. Everett held that the regulations could not be—regarded as an infringement of the privileges of American citizens as such.

In a letter from Mr. Everett to Mr. Mann (41 MS. Dom. Let., 138) Mr. Everett said:

What we deny to other powers we must disclaim for ourselves; and this Government could never give up the right of excluding foreigners whose presence they might deem a source of danger to the United States.

Strictly taken, the treaty is one of commerce and navigation, and the right of sojourn and residence must be understood to have reference to those objects.

No stipulation is made for any other privilege; although it might fairly be expected of the Russian Government to grant to the citizens of the United States that free entrance into the country which the citizens and subjects of the civilized states usually enjoy in each other's territories by the courtesy of nations.

Mr. Bayard, Secretary of State, in instructions to Mr. Lothrop, minister to Russia, July 1, 1887 (MS. Instructions Russia XVI, 518), said:

Under Article I of the treaty between the United States and Russia of 1832, the inhabitants of the two countries "are at liberty to sojourn and reside in all parts whatsoever of said territories, in order to attend to their affairs," and it is further stipulated that "they (the said inhabitants) shall enjoy to that effect the same security and protection as natives of the country wherein they reside, on condition of their submitting to the laws and ordinances there prevailing, and particularly to the regulations in force concerning commerce."

There is certainly nothing in these provisions which precludes either the United States or Russia from expelling from their respective territories each other's citizens or subjects.

It will be seen that two distinguished Secretaries of State have held that the treaty of 1832 did not confer upon citizens of the United States the broad right of "residence and travel" insisted upon by the gentleman from New York [Mr. HARRISON].

Article X of the same treaty expressly declares:

But this article shall not derogate in any manner from the force of the laws already published, or which may hereafter be published by His Majesty the Emperor of all the Russias, to prevent the emigration of his subjects.

It thus appears that Russia's denial of the right of emigration was expressly recognized in this treaty by the United States. The treaty must be construed as a whole, and how it can be claimed that Russia ever waived her right to prevent emigration it is difficult to say.

While, therefore, this Government has always insisted upon the right of expatriation, that right by no means has been acquiesced in by the other powers. It is a well recognized principle that the municipal laws of one country have in themselves no extraterritorial force, and whatever force they are permitted to have in foreign countries depends upon the comity of nations. So the case in this respect stands as follows: Under the municipal laws of Russia it is made a criminal offense for a Russian subject to emigrate. Within our territorial jurisdiction this is not recognized as an offense. It follows that if Russia were to attempt to enforce her law within our territory it would be resisted. Equally, if we attempted to enforce our municipal law within Russian territory we would be beyond our rights. Therefore the Government must of necessity be powerless to enforce this right of expatriation within the territory of another power which denies the right and whose

domestic laws provide a punishment for those who emigrate without the consent of the government. Fortunately this whole question has been passed upon frequently by our Department of State.

Mr. Frelinghuysen, Secretary of State, on the 27th of November, 1883 (149 MS. Dom. Let., 20), ruled as follows:

I have to observe upon the subject that the Russian Government does not admit the right of expatriation, but holds that a Russian subject who leaves Russia without the permission of the Emperor breaks the laws of his country, and the code provides punishment therefor.

Russia has no treaty stipulations with the United States which in any way modify the case so far as our citizens are concerned. If, therefore, one of these returns to the jurisdiction of the offense which has been entirely committed before his naturalization here, the American passport, which will be given him on proper application, will assure the earnest attention of our diplomatic and consular officers in case there may be any proper opportunity of service to him. The Department can not, however, guarantee freedom from detention, nor protection and release in case charges are there prosecuted for infractions of Russian law committed by the individual while a Russian subject and before any obligation was acknowledged by him to the United States.

Mr. Gresham, Secretary of State, on the 9th of March, 1893 (190 MS. Dom. Let., 553), held that:

While a person born in the United States, though of alien parents, is by the laws thereof a citizen, yet, should he be taken by his parents while a minor to the country of which they are subjects, he becomes amenable to the laws of that country and subject to a claim of allegiance there under *jure sanguinis*. On this ground the Department of State refused to issue a passport for the protection of a minor born in the United States whose parents proposed to return with him "for a brief period" to the country (Russia) of which they were subjects.

Mr. Blaine, Secretary of State, in a communication to Mr. Phelps, minister to Germany, on the 3d of May, 1892 (Foreign Relations, 1892, 189), stated the rule as follows:

Notwithstanding the alienage of the father, the son is by birth a citizen of the United States. His absence from the country during minority and while under the control of his father should not be counted too strongly against him, especially in view of the fact that he declares his intention of returning to this country to reside after the completion of his apprenticeship. If he will take the necessary oath to that effect he would seem to come substantially within this rule, and a passport may be issued to him. In issuing him a passport, however, it is proper that the legation should inform him that it does not guarantee him against any claim which may be asserted to his allegiance or service by the Government of Germany while he remains in that country. Having been born of a German father, conflicting claims with respect thereto may arise which it is not the purpose of this Government, by the issuance of a passport, to in anywise prejudice.

A young man, born in Baltimore, August 21, 1860, of German parents, four years later returned to Germany with his parents. He remained in Germany until 1881, when he was examined for military service, and, being found then to be unfit for it, was ordered to appear the next year. He then left for America, where he has since resided. The Department of State said:

Upon this state of facts you are, under our laws, a citizen of the United States by reason of your birth in this country, but by the German law you are a subject of Germany. Should you voluntarily place yourself again within German jurisdiction this Government would not be warranted in intervening to protect you from trial and punishment for violation of the military laws of that country. (Mr. Uhl, Acting Secretary of State, May 22, 1895, 202 MS. Dom. Let., 298.)

That portion of the notice of the 28th of May, 1907, before quoted, is identical with the notice now used by the Department of State, which I have above recited.

It is objected, however, that the further provision, contained in the former notice and eliminated in the present notice, refuses passports to Russia to certain classes of our citizens, though they may have never owed allegiance to Russia.

This provision does not in any sense admit the right of Russia to exclude any American citizen not formerly a Russian subject and who could not therefore have incurred any obligations under the Russian domestic law. Its whole purpose as apparent from the language was to save American citizens from humiliation and possible injury. It was in the very interest of those citizens themselves. It was not to be presumed for a moment that any American citizen would wish to go to a foreign country if he knew in advance that he would there incur danger of arrest and punishment.

I quite agree with the distinguished gentleman from New York [Mr. HARRISON] that the discrimination against American citizens on the ground of religious faith must cease. The Republican party agrees to this, the Administration agrees to this, and the wise, patient, and persistent Secretary of State will yet achieve this result.

It is asserted, however, by the gentleman from New York [Mr. HARRISON] that:

The passport is granted as a matter of right to every American citizen who chooses to apply for it.

This is not the law upon this question. Mr. Bayard, Secretary of State, in general instructions in regard to passports, May 1, 1886, held that:

The issuing of passports is at the discretion of the Secretary.

Mr. Sherman, Secretary of State, on November 8, 1897 (Foreign Relations, 1897, p. 29), concurred in this view.

The rule with reference to the issuance of passports was stated by Mr. Hay, when Secretary of State, in a circular to diplomatic and consular officers (Foreign Relations, 1902, p. 1):

As a general statement, passports are issued to all law-abiding American citizens who apply for them and comply with the rules prescribed; but it is not obligatory to issue one to every citizen who desires it, and the rejection of an application is not to be construed as per se a denial by this Department or its agents of the American citizenship of a person whose application is so rejected.

Mr. Attorney-General Knox, on August 29, 1901 (23 Op., 509), gave an opinion that sections 4075 and 4076, Revised Statutes, which confer on the Secretary of State authority to issue passports to citizens of the United States, are not in terms mandatory, but authorize the exercise of discretion in the discharge of the function so conferred. He said:

The act of Congress which defines your (the Secretary of State's) duty in the matter of the issuance of passports expressly says, "The Secretary of State may grant and issue passports." The provision, therefore, is not in terms mandatory, and I know of no law which gives to the citizen a right to a passport.

It thus has been uniformly ruled that the State Department has an absolute discretion in the issuance of passports. That Department is responsible for peace between this country and foreign countries, and if it believes in any case that the issuance of a passport might lead to strained relations between this country and another, it is clearly the duty of that Department to withhold the passport, especially so if the Department is also satisfied that a citizen of the United States would expose himself to a danger from which the Government could not protect him. And even were the Department of State persuaded in such a case that the danger which threatened our citizen was in contravention of treaty rights, it would be the duty of the Secretary of State, first, to save the citizen from the danger against which the Government could not guard, and second, to take every measure possible to remove, by negotiation, the peril in which our citizen was unjustly placed.

The gentleman from New York [Mr. HARRISON] takes the position that passports have only been "denied by the Department of State to individuals upon the ground that these individuals were personally unworthy." The gentleman is certainly in error. I have above called attention to the ruling of Mr. Gresham, while Secretary of State, who denied a passport for the protection of a minor born in the United States whose parents proposed to return with him "for a brief period" to Russia, of which country they were subjects. While under our law the minor was an American citizen, under the Russian law he was a Russian subject. Here, certainly, is a case in which a passport was refused to an American citizen who had never been in Russia, and for no other reason than to avoid unnecessary difficulties with a foreign power and to save the applicant from a danger which threatened him.

It therefore appears clear to my mind that the State Department has in no respect transcended the law.

The question remains whether or not the Government has been sufficiently energetic under the resolution of April 21, 1904, which is as follows:

Resolved, That the President be requested to renew negotiations with the governments of countries where discrimination is made between American citizens on the ground of religious faith or belief, to secure, by treaty or otherwise, uniformity of treatment and protection to American citizens holding passports duly issued by the authorities of the United States, in order that all American citizens shall have equal freedom of travel and sojourn in those countries without regard to race, creed, or religious faith.

This is the resolution to which reference was made in the resolution now before the House.

On July 1, 1904, the Secretary of State inclosed the resolution of April 21, 1904, to Mr. McCormick, our ambassador to Russia, with this comment (Foreign Relations, 1904, pp. 790 and 791):

The subject to which this resolution relates has heretofore been the occasion of friendly but sincerely earnest representations to the Russian Government on the part of that of the United States. The instructions on file in your office and the correspondence had by your predecessors with the imperial foreign office leaves no doubt as to the feeling of the Government of the United States in regard to what it has constantly believed to be a needlessly repressive treatment of many of the most reputable and honored citizens of the United States. Similar views have been expressed, by my predecessors as well as by myself, in conferences with the representatives of Russia at this capital. That these friendly representations have not hitherto produced the results so befitting the close intimacy of the relations of the two countries for more than a century and so much in harmony with their traditional amity and mutual regard is not, in the President's judgment, ground for relaxing endeavors to bring about a better understanding, if only on the score of expediency and reciprocal convenience.

I have therefore to instruct you to inform Count Lamsdorff that the text of the foregoing resolution has been sent to you for your information and for your guidance in interpreting this expression of the feeling of the people of this country, through their direct representa-

tives, as to the treatment of the citizens in question. You will make known to his Excellency the views of this Government as to the expediency of putting an end to such discriminations between different classes of American citizens on account of their religious faith when seeking to avail themselves of the common privilege of civilized peoples to visit other friendly countries for business or travel.

That such discriminatory treatment is naturally a matter of much concern to this Government is a proposition which His Excellency will readily comprehend without dissent. In no other country in the world is a class discrimination applied to our visiting citizens. That the benefits accruing to Russia are sufficient to counterbalance the inconveniences involved is open to question from the practical standpoint. In the view of the President it is not easy to discern the compensating advantage to the Russian Government in the exclusion of a class of tourists and men of business whose character and position in life are such as to afford, in most cases, a guaranty against any abuse of the hospitality of Russia and whose intelligence and sterling moral qualities fit them to be typical representatives of our people and entitle them to win for themselves abroad no less degree of esteem than they enjoy in their own land.

Under date of August 22, 1904, Mr. McCormick inclosed the resolution to the foreign office of the Russian Government, with a note, for which he was highly commended, and justly so, by the gentleman from New York [Mr. HARRISON]. I desire to call the attention of the House to a portion of that letter (Foreign Relations, 1904, pp. 792 and 793):

This resolution voices not only the feelings of the people, but also a principle which lies at the foundation of our Government. It is for this reason that the question has been, is, and always will be a live question with us, and liable to become acute and be brought forward at some time in such a way as to seriously disturb the friendly relations which have always existed between Russia and the United States.

Aside from the belief that the treatment accorded by Russia to many of our most reputable and honored citizens is needlessly repressive, public opinion, as Your Excellency knows, plays a large part in the foreign relations as well as domestic affairs with us, and when underneath this public opinion there lies an important principle, as is the case in the United States, it can not be left out of account by those who have maintained the close relations which it is desired by my Government to see maintained with this great Empire and her august ruler.

Events have proven that no artificial barrier can keep out those who come with hostile intent or who from without seek to circulate ideas of a hostile character. Is there any reason, therefore, why at least serious consideration should not now be given to the views of my Government as to the expediency of putting an end to such discriminations as now exist in Russia between different classes of American citizens on account of their religious faith when seeking to avail themselves of the common privilege of civilized peoples to visit other friendly countries for business or for travel?

In transmitting the views of my Government at this length, and personally adding some reasons for favorable action which seem to me to be cogent, I have been actuated by the desire, as Your Excellency will appreciate, to contribute something toward those friendly relations which have marked the past and which I value. For this reason I lend myself most earnestly to the work of carrying out my Government's instructions, in the hope that the result will be such as to contribute to the removal of one question of disturbing character from the realm of discussion by a mutually satisfactory understanding concerning it.

This letter was sent to the Russian Government by express direction of our Department of State. Certainly, then, down to that point the State Department had acted with all zeal under the instructions of this body as embodied in the resolution of four years ago. What the later correspondence is we do not know. Secretary Root says, in his letter above referred to, that:

It is not deemed compatible with the best public interests at this time to communicate the subsequent correspondence.

The State Department, however, assures us personally that every effort is being made to get rid of this discrimination which the Russian Government practices. They are hopeful of success, and I have confidence enough in the present Secretary of State to believe that his judgment should be supreme upon this question.

Since the gentleman has seen fit to make a party question of this, I wish to remind the House of the curious fact that in the last Presidential campaign our Democratic friends charged, from every Democratic platform, that the election of Theodore Roosevelt would result in devastating wars with all the world. The Democratic press represented him pictorially as a war lord. A Republican Congress, as has been seen, adopted the resolution of four years ago, in which it requested the President to renew negotiations with those countries which discriminated against certain of our citizens because of religious belief. The President, through his ministers, renewed such negotiations with great vigor and directness. We now have the spectacle of the Democratic party protesting that the Administration has not moved rapidly enough. Four years ago it was charged that the election of Theodore Roosevelt would precipitate war with foreign powers. To-day, upon the floor of this House, it is charged, in effect, that he is sacrificing the interests of American citizens because of his excessive love of peace. The country did not believe the charges made four years ago. It will not believe the charges made to-day.

It will be recalled that the resolution now under discussion called for two things:

First:

If not incompatible with the public interests, the correspondence relating to negotiations with the Russian Government concerning American passports since the adoption of the resolution by the House of Representatives relating to that subject on the 21st day of April, 1904.

Second:

A copy of the circular letter issued by the Department of State to American citizens, advising them that upon the Department receiving satisfactory information that they did not intend to go to Russian territory or that they had permission from the Russian Government to return, their application for passport would be reconsidered, and also a copy of the notice accompanying such letter issued by the Department of State, dated May 28, 1907.

What purported to be the circular letter and notice last referred to were submitted to the House to-day by the gentleman from New York [Mr. HARRISON] and appear in his remarks upon this resolution. This leaves only the correspondence relating to passports firstly above mentioned. The Secretary of State, in his letter to the chairman of the subcommittee, the gentleman from Rhode Island [Mr. CARRON], refers to the first portion of such correspondence and adds that:

It is not deemed compatible with the best public interests at this time to communicate the subsequent correspondence.

I fail, therefore, to see how in any way the House is not in full possession of the information asked in the resolution, in accordance with the terms of such resolution. For the resolution itself negatives the making public of any portion of the correspondence "not compatible with the public interests." And who is to be judge of this if not the Secretary of State? It has been suggested that this resolution in this respect simply followed the form which has uniformly been employed in the past in resolutions asking information from the State Department. If this suggestion means anything relevant to this discussion, it means that the qualification "if not incompatible with the public interests" should be entirely disregarded as being merely a matter of form. I find myself unable to agree with this proposition. But I think, on the other hand, that this unbroken precedent is a recognition of the principle that it would be dangerous in the extreme to call for information from the State Department if such information should be incompatible with the public interests, and of that the Secretary of State himself must be the judge.

Mr. Speaker, everyone knows that when negotiations have been undertaken and are under way to discuss and publish to the world those negotiations is not the best way to get practical and permanent results.

I want to say that this resolution would defeat its very purpose. Progress is being made. The State Department is obliged to recognize the domestic law of Russia, and although it dissents from it, it is powerless to change it, except by treaty.

Now, a suggestion has been made that the war of 1812 settled this question for all time. I wish to remind the gentlemen who rely upon that war that the seizures then complained of were without the jurisdiction of Great Britain, on the high seas; and in the case of the *Chesapeake* I believe it was even in American waters where an American vessel was followed out of an American port by a British man-of-war.

I wish also to say that this war did not settle that question, because it was not mentioned in the treaty that was finally signed.

There are two ways to get things from a foreign government. One is by negotiation, the other is by war. We have tried both in the case of Great Britain, and the war that was fought over that, among other issues, settled nothing; but by negotiation, patiently and carefully pushed, Great Britain has of her own motion receded from the ground she then took.

If we are left alone we will get the same results with Russia, under the guidance of as able an American Secretary of State as we have ever had. The American secretaries of State form the most illustrious roll of honor of which I know. Happily for America and mankind, Elihu Root, the present Secretary of State, is the peer of any in that distinguished list. The American people can safely trust him to guard their interests in all relations with other nations. [Applause.]

And when the result which we all desire is accomplished, it will be the greatest diplomatic triumph this country has ever achieved. One by one, under the influence of negotiations, the great powers of the world have yielded to the American doctrine on this point. Under the direction of the Department of State it will not be long, if we will simply be patient and practical, until the American doctrine of absolute right to expatriation will become a part of the international law of the world. [Applause.]

I do hope that we will be wise enough not to thwart the consummation of that great American doctrine which has tri-

umphed already in most of the countries of the world. [Applause.]

In the early years of the Republic the United States asserted the doctrine that free ships made free goods, though such goods belonged to a belligerent nation. Every great power resisted this assertion. Only recently the civilized nations of the world have acquiesced in this American doctrine, and to-day it is written in the international law of the world. Was this accomplished by war? No. But the doctrine was sound, and American diplomacy has secured its triumph. Just and fearless diplomacy must in the end write the rules which govern the nations of the earth in their relations one with another. And just as negotiations made universal the American doctrine of "free ships make free goods," so negotiation, in which we are now engaged, will one day establish that other great American doctrine of the right of expatriation. And when that time shall come the vexatious questions which have arisen during all our national life to embarrass our relations with foreign countries because of the status abroad of our naturalized citizens will have ceased.

As long as I am a Member of this House, and as long as our State Department is of the distinguished ability which it possesses now, when it tells me that it is not for the best interests of the public service to reveal negotiations going on, I am going to support the State Department, whether Republican or Democratic. [Applause.]

Increase of Pensions of Widows and Minor Children.

SPEECH

OF

HON. CHARLES A. KENNEDY,

OF IOWA,

IN THE HOUSE OF REPRESENTATIVES,

Monday, February 3, 1908.

On the bill (H. R. 15653) to increase the pension of widows, minor children, etc., of deceased soldiers and sailors of the late civil war, the war with Mexico, the various Indian wars, etc., and to grant a pension to certain widows of the deceased soldiers and sailors of the late civil war.

Mr. KENNEDY of Iowa said:

Mr. SPEAKER: It is not my purpose to take up the time of the committee with extended remarks on the bill now being considered. I am not unmindful of the fact that it is impossible to draw a general bill that will do exact justice to all claimants. I am heartily in favor of this measure as it stands, even if it does not contain all the provisions that I would like to see embodied in it. I think the action of the committee in making no distinction between soldiers' widows whose husbands died from disabilities incurred in the service and those whose death resulted from other causes is a great improvement over the law as it exists at the present time. For my part, I have never been able to understand why such a distinction was ever made in the law. Surely the cause of death of the soldier can in no way affect the financial condition of his widow, nor make her struggle for a livelihood less strenuous. I am pleased to see that the bill eliminates that provision of the existing law that disqualifies a soldier's widow for pension where her net income is \$250 per annum. This provision has, in many cases, been construed so as to subvert the intent of the law, and the Department has been to great expense in sending special examiners to look up these cases. As no such distinction is made with soldiers' claims, I think that it was eminently proper to eliminate that provision. There is one provision lacking in this bill that I wish it contained; that is, placing war widows in a class by themselves at a rate of \$20 per month. It occurs to me that the woman who bade her husband godspeed when his country called, who remained at home, in many cases, caring for children, suffering the anxiety and enduring the hardships of those troublesome times, is entitled to greater consideration at the hands of this Government than the woman who married the soldier after the conflict was over. It does seem to me that such distinction in the law in favor of the war widow would be nothing more than simple justice. While the passage of this bill, carrying an additional appropriation of over \$12,000,000 per year for pensions will, perhaps, be all the general legislation along that line enacted in this session, I would like to see the McCumber bill amended so as to reduce the age to which the \$20-per-month provision applies. The fact that very few soldiers will live to profit by the 75-year provision of that bill, and as the intent of the Government is to care for them in their declining years, I think that the age should be reduced, and I hope that some time in the near future the McCumber bill will be amended with that end in view.

Catholic Church Claims in the Philippine Islands.

SPEECH

OF

HON. JOHN C. CHANEY,

OF INDIANA,

IN THE HOUSE OF REPRESENTATIVES,

Friday, March 6, 1908.

On the bill (H. R. 16143) to provide for payment of the claims of the Roman Catholic Church in the Philippine Islands.

Mr. CHANEY said:

Mr. CHAIRMAN: House bill 16143 provides for "the payment of the claims of the Roman Catholic Church in the Philippine Islands," which arose from the operations of the insurgents under Aguinaldo and the suppression of the insurgent insurrection after American occupation.

The total amount of these claims equaled \$2,442,963.13, which were embraced under the following heads, namely:

1. Damages by insurgents.
2. Wanton damages by United States troops.
3. Damages incident to military operations.
4. Use and occupancy and damages by servants of the civil government.

The committee has allowed \$363,030.19 for use and occupation of church properties by the United States forces, and \$40,000 for damages incident to military operations, a total of \$403,030.19.

Of course damages committed by the insurgents could not be chargeable to the United States.

The minority report of the committee against paying these claims and the very earnest speech against the bill by the gentleman from Virginia [Mr. JONES] have caused every Member to take a deep interest in the question before the House.

That the United States has, in times past, paid for the use and occupation of private buildings and lands and for the appropriation of private property by the troops and forces of the United States is now familiar to everyone. The Court of Claims reports are full of awards for such use and occupation and for such appropriation of private property, and Congress has generally responded to the findings of the court by appropriating the money necessary to discharge these awards.

Even in the Confederate States, for claims arising out of the civil war, where "loyalty" was a jurisdictional fact, the establishment of which fact must be before the merits of a claim can be considered by the court, eleemosynary institutions—schools, churches of all denominations, etc.—were found to be impossible of disloyalty, and awards were given and appropriations made, notwithstanding the fact that the church communicants may have taken active part in the rebellion.

The claims of the Catholic Church of the Philippine Islands is therefore no new principle and no debatable principle.

The righteousness of these claims being acknowledged, what objection can there be to paying them?

The Catholic Church is a legal entity in the Philippines as it is in the United States.

The minority report objects to paying these claims—first, because the Catholic Church does not own these church properties, and second, because there is no properly designated person to whom to pay the damages.

Let us see what foundation there is for these objections.

First. If these properties do not belong to the Catholic Church, to whom do they belong?

It is insisted that the legal title to all these 400 properties was, up to Spanish capitulation, in the Crown of Spain, because there was, under Spanish law, a so-called "union of church and state;" that when the United States took the place of Spain as sovereign of the Philippine Islands the United States became owner of these properties.

I can not assent to this view, because there is no union of church and state under our Constitution, and when the Government of Spain retired from the Philippines there was a complete divorce of church and state. The United States can not, therefore, join the Catholic Church, nor permit that church to unite with this Government, in a joint administration of affairs in the Philippines a bit more than it can do it within the States comprising the Union.

The Catholic Church in the Philippines proceeds upon the same principles there as it does here. It runs its own affairs here, it must run its own affairs there; and we should recognize its right to conduct its own affairs there as we do here.

This right requires that, if we occupy its property to its exclusion, as we did during the Philippine insurrection, we should

pay for this use and occupation; and if we took and carried away and appropriated any of its property, we should also pay for that.

These properties are all held in the same way.

The ownership of these properties is found to be in the Catholic Church there, by a suit relating to one of the properties, to test the question of title, and this suit can well be regarded as the decision for all.

There was one of the judges of the court which determined the question who thought, under the peculiar holdings of realty under the Spanish Government by the church, that it might not have fee-simple title, but that the church had sole right of possession so long as used for church purposes, which was sufficient to entitle it to compensation for the use and appropriation of the property—the holding being much like that of a schoolhouse here. The court was unanimous on the main proposition, to pay the Catholic Church these damages, because the church was entitled to exclusive possession of these properties, had the sole right of that possession, and we, as tenants of that landlord, could not be heard to deny the rent money.

The church is, therefore, entitled to compensation for the use and occupation of its premises and the appropriation of its property by the forces of the United States, whether it is a fee-simple title or not, because it was the right of occupation and possession upon which the church bases its claims.

The amount of \$403,030.19 was found by a duly constituted board of award, and the amount allowed is below, rather than above, the actual damages sustained by the church on account of our occupancy.

The Secretary of War has put the reasonable sum for the privilege of occupancy to be at least \$500,000. Even Colonel Hull, president of the board of award, in his testimony before the committee said:

I am confident that \$500,000 would not be an excessive award at this time (taking into account the difference in relative values between the time of the occupation and the time he testified).

The only other question is as to who is the proper person to whom to pay the money. In a Protestant church it would be proper to pay it to the church trustees. The authority over church property in a Catholic church in a given locality, however, is the priest, and the bishop or archbishop over a field of churches—a diocese and the like.

The gentleman from New York [Mr. COCKRAN] has given us the relation of the priest to the church property, and he says that the priest is consecrated to the duty to have charge of and hold the church property, and that he does this as a trustee for the church.

There is no doubt but what every dollar of the money appropriated by this bill will be duly accounted for by the person to whom it is proposed to pay it, so there need be no hesitation on this score.

It is idle to talk about the dissenters from the Catholic Church in the Philippines having any interest in this proposed appropriation.

When these dissenters left the regular organization they gave up all their right, title, and interest in and to the church property. It was theirs to enjoy only while they remained a part of the regular church. The court reports in all the States of the Union hold to this view. Indeed, this assertion is based upon the decisions of State supreme courts throughout the Union.

If there be any error in the proposed appropriation, it is because it is too small.

I favor the bill and will vote to sustain the majority report of the committee.

I desire to have printed in connection with my remarks the majority report of the committee:

[House of Representatives, Sixtieth Congress, first session, Report No. 696.]

Catholic Church claims in the Philippine Islands. February 10, 1908.—Committed to the Committee of the Whole House and ordered to be printed. Mr. COOPER of Wisconsin, from the Committee on Insular Affairs, submitted the following report, to accompany H. R. 16143.

The Committee on Insular Affairs to whom was referred the bill (H. R. 16143) to provide for payment of the claims of the Roman Catholic Church in the Philippine Islands, beg leave to submit the following report, and recommend that said bill do pass with the following amendments:

In the blank space at the end of line 4, page 1 of the bill, insert the words "four hundred and three thousand and thirty."

In the blank space in line 5, page 1 of the bill, insert the word "nineteen."

In lines 12 and 13, page 1 of the bill, strike out "August 31, 1905," and insert in lieu thereof "January 15, 1906," so that said bill when amended will read as follows:

"A bill to provide for payment of the claims of the Roman Catholic Church in the Philippine Islands.

"Be it enacted, etc., That there is hereby appropriated, out of any moneys in the Treasury not otherwise appropriated, the sum of \$403,030.19, the same to be paid to the archbishop of Manila, in the Philippine Islands, as the representative (and trustee) of the Roman Catholic Church in said islands; and that the acceptance of said sum, paid under

the provisions of this act, shall be in full satisfaction of all claims for use and occupation of the property of said church in said islands and for damages done thereto by the military forces of the United States prior to the date, to wit, January 15, 1906, of the official report of the board of church claims, which said board, composed of John A. Hull, lieutenant-colonel, judge-advocate; Alexander O. Brodie, lieutenant-colonel, military secretary, and J. W. Moore, first lieutenant, Second Cavalry, was duly convened August 1, 1905, at headquarters Philippines Division in the city of Manila, in said islands, to consider and report upon said claims.

From the time that the American Army landed in the Philippines, in the year 1898, until the complete return of peace in the islands, the Government of the United States, through its military forces, took possession of churches, contiguous parish houses, school buildings, seminary buildings, etc., and used them as hospitals, prisons, or barracks. After the cessation of hostilities, in many instances the occupation of the buildings had to be continued until suitable quarters could be constructed for the garrisons which remained in the archipelago, the entire time of the occupancy varying in individual cases from a few weeks to two years or more. This occupation by the Government wholly excluded the church authorities, preventing them from taking any measures for the protection of the property. Many of the buildings so occupied were fine structures. For example, the cathedral at Manila, a large stone building with high walls and a dome and possessing an interior ornamented by handsome woodwork, was used at one time to imprison between 3,000 and 4,000 Spanish soldiers. Buildings thus seized and occupied were often seriously damaged, sometimes partially or wholly destroyed.

As presented, the claims demanded compensation for occupancy and damages not only by our own forces, but also by the insurgent forces, and were of two classes, namely, claims of the church proper and claims of the friars.

This report and the accompanying bill do not at all relate to the claims of the friars, but only to those of the Catholic Church proper.

These claims of the Catholic Church were presented at Manila before a board of officers called the "board on church claims," appointed under a special order of the War Department for the sole purpose of making an investigation and report. This board, composed of Lieut. Col. John A. Hull, judge-advocate; Lieut. Col. Alexander O. Brodie, military secretary, and First Lieut. J. W. Moore, Second Infantry, United States Army, was duly convened on August 1, 1905, at Headquarters Philippines Division, city of Manila, and at once entered upon what proved to be an exhaustive investigation, conducted under rigid rules and instructions prescribed therefor by the Secretary of War (see Exhibit A, post) and lasting for the better part of six months.

Your committee are convinced that the board was most painstaking and conscientious, and that it performed its duties with exceptional thoroughness and ability. All of the many witnesses before it were examined under oath. Moreover, the members of the board themselves were personally acquainted with the cities, towns, and villages in the archipelago where the structures in question were situated. Many of these they visited in order to determine as thoroughly as possible, from personal inspection, the rental value of the property and the amount of damage inflicted upon it by our troops.

The award of the board carefully excluded compensation, first, for damages done by the insurgents; second, for damages incident to military operations; third, for wanton damages by soldiers of the American Army; fourth, for use and occupancy and damages by servants of the civil government.

Fifty-nine of the cases presented by the church authorities were reported upon adversely, the board holding that no rent was due, that the damage was done by the enemy, or that it was an incident of active warfare.

The total amount claimed was..... \$2,442,963.13
The total amount awarded by the board was..... 363,030.19

A copy of the report of the board, containing a complete list of the claims, and a detailed statement of its proceedings, findings, and award, is herewith annexed. (Exhibit B, post.)

In the hearings before your committee, Secretary of War William H. Taft appeared as a witness and gave testimony at length, as did also Col. John A. Hull, United States Army, senior member of the board on church claims, and Maj. John Biddle Porter, judge-advocate, United States Army, at present assistant in the office of the Judge-Advocate-General. All of these witnesses were exceptionally well qualified, by reason of long experience in the Philippine Islands, to testify as to conditions concerning the claims in question. Your committee had also before it the original papers in the claims covered by the report of the board, and made frequent use of these during the hearings. All of the witnesses before your committee were united and positive in asserting that the award of the board was very conservative. Colonel Hull himself testifying that in his judgment \$500,000 would not be an excessive award at this time. Secretary Taft was of the same opinion.

The testimony before the board, and also that before your committee, shows plainly that since the damage was inflicted there has in many cases been a very serious deterioration of the property, owing to its exposure to the elements. Bishop Rooker, now deceased, an American and a former resident of Washington, testified (December 5, 1906) under oath before the board that if the Government of the United States were to grant the claims of his diocese (Jaro) just as they were presented the condition of the damaged structures there would still remain "very much deteriorated in comparison with what it was before the war." He declared that "the sums asked for would be insufficient to put the property back to its original condition," because, "as time has passed, the deterioration to the damaged buildings has increased month by month. This subsequent deterioration was not included in the claims presented." The bishop testified that if a certain claim for \$1,000 had been paid at the time the damages were inflicted this amount would have restored the property to its original condition, but that at the time he gave his testimony the restoration would cost not less than \$5,000.

It was the testimony of Colonel Hull that the award of the board was "based not on the value at the time it was made (1905-6), but upon the value at the time of the occurrence (1898-1902)." He added:

"I probably have a more intimate knowledge of these claims than any other one man. I have gone over them all, and I know them intimately. I am confident that \$500,000 would not be an excessive award at this time. * * * Prices have increased wonderfully from the time that I first went to the Philippines, in 1899, and I have no doubt that this has continued to go on. Five hundred thousand dollars to-day would not do any more than \$363,000 would two years ago. It would do about the same."

The property mentioned in the claims was that of a noncombatant, an organization devoted to charitable, educational, and religious purposes. The damages were inflicted while the property was in the exclusive occupation and control of the Government of the United States. Payment for such occupation and damages can be sustained upon the principle that private property should not be taken for public use without due compensation.

Precedents for the payment of such claims by Congressional appropriation are numerous. Congress has from time to time appropriated money to compensate for use and occupation of the property of institutions—religious, educational, or charitable—and for damages done thereto by our military forces during the civil war. The following is a list of some of these appropriations:

"Forty-first Congress: The Kentucky University, at Lexington, Ky., was paid \$25,000 for the use and occupation of their buildings by the United States troops. (16 Stat. L., 678.)

"Forty-third Congress paid the East Tennessee University \$18,500 for use of its property. (18 Stat. L., 604.)

"Forty-eighth Congress donated 46,080 acres of public land to the University of Alabama, to be applied to the erection of suitable buildings for said university, which was destroyed by fire on April 4, 1865, during the military operations at Tuscaloosa. (23 Stat. L., 12.)

"Fiftieth Congress paid the Catholic Church of St. Peter and St. Paul, at Chattanooga, Tenn., \$18,729.09, for stone and material taken and used by the military authorities of the United States during the civil war (25 Stat. L., 1188); the Baptist Female College, Lexington, Mo., \$3,107.67 as compensation for rent of the college building while used by the United States Army for four years from 1861. (25 Stat. L., 1189.)

"Fifty-second Congress paid to William and Mary College of Virginia \$64,000 to reimburse said college for the destruction of its buildings and other property destroyed without authority by soldiers of the United States Army during the civil war. (27 Stat. L., 744.)

"Fifty-third Congress paid to Washington College (now known as the Washington and Lee University), located at Lexington, Va., \$17,848 for injury to its buildings, apparatus, libraries, and other property injured or destroyed by troops of the United States Army during the late war. (28 Stat. L., 1039.)

"Fifty-fifth Congress paid to the book agents of the Methodist Episcopal Church South \$288,000 as compensation for property of said corporation, including the buildings and grounds and all machinery and all material of every kind, used, taken away, injured, consumed, or destroyed by the United States or its Army, or for its benefit in any way, during the years 1864 and 1865. (30 Stat. L., 1401.)

"Fifty-seventh Congress paid (32 Stat. L., 234, 235) the following claims: To the trustees of the German Evangelical Church, at Martinsburg, W. Va., \$2,500 on account of the destruction of their church building and its furniture, on February 17, 1863, while they were in possession of a portion of the military forces of the United States; to the trustees of the Methodist Episcopal Church of Martinsburg, W. Va., \$1,850 for the use and occupation thereof by the Federal troops from March, 1862, to April, 1865; to the bishop and trustee of St. Joseph's Catholic Church, at Martinsburg, W. Va., \$2,880 for use and occupancy of said church by the Army of the United States during the war of the rebellion; to the Cumberland Female College, McMinnville, Tenn., \$5,000 for the use, occupancy, and consumption of its property for hospital and other Army purposes during the late war of 1861 to 1865 by the military authority of the United States; to the Richmond College, Richmond, Va., \$25,000 to reimburse said college for the occupation of its buildings and grounds by the United States troops and officers for eighteen months commencing in April, 1865, and for injury and destruction of the buildings, apparatus, libraries, and other property of said college by said troops and officers; to the Stewart College (now the Southwestern Presbyterian University), at Clarksville, Tenn., \$25,019.96, for use and occupation of the buildings and grounds, for material used, and for injury to its buildings, apparatus, and other property by United States troops during the civil war; to the Catholic Church at Macon City, Mo., \$725 for use and occupation of said church during the civil war; to the St. Charles College, Missouri, such amount, if any, found upon investigation by the Quartermaster's Department to be due for use of its buildings and grounds by the United States military authorities during the civil war.

The only claimant that has ever asked compensation for damages to the property mentioned in the report of the board on church claims or for use of the same, is the Roman Catholic Church in the Philippine Islands. The only other possible claimant for compensation for damages would be the Government of the United States or its grantees, if such there were, upon the assumption or theory that prior to the war the title to the property was in Spain, and that, therefore, by virtue of the treaty of Paris, it became vested in the United States. This assumption that the title to church property in the Philippines passed from Spain to the United States by the treaty of Paris has received attention in the supreme court of the Philippine Islands in an opinion rendered by Justice Willard in the case of Jorge Barlin, bishop, etc., plaintiff and appellee, v. P. Vincente Ramirez, ex-rector, etc., and the municipality of Lagonoy, defendants and appellant.

The plaintiff brought this action against the defendant Ramirez, alleging in his complaint that the Roman Catholic Church was "the owner" of a certain church building and other property belonging thereto, that defendant went into possession of the same as its representative, and asking that the church be restored to the possession thereof.

The answer of the defendant Ramirez, in addition to a general denial, admitted that he was in possession of the property with the authority of the municipality of Lagonoy and of the inhabitants of the same, who were the "lawful owners" of the property. The municipality of Lagonoy being permitted to intervene, filed an answer, in which it alleged that the defendant Ramirez was in possession of the property under the authority and with the consent of the municipality of Lagonoy, and that such municipality was "the owner" thereof.

The plaintiff replied to this complaint, or answer in intervention, and the case was tried and judgment entered in favor of the plaintiff and against the defendants.

In deciding the case the supreme court, Justice Willard rendering the opinion, expressly declared that the assumption that the Spanish Government was the owner of the property, and that it passed by the treaty of Paris to the American Government, is not true. Says the court:

"As a matter of law, the Spanish Government at the time the treaty of peace was signed was not the owner of this property nor of any other property like it situated in the Philippine Islands."

If, when the treaty of Paris was signed, the Spanish Government was not the owner of the property in question in that case, "nor of any other property like it situated in the Philippine Islands," it follows,

of course, from this decision of the court that the Government of the United States has never had any title to the property mentioned in the claims presented before the board on church claims and appropriated for by the accompanying bill. This particular conclusion of the court was based largely, if not entirely, upon the laws of the Spanish Government defining the status of all property in the Philippines. A copy of the opinion is printed herewith. (Exhibit C, post.)

For generations before the war between the United States and Spain, the exclusive right to possess, control, and occupy buildings devoted to religious purposes was in the church. If, for the purpose of argument, the decisions above cited of the supreme court of the islands were to be ignored, it, nevertheless, can not truthfully be said that the relation of the Spanish Government to the property mentioned in these claims was ever other than that of a mere trustee. The Government of the United States can not, and ought not, to hold the property as trustee of any church, Catholic or Protestant.

Without respect to the legal title to the property, there can be no question that in equity it belonged to the Catholic Church.

The board on church claims included in its report a statement that—
"If Congress should in its liberality desire to compensate the church for the spoliation and carrying away of sacred ornaments, images, vestments, etc., we recommend that the sum of \$40,000 be paid, as, in the opinion of the board, this sum would be fully ample."

The aggregate of the amount claimed by the church for these articles of cult and ornamentation was \$298,222.50.

Your committee recommends the passage of the accompanying bill, as amended, providing for the payment of \$403,030.19 to the archbishop of Manila as representative and trustee of the Roman Catholic Church in the Philippine Islands, this amount when so paid to be in full satisfaction of all claims for the use and occupation of the property of said church in said islands, and for damages done thereto, by the military forces of the United States, and also in full satisfaction for the carrying away and loss of articles of cult and ornamentation, prior to January 15, 1906, the date of the official report of said board on church claims.

The sum appropriated by the accompanying bill includes no allowance for interest, as the payment by the Government of interest on claims would reverse its uniform practice.

THE MINORITY REPORT.

That there may be a complete showing of the case, I will also submit the minority report as a part of my remarks:

[House of Representatives, Sixtieth Congress, first session, Report 696, part 2.]

Catholic Church claims in the Philippine Islands—February 14, 1908, committed to the Committee of the Whole House and ordered to be printed—Mr. JONES of Virginia, from the Committee on Insular Affairs, submitted the following as the views of the minority—To accompany H. R. 16143.

The undersigned, members of the Committee on Insular Affairs, to which was referred House bill 16143, entitled "A bill to provide for the payment of the claims of the Roman Catholic Church in the Philippine Islands," being unable to concur either in the propositions of law enunciated in the report accompanying this bill or in the conclusions sought to be drawn therefrom, and believing that no sound public policy is to be subserved by the appropriation by Congress of a considerable portion of the amount recommended in this report, even if it were definitely and certainly ascertained to whom any part of it should be paid, are constrained, for the reasons herein advanced, to withhold their assent thereto.

The churches and the church property for the use and occupation of, the spoliation and injury to, and in some instances, the destruction of which it is sought to hold the United States responsible, are located in various villages and towns scattered over many of the provinces and islands of the Philippine Archipelago, and are more than four hundred in number. The cathedral of Manila is one of the church edifices involved, and some of the others are to be found in each of the five Catholic dioceses of the islands.

Prior to American occupation of the Philippine Islands the Roman Catholic Church was the only church permitted there, and its relations to the Spanish Government were so close and intimate as to cause the one to be inseparable from the other in the popular mind. At that time most of the parish churches and convents were occupied by friars, and the influence wielded by these parish priests was far greater than that of the secular representatives of the Government. Many causes had contributed to the popular disfavor into which these friars had fallen long prior to the insurrection against American rule, the principal and most disturbing one being of an agrarian character relating to the acquisition and holding of large bodies of the best agricultural lands, estimated at one-tenth of all the improved lands in the islands, by the Dominicans, Recolites, and Augustinians, three of the four friar orders in the Philippines. During the continuance of open hostilities to the United States most of these priests were driven into Manila, as many as sixty, perhaps, being killed, and five times that number imprisoned. Secretary Taft testified that "the feeling with respect to them—not as against the church, but against them as political quantities—was so bitter that it was very dangerous for them to go out into the parishes at all. As a natural result of the intense bitterness manifested against these Spanish friars, who, it was believed, had dispossessed and robbed them of their homes, and who were recognized as the representatives of Spain, a serious schism was brought about in the church, and there are now two branches of the same church, the one embracing a large majority of all the Catholics of the islands and calling itself the "Independent Philippine Catholic Church," and the other styled the "Roman Catholic Apostolic Church."

The Independent Catholic Church, of which Archbishop Gregario Aglipay, who prior to the insurrection was a native priest, is the acknowledged head, observes all of the rites, ceremonies, and festivals of the Roman Catholic Church, and differs with that organization only in the fact that it does not acknowledge the control of the Vatican. It is claimed for the Independent Catholic Church that it has more than 250 priests and 20 bishops; that it has a number of seminaries located at various points in the islands, and that it has a membership of 4,000,000 souls. Its opponents do not concede that its membership is so large, and sometimes place it at 3,000,000, or even less; but Bishop Brent, of the Episcopal Church, who has resided at Manila for a number of years, and than whom there can probably be found no higher authority, has, it is reported, but recently estimated the membership of this branch of the church at 4,000,000. It can be most conservatively and safely said that it outnumbers the membership of the Roman Catholic Church two to one, and that in many of the

parishes the priests, and all those who hold the Catholic faith, have identified themselves with the Independent Catholic Church.

It is not maintained on the part of the Roman Catholic Church that it can show any legal title to the churches and other property for damages to which payment is asked from the United States. Whatever claim that branch of the Catholic Church in the Philippines may have to the ownership of the 600 or 700 church edifices, one of which is to be found in every village in the civilized portions of the archipelago, is concededly purely equitable in character. As to where the title to this church property actually resides, and as to who in justice and equity is entitled to its occupancy and use for religious purposes, it would be premature, and, in our opinion, improper at this time to express an opinion. It is sufficient to say that the Independent Catholic Church, commonly known as "the Aglipayans," have never set up a claim to the actual ownership of it. Their contention is that as a matter of strict law these church properties belong, under the terms of the treaty of Paris, to the United States as the successor of Spain, and that they should be held in trust for and be used by the Catholic people of the communities where they are situated for religious purposes. There is no question but that these churches and other church buildings were erected under the direction of the Government of Spain upon Government property. The people supplied the labor, in most instances enforced labor, and contributed the taxes which went into the construction of these churches, and it does not seem to us unnatural or unreasonable that those who built them should assert their right to use them for purposes of religious worship. They were without exception erected upon Government land, and in most, if not in all, cases one-third of the moneys that were used in their construction came out of the general treasury of the Government, one-third out of local funds kept in the central treasury, and the remaining one-third consisted of contributions of money and labor made by the individual members of the church. The Crown of Spain exercised supreme control over the whole of this property.

It is manifestly right and proper that the disputed claim to the ownership, as well as to the occupancy and possession, of this vast property should be definitely and finally settled before any question as to the liability of the United States for damages done to it can be passed upon by the Congress. If the property in dispute passed to the United States as the successor of Spain, as is earnestly maintained by many lawyers and publicists of ability and eminence who have carefully examined the subject, then unquestionably no liability for damages attaches to the United States. Until it is decided by the supreme court of the Philippine Islands, the only tribunal competent to decide the question, since upon it has been conferred by special act the sole and exclusive right to determine to whom this property belongs, and, therefore, to whom damages, if the United States is liable for any, shall be paid, it is manifestly improper, in our opinion, for Congress to pass such a measure as is proposed in the bill accompanying this report. That the present Secretary of War, the Hon. William H. Taft, when civil governor of the Philippines, entertained a similar opinion will be amply demonstrated by a reading of the executive order issued by him on January 10, 1903. That order, intended to protect those in actual possession of these properties, to preserve the status quo of the same until all disputed questions relating to their ownership and possession could be judicially determined, was, in our opinion, a wise, just, and most humane one, and unless expressly revoked must now perforce be operative. This order is in these words:

"OFFICE OF THE CIVIL GOVERNOR OF
"THE PHILIPPINE ISLANDS,
"Manila, P. I., January 10, 1903.

"Señor _____,
Governor of the province of _____.

"MY DEAR SIR: The schism in the Roman Catholic Church and the establishment and organization of an independent Filipino Catholic Church, because of the zeal and heat which frequently accompanies religious discussion, and especially because of the conflicting claims in respect to church property, may result in attempts at dispossession of those in charge of the churches and consequent disorder and disturbance of the peace. I have thought it necessary, therefore, to write you a letter calling your attention, and through you that of the municipal presidents, to the functions which it is proper for civil executives to discharge with respect to religious controversies involving disputes over property. The policy of complete separation of church and state is enjoined upon those who serve under the American sovereignty. This does not mean that officers of the state as individuals may not attend church and may not take an interest in religious controversies and may not aid the churches of which they are members, but it does mean that no officer of the Government has the right to use his official position or the authority which he exercises as an official to further the interests of the church of which he is a member as against the rights and claims of other churches to which he may be opposed in his religious views. In these islands it is difficult for the man to separate himself from the office in the eyes of the people, and I therefore extend a word of caution to you and to the municipal presidents of your province against making yourselves so prominent in the religious controversies to which I have referred on one side or the other that charges may be made against you that you are using your official influence and exercising your official authority in favor of either the Roman Catholic Church or the Filipino Catholic Church.

"You should as far as possible as an official pursue a line of conduct absolutely impartial between the two conflicting parties and you should only intervene as officials whenever the public peace is disturbed and must be restored and conserved. To deal justly with all individual interests should be the pride of every government, and the capacity of a people for self-government may be largely measured by the ability and courage of their elective officers to do justice in the face of clamor or passion or prejudice of some of those who elect them. No controversy so arouses the participants to passion as that which grows out of religious differences, and if peace can be maintained where the people of a country divide under a new schism into two religious bodies without violence, it speaks volumes for the law-abiding character of the people and for the capacity and ability of their self-chosen officers. I urge upon you, therefore, and upon the municipal presidents over whom you so worthily exercise supervisory and disciplinary authority, to use your every effort now and in the months to come to prevent religious schism that exists in parts of the islands from resulting in any disturbance of the peace.

"Again, let me call your attention to one phase of the schism which is most important, and that is as to the possession of churches and convents. Executive officers have no function whatever to perform in respect to the determination of the question who owns private property. The questions of ownership of title, and even the right of possession, are questions to be decided by courts, which are open to all

parties in interest for the purpose of settling just such questions. The only function of the executive is to see to it that the peace is not disturbed by attempts on the part of one not in possession forcibly or by fraud to disturb another in the possession of property and to deprive him of it. Where, therefore, the priest or other representative of the Roman Catholic Church shall be in possession, representing his church, it is not your function to decide that the people of the town who, because they may have assisted in building the church, believe themselves to be the owners of the church may oust him and may let the priest of the Independent Filipino Catholic Church into possession. Whatever you may think of the merits of such a question, it is your duty to preserve the possession of the Roman Catholic priest or representative by arresting any person who attempts forcibly to dispossess him or actually succeeds in doing so, and allow the priest or representative having had peaceable possession to resume it; but beyond this you can not go. Such rights as the people of a town may have either to ownership or possession of the church property must be asserted in the courts. They can not assert such rights by force.

"On the other hand, should a priest in possession leave the Roman Catholic communion, and, retaining possession of the church property, allow it to be used for the service and ceremonies of the Filipino Church, it is not for you to decide that this is an unlawful act and to seek to remedy it by dispossessing him of the church, because the change which is effected is not effected by a disturbance of the peace, and the remedy for the wrong done, if it be wrong, can only be had in the courts organized to decide such questions. You must respect the person in peaceable possession, and you must protect him against forcible dispossession, no matter how lawful or equitable, in your opinion, are the claims to the property on the part of the attempted dispossessor. If he has a lawful right, he can have it vindicated in court. He can not be permitted to take the law into his own hands. To allow him to do so, would be to produce riot and confusion throughout these islands. The question is one of actual possession, not of constructive possession. Indeed, the question, so far as you and the presidents are concerned, is one really not of possession at all, but of the disturbance of the peace.

"Should any priest or other person in charge of a church or convent notify a presidente that he has reasonable ground to suspect that an attempt will be made to dispossess him, the presidente should detail policemen to maintain him in his possession and prevent an assault or forcible dispossession. A failure on the part of the presidente with energy to protect peaceable possession of church property will be good cause for dismissal.

"If the course which I have attempted to mark out for executive action be followed, the conflicting parties will be remitted to the courts to vindicate their rights, and the peace which is so absolutely essential to the welfare of the country and to the conduct of decent government will be fully preserved.

"With the confidence that you will observe the rules laid down in this letter and will see to it that your municipal presidents do the same thing, I beg to subscribe myself,

"Your very obedient servant and wellwisher,

"WM. H. TAFT, *Civil Governor.*"

That the title to church property in the Philippine Islands has, or ever could have, been judicially determined in any litigation involving it is most emphatically denied, and an examination of the opinions delivered in the case of *Barlin v. Ramirez et al.*, set forth in full in the report of the majority of the Committee on Insular Affairs, will, we confidently believe, convince any lawyer who will take the pains to examine it that the possession and only the possession of the particular property involved in that case was determined. That nothing more could have by any possibility been decided will be clearly apparent, we believe, to anyone who will read the act of the Philippine government of July 24, 1905, constituting the supreme court of the Philippine Islands the tribunal to hear and judicially determine all "controversies between the Roman Catholic Apostolic Church and the Independent Filipino Church" as to disputed church property. The case, the title to which is given above, and which seems to be relied upon to establish what we believe to be the utterly baseless assertion that the supreme court of the Philippine Islands has decided that the title of all the Catholic Church property in the islands is in the Roman Catholic Church, was appealed from the court of first instance of the province of Ambos Camarines. The complaint, it is true, set forth that "the Roman Catholic Church was the owner of the church building," but the prayer of the complaint was that it be restored "to the possession thereof."

The whole text of the opinion of the court shows conclusively that the right to the possession of the property was the only question involved. In this case the defendant had been put in possession of the particular property, the right to the possession of which was in controversy, by the Roman Catholic Church, and the court held, in accordance with the familiar doctrine that a tenant shall be estopped from denying the title of his landlord, that the plaintiff was entitled to recover the possession. This was clearly the only question involved, and it was therefore the only one which could have been decided. When, then, it is contended that this case actually decided the title and ownership of the property which was the subject of controversy, the obvious and conclusive reply is that in so far as it may have undertaken to so decide its action was ultra vires. Whatever may have been said by the justice who delivered the opinion of the court, to the effect that the Roman Catholic Church and not the United States as the successor of Spain, held the title to all the Catholic Church properties in the Philippines, was a mere obiter dictum and not binding upon anybody—certainly not binding upon the United States, which was not a party to the suit, even assuming for the sake of argument, what is most emphatically denied, that the supreme court of the Philippine Islands had jurisdiction in a case coming to it by appeal, as did this, to hear and determine a question involving the title to all the Catholic churches of the islands. Mr. Justice Carson, who agreed with the majority of the court as to the disposition of the case, declined to accept some of the propositions laid down in the opinion of the majority, and filed a separate opinion. He argued, for reasons set forth by him, that "the right of the plaintiff to a judgment for possession" was clearly established, but he declared:

"I am not prepared, however, to give my assent to the proposition that prior to the treaty of Paris 'The King of Spain was not the owner of the property in question nor of any other property like it situated in the Philippine Islands,' and inferentially, that the United States is not now the owner thereof and has no property rights therein other than, perhaps, the mere right of eminent domain.

"I decline to affirm this proposition, first, because it is not necessary in the decision of this case; and second, because I am of opinion

that, in the unlimited and unrestricted sense in which it is stated in the majority opinion, it is inaccurate and misleading, if not wholly erroneous.

"That it is not necessary for the proper disposition of this case will be apparent if we consider the purpose for which it is introduced in the argument and the proposition which it is intended to controvert."

Mr. Justice Johnson declined to subscribe to either opinion and reserved his vote. Of the five judges subscribing to the majority opinion, four are members of the Roman Catholic Church, and not one of the court is a member of the Independent Philippine Catholic Church, although three are Filipinos.

But the contention that this case decided the title and ownership of the church property located at Lagonoy, in the Province of Ambos Camarines, and that it must therefore be accepted as a test case, and one that finally and irrevocably settles the title as to all the Catholic Church property in the Philippines in favor of the Roman Catholic Church is, in our opinion, finally and completely disposed of by the statute of the Philippine Commission, enacted under the authority of the United States, which took effect on the 24th of July, 1905, and which confers "original" jurisdiction upon the supreme court of the Philippines and constitutes that court "the tribunal to hear and finally determine" all these church controversies, and which provides all the necessary legal machinery by which all the church properties in any one province may be embraced in a single petition and the title thereto determined. This act not only prescribes the court which shall hear cases involving both the title and the possession of church properties, and the procedure therein, but it by necessary implication deprives the courts of first instance of any right in them to entertain an action to try the title to churches or other property by declaring that it was not intended to take from any church, municipality, or person the privilege of instituting action in those courts "to recover the possession and control" of them. Realizing the great importance for an early settlement of these bitter church controversies, the act further provides that the actions therein provided for shall be "heard by the court as speedily as may be," and that they "shall be given precedence in their hearing over any other actions pending in said court." A copy of this act is filed herewith, and is printed as a part of these views. (Exhibit A, post.)

It is not to be presumed for a moment that the Philippine Commission, which enacted this legislation, did not know at the time of its enactment that the case of *Barlin v. Ramirez et al.* had been decided in the court of first instance and that they were not fully informed as to the scope and effect of the decision. To maintain for an instant that this case, which could only have been decided in one way, finally disposed of the burning and widespread controversy over the ownership of millions of dollars' worth of church property scattered all over the Philippines, is to seriously reflect upon the intelligence of the Philippine Commission. They most obviously did not regard it as a test case.

But if it be possible that we can be mistaken in our contention that the title to the church property in the Philippines has never been judicially determined, and that the necessity for the settlement of this momentous question is as urgent now as when Civil Governor Taft issued his executive order preserving the status quo until the whole question could be determined by the courts, and as needful as when the Philippine Commission by a special enactment provided the means for its settlement, the recommendation of the report, that the Congress shall pay to the archbishop of Manila \$403,030.19 in settlement of the claims of the Roman Catholic Church, can not be justified by anything to be found in the report and findings of the Hull board. The total amount awarded by the board was \$363,030.19, and Colonel Hull himself testified that the board, of which he was the chairman, increased to the extent of from 12 to 15 per cent the estimates and findings of the Army officers who, by reason of their personal knowledge of the buildings occupied and injured, were called upon by the board for assistance in its work. In view, therefore, of the testimony of Colonel Hull, whose labors appear to have been performed conscientiously, intelligently, and with painstaking care, we must conclude that the \$40,000 recommended to be paid in addition to the sum awarded by the board is intended as a mere gratuity for which no justification can be found in the instructions given the board by the Secretary of War defining the scope of its difficult task, and which we believe to be wholly unwarrantable by any evidence produced before us and upon which evidence these claims are supposed to be founded.

We are equally unable to agree to the recommendation of the report that this sum be paid to the archbishop of Manila, for all the testimony offered upon this point clearly indicates that this church testimony is not empowered under any canonical or other law to execute a proper acquittance therefor. We hold that whatsoever sum may be paid by Congress for the occupation of and damages to church properties in the Philippine Islands, if paid to the Roman Catholic Church, should be paid to the bishops of the various dioceses, and that its use should be limited to the repair and construction of churches, convents, and seminaries in the islands. Secretary Taft unmistakably indicated in his testimony before the Committee on Insular Affairs that such a limitation as this should be placed upon any appropriation made by the Congress. This is his testimony upon this point:

"Mr. JONES. Mr. Secretary, would there be any objection to limiting the expenditure of this money to objects in the islands?"

"Secretary TAFT. No, sir. I wish, certainly, that would be the case.

"Mr. JONES. I should fear if it were paid to the apostolic delegate it might be used outside of the islands—in Spain, for instance.

"Secretary TAFT. If there were any danger of that, I should like some limitation made to prevent it."

Just why these claims should not await judicial determination of the fundamental and vital questions underlying them, and upon which it is conceded they must rest, has not been made apparent. There are now pending in the Congress hundreds of claims for the use and occupation of and injury to both Catholic and Protestant churches in the United States. These claims have been waiting upon the pleasure of the Congress for more than a third of a century. Many of them have been referred by the Congress to the Court of Claims, the tribunal specially authorized to hear and determine all questions of law and fact relating to them, and are now, having long since received the sanction of that court, still awaiting Congressional action. Are they less meritorious and just than these church claims the payment of which is now being so strenuously urged upon the Congress?

W. A. JONES.

HARVEY HELM.

EXHIBIT A.
(No. 1376.)

An act providing for the speedy disposition of controversies as to the right of administration or possession of churches, convents, cemeteries, and other church properties, and as to the ownership thereof and title thereto by vesting in the supreme court of the Philippine Islands original jurisdiction to decide such controversies, and for other purposes.

Whereas controversies have arisen between the Roman Catholic Apostolic Church on the one hand and the association called "The Independent Filipino Church," certain municipalities, and other persons on the other hand as to the right of administration or possession of numerous churches, convents, cemeteries, and real and personal property used in connection therewith, and as to the ownership thereof and title thereto; and

Whereas, if actions involving controversies as to said church property are brought in the courts of first instance, great and interminable delay by reason of the great number of properties involved and the fact that the courts of first instance are fully occupied with ordinary litigation will result not only in the disposition of the actions so brought, but also in the disposition of the ordinary litigation pending before said courts; and

Whereas frequent and angry controversies have arisen and continue to arise in numerous municipalities of the Philippine Islands between contending religious organizations, municipalities, and other persons as to the right to the possession of said properties, often culminating in illegal and forcible seizure thereof and in grave disturbances of the public peace and order, and it is believed to be in the interests of the Filipino people that such a condition of affairs should no longer continue and that all controversies of this character should be speedily settled in a legal and orderly way; and

Whereas there are several hospitals, haciendas, and other lands, some of which are in the possession of the government of the Philippine Islands, but as to which the Roman Catholic Apostolic Church claims the right of administration or ownership, and others of which are in the possession of the Roman Catholic Apostolic Church, but as to which the right of administration or ownership is claimed by the government of the Philippine Islands, and it is also of general importance that these controversies should be speedily and finally determined: Now, therefore,

By authority of the United States, be it enacted by the Philippine Commission that:

SECTION 1. The supreme court of the Philippine Islands is hereby given original jurisdiction and constituted the tribunal to hear and finally determine all actions which involve controversies between the Roman Catholic Apostolic Church and its representatives on the one hand, and the Independent Filipino Church and its representatives or any municipality or other person on the other hand, as to the title to any and all churches, convents, or cemeteries in the Philippine Islands and real and personal property used in connection therewith, or as to the ownership, right of administration, or possession thereof.

SEC. 2. The Roman Catholic Apostolic Church, the archbishop of Manila, or any bishop of a diocese, or other property representative of the Roman Catholic Apostolic Church, or any or all of them claiming the right of administration or ownership of any of the property or properties mentioned in the preceding section, or title thereto, possession of which property or properties is withheld by the Independent Filipino Church or any representative thereof, or by any municipality or other person, may file a petition in the supreme court of the Philippine Islands setting forth in a succinct manner the particular piece or pieces of property or properties, the title to which, or the ownership, right of administration, or possession of which, is claimed by the petitioner or petitioners, and that the Independent Filipino Church or its representatives or any municipality or any other person unlawfully withholds from the petitioner or petitioners the administration or possession of such property or properties or unlawfully claims ownership therein or title thereto, and praying that a decree be entered giving the administration and possession of such property or properties to the petitioner or petitioners and generally enforcing his or their rights as they may appear. It shall not be necessary to describe in the petition by exact metes and bounds the churches, convents, or cemeteries so claimed to be withheld, but it shall be sufficient to designate them as the church, convent, or cemetery in the municipality or the barrio of the municipality of the province in which they are respectively situate. In all actions in which the Independent Filipino Church or any representative thereof is in possession of any church, convent, or cemetery, or real or personal property used in connection therewith, the Obispo Maximo or the representative of the Independent Filipino Church in possession of the property shall be made a party defendant, and in each and every action the municipality in which such church, convent, or cemetery is situate shall also be made a party defendant. Upon the filing of the petition a summons shall issue in the usual form against the party or parties defendant, accompanied by a certified copy or copies of the petition, commanding the defendant or defendants and each of them to appear and answer said petition within forty days after the service of said summons, and the same shall be served upon said defendant or defendants as speedily as possible by the officer of the court charged with that duty. In case a municipality is named as defendant, service shall be made in the manner prescribed in section No. 396 of act No. 190. The officer who is charged with the duty of serving said summons shall immediately endeavor to serve the same upon the party and each of the parties defendant as provided in other actions for service of summons by said act No. 190. The court may, in its discretion, when it is deemed necessary to facilitate service, appoint special officers for that purpose. Where the property in controversy is outside of the city of Manila, the summons shall be sent by the clerk of the supreme court to the governor or sheriff of the province in which the property is situate for service, and such officer shall be entitled only to the fees which would be allowed were the summons returnable in his own province. In case a special officer is appointed for the purpose of serving process, the process shall be sent or delivered to him by the clerk of the supreme court, and he shall be allowed the same fees as are hereby authorized for the governor or sheriff.

SEC. 3. It shall not be necessary to file separate petitions against each defendant alleged to be wrongfully in possession of each piece of property as above set forth, but all defendants holding several and distinct pieces of property in the same province may be embraced in one petition.

SEC. 4. Within forty days after service of the summons on the defendant or defendants, unless further time is given by the court, the defendant or defendants served shall file their several answers or a

joint answer, as they may elect, succinctly stating the facts upon which they base their interest and deny the ownership or the right of administration or possession or claim of title of the petitioner or petitioners, and stating to what use the property claimed or held by such defendant or defendants has been put while in the possession of the defendant or defendants and for what period of time it has been so used and whether such property is used or ever has been used by the Roman Catholic Apostolic Church as a church, convent, or cemetery, or in connection therewith; and if so, for what period of time. Upon the filing of such answer or answers no further pleading shall be necessary, and the action shall be considered at issue. In the event that any defendant fails to file his answer to the petition within the time hereby prescribed, the allegations of the petition shall be taken as confessed and true as to him, and the court shall at once enter a decree directing the return of the personal property and ousting such defendant from possession of the real property described in the petition and held by him and, if requested, shall issue a writ of possession in accordance with the decree. Whenever any complaint or petition filed in pursuance of this act is under oath the answer or answers to such complaint or petition must also be under oath. The court shall have power and authority to appoint receivers, issue injunctions, and other extraordinary process as provided by the Code of Civil Procedure.

SEC. 5. After an action shall be at issue the petitioner or petitioners shall have sixty days within which to take evidence in support of the averments of their petition, and the defendant or defendants shall likewise have sixty days after the time fixed for the taking of the petitioner's proof within which to take evidence to sustain the averments of their answer or answers, and thereafter the petitioner or petitioners shall have thirty days in which to take evidence in reply. In case either the petitioner or petitioners or the defendant or defendants shall have concluded the taking of evidence before the expiration of the time allowed herein for concluding the same, they may so notify the opposite parties in writing, and thereupon the time within which the latter are required to take their evidence shall begin to run. The court, in order to facilitate the taking of evidence, may appoint such special commissioners as may be necessary to that end, and, in its discretion, may appoint the clerk of any court of first instance as such special commissioner, and such special commissioner shall be allowed compensation not to exceed 10 pesos per day for his services while actually engaged in taking the evidence. Any commissioner thus appointed shall have authority to issue process upon the application of either party, to summon witnesses to appear before him, and, if necessary, to compel their attendance by issuing attachments, and to administer oaths. Such commissioner shall make his report to the court within thirty days after the taking of evidence has been completed by him.

SEC. 6. The attorneys for the parties litigant, within seven days after any action shall be at issue, shall appear before the supreme court of the Philippine Islands and stipulate, so far as possible, what facts may be taken as agreed upon by the parties in interest, so as to save the necessity of taking evidence, and these stipulations shall be reduced to writing and the facts therein agreed upon shall be taken and considered as established. At the conclusion of the taking of the evidence in any action the same shall be heard by the court as speedily as may be, and actions arising under the provisions of this act shall be given precedence in their hearing over any other actions pending in said court.

SEC. 7. After reaching a conclusion upon the issues presented in any action the court shall render its decree accordingly. If it find in favor of granting the prayer of the petitioner or petitioners in toto, it shall enter a decree directing the return to the petitioner or petitioners of the personal property and ousting the defendant or defendants from possession of the real property mentioned in the petition and awarding possession of such real and personal property to the petitioner or petitioners, or such of them as may be entitled thereto, and directing a writ of possession to issue against the defendant or defendants in the manner and form prescribed by act No. 190. If it shall find in favor of the defendant or defendants, it shall decree accordingly and direct that the petition be dismissed. In the event that the court shall find that the petitioner or petitioners or any of them are entitled to some of the properties mentioned in the petition and not entitled to others mentioned therein, it shall decree in accordance with its finding, granting the prayer of the petitioner or petitioners or any of them as to the property or properties to which such petitioner or petitioners or any of them are entitled, and decreeing that the defendant or defendants or such of them as are wrongfully in possession of the personal property return the same to the petitioner or petitioners, that the defendant or defendants or such of them as are wrongfully in possession of real property be ousted therefrom, and that a writ of possession to that effect be issued, and dismissing the petition in so far as it seeks to recover possession from the defendant or defendants or any of them of any property to which none of the petitioners is entitled.

SEC. 8. Whenever any municipality claims to be the owner of any church, convent, cemetery, or real or personal property used in connection therewith which is in the possession of the Roman Catholic Apostolic Church or of any bishop or priest or other proper representative thereof, such municipality may in like manner bring its action in the supreme court of the Philippine Islands against the party or parties in possession, making the Roman Catholic archbishop or bishop of the diocese in which the property or properties are situate a party defendant thereto, and the same procedure as is set forth in the preceding sections of this act shall be followed and the provisions of this act shall in all respects apply to such actions: *Provided*, That no municipality shall institute such suit without first submitting its claim of title to the attorney-general for the Philippine Islands and receiving his approval to the bringing of such suit: *And provided further*, That when such approval has been had it shall be the duty of the attorney-general to direct and control the litigation when begun, utilizing the services of the provincial fiscal so far as in his judgment may be necessary in the preparation and conduct of the action: *Provided, however*, That nothing in this act contained shall prohibit the Roman Catholic Apostolic Church, the Independent Filipino Church, or any municipality or other person not taking advantage of the provisions of this act from instituting actions in the courts of first instance, or in the court of land registration, in accordance with existing provisions of law, to recover the possession and control of churches, convents, cemeteries, or other property.

SEC. 9. The supreme court of the Philippine Islands is also given original jurisdiction to hear and determine all actions involving the title to any hospital, asylum, charitable institution, or other property of any description whatsoever, or the ownership, right of administration, or possession thereof, which may be brought by the government of the Philippine Islands against the Roman Catholic Apostolic Church or any archbishop, bishop, priest, or other lawful representative thereof,

or which may be brought by such archbishop, bishop, priest, or other lawful representative of the Roman Catholic Apostolic Church against the government of the Philippine Islands; and the procedure as set forth in the preceding sections hereof shall be followed, and the provisions of this act shall in all respects apply to such actions.

Sec. 10. All costs of the several actions begun in accordance with the provisions of this act, including compensation to special commissioners, but exclusive of counsel fees, shall be borne by the government of the Philippine Islands, and from time to time, as may be necessary, the Philippine Commission shall make appropriation therefor as in other cases of obligations against the government of the Philippine Islands, but the costs herein provided to be paid shall be those lawfully and necessarily accruing in the supreme court of the Philippine Islands only.

Sec. 11. No municipality becoming either a party plaintiff or defendant under the provisions of this act shall appeal from the decision of the supreme court of the Philippine Islands to the Supreme Court of the United States save upon the approval and by the direction of the attorney-general for the Philippine Islands.

Sec. 12. The public good requiring the speedy enactment of this bill, the passage of the same is hereby expedited in accordance with section 2 of "An act prescribing the order of procedure by the Commission in the enactment of laws," passed September 26, 1900.

Sec. 13. This act shall take effect on its passage.
Enacted, July 24, 1905.

Life-Saving Service of the United States.

SPEECH

OF

HON. CHARLES R. THOMAS,
OF NORTH CAROLINA,

IN THE HOUSE OF REPRESENTATIVES,

Monday, March 16, 1908,

On the bill (H. R. 17710) to increase the efficiency of the personnel of the Life-Saving Service of the United States.

Mr. THOMAS of North Carolina said:

Mr. SPEAKER: When the Atlantic and Gulf coasts of the United States are in the icy grasp of winter, and cold and terrible winds are lashing the waves of the stormy Atlantic and the Gulf, and many wrecks are occurring and tempest-tossed mariners are crying for rescue and help, the value of the Life-Saving Service and such legislation as is needed to promote its progress and efficiency is most apparent. In making a short but earnest plea for the life savers I am actuated by no selfish motive.

I have made this plea often before during my service in Congress, and I expect to continue to make it so long as I shall remain in Congress. Representing a district which stretches along a considerable part of the North Carolina coast, I am personally familiar with the work of the Life-Saving Service, knowing many of the men who are engaged in it personally, and am proud to number them among my strongest and best friends. They are among the bravest and most daring and courageous men employed in the Government service. Theirs is a life of hardship and oftentimes intense suffering, as they discharge their duties in the patrol of the coast, the rescue of the shipwrecked and distressed, and in time of war in aid of the military and naval forces of the United States. While not a part of the Army and Navy, they aid and assist both the Army and Navy in time of war, and in time of peace they face upon the wintry coast and stormy seas perils as great as those encountered by either soldier or sailor, without the inspiration which accompanies the soldier, who marches into battle to the strains of martial music, or the sailor, who has to inspire him the example of John Paul Jones, Perry, Dewey, and a host of other gallant men who have reflected imperishable glory upon the American Navy. While he is not enlisted in the Army or Navy, the life saver belongs to the great army of mercy, and when I plead for him I plead not only for him individually, but also for the cause of humanity.

One of the greatest and earliest advocates of the Life-Saving Service was Hon. S. S. Cox, of New York, better known as "Sunset" Cox, and so called, I am informed, because of his most beautiful and eloquent word painting of a sunset scene. I wish that I had to-day the eloquence and the vocabulary of "Sunset" Cox with which to portray the lives and the services of the men in the Life-Saving Service, who imperil their own lives to save others.

Some years ago, long before I came to Congress or had any idea of becoming a Representative, I witnessed a wreck upon the coast of North Carolina, the ill-fated *Crissie Wright*. I saw men who had been frozen to death on that ship, every one of whom could have been rescued had there been a life-saving station at that point. From that hour I determined to promote the cause of the Life-Saving Service and the saving of those who go down to the sea in ships.

Mr. Speaker, the life-saving crew at Long Island, N. Y., recently rescued sixteen of the crew on the bark *Puritan* and two women and two children. I include in my remarks an account of this heroic rescue which I have clipped from the *Washington Post*:

SAVED IN BREECHES BUOYS—LIFE SAVERS GET LINE TO WOMEN AND CHILDREN ON BARK—BRING TWENTY, INCLUDING CREW, ASHORE FROM VESSEL POUNDING HELPLESSLY IN ANGRY SEAS.

BELLSPOUNT, N. Y., February 1.

Momentarily facing death in angry seas which threatened their ship with destruction, two children, two women, and the crew of sixteen of the bark *Puritan*, which came ashore in the storm 2 miles west of here early to-day, were rescued in breeches buoys by life-saving crews this evening.

The *Puritan* was pounding helplessly in the waves, which slowly drove the vessel farther on the Long Island sands, when the life savers succeeded in getting a line to the bark and brought the women, children, and crew ashore.

The captain and mate remained aboard the *Puritan*, and will probably not come ashore until the last hope of the bark holding together is given up. Tugs were standing by the *Puritan* late to-night.

The bark *Puritan* was in tow of the tug *Teaser*, bound for Boston. Early to-day the tug and tow found themselves making heavy weather. The *Teaser* finally gave up towing the *Puritan* and cut the line. The bark then drifted upon the beach. The tug stood out to sea and rode out the storm.

There were many other instances of this kind during the past winter. On stormy nights when the tempest is high and the great waves come rolling in on the Atlantic coast, if you could look through the darkness you would see for hundreds of miles along the coast strong men, bronzed by exposure to the weather, walking all night long, up and down, sentinels, peering out into the darkness. A vessel, perhaps, or a great steamer, comes driving ashore. The signal light is flashed by the patrolman of the life-saving crew, and strong men come hurrying down the coast with life-saving apparatus. If a boat can live, the lifeboat is launched and manned by brave fellows pulling out into the storm. If the boat can not live, a line is shot on board the vessel, the breeches buoy is rigged to the cables, and backward and forward it plies until every passenger and every sailor is saved.

I shall include in my remarks a summary of the operation of the Life-Saving Service for the year ending June 30, 1907. This shows that with 278 life-saving stations in operation nearly seven and one-half millions worth of property was saved, and out of more than 5,000 persons whose lives were in jeopardy during the past year only 45 were lost where the stations could get in their work. Besides, many persons were given succor and relief at the stations, and many vessels, including large steamers, warned of approaching danger.

The summary is as follows:

SUMMARY OF OPERATIONS OF THE LIFE-SAVING SERVICE FOR THE FISCAL YEAR ENDING JUNE 30, 1907.

[By Mr. S. I. Kimball, General Superintendent of the Life-Saving Service.]

During the period covered there were 278 life-saving stations in operation, namely, 200 on the Atlantic and Gulf coasts, 60 on the Great Lakes, one at the Falls of the Ohio (Louisville, Ky.), and 17 on the Pacific coast (including one station at Nome, Alaska).

In the twelve months covered by the report the number of disasters to vessels occurring within the field of operations of the Service was 838, involving 347 documented vessels, and 491 undocumented craft. Fifty-five of the endangered vessels were totally lost. The value of property imperiled—\$8,832,585—is, however, much smaller than that given in the tables for 1905-6, namely, \$15,041,140. The value of the property saved was \$7,432,985, the property loss being \$1,399,600, as against a loss shown last year amounting to \$2,775,040. Aboard the vessels meeting disaster there were 5,112 persons, of whom 45 were lost. Eight hundred and seven persons were succored at the stations, 1,140 days' relief being furnished.

The foregoing figures relate to both documented and undocumented vessels, the latter class including sailboats, small launches, rowboats, etc. In the accidents to these smaller craft 1,176 persons were imperiled, 23 of whom were lost. The estimated value of the property involved was \$530,320, of which \$516,585 was saved.

There were 611 vessels, valued, with their cargoes, at \$5,661,235, saved under circumstances that would have resulted in serious damage or total loss but for the assistance of the life savers. In 449 of these instances, in which the property imperiled was valued at \$1,270,995, the station crew saved property to the value of \$1,238,935 without outside assistance. In the 162 instances remaining, in which the property endangered was worth \$4,390,240, they worked in conjunction with the crews of wrecking vessels, tugs, etc., saving property to the value of \$4,053,230. The station crews also afforded minor assistance to 714 vessels not included in the preceding figures, making a total of 1,325 to which aid was extended. The number of vessels warned from danger by the signals of the Service patrolmen was 204; these warnings were given at night in 182 instances and 22 were given during the day in thick weather. Ninety-six of the vessels warned were steamers.

The President, on January 28, in his message to Congress recommended in the strongest terms such legislation as will promote the efficiency of the Life-Saving Service by providing increased pay and pensions. The bill now under consideration, H. R. 17710, does not provide for pensions, but it does provide for increased pay for superintendents of the Life-Saving Service, and for the keepers of life-saving stations and for surfmen. The bill speaks for itself and I include it in my remarks,

as it is self-explanatory. The effect will be to give a No. 1 surfman in each of the crews of the life-saving stations \$70 per month instead of \$65 and to give to each of the other surfmen of the crews of life-saving stations, in addition to \$65 per month they are now receiving, either one ration per day or commutation therefor at the rate of 30 cents per ration, which will increase their pay about \$9 per month. The bill also extends the provisions of the existing law in regard to keepers and members of life-saving crews (who die by reason of perilous service or any wound or injury received or disease contracted in the Life-Saving Service in the line of duty) to a dependent mother as well as to the widow, or child or children under 16 years of age. The following is the bill upon which we have been able to secure a favorable report from the Committee on Interstate and Foreign Commerce. The passage of this bill I regard as an absolute necessity in order to preserve the efficiency of the Service.

A bill to increase the efficiency of the personnel of the Life-Saving Service of the United States.

Be it enacted, etc., That from and after the passage of this act the compensation of district superintendents in the United States Life-Saving Service shall be as follows: For the superintendents of the first, second, fourth, fifth, sixth, seventh, tenth, eleventh, twelfth, and thirteenth districts, \$2,200 per annum each; for the superintendents of the third and ninth districts, \$2,000 per annum each; for the superintendent of the eighth district, \$1,900 per annum. That the pay of keepers of life-saving stations shall be \$1,000 per annum each, and that the pay of the No. 1 surfman in each of the crews of the life-saving stations shall be at the rate of \$70 per month.

SEC. 2. That every keeper of a life-saving station and every surfman in the Life-Saving Service of the United States shall be entitled to receive one ration per day or, in the discretion of the Secretary of the Treasury, commutation therefor at the rate of 30 cents per ration.

SEC. 3. That section 8 of the act of May 4, 1882, entitled "An act to promote the efficiency of the Life-Saving Service and to encourage the saving of life from shipwreck," is hereby amended to read as follows:

"SEC. 8. That if any keeper or member of a crew of a life-saving station shall hereafter die by reason of perilous service or any wound or injury received or disease contracted in the Life-Saving Service in the line of duty, leaving a widow, or a child or children under 16 years of age, or a dependent mother, such widow and child or children and dependent mother shall be entitled to receive, in equal portions, during a period of two years, under such regulations as the Secretary of the Treasury may prescribe, the same amount, payable quarterly as far as practicable, that the husband or father or son would be entitled to receive as pay if he were alive and continued in the Service: *Provided*, That if the widow shall remarry at any time during the said two years her portion of said amount shall cease to be paid to her from the date of her remarriage, but shall be added to the amount to be paid to the remaining beneficiaries under the provisions of this section, if there be any; and if any child shall arrive at the age of 16 years during the said two years, the portion of such child shall cease to be paid to such child from the date on which such age shall be attained, but shall be added to the amount to be paid to the remaining beneficiaries, if there be any."

SEC. 4. That all acts or parts of acts inconsistent herewith are hereby repealed.

The committee in its report upon the bill say:

It was developed that there exists in the Service a serious condition, requiring immediate relief if the high standard of efficiency which has heretofore characterized this Service is to be maintained.

In a corps of less than 1,900 men there have been during the last five years 1,538 changes (see table). In these changes 602 left the Service to engage in other business, and 422 others failed to reenlist upon the expiration of their terms of enlistment, practically all for the same reason, namely, to obtain better wages in less arduous and hazardous occupations. During the same period 207 were dismissed for cause and 49 deserted, while in former years, when the compensation paid by the Government compared more favorably with wages outside and the cost of living was much less, dismissals for cause were rare and desertions almost unknown. The men then reenlisted from year to year, and the service of most of them was practically continuous.

These numerous changes alone, even if the new and untrained men were in every way thoroughly qualified, would seriously affect the maintenance of proper discipline at the stations and be highly detrimental to the efficiency of the crews in their work at wrecks, where so much depends upon united action and mutual reliance upon one another, as the failure of a single man at the oars to properly perform his part at a critical time might involve not only the lives of the crew, but of those whom they seek to save. Their success is largely dependent upon the prompt, skillful, and concerted execution of orders in maneuvering the boat in a heavy sea, which can be secured only by constant practice in the Service drills. But it appears that, as a matter of fact, the men recruited to fill vacancies are not, as a rule, thoroughly qualified, and in many of the districts it is found impossible to secure anything like a sufficient number of men with even scant qualifications to supply the vacancies as they occur; and as it is necessary that the crews shall always be full for the manning of the boats and the unremitting patrol of the coast, the deficiency has to be made up by the employment of such men as can be found in the vicinity of the stations, however poorly qualified they may be.

These increases in pay and allowance for rations, it is believed, are the minimum that will be required as inducements to secure not only a sufficient number, but a better class of men, and retain the desirable men now in the Service. The records of the Service show that over 80 per cent of the men are married, the remaining 20 per cent being made up largely of young men yet unmarried because of their age and widowers. Most of these men, therefore, must contribute to the maintenance of two households. They are required to reside at the station during the active season, and must provide their own food and cook it themselves or hire a cook at their own expense. Many stations, perhaps a majority of them, are located on islands and at isolated points on the coast far from large markets and without conveniences of transportation. Some stations, particularly on the Pacific coast, are 50 to 75 miles from a railroad. Provisions are therefore necessarily high. The proposed ration or commutation thereof at 30 cents per day will

not, in many cases, equal the cost of each man's share of the station mess, but, so far as it goes, will be a material help in this direction, and will be highly appreciated by these men, who have heretofore had no allowances of any kind. *They must still provide their own uniforms and even the storm clothes, rubber boots, etc., required on patrol and in wreck duty.*

The increase of \$5 per month in the compensation of the No. 1 man in each crew is a tardy recognition of the position held by him and his distinctive duties. He corresponds to the mate of a merchant vessel, and on him devolves the command of and responsibility for the operation of the station in the absence of the keeper. He is selected with this in view, and is usually a man of long and faithful service, the best qualified in the crew physically and professionally. This difference in pay also doubles the opportunity for advancement from the lowest grade, and places a premium on the good behavior, study, and proficiency in his calling of every surfman in the Service.

The total increase per annum provided for by this meritorious measure would be a little over \$230,000. I have secured from the Superintendent of the Life-Saving Service, who is one of the very best and most efficient officers of the Government, a statement showing what additional amount would be required from the Treasury if this bill becomes a law. The statement is as follows:

Estimated pay of district superintendents, keepers, and surfmen for one year.

Grade.	Number of men.	Present salary.	Aggregate pay per annum.	Proposed salary.	Aggregate pay per annum.
Superintendents:					
Districts 1, 2, 4, 5, 6, 7, 10, 11, 12, 13.	10	\$2,000.00	\$20,000.00	\$2,200.00	\$22,000.00
Districts 3, 9.	2	1,800.00	3,600.00	2,000.00	4,000.00
District 8.	1	1,700.00	1,700.00	1,900.00	1,900.00
Keepers.	265	900.00	238,500.00	1,000.00	265,000.00
No. 1 surfmen.	265	\$65.00	159,325.00	\$70.00	171,587.50
Other surfmen.	1,633	\$65.00	981,841.25	\$65.00	981,841.25
Rations to all keepers and surfmen (see separate table for calculation).	2,163				188,733.60
Total.			1,404,972.50		1,635,062.35
Additional cost under provisions of proposed law.					230,089.85

* Per month.

Pay and rations of surfmen based on present average annual term of service, nine and one-fourth months.

And now, Mr. Speaker, considering these facts and the value of the Life-Saving Service and the small increase of cost of the Service annually under the bill now up for consideration; considering the benefit of the Life-Saving Service to the commerce of the country and the absolute necessity of promoting its efficiency, preserving its personnel, and saving it from deterioration; and for the sake of human lives and the great cause of humanity, this bill should be passed and justice should be done to the life savers and done at once. This bill is one of the most meritorious measures before Congress. I am heartily in favor of it, and I hope it will pass without a dissenting voice.

Increase of Pensions of Widows and Minor Children.

SPEECH

OF

HON. D. W. HAMILTON,

OF IOWA,

IN THE HOUSE OF REPRESENTATIVES,

Monday, February 3, 1908.

On the bill (H. R. 15653) to increase the pension of widows, minor children, etc., of deceased soldiers and sailors of the late civil war, the war with Mexico, the various Indian wars, etc., and to grant a pension to certain widows of the deceased soldiers and sailors of the late civil war.

Mr. HAMILTON of Iowa said:

Mr. SPEAKER: The bill which is being discussed, in my judgment, is one of very much importance to thousands of needy and deserving widows of this country, and while I am glad to have the opportunity of voting for this bill, I also regret that it can not be amended. I believe that it should apply to widows of deceased soldiers who have married since 1890 and should also apply to widows of soldiers who did not serve ninety days. As I have stated, I very much favor this measure, but would be glad if the amount granted to the widow was considerably more than \$12 per month. Just why the widows who are beneficiaries under this bill have been denied what I consider their just rewards and only allowed \$8 per month to this time I do not understand.

While these women did not have to suffer the hardships and privations of the soldiers, they passed through a period of greater suffering and anxiety even than the soldier himself. While the man who went to the front to do battle for his country was cheered from time to time by his comrades, the wife and mother, or the daughter in her lonely home spent hours, days, weeks, months, and years in anxious waiting. Many were the nights that she tossed restlessly upon her pillow in dread fear lest the morning would bring her news of the death of loved ones in a far-away State, but with all this she bore bravely her trials in her communications with those who had gone to the front, many times hiding her anxiety and extending words of cheer and encouragement which very materially added to the bravery and efficiency of the soldier upon the battlefield.

It certainly is a pleasure to me this day to give my vote in favor, not of charity to her, but in partially repaying to her a debt which this Government owes, and removing to some extent the difficulties that surround her in obtaining her just dues.

Agricultural Appropriation Bill.

SPEECH

OF

HON. HENRY D. FLOOD,
OF VIRGINIA.

IN THE HOUSE OF REPRESENTATIVES,

Saturday, March 28, 1908.

On the bill (H. R. 19158) making appropriations for the Department of Agriculture for the fiscal year ending June 30, 1909.

Mr. FLOOD said:

Mr. CHAIRMAN: There can be no effective road improvement in many States of this Union without the aid of the General Government. There is nothing, moreover, that is so much needed to the development of these States and to the prosperity and happiness of their people as a good system of public roads. This is admitted on all hands, as it is also well recognized that there will have to be a cooperation of county, State, and nation before the roads in our more sparsely settled States can be so built as to be of essential service to the people of those States.

These facts being admitted, it seems strange that it is so hard to arouse Congress to the necessity of taking some action toward helping the States and people to construct a comprehensive system of roads. I have heard but two objections urged. The first is the size of the appropriation it will require, and the second that it infringes upon the rights of the individual States.

I desire in this connection to have read a bill which I have introduced providing for an appropriation for this purpose and against which neither of the objections about referred to can be applied.

A bill (H. R. 164) to distribute the surplus in the Treasury of the United States to the several States, Territories, and the District of Columbia for the sole purpose of improving the roads therein.

Be it enacted, etc., That it shall be the duty of the Secretary of the Treasury at the end of each fiscal year to take an account of all the funds in the Treasury of the United States, and after deducting from said sum the amounts required by law to be kept in said Treasury the remainder, if any, shall be declared a surplus.

SEC. 2. That it shall be the duty of the Secretary of the Treasury to immediately provide for the distribution of said surplus, not exceeding \$25,000,000 annually during the continuance of this law, on a per capita basis to the States, Territories, and the District of Columbia, to be computed from the last general census taken by the national authorities, and shall prorate the same accordingly for the sole purpose of improving the postal roads in said States, Territories, and District of Columbia, under such rules and regulations as the States, Territories, and District of Columbia may provide, and said Secretary shall immediately notify the governors of said States and Territories and the Commissioners of the District of Columbia the amounts due each, and that the same will be paid over to such person or persons as may be duly authorized by said States, Territories, and the District of Columbia to receive and receipt for the same.

SEC. 3. That it shall be the duty of the governors of the several States and Territories and the Commissioners of the District of Columbia to make a full and complete report to the Secretary of the Treasury on the 15th day of November of each year what legislation, rules, and regulations have been adopted for the expenditure of said funds upon the postal roads, the manner in which the same has been spent, and the results accomplished. And it shall be the duty of the said Secretary to submit said reports to Congress on the first day of each regular session.

This bill provides for an appropriation of \$25,000,000 a year. Surely to a legislative body which is appropriating a billion dollars a year an appropriation of the size carried by this bill could not be thought to be extravagant when it goes to the accomplishment of improvements which will benefit directly and indirectly nine-tenths of the people of the American Republic.

Nor is this bill subject to the objection that it is conferring upon the National Government duties and functions which should be performed by the State governments. It provides simply that the National Government shall aid the States, Territories, and District of Columbia in doing a work of great public interest which the revenues of the States and Territories do not enable them to do properly. The National Government will have no discretion as to the method of expending this appropriation, except to see that it is not diverted or wasted. This bill provides that the appropriation shall be distributed among the States according to population, to be paid over to such persons as may be authorized by said States, and expended under the rules, laws, and regulations of those States and by the officers of those States. Surely the most punctilious States rights man could not object to a measure of this character.

Mr. Chairman, I believe the people all over this country are in favor of this bill. I know they are in the State which I have the honor in part to represent upon this floor, and in evidence of this fact I send to the Clerk's desk and desire to have read a joint resolution adopted by the general assembly of Virginia, on February 4, 1908:

Joint resolution to distribute the surplus in the Treasury of the United States to the several States * * * for the purpose of improving the roads therein.

Whereas the question of improving the roads of the State is one in which our people are deeply interested and realizing that the best solution of the question can only be reached by national aid in addition to local and State aid: Be it

Resolved by the house of delegates of Virginia (the senate concurring), That our Representatives in Congress be, and are hereby, requested to support and, if possible, secure the passage of a bill introduced by Hon. H. D. FLOOD, known as H. R. 164, entitled "A bill to distribute the surplus in the Treasury of the United States to the several States and Territories and the District of Columbia, for the sole purpose of improving the roads therein."

The keeper of the rolls will send a copy of this resolution to each of the Senators and Members of Congress.

Agreed to by the general assembly of Virginia, February 4, 1908.

JNO. W. WILLIAMS,
Keeper of the Rolls of Virginia.

Under this bill Virginia would get, approximately, \$608,546, and every other State, Territory, and the District of Columbia would get the part its population bears to the whole population of the country by the census of 1900.

Under this bill the counties in my Congressional district would get the following sums:

Alleghany	\$5,357
Amherst	5,836
Appomattox	3,147
Augusta	12,985
Bath	1,904
Botetourt	5,609
Buckingham	4,985
Craig	1,377
Cumberland	2,952
Fluvanna	2,952
Highland	1,835
Nelson	5,248
Rockbridge	7,905

A decided impetus has been given in the State of Virginia during the past year or two to the improvement of her public roads. The State and counties combined will spend during the coming year nearly a million dollars. This bill will add \$608,546 to this amount without any effect upon the revenues of the National Government and without any effect upon the Government itself, except to make Congress a little more economical in the expenditure of the public revenues in other directions.

Furthermore, the provisions of this bill are such as to exempt it, as I have shown, from the imputation of centralization by leaving the disbursement of the appropriation to the discretion of the States and Territories. And it also guards against malfeasance and extravagance by requiring that the annual expenditures shall be submitted to the rigid scrutiny of Congress.

In the remarks I made in support of this bill during the last session of Congress, I passed in rapid review the historical attitude of Congress toward governmental aid to highways during many years, and cited the advocacy of that aid by such men as Jefferson, Clay, Calhoun, and Benton. It is not my purpose now to repeat myself; but I do wish to again call the attention of this House and the country to the specific features of my bill and to the great good that would accrue not only to the agricultural sections of this country, but to every section and to every interest by its enactment into law.

To effect an object so valuable, so extensive, so lasting, auguring so auspiciously for the contentment of the people and the security of our institutions would involve no greater outlay each year than the construction of three battle ships. And who could doubt which appropriation would result in the greater good to the country? One provides against an improbable hos-

tile contingency, the other secures lasting advantages to increasing millions of our own people.

If this bill becomes a law it will tend to increase immensely and in an augmenting ratio the value of the land, the only intrinsic and enduring value.

If it becomes a law the benefits from it will be indeed manifold. They will augment our resources incalculably; will increase greatly the facilities of education and of intercourse; will produce a more scientific system of agriculture; will infuse intelligence generally, and will cause a universal patriotic glow, which will prove a very sheet anchor of safety.

I trust the party in power may give earnest reflection to this measure; may weigh its intrinsic merit and beneficence in the scale with other measures, too many of which are partisan in their character, now absorbing the time and thoughts of its members.

Partisan legislation in a great and free country like ours can be built upon no enduring basis. In a land we all love and whose real greatness we alike hope and believe will endure, mere party advantage is but temporary and fluctuating. But the fruition of this scheme will be a great and enduring blessing to the entire land. So great and multiform and permanent will be the benefits it will bring that to no measure could any Member dedicate his influence and efforts with such assurance of genuine reward.

Beside the sweep of its real worth mere party advantage is as the small dust on the balance. [Applause.]

Eulogy on the Late Senator William James Bryan.

REMARKS

OF

HON. WILLIAM SULZER,

OF NEW YORK,

IN THE HOUSE OF REPRESENTATIVES,

Sunday, May 3, 1908.

The House having under consideration the resolutions—

Resolved, That in accordance with the order of the day an opportunity be now given for tributes to the memory of Hon. WILLIAM JAMES BRYAN, late a United States Senator from the State of Florida.

Resolved, That as a particular mark of respect to the memory of the deceased, and in recognition of his distinguished public career, the House, at the conclusion of these exercises, shall stand adjourned.

Resolved, That the Clerk communicate these resolutions to the Senate.

Resolved, That the Clerk send a copy of these resolutions to the family of the deceased.

Mr. SULZER said:

Mr. SPEAKER: The sudden death of WILLIAM JAMES BRYAN, the brilliant young Senator from Florida, was entirely unexpected and inexpressibly sad. It cast a pall of gloom over the Capitol, shocked innumerable friends, prostrated a loving family, and caused countless thousands to mourn that one so young, so good, so happy, with prospects so bright for so long and so useful a public career, should die so soon.

At the time of his death he was the youngest man in the United States Senate and one of the very youngest men that ever occupied a seat in the upper branch of the National Legislature. He was a young man of sterling worth, of much promise, of high purpose, of great determination, and of noble impulses. He had a magnetic manner, an attractive personality, a sunshiny nature, a smiling, open countenance, a cheerful disposition, and a most lovable character. He was a kind and sympathetic friend, a courteous gentleman, and an affectionate husband.

His life was gentle, and the elements
So mix'd in him, that Nature might stand up
And say to all the world, "This was a man!"

Mr. Speaker, Senator BRYAN was born in a log house near Fort Mason, then in Orange, now in Lake County, Fla., on October 10, 1876. In 1883 his father moved from Fort Mason to the old home in Kissimmee, Osceola County, Fla., where young BRYAN was reared and lived until he came to Jacksonville to practice law.

He attended school in the country one year, then went to the public school at Kissimmee until September, 1892, when he entered the freshman class at Emory College, Oxford, Ga., from which institution he was graduated, fifth in a class of forty, with the degree of A. B., in June, 1896. In the summer of 1896 he was elected principal of the public school at Monticello, Ga., and taught there for about one year. Then he came to Jacksonville and was in the office of Barrs & Bryan for three or

four months studying law. In September, 1898, he entered the law department of Washington and Lee University, and was graduated in June, 1899, with the degree of LL. B., taking the two years' course in one. In the summer of 1899 he traveled in Florida for the law school from which he had just graduated for three months for \$150 and traveling expenses and secured about ten new students for the university.

On his twenty-second birthday, October 10, 1899, he left home to become a member of the law firm of Barrs & Bryan, which association continued until January 1, 1901, when he rented a small office from D. U. Fletcher and struck out for himself, and practiced by himself until January 1, 1903.

Young BRYAN was always of buoyant spirits. He looked on the bright side of things. He was hopeful and ambitious. He wanted to make a name for himself. As a college boy he was fond of athletics; played tennis, baseball, and football. He was a good student, learned easily, and took great interest in his debating society. Emory College has for seventy-five years had two debating societies, which own their own separate buildings. The rivalry between these societies has always been keen. At each commencement one night is always devoted to a "champion debate" between these literary societies. This debate is the biggest event at commencement, and places on the respective sides are usually filled only by seniors. He was a champion debater during both his junior and senior years at Emory College.

As a law student at Washington and Lee, he was on the football team, and finished his law course without apparent effort. He was awarded the intersociety medal for oratory, and represented that university in the Southern Intercollegiate Oratorical Association in the spring of 1899.

When he was traveling for Washington and Lee University in the summer of 1899, he went to all the principal cities and towns in Florida and in that way formed a wide State acquaintance. He took a prominent part in the capital-removal campaign in 1900, which widened still further this acquaintance.

He was admitted to the bar at Kissimmee the first week in October, 1899. His career at the bar was rapid and brilliant. He was an able lawyer and an honest advocate. He had several important criminal cases at Kissimmee, and from the first was successful. The bulk of his practice was criminal cases and personal-injury suits against corporations. He was the friend of the poor and the unfortunate. He helped the under dog.

On July 15, 1902, he was nominated, by 1,100 majority out of a total of 3,100 votes, for county solicitor, renominated in 1906 without opposition, and was holding the office when he was appointed a Senator in Congress December 25, 1907. He was sworn in as Senator January 9, 1908, and his last appearance in the Senate was February 18. Two days after this he was attacked with typhoid fever, and died in the capital of his country on the 22d day of last March, honored and loved and mourned by all his countrymen.

Such, in brief, Mr. Speaker, is the story of the short but active life of this remarkable young man. He was no dreamer. He believed in plod and progress. He was a worker; he did things. In his short life he accomplished much of good that reflects great credit on his interesting career. He died young, but he lived a noble life, and—

We live in deeds, not years; in thoughts, not breaths;
In feelings, not in figures on the dial.
We should count time by heart-throbs. He most lives
Who thinks most, feels the noblest, acts the best.

Senator BRYAN was a sympathetic man and he believed in his fellow-man. He was liberal-minded and the foe of every superstition. He was a high type of the earnest, the honest, the truthful, and the sincere American gentleman. There was no blemish on his shield. He was a Democrat through and through. He believed in the great principles of Thomas Jefferson—in civil and religious liberty—in the rights of man. He was the friend of every cause that lacked assistance. He fought the good fight, and his life will ever be a beacon light to the young men of his State and an inspiration to the struggling youth of our country, but the saddest part of this most useful and promising life is the contemplation of the ever to be regretted fact that its flame went out before it had time to brighten into its full effulgence, before the full development of his powers; that he had so much to do and left so much undone; that he was cut off in the very beginning of his great career; that he died on the threshold of his grander opportunities and wider possibilities—that is the saddest part of it all, but we humbly bow to the inevitable and reverently say—

Rest, spirit, rest! Soar, spirit, soar!

The Street Car Extension Bill.

SPEECH

OF

HON. FRANK CLARK,

OF FLORIDA,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, February 22, 1908.

The House being in Committee of the Whole House on the state of the Union, and having under consideration the bill (S. 902) authorizing certain extensions to be made of the lines of the Anacostia and Potomac River Railroad Company, the Washington Railway and Electric Company, the City and Suburban Railway of Washington, and the Capital Traction Company, in the District of Columbia, and for other purposes—

Mr. CLARK of Florida said:

Mr. CHAIRMAN: I regret very much, Mr. Chairman, that this discussion has taken the turn that it has. I regret very much that it has been given a political aspect.

Mr. Chairman, I do not care to proceed until the House is in order. If there are gentlemen who do not care to hear what I say, I wish they would go to the cloakroom or somewhere else, because I have some views on this subject which I want to present to this House and to the country.

I was saying, Mr. Chairman, that I regret that gentlemen have shown feeling upon this question. It is not a question for the display of feeling; it is not a question for attempts to achieve political advantage. It is purely an economic social question of what is best for both races. Now, the gentleman from Kansas [Mr. CAMPBELL] has some very peculiar views, so far as some of us are concerned, with relation to this matter. I want to say to that gentleman that on last Sunday afternoon an old negro man living in this city came to my office and spent the afternoon with my wife and myself, and I have not spent a more pleasant afternoon for years. [Applause.] He belonged to my father, and he was the first human being that ever carried me out in the yard after my birth. [Applause on the Democratic side.] I want to say to the gentleman from Kansas that I love that old negro man [applause], and that in a contest between him and others, in a physical contest, I would be found by his side protecting and defending him. [Renewed applause.] That is a sentiment that you northern Republicans do not understand and can not understand. [Applause.] But there is a vast difference, Mr. Chairman, in that sentiment which every man upon this side of the House who lives south of that river can understand and the sentiment that his children and mine are to sit side by side in school. There is a vast difference in that sentiment and the sentiment that they should sit side by side with my children in a street car or in any other public conveyance.

This amendment offered by the gentleman from Alabama is not an attack upon the negro race; it is not unjust to them, and there is no effort on this side of the House to make it unjust to them. In my State, and the gentleman from Kansas inveighs against it—and, Mr. Chairman, all I say is in the utmost of good humor and kindly feeling, because I admire the gentleman very much; some of the best friends I have in this House, I want to say, are upon the other side of the aisle and I have the utmost respect and deference for the opinions of those gentlemen. But I want to say this: When the gentleman says that they are not entitled to vote, let me say to the gentleman that I can get more colored votes in my district of those who do vote than he can to save his life, and if he will come down there and have a friendly contest with me I will show him that. I want to say here that they are not denied a vote in the State of Florida. [Applause on the Republican side.] I want to say that the election laws of the State of Florida are fairer than the election laws of New York, fairer than the election laws of a great many other States; in Florida we have no emblem at the top of our ticket, where the ignorant and vicious can simply make a cross and vote the whole ticket from one end to the other. We have the Australian ballot in its purity and simplicity. The names of all candidates are put upon the ticket in alphabetical order, regardless of what party they belong to, and the only requirement is an educational one. The man will simply have to know how to read and he must know who the candidates of his party are, and then he marks each one and votes for them. I will say to the gentleman that if a socialist runs against me for Congress and his name is Brown his name will appear on the official ballot before mine, and there is no indication of what he is or who he is, nor is there any kind of device to prevent any man from voting as he pleases, be he black or white. Along with the educational qualification we have another, requiring the payment of \$1 poll tax for school purposes each year by all males over 21 years of age, which is a prerequisite to the right to vote, and

this applies equally to white and black. I do not hesitate to say to the gentleman that the black man or the white man who will not pay a poll tax of \$1 per year for the education of the children of the country ought not to be allowed to vote in Florida or anywhere else. [Applause.]

The CHAIRMAN. The time of the gentleman has expired.

Mr. CLARK of Florida. I ask for one minute more.

The CHAIRMAN. The gentleman from Florida asks unanimous consent to proceed for one minute. Is there objection?

There was no objection.

Mr. CLARK of Florida. Now, I want to say to the gentleman from Kansas that I am going to vote for this amendment. I am going to do it because I think it is in the interest of the black man more so than it is in the interest of the white man, and I say this because, as is well known, in every conflict between the races the black man gets the worst of it. You bring them together and you are bound to have conflicts. You know it and I know it. There is no need of our undertaking to deceive ourselves on this question, nor is there need of inquiring who is to blame. I would not do them an injury. I would not do them a wrong, and I do not believe you can get one of them in my State who is acquainted with me to tell you that I would. I was United States district attorney for nearly four years down there, and in discharging the duties of that office I gained a wide acquaintance with the leading negroes. I know many of them well, and I do not believe you can get a single one of them to say he thinks I would do them an injury. Having had the experience of a lifetime with them, I express it as my deliberate judgment that it is better to keep them separate—better for them, better for their race, better for everybody; and this system is working well in the State of Florida, in our larger cities, where we have street cars, and upon our steam railroads all over the State. There never has been any confusion or trouble on account of the separation of the races on public conveyances. Before the adoption of that system there was a great deal of trouble. I admit that at times it was caused by the white man. I am not holding him up as entirely blameless. Some white men are not of the kind the gentleman from Kansas would want to marry into his family. I agree with him. This class of white man is not peculiar to any section of our country. I have seen him in the North, in the East, in the West, and in the South. I have seen a lot of white people of that sort, and when one of this class gets a drink or two inside of him, and he gets himself inside of a street car, there is generally trouble. If you desire to reduce the chances of trouble to the minimum and subserve the best interests of all the people, you had better keep the races apart in all public conveyances.

The CHAIRMAN. The time of the gentleman has expired.

Mr. CLARK of Florida. Mr. Chairman, the relations of the races in the South is the one question, I believe, above all others that has been more discussed by more people who absolutely knew nothing of it than any other question that has ever challenged American thought since the formation of this Republic. The ignorance of real conditions permeating the effusions of theoretical defenders of the negro race would be ludicrous in the extreme if it were not for the fact that every speech, magazine article, or other publication of this character makes more difficult the proper and just settlement of one of the greatest problems that ever confronted any people. In the beginning of my remarks upon the pending amendment offered by my friend from Alabama [Mr. HEFLIN] I said that I regretted the turn which the discussion had taken. Partisanship has no place in the consideration of a question of this character. I regret that our Republican friends have seen fit to inject into the debate wholesale charges of oppression of the negro in the various Southern States, and, as is usual when such charges are made, have utterly failed to submit any proof supporting the charges which they prefer against our people. I do not say that the distinguished Republican gentlemen who have seen fit on this occasion to arraign the people of not only an entire State, but of several States, were actuated by a desire to retain for their tottering party the negro vote in the doubtful Northern States in the pending campaign. I sincerely trust they were actuated by a higher and nobler motive, particularly when we remember that this debate is taking place on the anniversary of the birth of the Father of his Country.

I try to give all men credit for sincerity of purpose, and I would not attribute to any gentleman upon this floor motives other than a patriotic purpose to faithfully subserve the best interests of our beloved country, with the lights before him. But, Mr. Chairman, in our journey through this life I have discovered that we do occasionally run upon some queer and apparently inconsistent things. I say "apparently inconsistent things," because I am looking at the matter I have in mind and considering it from my standpoint, in a plain democratic way.

I have no doubt that the eminent Republican logicians on the other side of this Chamber will have no difficulty whatever in explaining away, at least to their own satisfaction, the "apparent inconsistency" which appears to be inexplicable to my humble democratic mind. Let me state the case. Last winter, on my way to the Capitol, I had a conversation with one of my Republican friends relative to the matter of giving the people of the District of Columbia some sort of local self-government. We were on a street car at the time, and I said to my friend that I "thought that we ought to give the people of this District a local government and let them have some voice in the management of their affairs." My Republican friend said: "Oh, no; we can not afford to do that; there are too many negroes here." I said: "What! You say that? Now, if a man on our side of the House should arise in his place and say what you have just said to me, you or some one else on your side would immediately spring to your feet and, rolling your eyes toward heaven in holy horror, you would deliver a lecture to us on our alleged wrongful conduct toward the negro race." "Well," said my Republican friend, "that is a part of the game, but we can not afford that legislation."

I shall not disclose the name of this gentleman without his permission, but he is still a Member of this House, and he will vote against the amendment of the gentleman from Alabama. This, Mr. Chairman, is the "apparent inconsistency" that has been giving me trouble. I shall not charge or intimate that my Republican friend is not a sincere man. I know he is sincere. The thing that has been troubling me since I know he will vote against the amendment of my friend from Alabama [Mr. HEFLIN] is, *When is he sincere?* Was it when he inveighed against the negro in his conversation with me, or when he votes against the amendment of the gentleman from Alabama?

The gentleman from New York [Mr. OLCOTT] apparently lost his temper in the few remarks he made upon this subject and fanned the air at a desperate rate for a few minutes. He was ready to charge, and did charge, that the black man was discriminated against on the railroads throughout the Southern States, but when he was interrogated as to a particular State frankly admitted that he did not know anything about it! I am convinced that the gentleman from New York [Mr. OLCOTT] knows no more about the actual conditions on the street cars in Washington and the practical workings of the present system of mixing the races here than he knows of the relations of the races in the South. If the gentleman from New York [Mr. OLCOTT] will take the time to interview the laboring white man in the city of Washington, who is forced to use the street cars, whose wife and children are forced to use them, I venture the assertion that he will receive information that will give the opinion which he now entertains a decided shock. It will not change the gentleman's opinion—nothing will do that. I beg to suggest right here—without reference to any particular gentleman—that the real facts as to the practical operation of the system of mixing the races on street cars in the city of Washington can better be learned from interviews with the white laboring man and members of his family than it can be from interviews with the habitués of the luxuriously appointed drawing-rooms of the city, or by personal observation obtained from a seat on the soft cushions of a magnificent landau as one is rapidly driven over the smooth streets of the Capital City behind a spanking team of thoroughbreds.

Mr. Chairman, the question raised by the amendment offered by the gentleman from Alabama [Mr. HEFLIN] is purely a question of disposing of a situation in such manner as will lessen the friction between the races. The adoption of that amendment will not discriminate against the negro race, nor will it inure to the advantage of the white race alone. It will inure to the benefit of both races. It is not intended by the gentleman from Alabama as an attack upon the negro, nor is it an attempt by that gentleman, or by any of us who support it, to deprive the negro of a single right which he has under the law of the land. On its very face it provides equal accommodation for both races on the street cars in the Capital City of this Republic, and surely, here under the watchful eye of such guardians of the rights of the colored brother as the gentleman from Kansas [Mr. CAMPBELL], the gentleman from Vermont [Mr. FOSTER], the gentleman from Illinois [Mr. MADDEN], and the two gentlemen from New York [Messrs. OLCOTT and DRISCOLL], with a magnificent police force to enforce the law, and within easy call is the Army and Navy of the United States, this law can and will be enforced. It is idle to call this amendment a discrimination against the negro. Wherein is the discrimination? The amendment itself contains no discrimination. The language used contains no hint of discrimination, yet gentlemen seize upon it as an excuse to arraign the people of an entire section of this country for alleged wrongs to the

negro race. Is this fair? Do gentlemen imagine that even the negro, who has been the willing dupe of the Republican party for all these long years, can be longer deceived by these loud quadrennial protestations of affectionate regard for him?

In the city of Jacksonville, which is in my district and is the largest city in the State of Florida, we have the races separated on the street cars, and the negro is protected in the enjoyment of the portion set apart for his use. Within this month a white man has been dealt with in the courts for violating the city ordinance in refusing to vacate when advised that he was in the section set apart for negroes. Here is what the *Florida Times-Union*, a newspaper published in the city of Jacksonville, says of the incident:

ALLEGED VIOLATOR OF JIM CROW LAW—YOUNG WHITE MAN FROM CAMDEN, S. C., ALLEGED TO HAVE REFUSED TO MOVE FROM NEGRO SECTION.

R. G. McCright, a young man from Camden, S. C., was arrested on a street car by Policeman Charles A. McManis yesterday afternoon and docketed at headquarters for violating the street-car ordinance by not moving from the seat intended for negroes when so ordered by the conductor.

The conductor says he requested the young man several times to move, but he paid no attention whatever to his requests. Policeman McManis, in citizen's clothes, was on the car and when the young man refused absolutely to move he arrested him and took him to police headquarters. At police headquarters McCright admitted that he had refused to move, but stated that he was a stranger to the city and was not of the opinion that he was violating any law. He deposited a cash bond of \$25 for his appearance in the municipal court this morning, when the case will be heard before Judge Wright.

While on this phase of the subject, Mr. Speaker, I desire to refer to the unsupported, bald declarations of gentlemen that negroes are not supplied with accommodations equal to those furnished to white people upon railroads in the South. Why gentlemen will persist in these statements I can not understand. Let me suggest something here that in all probability these gentlemen have never thought of. On our Florida railroads—and I presume it is the same in other Southern States—the cars furnished for negro passengers are just as good as those furnished for white passengers. I am free to admit, however, that they do not long remain as good, as comfortable, and as clean as do those set apart for white passengers. You will not have to search long for the reason of this change. The average negro is perfectly happy when he finds himself eating a watermelon or going on a railroad excursion. The railroad companies in the South cater to this weakness of the negro for riding on trains, and scarcely a week passes in the summer time that a negro excursion is not "pulled off" in every neighborhood. They flock to these excursion trains by thousands, and of course the cars set apart for the negroes on the regular passenger trains are used for negro excursions.

Imagine a nice, new passenger coach, packed with dirty, greasy, filthy negroes, down South, in midsummer, and you can readily understand why that car does not long remain as good, as clean, and as desirable as a similar car occupied exclusively by white travelers. It is said of Sam Jones, the great Georgia revivalist, that on one occasion a certain Northern gentleman asked him if there was very much difference in the instincts of a "nigger" and a white man. Sam replied that he didn't know as to that, but of one thing he was absolutely sure, and that was that there was a vast difference in the "out stinks" of the two.

For more than forty years, Mr. Chairman, the white people of the South have been taxing themselves to educate negro children, have been building churches for them, and in every conceivable way, with a patience and forbearance never excelled in any age, have struggled along with the stupendous task of elevating and fitting for the duties of citizenship this black mass of ignorant, vicious, and incapable freedmen. I am not wise enough to foretell the end of the problem confronting us. Mr. Lincoln said that this nation could not exist "half slave and half free." I think it is equally true that this nation can not exist *half white and half black*. I am very sure that no country having within its borders two distinct races, alien to each other in every essential respect, can long exist with any degree of harmony between the two upon the beautiful theory of perfect equality of all before the law.

The position which we of the South occupy on this question is not one of hostility to the negro. It is one of patriotic love for our own race. We would not destroy the negro, but we would preserve the Caucasian. We will do the black man no harm, and we will not allow him to harm the white man. Members of Congress who are dependent upon a few negro votes in order to retain their seats in this body, a few long-haired negrophilists in various sections of the country, and a lot of short-haired white women who disgrace both their race and sex, may rant of injustice and wrong to the end of time, but they had as well realize now as at any other time that, no matter what the cost or how great the sacrifice, we shall under any and all circum-

stances maintain the integrity of our race and preserve our civilization.

If God Almighty had intended these two races to be equal, He would have so created them. He made the Caucasian of handsome figure, straight hair, regular features, high brow, and superior intellect. He created the negro, giving him a black skin, kinky hair, thick lips, flat nose, low brow, low order of intelligence, and repulsive features. I do not believe that these differences were the result of either accident or mistake on the part of the Creator. I believe He knew what He was doing, and I believe He did just what He wanted to do.

We believe in God, and we are willing to accept His work just as it fell from His hands. But these people who profess to believe that "a white man may be as good as a negro if the white man behaves himself" are not satisfied with God's work in this regard. They are quite sure that they can make a better job of it than did the Creator, hence we find them attempting to remove the black man from the menial sphere for which he was created, and where he may be useful, to a higher circle, for which he is entirely unfitted and where he is perfectly useless.

While there are some people of the classes I have described—and I am quite sure they are to be more pitied than censured—the great masses of the white race from one end of this country to the other have race pride sufficient to forever protest against and resist to the last extremity amalgamation with the negro. The gentleman from Kansas [Mr. CAMPBELL] gave us an exhibition of intense aversion to this idea of amalgamation only a few moments ago, and that, too, on the floor of the American House of Representatives.

He is willing that negro children may attend school and in every way be schoolmates with his children; he is willing that he and his family may attend church with negroes and, of course, sit side by side with them in the house of worship; he is willing for himself and family to sit side by side with negroes in street cars and other public conveyances; it is fair to assume that he is perfectly willing that he and his family should travel in the same sleeping cars with negroes, eat at the same table in the same dining car, and be guests at the same hotel, and in all these matters be on terms of the most perfect equality with them; but when the gentleman from Kansas [Mr. CAMPBELL] is brought down to the natural and unavoidable result of such association, viz, intermarriage between the two races, and he is *bluntly*, not to say *cruelly*, asked the question if he "would permit a negro to marry his daughter," we see him flush with indignation and anger, and as the rich, red Caucasian blood rushes in violent protest to his face, you hear his eloquent voice ring out above all the noise in this Chamber "No!"

But, Mr. Speaker, if the gentleman from Kansas [Mr. CAMPBELL] persists in maintaining in practice his peculiar theories in this regard, I fear the time may come when his vigorous "No!" may prove ineffectual and futile. The gentleman will find that he can not draw the line when and where he pleases. If the negro boy is as capable of mental and social development to the same extent as is the white boy, if there is really no difference between them except a difference in color, why allow the negro boy every privilege you allow the white boy, and then, when you have thoroughly educated him, when you have admitted him to your drawing-rooms, and otherwise have blessed him with a superior culture, draw the line arbitrarily, purely on account of his color, and say to him, "Thus far and no farther." Do you believe you can do this? If this is your policy with the negro, then you do him a most grievous wrong. You invite him to climb the ladder, and you assist him from rung to rung, until you have safely landed him on the one next to the top, and then, without notice, you rudely and suddenly strike him down as he reaches for the goal which you have told him should be his.

Why not tell him the truth in the beginning? Why deceive him? Why longer carry on your game of deception?

The gentleman from New York [Mr. DRISCOLL] says that we have been allowed to have our own way down South with this question for so long that we have grown "bold" enough to come on the floor of this House and make demands for this kind of legislation. The gentleman uses that word "bold" as though he thought we did not have the right to come here and make demands. We do demand, and we have the right to demand. The blood of the "heroes of the Revolution" flows through our veins; from the Revolution to the present day no foreign foe has ever engaged this Republic in battle that Southern blood has not consecrated every place of conflict; in all our history no foreign foe has ever threatened the flag that we did not rally to its defense. In these emergencies we volunteer, and do not have to be drafted.

Yes; we have the right to demand. This is our country, as it was the country of our fathers. The country of the white man, not the home of the mongrel. It will always be the white man's country. If the black man and the yellow man each desire to remain with us, occupying the sphere in life for which God Almighty intended each, let them do so. If not content with that, then let them go elsewhere.

Before closing, Mr. Chairman, I desire to say in this connection that able lawyers in this country who have given a great deal of thought to the subject contend that neither the fourteenth nor the fifteenth amendments to the Constitution of the United States were ever constitutionally proposed or constitutionally adopted, and that as a matter of law and fact the negro has no legal status as a citizen.

Hon. John S. Beard, a prominent lawyer and citizen of my State, residing at Pensacola, and a member of the Florida State senate, delivered a speech in that body on this subject last year. Mr. Beard's speech presents the question so clearly, logically, and ably that I shall attach it as a part of my remarks.

SPEECH OF JOHN S. BEARD IN FLORIDA STATE SENATE.

Mr. President, the provisions of the resolution proposing an amendment to the constitution of the State of Florida, limiting, as they do, the franchise to the white males, are in direct conflict with the provisions of the fifteenth amendment to the Federal Constitution. If this resolution passes both houses of the legislature by the requisite constitutional majority, and is ratified by the people at the polls as a part of the State organic law, its validity as a part of the constitution of the State will, of course, depend upon the invalidity of the so-called fifteenth amendment to the Federal Constitution, which will finally have to be determined by the Supreme Court of the United States.

I contend—and I think that I can demonstrate, and I believe that the Supreme Court of the United States will hold—that the fifteenth so-called amendment is not a part of the Constitution of the United States; that it was neither constitutionally proposed nor constitutionally ratified. The suffrage or political power was not delegated to the Federal Government by the States in the Constitution which created the Union of the States and established the Government of the Union. Not only was this power never delegated to the Federal Government, but the reservation of it by the States is rendered more emphatic by express provisions of the Federal Constitution, which adopt the electorate created by the States as the electorate of the elective Federal offices. This is illustrated by the constitutional fact that:

Representatives in Congress are elected by the electors of the most numerous branch of the State legislatures. Each State appoints electors of President and Vice-President, as the State shall determine, and Senators in Congress are elected by the legislatures of the States which are elected by constituencies created by the States. These are the only elective Federal offices. The fourteenth and fifteenth amendments do not change these express provisions of the Federal Constitution, but place limitations upon the former absolute political power of the State; the fourteenth by providing for the reduction of the States' representation in Congress, and consequently in the electoral college in proportion to the number of male citizens of the United States, inhabitants of the States, of and over 21 years of age, who are denied the right to vote under the suffrage laws of the State; and the fifteenth amendment, which prohibits the United States, or any State, from denying or abridging the right of citizens of the United States to vote on account of "race, color, or previous condition of servitude."

It is necessary to consider the proposal and adoption of the thirteenth and fourteenth amendments in order thoroughly to understand the methods employed in the so-called proposal and adoption of the fifteenth. They are, in design, immediately connected, each following the other in a logical sequence. The thirteenth amendment makes the former negro slave a freedman; the fourteenth elevates him to citizenship, and the fifteenth enfranchises him.

Mr. Lincoln, in his first inaugural address, said that "No State, upon its own mere motion can legally get out of the Union," that "resolves and ordinances to that effect are legally void. I, therefore, consider that, in view of the Constitution and laws, the Union is unbroken."

In July, 1861, Congress adopted with practical unanimity a resolution:

"That this war is not waged, on our part, in any spirit of oppression, nor for any purpose of conquest or subjugation, nor purpose of overthrowing or interfering with the rights or established institutions of the States, but to defend and maintain the supremacy of the Union, and to preserve the Union with all the dignity, equality, and rights of the several States unimpaired; and as soon as these objects are accomplished the war ought to cease."

Again, Congress declared a "fixed determination to maintain the supremacy of the Government and the integrity of the Union of all these United States." This passed the Senate with the opposition of but a single vote.

Again and again, by Executive proclamation and by Congressional resolution, the Southern States were assured in every authoritative form that they were States in the Union, and that they had only to lay down their arms in order to resume their old Federal relations; that their seats in Congress were vacant, and they had only to return to take them.

The war closed in 1865 by the surrender of the Southern armies in the field. The terms of surrender were only a repetition of those oft-repeated Congressional and Executive assurances. There was absolutely nothing, by act or declaration of the Federal Government prior to or at the time of surrender, to indicate the policy that the Federal Government pursued toward the Southern States after they had surrendered and the remnants of the Southern armies were scattered.

Well and truly did President Davis say, in 1873, in an address delivered before the Southern Historical Society, in Virginia, that, "We were more cheated than conquered into surrender."

The sole issue involved in the war between the United States and the Confederate States was the right of secession. The Southern States contended that they had the sovereign right to withdraw from the Union; the Federal Government contended that they did not, but were still States in the Union. This was the sole issue involved, and the war settled only that issue. When the Southern States surrendered, they accepted in good faith and for all time the contention of

the Federal Government that secession was null and void, and that they were States, and States in the Union. I quote from Ben Hill's "Notes on the situation":

"The late war was either a rebellion, or it was a civil war, or it was a foreign war. Each name has its advocates; others, again, give the war either or all of these characters by turns, as the giving of either or all can be supposed to justify some oppression on the unsuccessful party to the conflict. I shall not stop to prove that it was what history can only call it—a civil war. Whether it was the one or the other, there is no question, in all international or municipal law, better settled, or settled on more manifest foundations of natural reason, social justice, and public faith, than is the question of the rights and powers of the conqueror and the rights and obligations of the conquered. All conflicts, whether between a sovereign and his subjects or between two parties in a government or republic, or between two independent nations, are founded on some question, some difference, making an issue between the parties which reason has not been able to settle. The parties take up arms to solve the question and settle the issue between them.

"Every war ends by compromise, or by one party yielding to the other, either on terms or without terms. If the end is by compromise, the terms of the compromise constitute the law of the peace. If one party surrenders on terms, the law of peace is the issue of the fight, qualified by the terms of the surrender. If the surrender is without terms, then all the questions involved in the issue are settled in favor of the conqueror; but no question not distinctly involved is settled or affected.

"Now, two things must be distinctly understood and fixed in the minds of the reader: First, where must we look to find the terms on which the conflict ends, and which makes the law of the peace between the parties? Second, at what time must these terms be made known or agreed upon?

"Wars between independent nations are usually ended by treaty, and, of course, we must look to the treaty of peace to find the terms of peace. What is not found in the treaty is not settled. So also in civil wars. Treaties are sometimes made and have the same force and effect as when made between independent nations. Usually, however, treaties are not made between parties to a civil war or a rebellion, because the sovereign party, claiming to be the legitimate government, will not treat with those whom they persist in calling rebels—because to treat with them is to admit a sort of implied independence or authority. In all such cases, in order to find the terms of the peace, we must look to the causes or difference which actuated the parties in taking up arms; to the declarations and demands of the parties at the time of the beginning and during the progress of the struggle; to the promises made or assurances proclaimed by the victor to induce the adversary to lay down his arms, and to the negotiations and terms of surrender. Whatever is not there found is not settled, and forms no part whatever of the terms of peace.

"I need not add that all the treaties, declarations, and promises are to be interpreted, not according to the discretion of either party, but in the light and according to the rules of the laws of nations, and the established principles of natural justice and good faith.

"In the next place, it must be stated that whatever either party, in case of a compromise or a treaty, or the victor, in case of a surrender, intends to demand, as a condition of the peace, must be made known before or at the time the treaty is made or before or at the time the surrender is accepted. No party agrees to what is not made known or surrenders to what is not claimed. To demand new guarantees after a treaty has been made is a breach of treaty, and to prescribe new terms of surrender, after the surrender has been accepted, is deemed infamous by all mankind, and in both cases is held to be a new and just cause of war; and when such conduct is exhibited toward an adversary who has given up his arms and submitted to the victor, and is thereby unable to renew the war, the party guilty of it has no claim to the confidence or respect of any people, for he brings the faith of promises into disrepute."

Mr. Hill fortifies this opinion by copious quotations from Vattel.

As I have said, the war ended in 1865, with the surrender of our armies in the field. Mr. Lincoln had held that it was the duty of the Executive to initiate reconstruction, and had during the war established provisional governments in the States of Louisiana, Arkansas, and Tennessee, and had also recognized the so-called "reorganized" government in Virginia. After the surrender, the Southern States began to remodel their constitutions so as to harmonize with the new order of things. Each State had a government republican in form and complete in all departments; and these States had been repeatedly assured by the Federal Government that they were States in the Union, but President Johnson, by proclamation of May 20, 1865, stopped this movement. (Fleming's Documentary History of Reconstruction, 163 and 168.)

This was the first violation of good faith toward the Southern States after surrender, but was followed in quick succession by other more glaring and baser betrayals of confiding confidence and good faith in the terms of surrender.

On May 29, 1865, the President issued his proclamation of amnesty and the first of seven proclamations appointing provisional governors in seven of the Southern States. With the necessary change of names and dates, these proclamations were alike. The last was for Florida, July 13, 1865. The amnesty proclamation was drafted by Mr. Lincoln and was read and adopted at the first Cabinet meeting held by President Johnson after President Lincoln's death. (Thorpe, vol. 3, 162.)

In Louisiana, Arkansas, and Tennessee President Johnson recognized the governments established during Lincoln's Administration and recognized by Mr. Lincoln, generally known as "the ten per cent governments."

In Virginia President Johnson also recognized the "reorganized" government, recognized by Mr. Lincoln and by Congress. Blaine, in his Twenty Years in Congress, speaks sneeringly of this Virginia government, and quotes Thaddeus Stevens as having said that this government carried all of its records, archives, and effects to Richmond from Alexandria in one ambulance. Both Blaine, and Stevens seem to have forgotten that it was this "reorganized" government, and only this government, that has ever given consent to the creation of the State of West Virginia out of a part of the State of Virginia, and which ratified the thirteenth amendment to the Constitution of the United States.

The proclamations appointing provisional governors in the seven Southern States instructed each governor, at the earliest practical moment, to call a convention of his State for the purpose of amending the constitution of the State, so as to restore the State to its "prac-

tical relations" to the Federal Government. Every delegate to this convention, and the electors of delegates, by this proclamation were to be qualified under the constitution and laws of the State prior to the ordinance of secession, which, of course, limited the franchise to the white males, who were to subscribe to the oath of amnesty, which oath was to obey the Constitution and laws of the United States, and all proclamations and laws of the Federal Government made during the war with reference to the emancipation of slaves; and the legislatures which were elected under those constitutions were to prescribe the qualifications of future electors. (For these proclamations, see Richardson, vol. 6.)

From the benefits of this amnesty proclamation fourteen classes of persons were excepted, which was a greater number of proscribed persons than were excepted from the benefits of the proclamation issued by President Lincoln on December 8, 1863, but President Johnson used the pardoning power liberally and extensively.

The provisional governors of all the States called conventions, which met, framed constitutions, and did all that was required, viz., abolished slavery, declared the ordinances of secession void, repudiated all debts contracted in aid of the Southern Confederacy, and established new governments, based on the constitutions of 1861, minus slavery. Provisional governors now gave way to those elected by the people. Legislatures elected by the people met and elected United States Senators. Representatives in Congress had been elected when the governors and legislatures were.

Having complied with all of the conditions of the so-called "reconstruction," would these Southern States be restored to their former Federal relations, and would their Senators and Representatives be accorded their seats in Congress? The President and Congress had assured them that they would. But let us see.

In February, 1865, President Lincoln signed the joint resolution proposing to the States the thirteenth amendment to the Federal Constitution. This amendment was proposed to all the States, including the seceding States, for ratification—and without the ratification of at least five of these seceding States, it would not to-day be one of the amendments to the Federal Constitution. (Thorpe, vol. 3, 229; Tucker on the Constitution, vol. 1, 341.)

The Southern States were now required to ratify the thirteenth amendment, as a condition precedent to their being admitted to representation in Congress. (Thorpe, vol. 3, pp. 228, 229.)

The legislatures of all the Southern States, with the exception of Mississippi and Texas, ratified this amendment.

In his annual message to Congress, on December 4, and in a special message of December 18, 1865 (Richardson, vol. 6), the President reported what he had done in the Southern States, and what the Southern States had done, viz., that the thirteenth amendment had been ratified by all of the Southern States except Mississippi, Florida, and Texas (Florida ratified the thirteenth amendment on December 28, 1865); that every condition of so-called "reconstruction" had been complied with, and that the Southern Senators and Representatives should be accorded recognition. Congress, however, refused to admit the Southern Senators and Representatives, notwithstanding the fact that the Southern States, without which the thirteenth amendment would not have received the approval of three-fourths of the States necessary to make it a part of the Constitution, had ratified the amendment, and had complied with all other conditions of reconstruction, with the explicit understanding that by so doing they would be fully restored to their old Federal relations. (Thorpe, vol. 3, 239, 297.)

It is true that the Constitution makes each House of Congress the judge of the qualifications, returns, and election of its own members; but every authority, including Story, Tucker, and Hamilton—in No. 60 of the Federalist—and no authority to the contrary that I have been able to find, hold that each House can only ascertain if each member has the qualifications prescribed by the Constitution, which are age, citizenship, and residence. There was never a question of doubt raised as to any member elected to either House from either of these States possessing these requisite qualifications; there was never a question raised as to their having been duly elected, and there should have been no question as to their having been elected by States of the Union.

To cite no other evidence; Congress had within the past few months recognized each of these States as States in the Union by submitting to them the thirteenth amendment for ratification or rejection. Mr. Lincoln, in the last speech he ever made, April 11, 1865, said that the thirteenth amendment should be submitted to all the States, including the States of the late Confederacy, and should be ratified by the legislatures of three-fourths of all the States; otherwise "the amendment would always be questioned and questionable."

To ratify or reject an amendment to the Federal Constitution is a high constitutional function, which can be exercised only by States in the Union.

Congress now, however, passed a joint resolution over the President's veto (Statutes at Large, vol. 14, p. 27; Fleming's History of Reconstruction, 197) repudiating or refusing to recognize the governments organized under the proclamations of Lincoln and Johnson, and appointed a joint committee of fifteen of which Thaddeus Stevens, on the part of the House, and William Pitt Fessenden, on the part of the Senate, were chairmen, to inquire into the conditions in the late Confederate States; to report which, if any, of these States were entitled to representation in either House of Congress; and refused to admit to either House of Congress a member from any of these States until the committee should report favorably upon such admission. All matters affecting these States were now referred to this committee.

Now began a carnival of crime against constitutional liberty; disregard and brazen violations of the plainest constitutional provisions, and of plighted faith to the Southern States, which for turpitude stands unparalleled in history. The Chamber of Deputies of the French National Assembly, in 1798, possessed a high degree of political virtue and morality as compared with the Congress of the United States during this and the immediately preceding and succeeding periods. I quote from an address delivered by Hon. A. Caperton Braxton before the Virginia Bar Association:

"In justification of its action in repudiating the reconstruction governments erected in the South by Presidents Lincoln and Johnson, it behooves Congress to show that those governments were disloyal and dangerous to the Union; that they were but the recrudescence of the rebel element—in short, to discredit them with the Northern people in every possible way. To this task the Joint Committee on Reconstruction addressed itself with vigor; and unfortunately, the chaotic condition of the South, just emerging, as it was, from a devastating war, with nearly five million, idle, ignorant, vagabond, newly enfranchised slaves to be assimilated by the body politic, afforded but too much material for criticism. The Joint Committee on Reconstruction

began to take testimony on the condition of the States lately in rebellion, and soon became the mecca of all the dissatisfied elements in the South. The adventurers, then known as 'carpetbaggers,' who had followed the Union armies there, were quick to grasp the political opportunity afforded them for office-holding and plunder, if they could but succeed in disfranchising the white native men and enfranchising the negroes, whom they found they could readily control. These 'carpetbaggers,' therefore, at once allied themselves with the Northern negro suffragists, and in the shape of evidence submitted to the Joint Committee on Reconstruction, furnished their Northern allies with ample ammunition for their political war at home.

"Thus the Northern heart was fired, the hands of Congress were strengthened, and the efforts of the President to uphold the Federal Constitution in the South were successfully represented to the country as a traitorous cooperation with 'Southern rebels.' The country was assured that, to all intents and purposes, the negroes were the only loyal element in the South; for Congress knew that it was only to these negroes and their 'carpetbag' allies that it could look in the South for supporters of its policy. The laws adopted in various Southern States to regulate vagrancy and prevent the newly enfranchised slaves from becoming tramps by the hundreds of thousands were represented as veiled attempts to reenslave them."

In June, 1866, Congress proposed the fourteenth amendment to the Constitution, which, among other things, raised the negro to citizenship and disqualified a majority of the leading citizens of the seceding States, including a large number of distinguished citizens of these States to whom amnesty has been extended by the President's proclamations of May 29, 1865, and of December 8, 1863, with explicit authority from Congress by the act of July 16, 1862 (12 Stat. L., 589), and disqualified others to whom the President had extended pardons in pursuance of his unquestioned constitutional authority.

Meantime the minority report of the Joint Committee on Reconstruction, signed by Reverdy Johnson, Rogers of New Jersey, and Girdler of Kentucky, says that the proclamations of amnesty issued by President Lincoln and his successor, with the consent of Congress, were inconsistent with the idea that the parties they included were not to be considered in future as restored to all rights belonging to them as citizens of their respective States.

"A power to pardon is a power to restore the offender to the condition in which he was before the date of the offense pardoned. These amnesties would be but false pretenses if they were to be practically construed as leaving the parties who had availed themselves of them, in almost every particular, in the condition in which they would have been if they had rejected them." (Thorpe, vol. 3, 293, 295.)

As to the effect of pardon and amnesty, see *ex parte Garland*, 4 Wallace.

This proposed amendment was a violation of good faith on the part of the Government. As to the original purpose and design of the fourteenth amendment, I again quote A. Capperton Braxton:

"That qualifications for suffrage were in the exclusive control of the States was a doctrine of such long standing and so well established that up to this time practically no one had dared to question it. Mr. Sumner, it is true, had ventured to do so in the year before, when in the Senate in February, 1865, he had opposed the readmission of Louisiana unless she would adopt negro suffrage, but his colleagues had good naturedly laughed at him as an extremist, and he had admitted that public sentiment was overwhelmingly against him. How, then, was the Federal Government to secure a satisfactory basis of suffrage in the Southern States? Clearly other amendments to the Constitution were requisite, but to what extent would the North consent to amendments that necessarily would affect them as much as the South? Let us see.

"The Dred Scott decision, holding free negroes not to be citizens, was always unpopular in the North, and was rendered much more so by the result of the war. It was reasonably sure, therefore, that an amendment conferring citizenship upon them would be practicable. That was one step gained. If he be made a citizen, then that the negro could have protection of his natural and inalienable rights of life, liberty, and property was but a natural corollary. The nation, by giving him freedom, had deprived him of the protection of his master. It was therefore but just that it should give him in lieu thereof the protection of the laws. So far, then, the ground was safe. The freedman's civil rights could easily be provided for, and he himself would have been more than satisfied to let matters rest there. It was more than he had ever hoped for, and all that he desired, at least, so far as 90 per cent of his race were concerned. For be it remembered that the Southern negroes, as a race, had neither requested nor desired suffrage, and the demand for it in the South had come almost exclusively from the white 'carpetbaggers.' But the negro's Northern friends were vastly more interested in his political than in his civil rights, for these concerned them as well as him. That negroes should ever have been counted in fixing the apportionment of the State's representatives in Congress or the electoral college was always a bone of contention between the North and the South, and a very sore subject with the former; but if it were unfair that three-fifths of them should be counted when they were slaves, how much worse was it that now as freedmen five-fifths of them should enter into the computation. There would be no trouble in the North to pass a constitutional amendment correcting this, but what should that amendment be?

"At first it was proposed that the registered vote should be taken as a basis of representation, but New England cried out against this on the ground that the heavy emigration of her young men made her voters abnormally few in proportion to her entire population, especially as compared with the West. Then it was suggested that the white population only be taken as a basis, but this was resisted by all the advocates of negro suffrage, who hoped some day to see it established. What then was to be done?

"Some were for giving suffrage to the negro out and out, but they were met not only by the opponents of negro suffrage, but even by those advocates of it who were opposed to depriving the States of their unlimited control of suffrage qualifications. Many men recognized the peculiar conditions and political exigencies, which, in their opinion, called for negro suffrage in the South, but they bitterly opposed it for their own States; in fact, there were not a few who desired it in the South for the identical reason that they did not desire it at home; that is, that the negro might be induced to remain in the South. He had ever been regarded by the free States as an undesirable immigrant, and they were now in more danger of his invasion than ever before, especially if the first clause of the proposed amendment, securing him citizenship and the equal protection of the laws, should be adopted and thus nullify all their old laws discriminating against him.

"All of the perplexing considerations were weighed and discussed by the Joint Committee on Reconstruction, to whom were referred all bills on the subject, including several for general negro suffrage

throughout the Union and for permanent disfranchisement of the 'rebels.' Finally it was suggested, as a revelation from heaven, that the difficulty could be solved by so wording an amendment as to induce rather than compel the States to adopt negro suffrage, which it was claimed could be accomplished by cutting down their representation in proportion as they should deny their male citizens the electoral franchise on account of race. This was believed at the time to be almost a divine inspiration.

"Under this arrangement it was said everybody would get what they wanted. The States-rights men would observe that each State was left free to regulate suffrage as it chose; the New Englanders would lose no part of their representation; the free States would be at liberty to continue keeping out negro immigrants by denying them the suffrage, and yet their existing colored population was so small that they would lose absolutely nothing in their Federal representation.

"But the Southern States, where the negroes were nearly half the population, could not, it was said, resist the temptation to double their political power by enfranchising their negroes voluntarily, thus satisfying at once those who wished to reward the loyal negro by giving him the elective franchise—those who wished to punish the disloyal States by making them purchase, with negro suffrage, a right they had always enjoyed under the Federal Constitution, and those who wished to perpetuate the power of the Republican party with negro votes."

But the question is, Was this amendment constitutionally proposed and constitutionally ratified? Is it, in other words, a part of the Constitution of the United States? Article V of the Federal Constitution declares that:

"The Congress, whenever two-thirds of both Houses shall deem it necessary, shall propose amendments to the Constitution."

Not two-thirds of the Members present, but "two-thirds of both Houses." When the Constitution intends a measure to be disposed of by a majority of those present, it distinctly says so, as in the ratification of a treaty:

"Provided two-thirds of the Senators present concur."

Again, in the trial of impeachments:

"No person shall be convicted without the concurrence of two-thirds of the Members present."

And again:

"The yeas and nays of the Members of either House, on any question, shall, at the desire of one-fifth of those present, be entered on the Journal."

In the case of amendments the Constitution is equally explicit. It requires the concurrence of two-thirds of both Houses—two-thirds of the entire membership. This was the opinion of Senator Thomas A. Hendricks, of Indiana, and Senator Garrett Davis, of Kentucky. This was also the opinion of Lyman Trumbull, B. F. Wade, Charles Sumner, and Oliver P. Morton up to the time of the so-called "proposal of the fifteenth amendment," on which occasion their opinions underwent a radical change to meet the exigency of two-thirds of the entire membership of the Senate not voting for the proposal of the fifteenth amendment. In fact, the construction for which I now contend of this clause of the Constitution has never been seriously and honestly controverted.

By another express provision of the Constitution each State is to be represented in speech and vote by "two Senators" and "at least one Representative."

By another express provision of the Constitution, "No State, without its consent, shall be deprived of its equal suffrage in the Senate." This last provision of the Constitution is found in the same article and paragraph which requires the proposal to be made by two-thirds of both Houses.

At the time the fourteenth amendment was proposed eleven States of the Union were not represented in either House of Congress—eleven States of the Union were deprived of their equal suffrage in the Senate, not only without their consent, but over their protest—eleven States of the Union were demanding a hearing through their legal and constitutional representatives—demanding their guaranteed constitutional rights, but were arbitrarily and tyrannically denied any part or participation in preparing and proposing this amendment, which more vitally affected them than the other States of the Union.

Was this a proposal by two-thirds of both Houses? Was this a constitutional proposal? It was absolutely null and void. It was too late to say that the seceding States were not States in the Union. Congress had recognized them as States in the Union by the resolution of 1861. President Lincoln at all times held that the seceding States were States in the Union, and that ordinances of secession were null and void, and upon this ground alone refused to receive or treat with Confederate commissioners. Congress had again and again recognized them as States, as, for instance, by the act of July 23, 1866, dividing them into judicial districts. (Thorpe, vol. 3, 179, 303, 333.)

Congress had called upon them to act upon the thirteenth amendment, and by their action this proposed amendment was ratified.

Is the thirteenth amendment a nullity? Is it if these States were not States in the Union and were not entitled to representation in both Houses of Congress?

The fourteenth amendment did not receive two-thirds of the true membership of both Houses. There were then thirty-six States of the Union. If the Southern States had been admitted to representation in the Senate, there would have been seventy-two Senators. But the Southern States were arbitrarily excluded from representation in both Houses of Congress. The vote upon the fourteenth amendment in the Senate stood: Yeas 33, nays 11, absent 5. (See Thorpe, vol. 3, 274, quoting Congressional Globe of June 8, 1866, p. 3042.)

But two-thirds of seventy-two are forty-eight, so the amendment received many votes less than the necessary two-thirds of the constitutional and true membership of the Senate. Nor yet did it receive two-thirds of the Senate, even as then constituted.

In the House the vote stood—120 yeas, 32 nays, 32 not voting. (Thorpe, vol. 3, p. 276, quoting Congressional Globe of June 13, 1866, pp. 3148, 3149.)

There were present 184. Two-thirds of 184 are 123, so in the House the proposed fourteenth amendment did not receive two-thirds even of those present.

By a concurrent resolution the two Houses instructed the Secretary to transmit certified copies to the governors of all the States, to be laid by them before the legislature for ratification. (Tucker on the Constitution, vol. 2, 850. Thorpe, vol. 3, 277.)

Another recognition of the Southern States, as States of the Union. Charles Sumner said that the States of the Southern Confederacy had committed "State suicide;" and Thaddeus Stevens, not to be outdone in venomous and original absurdity, said that these States were "conquered provinces." But the fourteenth amendment was submitted to them for ratification or rejection by the Federal Government.

Provinces can not ratify amendments to the Federal Constitution; only States, and States in the Union, can, and certainly not States which had committed "State suicide"—dead States.

A little later, in 1869, the Supreme Court of the United States (7 Wallace, 700), in the case of *Texas v. White*, speaking through Chief Justice Chase, says that "The ordinance of secession was absolutely null," and "the obligations of the State as a member of the Union, and every citizen of the State as a citizen of the United States remained perfect and unimpaired;" that "the State that attempted to secede continued to be a State and a State of the Union."

And still a little later, in 1871, the Supreme Court of the United States, in the case of *White v. Hart* (13 Wallace), held that "The reconstructed States have never been out of the Union."

Now, we give the executive, legislative, and judicial departments of the Federal Government in the most solemn and authoritative ways declaring that secession was a nullity; that the States which attempted it continued States, and States of the Union; and yet, Congress, in open, notorious, and arbitrary violation of the Constitution, refused to admit their Senators and Representatives, elected and qualified, to their constitutional seats in Congress.

Naturally and properly, all of the Southern States, with the exception of Tennessee, refused to ratify this amendment, which they had had no voice in framing or vote in proposing, and which contained such objectionable and degrading features. Florida in rejecting this amendment said:

"We are in fact recognized as a State for the single and sole purpose of working out our own destruction and dishonor. We are recognized as a State for the highest purpose known to the Constitution, viz, its amendment; but we are not recognized as a State for any of the benefits resulting from that relation." (Fleming's Documentary History of Reconstruction, p. 236.)

Tennessee, however, ratified the amendment in July, 1866, and was in that month restored to her former practical relations to the Union, and her Senators and Representatives were admitted to seats in Congress. (Stat. L., vol. 14, 364; Fleming's Documentary History of Reconstruction, p. 202.)

The fourteenth amendment was not ratified. Congress now determined to force the Southern States to ratify the fourteenth amendment and make it a part of the Federal Constitution, and to this end Congress destroyed the existing electorate in the Southern States by disfranchising the majority of the leading white voters and created a false and unconstitutional electorate by enfranchising the negroes. The negro should be the only voter.

Now began what is known as "Congressional reconstruction." In 1867 Congress passed over the President's veto the reconstruction acts. These laws—if such acts of a mutilated Congress, so palpably and avowedly in conflict with the Constitution can be called laws, taken together—divided ten States of the late Confederacy into military districts, over which military commanders were appointed as governors. The constitutional and legal governors in the States were superseded by these military governors. Citizens were arrested and tried by military commissions. The negroes were completely enfranchised, and a majority of the leading whites were nearly as completely disfranchised by applying the disqualifying features of the proposed but rejected fourteenth amendment both to officials and voters. Each military governor was given a sufficient military force to enforce his authority. These acts provided that when the people of any of the States should form a constitution in conformity with these acts enfranchising the negroes and disfranchising the majority of the whites, and when the States had ratified the fourteenth amendment to the Constitution, that such States should be admitted to representation in Congress. The Supreme Court of the United States was deprived of all jurisdiction in cases arising under these acts (see *McArdle* cases, reported in 6 and 7 Wallace), and a Senator upon the floor of the Senate threatened every judge of the United States Supreme Court with impeachment should the court dare declare any of these "reconstruction acts" unconstitutional. The President of the United States, who is the constitutional Commander in Chief of the Army, was deprived of all control over the Army. The President, in vetoing these acts, said that they were "bills of attainder against millions of people, not one of whom had been heard in his own defense." The Supreme Court of the United States has, in the case of *ex parte Garland and Cummings v. Missouri* (4 Wallace), defined bills of attainder and *ex post facto* laws, and these acts of Congress are clearly within these definitions laid down by the Supreme Court. These military acts were clearly unconstitutional under the then recent decision of the United States Supreme Court in *ex parte Milligan*, reported in the fourth Wallace, in that they established military tribunals for the trial of citizens in the Southern States a year after the President had by proclamation declared the war to be at an end in those States, and in which the civil courts were open and civil process enforced at the time that the civil governments were overthrown and military governments and courts established. These acts established absolute military despotism in ten States of the Union. The sole purpose of these acts was to force the people of the Southern States, by military despotism, to adopt measures by an electorate forced upon them by Congress in open, notorious and avowed violation of the plainest provisions of the Constitution.

For a searching analysis of these acts and an unspeakable demonstration of their unconstitutionality, see the President's veto messages in the sixth volume of Richardson.

As to the disfranchising features, I have already shown that they are in conflict and inconsistent with the amnesty and special pardons of the President. The excuse urged by Congress for this arbitrary and tyrannical action was that these States did not have governments republican in form, established according to the Constitution.

In the first place, this Congressional assertion was in conflict with the notorious facts. In the second place, if this assertion had been true, it was entirely beyond the constitutional duty or power of Congress to establish governments in those States. The constitutional authority is to "guarantee" a republican form of government, which Madison says in the forty-third number of the *Federalist*, "suppose a preexisting government of the form which is to be guaranteed. As long, therefore, as the existing republican forms are continued by the States they are guaranteed by the Federal Constitution. Whenever the States may choose to substitute other republican forms they have a right to do so and to claim Federal guaranty for the latter. The only restriction imposed on them is that they shall not exchange republican for antirepublican constitutions. The authority extends no further than to a guaranty of the republican forms of government."

At the surrender the Southern States all had republican forms of government. The President, by Executive proclamation, overthrew these republican forms of government and established other governments which were republican in form, if not in origin. These reconstructed

governments of Lincoln and Johnson were now overthrown by Congressional acts, and ten States of the Union for more than a year were military despotisms. Under the supervision of the Army this new Congressional electorate, constituted almost entirely of negroes, was enrolled, elections were held, and delegates to constitutional conventions elected by this Congressional military electorate. These conventions, constituted of negroes and "carpetbaggers," convened, while the disfranchised and disarmed white men of the South were held under control by the United States Army. These Congressional military conventions framed constitutions enfranchising the negroes and disfranchising the whites and in every other way complying with the Congressional plans and demands. The constitutions framed by these conventions were ratified by this new Congressional-military electorate in all of the States except Virginia, Mississippi, and Texas. Representatives in Congress and State officials were now elected by this false electorate, and the legislatures, constituted of negroes and "carpetbaggers," elected by this false electorate, ratified the fourteenth amendment which had been formerly rejected by legislatures elected by true electorates, and these false legislatures in turn elected United States Senators.

Since these reconstructed States were in this way forced to go through the form of ratifying the fourteenth amendment it was now declared to have received the ratification by the legislature of the necessary three-fourths of the States, and to be a part of the Constitution of the United States.

Can these products of fraud, usurpation, and force be palmed off as legislatures to perform one of the highest constitutional functions of sovereign States of the Union? These legislatures were false, spurious, and revolutionary—the products of plain and notorious usurpation by Congress, and which the real constitutional electorate would never have elected or have permitted to convene or to remain in session one instant had they not been protected by the United States bayonets.

There were now thirty-seven States in the Union. Can it be claimed that there was a constitutional ratification in the Southern States, except possibly by Tennessee? The States of Delaware, Maryland, California, and Kentucky rejected the amendment. I take no account of those States which withdrew their ratifications, but which were counted as ratifying. These four States, with the ten Southern States, whose ratification was secured in the manner narrated, make fourteen which have never ratified this so-called "amendment to the Constitution," which leaves twenty-three States only which constitutionally ratified the fourteenth amendment. But three-fourths of thirty-seven are twenty-eight. I think that it is conclusively demonstrated that the fourteenth so-called "amendment to the Constitution" was neither constitutionally proposed by a constitutional Congress nor constitutionally ratified.

Upon this fraudulent so-called "ratification of the Constitution" all of the Southern States, except Virginia, Mississippi, and Texas, which three remained military districts, were restored to their former practical Federal relations in June 1868, and were admitted to representation in Congress, or, rather, the misrepresentation of negroes and "carpetbaggers." (See Fleming's Documentary History of Reconstruction, 476.)

All of this has a most important bearing upon, and an understanding of which is essentially necessary preliminary to the consideration of, the methods employed in the so-called "proposal" and so-called "ratification" of the so-called "fifteenth amendment."

Before considering the methods of the proposal and ratification of the so-called "fifteenth amendment" let us consider the feeling throughout the North on the subject of negro suffrage.

Until the passage of the reconstruction acts by Congress in 1867 the constitution, laws, and the public sentiment of thirty-three of the thirty-seven States in the Union, in all of the Territories and in the District of Columbia, were not merely oblivious of the negro, but absolutely hostile to him as a voter. In December, 1865, the question of negro suffrage in the District of Columbia was submitted to the people. In Washington City the vote stood 35 for and 6,521 against negro suffrage. In Georgetown the vote stood 1 for and 812 against negro suffrage. The vote in the District was: For negro suffrage, 36; against negro, 7,333.

In the face of this Congress passed a bill over the President's veto establishing negro suffrage in the District of Columbia. (Thorpe, vol. 3, p. 248.)

In 1865 the Territory of Colorado took a vote on the question of negro suffrage. The vote stood: For negro suffrage, 476; against negro suffrage, 4,192. But in spite of this Congress, by law, established negro suffrage in Colorado and all of the Territories.

The people of the North were getting restive and uneasy. They had seen the radicals, in violation of the plainest inhibitions of the Constitution, establish negro suffrage in the States lately constituting the Southern Confederacy. They had seen Congress in the District of Columbia and in the Territory of Colorado establish negro suffrage despite the overwhelmingly wishes of the people as expressed at the polls. They had seen Congress establish negro suffrage in all of the other Territories where there was every reason to believe that negro suffrage was as obnoxious as in Colorado. They had seen in 1866 Nebraska adopt a constitution limiting the suffrage to white persons and Congress refuse to admit her as a State until her legislature, in violation of her constitution, should establish negro suffrage. In 1866 there was not a State in the Union in which a negro stood on a perfect equality with a white man. (Thorpe, vol. 3, 242, 251, 252.)

The people of the North did not know where this irresponsible conclave would stop. Constitutional limitations and oaths of office alike seemed to have no restraint upon them, urged on as they were and led by such men as Ben Wade, Lyman Trumbull, Thaddeus Stephens, Charles Sumner, Oliver P. Morton, and others with less ability, but as much venom, and equally as destitute of constitutional morality.

When the Republican national convention met in 1868, in order to insure the election of Grant, they found it necessary to adopt a plank in their platform that "The guaranty by Congress of equal suffrage to all the loyal men at the South was demanded by every consideration of public safety, of gratitude, and of justice, and must be maintained, while the question of suffrage in all the loyal States properly belongs to the people of those States."

This unconstitutional, cowardly, and unfair proposition to continue to impose negro suffrage in the Southern States by Federal power, while the Northern States were to be left their constitutional right to decide the question for themselves, was perfectly satisfactory to the radical majority of the North. But the radical leaders having deceived and betrayed the South, and having violated every constitutional obligation and restriction, rounded out their infamy when they now deceived their own party and the great mass of voters of the North, for in a few months they as ruthlessly violated this platform pledge to their own people as they had violated on numerous occasions

their oaths to protect, preserve, and to defend the Constitution, and had violated their express compact with the Southern people.

In the opinion of the average Northern voter negro suffrage was good enough for the South, but not for the North, for at that time, of the thirty-seven States which constituted the Union, all save five used "white" as descriptive of the voter, and in one of these five (New York) while the negro was recognized as a voter, such limitations and restrictions were placed upon him, not applicable to the white voter, that it was equivalent to disfranchising the negroes. (Thorpe, vol. 3, 459.)

The constitution of some Northern States forbade the free negro entering the State. Within the past two years seven Northern States had rejected equal negro suffrage when made an issue at the polls. (Thorpe, vol. 3, 446.)

These seven included the great States of New York and Ohio and the banner Republican State, Michigan.

When Congress met in December, 1868, the Southern States, except Mississippi, Virginia, and Texas, which were still military districts, were misrepresented in the House and Senate by negroes and "carpet-baggers" elected by military Congressional electorates.

I will not now go through the history of the parliamentary progress of the fifteenth amendment, but on the 23d day of February, 1869, the conference committee reported the resolution to Senate and House. This Congress expired on the 4th of March. In vain did Thomas A. Hendricks and other great, good, and patriotic men appeal to the fanatic majority to let the next Congress, fresh from the people, dispose of this measure. In vain did Hendricks, Davis, and others in the House and Senate remind the leaders of the radical party of their platform pledged to the people upon which they had carried the election.

Under the leadership of Boutwell, Conkling, Sumner, Trumbull, Morton, Wade, and others of that ilk—Stephens had gone, let us hope, to a not too hot reward in the preceding August—the resolution was pushed to a vote, and rushed to a so-called "passage" in Senate and House.

These usurpers and tyrants said as plainly as words could say: "It must be now or never. The next Congress will not pass it; we can—the existing legislatures of a sufficient number of States belong to us. Put it off and it is lost forever. The people do not want it. Had the people known our purpose—had we not misled them by our platform pledge—the Democrats would have carried the election last November."

Under whip and spur the House of Representatives, on the 25th of February, voted on it. The vote stood—144 yeas, 44 nays, 35 not voting. (Thorpe, 3, p. 445, and Braxton, both citing Congressional Globe of Feb. 25, 1869, p. 1564.)

The entire membership of the House was then 223. Two-thirds of 223 are 149. So the amendment did not receive two-thirds of the vote of the House.

On February 26 the amendment was voted on in the Senate. There were then thirty-seven States in the Union, which would make the membership of the Senate seventy-four, but Texas, Virginia, and Mississippi were arbitrarily held as military districts; that would leave thirty-four States, with a membership in the Senate of sixty-eight, but Georgia, though she had fully complied with the reconstruction acts, and her Representatives had been admitted to the House and had there voted on the amendment, was excluded from the Senate over the protest of even Senator John Sherman, of Ohio. So there were four Southern States which were not accorded even the misrepresentation accorded to the other seven Southern States. This left thirty-three States represented in the Senate, with a total membership of sixty-six. The vote stood—yeas 39, nays 13, not voting 14. (Thorpe, vol. 3, 445, and Braxton, both citing Congressional Globe of Feb. 26, 1869, p. 1641.)

But two-thirds of sixty-six are forty-four, so the amendment did not receive two-thirds of the Senate, and Senator Garrett Davis, of Kentucky, and Senator Hendricks, of Indiana, immediately challenged the announcement of B. F. Wade, President pro tempore of the Senate, that two-thirds had voted for the amendment. Senator Davis, of Kentucky, said:

"Sir, your amendments to the Constitution are all void; they have no effect; they are proposed by a mutilated Congress; they are proposed by a mutilated House of Representatives and Senate."

But Wade persisted in holding that thirty-nine was two-thirds of sixty-six, and he was sustained by a radical and conscienceless majority. The so-called "ratification" of this amendment by the legislatures of some of the States, and the declaration that it had been ratified by three-fourths of the States was, if possible, even more infamous and scandalous than its proposal. I quote Braxton again:

"The amendment passed the Senate rather late Friday night, February 26, 1869. The next morning, as soon as the enrolled resolution was signed by the Presiding Officer, it was telegraphed by Congressman Sidney Clark to the legislature of Kansas, then on the point of adjournment. This telegram, entirely unofficial, was received by that legislature during its afternoon session, and that very evening, in less than twenty-four hours after the amendment had passed Congress, long before it had been certified to the States for action and before any one in Kansas had even seen it (other than Clark's telegraphic copy) the legislature of that State ratified it. The people of Kansas at the polls about a year previous had voted against negro suffrage two to one. Senator Stewart, of Nevada, was, if anything, more anxious than Congressman Clark, of Kansas, to obtain action by existing legislatures before the people could make themselves heard. The State of Nevada had very recently adopted a constitution which restricted suffrage to 'white' men. The people of that State, like those of California and Oregon, were overwhelmingly opposed to the extension of the elective franchise to any but white men, not so much because of the fear of the negro as of the Chinese vote."

"It was generally conceded among the radical press that Nevada would reject the amendment, but they underrated the resources of their own generals."

"Late Friday night, as soon as the Presiding Officer has announced that thirty-nine votes was two-thirds of a Senate of sixty-six members, Senator Stewart, impressed by the fact just stated by him in the Senate, that 'their legislatures were waiting to ratify the amendment, and that if it was not done by them, and at once, the whole thing would be lost,' caused the Secretary of the Senate, without even waiting for the resolution, enrolled or signed, to telegraph it to the legislature of Nevada and Louisiana, to which telegram he and three others added a message urging the immediate ratification by the legislatures. This remarkable dispatch did not reach Nevada until the next morning, Saturday, when the legislature at once endeavored to comply with its instructions. But they were not quite so docile as in Kansas, and did not succeed until Monday morning, March 1, 1869, when they ratified the amendment against a strong written protest of the minority, including Republicans and Democrats. This protest insisted, among other

things, that the amendment had not received the constitutional two-thirds majority in the Federal Senate; that the legislature of Nevada had as yet no official knowledge of the proposed amendment (the telegraphic report of it, as it afterwards transpired, being materially incorrect); that the people of Nevada should be given an opportunity to be heard upon it; and that the people, by voting the Republican ticket for President, had just within a few months past ratified the declaration of the Republican platform of May, 1868—that the control by loyal States of their suffrage laws should not be interfered with. But all this was as saying at the moon, and Nevada was recorded as the second State ratifying the fifteenth amendment."

"On March 17, 1869, the legislature of New York, whose people were well known to oppose equal suffrage for negroes, ratified the amendment by a majority of two in the senate. At that time there was pending before the people of that State a proposed amendment to the State constitution granting equal suffrage to negroes. Later on in the same year the vote was taken, and negro suffrage was defeated at the polls by over 32,000 majority. To give effect to their views, the people of New York at the same time elected new members of their legislature, who at once rescinded the former act of ratification and certified their rescinding act to the Secretary of State at Washington. But notwithstanding that three-fourths of the States had not yet ratified, and their votes on ratification were not yet announced, it was held that the repealing act of New York was void, and that the vote ratifying the proposed amendment was irrevocable. Thus New York was counted for the amendment."

"The legislature of Ohio, on the other hand, voted on May 4, 1869, to reject the amendment, but later on in the year, a change having been effected in the legislature, that vote was rescinded and the amendment ratified by a majority of one in the senate, and that action certified to the Secretary of State at Washington. In this case it was held that the repealing act was valid, and that an adverse vote of a State upon the ratification of a proposed amendment could at any time be changed; so Ohio was also added to the list of ratifying States, though the year before the people of that State had at the polls rejected negro suffrage by 50,000 majority."

"In Indiana the action was still more arbitrary. When news came of the passage by Congress of the fifteenth amendment the radicals, who had a majority of both houses of the legislature, attempted to rush through a ratification, as it had been done in Kansas, Nevada, and other States. The Democrats protested and insisted that time should be taken to hear from the people on the question, but all in vain. Thereupon, on the morning of March 4, 1869, when, according to programme, ratification was to have been put through, seventeen senators and thirty-six representatives resigned, thus breaking the quorum. It was urged by some that the remnant of both houses proceed to ratify and not let the record show the lack of a quorum, but the governor would not agree to the fraud. He therefore ordered a special election to fill the vacancies and called an extra session to meet in May. All of the resigned members were returned but one, and in this and other ways the people made their opposition to the amendment so manifest that it was hoped the radical members of the legislature would not attempt again to disregard their wishes; but they were found to be obdurate, though several of their men finally deserted and came over to the opposition."

"On May 13, 1869, the senate took a vote on the resolution to ratify, but less than a quorum voting, those present and not voting were counted to make a quorum, although the presiding officer of the United States Senate, upon the passage of the amendment by that body, had just refused to count as present those not voting, lest it show the affirmative vote to be less than two-thirds even of those present."

"The next day, May 14, 1869, the ratification resolution in the Indiana legislature was taken up by the house. In order to prevent being counted as present, as was done in the senate, forty-two members had again resigned the day before, thus reducing the membership to less than two-thirds, which, under the constitution of Indiana, was necessary to make a quorum. But the speaker showed himself equal to the occasion by ruling that while the State constitution of Indiana did specify two-thirds as necessary to make a quorum for ordinary business, it did not follow that more than one-half was necessary for extraordinary business, such as ratifying amendments to the Federal Constitution. He therefore announced the amendment ratified, and the name of Indiana was duly added to the list of ratifying States."

Those are examples of some of the methods employed to obtain a ratification of the amendment in the Northern States which were counted as ratifying."

In the Southern States this amendment was ratified by the legislatures elected by electorates created by Congress and the military and protected by the United States bayonets. In these States the question of securing negro suffrage in the Federal Constitution was left almost exclusively to the negroes under the tutelage of their carpetbag leaders and allies, and the ratification of this amendment was made a condition precedent to the restoration of Mississippi, Texas, and Virginia to their practical Federal relations, and the admission even of their Senators and Representatives elected by a false and unconstitutional electorate."

The question, though, is: Was this so-called proposed amendment ratified by the legislatures of three-fourths of the States of the Union? There were then thirty-seven States of the Union. Three-fourths of thirty-seven are twenty-eight. Six States—California, Delaware, Kentucky, Maryland, Oregon, and Tennessee—rejected the amendment. Indiana, as has been shown, never really ratified it. If New York was not allowed to withdraw her ratification, Ohio should not have been allowed to withdraw her rejection. Surely one of these States should have been recorded against ratification."

In the Southern States the amendment was ratified by legislatures elected by false, unconstitutional constituencies. It will scarcely be contended even by the most partisan, unscrupulous radical that in any one of these States, in a legislature chosen by the true constitutional electorate of the State, a single vote would have been cast for ratification."

This leaves only nineteen States which by any possibility could be fairly counted for ratification—nine less than the three-fourths necessary to a ratification. Nor does this take account of the remarkable proceedings in Kansas, Nevada, and Missouri. It is a matter of grave doubt if there was an honest ratification in a single State outside of New England, where the love of the negro was and is only equalled by her hatred of the Southern white man. That the radical leaders were fully convinced that the people of the North did not want negro suffrage is abundantly evidenced by the plank in their platform in the preceding year and by their prompt rejection of the proposition made in the Senate to submit the amendment to conventions in the respective States instead of the legislatures, so that it could be made an issue in the election of delegates to the conventions, and thereby afford the people

an opportunity to pass upon the question. Not only was this proposition rejected, but they insisted that the amendment be submitted to legislatures already chosen, thereby denying the people all opportunity to pass upon this vital matter.

The Constitution contemplates a ratification by a true, valid, and constitutional legislature; nothing else will do. A false ratification by an apparently true legislature of the State will not suffice, as in Indiana. An apparently true ratification by a spurious and unconstitutional legislature, as in the case of the Southern States, is no ratification. The validity of an amendment to the Constitution of the United States depends upon the historic truth of its ratification as required by the Constitution. The history of this great crime against constitutional government and civilization, perpetrated by the Anglo-Saxon race in one section of the Union against a disqualified and disfranchised minority of the same race in another section of the Union, is revolting and shocking, and were it not for well-authenticated records, would challenge credulity itself. The hypocrisy of the cant of Sumner et al. of the "equality of man"—the "fatherhood of God and the brotherhood of man"—is fully shown by their unwillingness to admit the Mongolian race to citizenship or to the suffrage. With the negro race, which only affected the Southern people, he was worthy of the ballot, however ignorant and vicious he might be. Every third voter in the South was a negro, while in the North only one negro voter to about eighty-four white voters. I quote again from Mr. Braxton:

"That these men were sincere in their protestations of a compelling sense of justice to the negro as a man and brother entitled to the right to vote as an inalienable natural right, like that of life and liberty, can hardly be accepted when we find them only too willing to exclude from that inalienable right Indians and Chinese, whose political affiliations were not so well ascertained. It is almost shocking to find among those who would exclude these races the names of Sumner, Morton, and Fessenden, who, with many others, insisted on indiscriminate suffrage for all citizens, regardless of race, yet succeeded in restricting the doctrine to the white and black races by adopting the timely suggestion of Mr. Stewart, that the red and yellow races might, by manipulation of our naturalization laws, be prohibited from becoming citizens. Thus they held that although suffrage be a natural right, belonging to man, like that of life and liberty, to deprive them of which were a heinous sin, yet there was no impropriety in restricting this natural right to men who were citizens, reserving the right to say who might become citizens. This was not surprising logic in that class of men, who, it is said, had on one occasion declared by a formal resolution, first, that the voice of the people is the voice of God, and, second, that we are the people."

It will be observed that the fourteenth and fifteenth amendments protect only citizens of the United States, while the naturalization laws were made to apply to the white and negro races only, and later extended to Indians of the Indian Territory who had severed their tribal relations.

Hon. A. Capperton Braxton, from whom I have so extensively quoted, is a lawyer by character and ability stands in the very front rank of the Virginia bar, and who has given much thought and study to the history of the fifteenth amendment.

The thirteenth amendment is clearly distinguishable from the fourteenth and fifteenth, both in the manner of its proposal and in the manner of its ratification. It is true that eleven States were absent from Congress when it was proposed, but in this instance these States were voluntarily absent, and therefore their absence did not affect the constitutionality of its proposal; and while its ratification in the Southern States had its initiation in Presidential usurpation, yet in these States it was ratified by legislatures elected by constitutional constituencies. There can be no question that the thirteenth amendment was proposed and constitutionally ratified, and is truly a part of the Constitution of the United States; and there can be just as little question that the fourteenth and fifteenth amendments were neither constitutionally proposed nor constitutionally ratified, and are therefore not parts of the Constitution of the United States.

Edmund Burke said that he did not know how to frame an indictment against an entire people, but the Congress of the United States, during what is known as "the reconstruction period," not only framed an indictment against an entire people, but convicted and sentenced an entire people without trial. Not one of all these proscribed millions in the Southern States was ever heard in his defense.

The Federal Government, in every department, insisted at all times that the ordinances of secession were null and void and that the citizens of those States which had seceded were in insurrection and rebellion against the Federal Government. If the citizens of the Confederate States were rebels against the United States, they came under the ban of the law and were subject to indictment and trial, but under the Constitution of the United States, no indictment and trial by a jury of their peers.

The reconstruction acts of Congress were directed against ten States, but no citizen of either of those States was ever tried in any court for treason or rebellion, for the very simple reason that the Federal Government knew that they had committed no crime and that a trial under the Constitution would result in their acquittal and exoneration.

The reconstruction acts of Congress have never been passed upon by the Supreme Court of the United States. It is, however, universally admitted that they were in violation of the Constitution of the United States. Even those who advocated them at the time or their passage admitted then that they were outside of and beyond the Constitution. If these reconstruction acts were unconstitutional and invalid, then the governments established by them and under their authority were usurpations, and the ratifications of the fourteenth and fifteenth amendments by these governments were and are nullities. These acts of ratification were not such acts as to become valid, because performed by de facto, though usurping, governments.

I am aware of and have considered the Congressional so-called "fundamental condition" upon which this and the other Southern States were restored to their former Federal relations and admitted to representation in Congress, but this fundamental condition is an unconstitutional, usurpation act by a fragmentary Congress—a condition which even a constitutional Congress would have had no authority, under the Constitution, to attach. Each State has the absolute right to establish and amend her own fundamental law, controlled and limited only by the Federal Constitution.

I am also aware that it will be contended that as these amendments have not been questioned in the courts for nearly half a century, if invalid at first, that the lapse of time has validated them. To this I reply that both the fourteenth and fifteenth amendments are intended as organic limitations upon sovereign States and that no time runs against a State or can render that valid against a State which was originally invalid, whenever the State sees fit to challenge its validity. I am also aware that it will be urged by some that the move I suggest

is both radical and inexpedient. To this I reply that there were some in our midst during the reconstruction period who were in favor of accepting the military bills and every other unconstitutional act of a radical Congress. These weaklings then said: "We are powerless, and we must accept the situation." If the patriotic manhood of that period had been controlled by such counsel, we would to-day be under carpetbag rule and negro domination. I deny that this proposed amendment to the constitution of the State is either inexpedient or radical.

I concede that it would be useless to appeal to the political department of the Federal Government to inaugurate a repeal of these amendments. In that department of the Government, which is actuated and controlled by sentiment, prejudice, malice, or political interest, or all, our adversaries are in an overwhelming majority; and while a large majority of them may agree with Secretary Root that negro suffrage was an experiment which has proved a failure, they have not the independence, manliness, frankness, or political courage to undo these great wrongs by repealing these amendments. My proposition is not to appeal to the political department and ask for a repeal of these amendments, but to appeal to the judicial department, which is supposed to be controlled only by the law and the facts, upon the ground that these amendments were never constitutionally proposed or constitutionally ratified, and are not now parts of the Federal Constitution.

If to be conservative means to preserve existing conditions, and if it is desirable to preserve existing conditions, then my proposition is both conservative and expedient. Absolute white and democratic supremacy is now maintained in the Southern States by the unity of the white people, who settle their political differences by white primary elections. But the growing intensity of antagonism between the two factions in the Democratic party in this and every other Southern State must indicate to every thoughtful man that issues of such magnitude will arise—and I fear at no distant day—between the two factions that they can not be determined by primary elections. Both factions will contend for mastery in the primary. The losing faction, unwilling to accept the determination of those issues by the primary, will appeal to the general and constitutional election. With the white people in this way divided upon these issues, the negro will hold the balance of power, and each faction will bid for this ignorant, venal vote in the general and constitutional election. The negro being again forced by these contending factions into politics, and knowing that he holds the balance of power, will demand and get concessions in consideration of this vote. Political equality under such conditions is inevitable and a certain amount of social equality an unavoidable corollary. Under such conditions absolute white supremacy in the Southern States, so essential to the preservation of civilization in those States, will be a thing of the past.

The proposition that I make is conservative, expedient, necessary; and while we stand united, as we are to-day, possible of attainment; but if we put off until such division as I have indicated, and firmly believe will come, the proposition I now make will then be impossible of attainment.

After such thought and as thorough an investigation as I am capable of giving to any subject, I firmly believe that the Supreme Court of the United States will sustain my position. If it does not, we will be no worse off than we are to-day; we will stand exactly where we do to-day, but with the consciousness of having made a firm and patriotic effort to avert the calamity which I and all of you must see is in the not distant future.

Eulogy on the Late Senator Edmund Winston Pettus.

REMARKS

OF

HON. WILLIAM SULZER,

OF NEW YORK,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, April 25, 1903.

The House having under consideration the following resolutions:

"Resolved, That the House now proceed to pay tribute to the memory of Hon. JOHN T. MORGAN and Hon. EDMUND W. PETTUS, late Senators from the State of Alabama.

"Resolved, That, as a special mark of respect to the memory of the deceased Senators and in recognition of their distinguished public services, the House at the conclusion of the exercises to-day shall stand in recess until 11 o'clock and 30 minutes a. m. on Monday next.

"Resolved, That the Clerk communicate these resolutions to the Senate.

"Resolved, That the Clerk send a copy of these resolutions to the families of the deceased Senators"—

Mr. SULZER said:

Mr. SPEAKER: On this occasion I desire to place on record my humble tribute to the memory of my friend, dear old Senator EDMUND WINSTON PETTUS, of Alabama, and to say just a few words regarding his life, his character, and his public services.

General PETTUS, Mr. Speaker, was one of the quaintest men and one of the most unique characters it has ever been my good fortune to know. The Congress will never see his like again. He was sui generis. I became acquainted with him when he first came to the Senate in March, 1897, then in his seventy-fifth year—a hale and hearty old man, 75 years young—and during the time he served in the Senate I had frequent occasion to see him and to discuss with him many questions of public moment. The better you knew him the more you liked him. He was in many respects a very remarkable man, and much of the story of his long and interesting life reads like a romance.

He was a lovable man. He had a genial disposition and an attractive personality. He made friends and he held them for

life. He was a man of much learning and erudition, and he was a hard-working student all his life. He was a man of great physique and of rugged character—one of the Creator's truly noble men. He was intensely democratic in all things. He loved the old landmarks of the fathers. He had a pleasing, confiding way that made him many friends, and when he died, full of honors, at the ripe old age of 86 years, I do not believe he had an enemy in all the world. He was a student and a soldier, a lawyer and a legislator, and in every field of his intense and heroic endeavor he reflected credit on himself, honor on his State, and glory on his country. He lived to a good old age, and was the oldest man and the best-loved man in the Senate when he died. His life, so perfect in all things, is an inspiration to us all, a priceless heritage to generations yet unborn, so pure, so simple, so just, so true, so noble, and so grand. The poet must have had him in mind when he sang:

Lives of great men all remind us
We can make our lives sublime,
And, departing, leave behind us
Footprints on the sands of time.

Mr. Speaker, EDMUND WINSTON PETTUS was born in Limestone County, Ala., on the 16th day of July, 1821. He came from good old Revolutionary stock. He was to the manor born—a true American. His grandfather on his mother's side was Capt. Anthony Winston, a brave and distinguished Revolutionary soldier. Young PETTUS received his early education in the schools of Alabama, and graduated from Clinton College, in Smith County, Tenn. He studied law in the office of William Cooper, then the leading lawyer in northern Alabama. He was admitted to the bar in 1842, on reaching his majority, and immediately began the practice of law in Gainesville, Ala. In 1844 he was elected solicitor for the seventh circuit, but when the Mexican war broke out he resigned, and enlisted and served as a lieutenant in his company. In 1849 the stories of the gold fields in California attracted him, and as a member of a little party he made the trip across the continent on horseback, but soon returned to the scenes of his former labors. Shortly thereafter he moved to Dallas County, where he identified himself with a well-known law firm and practiced law successfully until the outbreak of the civil war. He enlisted in 1861 as a major in the Confederate army, was soon promoted to be a brigadier-general, and throughout the war he won continual plaudits for his bravery in battle—a dashing, grand, heroic figure, the idol of the chivalrous soldiers of the Southland.

In the trying days following the war of the States he continued the practice of the law with much success and unhesitatingly bore his share of the burdens of those distressful times. In 1896 he was nominated by his party and unanimously elected by the legislature of Alabama to the United States Senate, where he served faithfully, industriously, and with much favorable commendation until his death—loved and honored and respected and mourned by all. Such, in brief, is the story of his life, but—

Life is but a day, at most,
Sprung from night, in darkness lost.

Mr. Speaker, Senator PETTUS was not only a great soldier in two famous wars, but he was a great constitutional lawyer and a far-seeing, constructive statesman. He was not a great talker, but he was a great worker. He believed in doing things, and doing them well. He believed in plod and progress, and there was no more indefatigable worker in Congress. He was invaluable in committee work. During the time he was in the Senate he accomplished much, and he has stamped the impress of his personality indelibly on the statutes of our country. He loved justice and hated intolerance.

He was a many-sided man, a myriad-minded man, deep and profound, and yet without trick or artifice. He had no mannerisms. He was a Democrat of the Jefferson school. He knew and loved Andrew Jackson. He believed in the capacity of the people to govern themselves. He was opposed to centralization of wealth and of power. He believed in the Constitution. He loved humanity and gloried in the coming of the better day. He was a gentleman of the old school, with a kindly nature and a courteous manner that made you feel at home, but at the same time the dignity of his character commanded the respect that was his due. He had a ready wit and a humor that was all his own. He was a lovable companion, and his fund of anecdotes, generally with an application, seemed inexhaustible. He was a great man, and he has left his impress on the history of his time. As the years come and go those who knew him best will miss him more and more—this kindly, earnest, brave, sincere, and grand old man of Alabama, who lived so many useful years to do good work for the home, for the State, for the country, and for humanity.

Agricultural Appropriation Bill.

SPEECH

OF

HON. EDMUND H. HINSHAW,

OF NEBRASKA,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, April 2, 1908,

On the bill (H. R. 19158) making appropriations for the Department of Agriculture for the fiscal year ending June 30, 1909.

Mr. HINSHAW said:

Mr. CHAIRMAN: This is a great bill, upon a great subject, carrying this year twelve millions. The chief industry in our country is and has always been the pursuit of agriculture. The soil produces the wealth of the country and determines its prosperity. The more a given amount of soil produces the greater the wealth and prosperity of the nation. The purpose of the organization and maintenance of the Department of Agriculture is to ascertain the best and most profitable methods of cultivating the soil and to diffuse that information among the people. The farmer who makes two blades of grass or two stalks of wheat or corn grow where but one grew before is twice as prosperous as he was, and the steady aim of this great Department is to aid him in the accomplishment of that purpose. Its workings are of direct benefit to every farmer in the country who takes advantage of the information which is so carefully prepared and freely distributed.

In 1839 the first appropriation for agriculture was made by this Government, amounting to \$1,000. Since then more than \$84,000,000 has been expended by the Government, and the appropriations will continue and increase. The Department was originally but a subsidiary bureau of the Interior Department, but was made a separate Department with a Cabinet minister at the head in 1889. It has only been in comparatively recent years that governments have made an organized effort to study methods of agricultural production. In 1842, in England, the first agricultural experiment station was established, and the first school of instruction was established in Germany in 1851. In 1875 the first experiment station was established in the United States. Meeting at first with derision, these efforts have come to be recognized the world over as of vast benefit to the farming industry, and therefore to all the people.

Modern machinery and methods have reduced the cost of producing crops. It cost by old methods 60 cents to raise a bushel of wheat, according to the historians. Now it can be raised, harvested, and thrashed, by modern methods with improved machinery, for half this amount. No more worthy thing has ever been done by this or any other government than the general diffusion of information upon the best methods of cultivating the products of the soil, and, as much as I favor economy in the expenditure of our revenues, I do not hesitate to urge and vote for liberal appropriations for continued extensions of this great work.

The Department of Agriculture is to-day divided into thirteen bureaus, entitled: Weather, Animal Industry, Plant Industry, Forest Service, Chemistry, Soils, Statistics, Entomology, Biological Survey, Experiment Stations, Accounts, Publications, and Public Roads. These bureaus are in the charge of experts, who embody the results of their researches in annual reports, the more salient features of which are to be found in the farmers' bulletins which the Department publishes and allots in equal numbers to Members of Congress for distribution to their constituencies.

If one could take out and separate the last two years from those which have gone before, he would be astounded at the tremendous developments which have been crowded into those twenty-four months. During that time we have enacted at least two great measures which come under the direct control of the Department of Agriculture. I refer to the pure-food bill and the meat-inspection bill. The complete tale of these is not yet told, but the benefits to be derived from them are certain to be remarkable. The Bureaus of Chemistry and Animal Industry, respectively, have charge of enforcing them. In addition to these, we have enacted the railway-rate bill, denatured-alcohol bill, employers' liability bill, the railway hours of service bill, and many other measures of equal importance. More has been done in a legislative way in the period mentioned than had been accomplished in a similar time during the last hundred years, if war measures be disregarded.

I feel a justifiable pride that I have done my share in the enactment of these great measures which work so largely for

the benefit of the whole country. And that is the thing for which the patriotic Member of the National Legislature must ever strive—the benefit of the whole country. Some Members have districts which, by the nature of their industries or geographical contour, require special attention from the Government, and others, as in my case, represent sections which are not in need of special local legislation, but are benefited or injured according to the course followed by legislation of a national character. And while I do not blame those Members who exert themselves in behalf of local waterways, irrigation, or their particular sections, the construction of forts, arsenals, and other public works, yet I deem it the better part to work for the enactment of legislation of general importance and the support of these great measures which make for the well-being of all the people.

The vast range of the activities of the Agricultural Department are probably not well understood. Under the meat-inspection law passed by Congress this work is now being done thoroughly in a thousand different houses, and about 1,300 additional experts are required in the Bureau of Animal Industry. At first it was feared that the agitation at home and abroad caused by the revelations of unsanitary conditions in the packing houses would cripple our foreign trade, but the results have shown that the stamp of approval of the Government upon meat products carries with it such a certificate of good character that both domestic and foreign trade has been improved and strengthened, and the producer likewise has been benefited.

The activities of this great Department extend to investigations looking to the destruction of the gypsy and brown-tailed moth in New England, the cattle-fever tick in the Southern States, and hog cholera and other diseases which have so depleted the live stock of the country. Experiments have shown that hog cholera is due to a virus which can pass through the finest filter, is invisible under the microscope, and can not be isolated or discovered by the usual methods. Experiments are in progress to produce a vaccine or serum for the prevention or cure of this disease. Nebraska is promised an experiment station in connection with the State agricultural school, whereby it is hoped that sufficient serum will be produced to furnish the farmers of the State with general treatment of their affected herds.

The Department has also enforced the humane treatment of live stock in transit.

The farmer has learned to know the importance of the position that he holds in the nation, and that to his educated and skillful efforts is largely due the prosperity and greatness of the Republic. The farm products of the year now have a value of \$6,794,000,000, which is about one-half billion dollars above the value of 1905, and far in excess of the annual values theretofore. Corn in the year 1906 reached the incomprehensible value of \$1,100,000,000 and 2,881,000,000 bushels. An enumeration of the figures of the production of wheat, oats, hay, and other products of the farm almost staggers comprehension. Crops have been on such a high-priced level that the result has been unusual prosperity for the whole farming community. This is shown by our export trade. Notwithstanding the immense increase in manufacturing, the exports of farm products still surpass all other products. Ending with June 30, 1906, the year's export of farm products was \$976,000,000, the largest ever sent forth by any country.

The products of our packing houses were exported to the extent of \$207,000,000, the largest in our history. Those who like to study the balance of trade will find an interesting chapter in the fact that in 1906 our agricultural exports exceeded our agricultural imports by \$433,000,000. The exports for a single year would pay the national debt. Farm values have increased in value \$6,131,000,000 since the census was taken in 1900. The rise in value of land per acre is probably due to many causes, but chiefly the increased productiveness and the higher prices of products. Scientific knowledge of farming, crop rotation, and fertilizing are responsible for a large increase in production and values, and the future is full of promise. More intensive farming, the utilization of the arid regions, the employment of irrigation will all add to the wealth of the nation and the happiness and prosperity of both producer and consumer. To all of these beneficent results the Department of Agriculture is contributing through its sixty experiment stations in fifty-one States and Territories, through sixty-three agricultural colleges and thousands of farmers' institutes. While the farmer in the East and the cotton farmer of the South have been materially advanced in prosperity during recent years, to the farmer of the Middle West has come the greatest benefit, and in my own recollection hundreds of thousands of agricultural debtors paying high rates of interest have become financially strong, with little debt and, if paying interest at all, at

a very low rate. There was a time when it was difficult to procure money with which to farm and labor was fairly easy to obtain, while now capital is more readily secured and farm labor is high and scarce. Labor-saving machinery has come to the farmer's rescue, and while the farmer's lot is burdened with many trials and difficulties, yet his is the life of independence, and conditions, both as a result of legislation and economic development, constantly tend to improve his lot. His standard of living has become better and better; the telephone and the free rural delivery bringing his letters and daily newspaper now make the farm a place to be sought and not to be avoided. The city no longer tempts as of yore; agriculture is dignified and is ennobled.

The future interests of the farmer, as well as his manufacturing and commercial brother, could be still further improved, in my opinion, by some legislation which would secure to him a permanent enjoyment of the results of his labor. I refer to the methods by which his products may be safely and economically marketed and the money which he procures for them be safely kept for investment or use when he may call for it. The railroad-rate bill passed by Congress in 1906 has already brought good results, and as it is worked out in the future, I believe, it will result in the reduction of freight rates in interstate commerce and in a more speedy and certain supply of the facilities for transportation of grain and live stock. This national statute, which it was my pleasure and duty to advocate and vote for, has been supplemented in many States by laws tending to produce similar results within the boundaries of the States.

There is another proposition that has appealed to me as of peculiar interest to the farming community. The necessity for it has been emphasized by the recent financial flurry, which came in the midst of the greatest prosperity. It did not come because of failure of production or of lessened demand for the products of labor. It probably was due to overspeculation and to the tremendous demands upon capital for investment in the vast industrial concern which have spread with amazing complexity through our national life. But whatever the cause, almost in the twinkling of an eye banks found themselves compelled to refuse, at least in part, payment of depositors. Happily, that situation has now passed away, but it may recur. In the great cities the large depositors instantly withdrew their money and placed it in vaults out of circulation.

No doubt these acts were caused by fear. If there had been no fear of the loss of their money, I do not believe the panic would ever have occurred. It seems to me, therefore, that a system by which the whole people would be absolutely made confident that under no circumstances would any depositor lose a single dollar would do more to prevent the withdrawal of money from circulation and therefore a repetition of the occurrences of October, 1907, than any other form of financial legislation. It seems to me neither unjust nor impracticable to create, by national law, a fund for the payment of depositors of suspended national banks. Each State can likewise protect the depositors in State institutions. A small tax upon deposits, paid not by the depositors but by the banks, would create an ample fund for this purpose. The banks would be the gainers by this system, notwithstanding the small tax they would pay, because from out the pockets of the people and the hiding places of fear would come to the bank vaults millions now practically out of circulation. While I would be pleased to have the bill which I have introduced become a law, I will be equally well satisfied if any other bill of similar import shall become the law of the land. I firmly believe that this legislation will come. It is embodied with many other propositions, some of which are quite objectionable I think, in what is known as the Fowler bill, recently favorably reported by the Committee on Banking and Currency.

Insurance of bank deposits will, in my judgment, tend to build up and extend not only our great agricultural interests and make secure the results of the farmer's toil, but every wage-worker, every merchant, and every manufacturer of the land will receive a renewal of confidence thereby and an access of strength and a feeling of safety inducing renewed effort.

As an illustration of the rapid extension and increase of the facilities and conveniences of farm life by governmental instrumentality, the growth of the free mail delivery in the last few years is notable. My chief personal experience has come within the Fourth District of Nebraska. That district, when I entered Congress, contained but 83 rural routes, a very inadequate service for over 200,000 people. To the best of my ability I assisted the patrons of the proposed routes to their early completion, and at present there are over 250 routes in the district, and the space is so well covered that those who wish to get additional service are not able to find a portion of land unoccupied sufficiently large to permit the establish-

ment of an additional route. Undoubtedly there are places which are not properly covered and patrons who are not properly reached; but the Department has tried, I am sure, in every possible way to accommodate all the people. In due time, I have no doubt, a house-to-house service will prevail, but with the increase of salaries to the carriers recently made and the other vast expenses incident to the service, the Department has probably made as great progress as could be reasonably expected. The Congress this year appropriated \$33,000,000 for the service. I doubt not it will increase year by year, and I look to see the time when this branch of the postal service will be self-sustaining. No one would think of its discontinuance. I believe this has added more to the desirability of farm life than any other feature that legislation has produced.

There is another question of impending moment in which the farmers of this country are vitally interested, both directly and indirectly. I refer to the tariff. The Dingley tariff law, passed in 1897, has aided in the accomplishment of wonderful results to this country. Great prosperity has followed its enactment, and while opinions may differ as to whether the law caused that prosperity, it can not well be doubted that the impetus given to manufacturing and to commerce stimulated agriculture and enhanced prices. There has been a steadily rising wave of wealth. But the conditions existing in 1897 differ from the conditions of 1908. The schedules of this tariff law should be remodeled. They will be remodeled. The principle of protection will be preserved. A tariff charge which in 1897 was reasonable will be found, in many instances, under the changed conditions of to-day, excessive. The free list, now very large, will doubtless be increased, so far as the state of the revenues will admit. There is no disagreement among men or parties upon this question of revision, and it is certain to be brought about within a year. When it does occur the Representatives of the great Middle West should see to it that the peculiar productions of that great food-producing section of the world shall have adequate and proper protection. The demand of the East is that "raw material," as they call it, should be brought in free of duty. Thus they seek to put into untrammelled competition the great Middle West and the vast reaches of Argentina. While demanding protection upon the finished products of their skill, these Eastern philanthropists are willing to sacrifice upon the altar of free trade the products of the farms and the ranges of the West.

I favor the abolition of the duty on lumber, on farm implements, on wood pulp, and print paper. The lumber interests of the Puget Sound country contend that the present duty of \$2 per thousand on lumber does not affect the price to the American consumer, and hold that the lessening supply and the increasing demands of the last few years is alone responsible for the excessive price. Still it seems to me that no good purpose is subserved by the retention of this duty, and if by its abolition the cut of the Canadian forests can have freer and cheaper admission to our markets and greater competition thereby ensues, we may have some reason to believe that the builder of a prairie home will receive substantial relief. A tariff law, by whatever party enacted, is always a matter of compromise between the different sections and the varying and conflicting interests of a vast country. No one ever can or does have wholly his own way. The West is growing stronger and more populous year by year. Its interests are extending and increasing. Its strength in the national Congress is growing. Its rights must and will be sought and maintained. In the framing of this new law careful and jealous regard must be had, both as to the amount of the duties levied upon the things that we buy and the protection which must be given that vast region upon the things which it sells.

The farmers of this country are especially interested in the perpetuation of what are known as the "Roosevelt policies." It gives me great satisfaction to say that in all matters of general legislation I have steadfastly adhered to this progressive platform. He has become preeminently the exponent and advocate of reform tendencies and noble ideals of government. He is a worthy leader in a worthy cause. The hearts of the people are with him. His sincerity has never been doubted. His ability is great and unquestioned. His honesty of purpose is known of all men. His policies can be continued and enforced by reposing confidence in the men who have upheld and aided him and voted for his principles.

To curb and minimize the too great influence of the over-reaching corporation and the combinations of interests which have sought to dominate and control the destinies of the country, is a duty demanding high resolve and inflexible purpose. This campaign has been begun, and will be continued to the end. No one need suppose that a reaction is at hand. Peaceful, progressive, persistent will be this revolution in our affairs. The

era of Roosevelt marks an epoch in history. The Grecian poets rivaled each other in singing the praises of the golden age of Greece. The age of Pericles, Demosthenes, and Phidias is still the theme of the historian and the pride of the student of antiquity. The glory that was Rome's when Cæsar with his legions drove Pompey across the sea to an ignominious death, and handed down to his august successor the vast empire, encircling the Mediterranean, is yet the subject of panegyric and lofty praise by the pen of the Gibbons of the historic world. We read much of England's golden age when the masterful Elizabeth reigned with haughty and despotic power. England under Victoria, Disraeli, and Gladstone has been lauded as mistress of land and sea. Ninety millions of American freemen, educated, refined, liberty-loving, rich and free, possessed of resources surpassing all the dreams of antiquity and the hopes of more modern times, with a virility and determination deep-seated, intense, and unconquerable, surpass the ideals of Grecian poet and sage, the warrior of Cæsar's day, the peasantry of England, oppressed by the taxes of Elizabeth's government, or the Englishman of the Victorian era still tied down by feudal customs and ancient laws, and these millions of free-born American men are bounding forward with mighty speed to the attainment of perfection in all matters of public policy, in the establishment of the eternal right and in the everlasting recognition of the inalienable rights of man and the superiority of America's character, its Government, and its laws.

Eulogy on the late Senator John T. Morgan.

REMARKS

OF

HON. WILLIAM SULZER,

OF NEW YORK,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, April 25, 1908.

The House having under consideration the following resolutions: "Resolved, That the House now proceed to pay tribute to the memory of Hon. JOHN T. MORGAN and Hon. EDMUND W. PETTUS, late Senators from the State of Alabama.

"Resolved, That, as a special mark of respect to the memory of the deceased Senators and in recognition of their distinguished public services, the House at the conclusion of the exercises to-day shall stand in recess until 11 o'clock and 30 minutes a. m. on Monday next.

"Resolved, That the Clerk communicate these resolutions to the Senate.

"Resolved, That the Clerk send a copy of these resolutions to the families of the deceased Senators."

Mr. SULZER said:

Mr. SPEAKER: In the death of Senator JOHN T. MORGAN the Commonwealth of Alabama lost her foremost and best beloved citizen, and the country one of its greatest and most esteemed statesmen. He was a grand old man, honest and brave, eloquent and courageous, learned and logical, sagacious and patriotic, and his departure to the undiscovered land leaves a void in our public and private life which can not be filled. He will be missed more and more as the years come and go. He was a gentleman of the old school, a man of heroic mold, of much reading and constructive ability, of the highest honor, of unquestioned integrity, a part of our history for more than half a century, and in his personality he linked the glories and the memories of the past with the plot and progress of the prosaic present. For thirty years and more, like a Roman senator in the brightest era of the ancient Republic, he stood like a giant oak in the greatest legislative forum of the world eloquently championing the rights of man and battling for the cause of Democracy—as brilliant as Clay, as industrious as Benton, as logical as Calhoun, and as profound as Webster.

In halls of state he stood for many years
Like fabled knight, his visage all aglow,
Receiving, giving sternly, blow for blow,
Champion of right! But from eternity's far shore
Thy spirit will return to join the strife no more.
Rest, citizen, statesman, rest; thy troubled life is o'er.

JOHN TYLER MORGAN was born in the little town of Athens, Tenn., June 20, 1824. He received an academic education chiefly in Alabama, to which State he was taken when 9 years old, and where he resided continuously until his death. He studied law, was admitted to the bar in 1845, on reaching his majority, and he practiced his profession with much ability and great success until his election to the Senate. He was one of the great lawyers of the country—learned and eloquent, methodical and industrious, sagacious and sincere, honest and true, safe and successful. He was a Presidential elector in 1860 for the State of Alabama, and voted for Breckinridge and

Lane. When war came between the States he joined the Confederate army in May, 1861, as a private, but was soon promoted to be a major and shortly afterwards to be a lieutenant-colonel of his regiment. He was commissioned in 1862 as a colonel and raised the Fifty-first Alabama regiment; was appointed brigadier-general in 1863, and was assigned to a brigade in Virginia, and subsequently resigned to join his regiment, whose colonel had been killed in battle. Later, in 1863, he was appointed again a brigadier-general and assigned to the Alabama brigade, which included his own regiment.

After the war he resumed the active practice of his profession, was again a Presidential elector in 1876, and voted for Tilden and Hendricks. He was always a Democrat of the old school, and ever took a deep interest in public affairs. He was elected to the United States Senate to succeed George Goldthwaite, took his seat March 5, 1877, and continued to represent his State in that Chamber of Congress until his death, having been elected for six full terms, and I believe in all our history there are less than half a dozen men who have been elected to the United States Senate for six full terms in succession. He died in the Capital of his country in the fourth month of his thirty-first year of continuous Senatorial service, with a world-wide reputation, full of honors, in the zenith of his fame, and with the respect and the love of all the people of all the land.

For years General MORGAN was a commanding figure in the Senate, a conspicuous legislator, a shining mark, a sturdy plodder, an eloquent debater, and his work in Congress has left a deep and lasting impress on the affairs of men and on the statute books of his time. He was a man of great energy, of unwearied industry, of unswerving devotion to principle, of eternal fidelity to friends, and he had the faculty to sound the depths of every proposition that came within the confines of his consideration. He exhausted every subject within the range of his grasp. He was a man of the highest ideals, of the noblest impulses, of the clearest conception of the amenities of human life, and he stood for the best traditions of the Senate and represented in his personage the highest type of an American citizen. He was a faithful public servant, and the great work he did for all the people will live as long as the Republic shall endure. He gave to his country the best and ripest years of his life and his country will never be ungrateful to his memory or forgetful of his long and illustrious service. The country mourns its loss.

But weep not for him!
Not for him who, departing, leaves millions in tears!
Not for him who has died full of honor and years!
Not for him who ascended Fame's ladder so high,
From the round at the top he has stepped to the sky.

It was my good fortune, Mr. Speaker, to have known Senator MORGAN well. He was my friend and I was his friend. For more than a dozen years we worked together in Congress, and I had frequent occasion to consult with him and to get his advice regarding matters of much public moment. He was a most approachable man, kind and patient and considerate, and he took a great interest in the welfare of younger men. He was always glad to help those that needed help. He had a sunny, genial disposition; a quaint sense of humor; he dearly loved a good story, and yet he was one of the most learned, one of the most erudite, one of the most eloquent, and one of the gravest men it has ever been my good fortune to know. In every sense of the word he was a great man and a true man and an honest man, and he believed in his fellow-man. He looked on the bright side of life. He knew the world was growing better; he was optimistic and not pessimistic. There was nothing of the skeptic or the cynic in his make-up. He never lost faith in humanity.

He was a lover of liberty, a friend of freedom, a believer in the supremacy of the law, and one of the greatest constitutional lawyers this country has ever produced. He believed in the greatness and the glory and the grander destiny of the Republic and stood for that great cardinal principle of Jefferson, "Equal rights to all, special privileges to none." He had no use for the trickster, the trimmer, and the trader. He was a great constructive statesman—a creator of statute law. He hated cant, spurned pretense, and despised hypocrisy. He was a simple man and a great Democrat. He was an indefatigable worker and he met Napoleon's test—he did things—things that will live, things that are now history. He was a fearless man and dared to do what he thought was right, regardless of consequences. He was a faithful public official and he died in the service of his country—ripe in years and crowned with glory. His work is done. His career is finished. He has reaped his everlasting reward in the great beyond. Grand old man of Alabama, hail and farewell!

The Catholic Church Claims Bill.

SPEECH

OF

HON. A. L. BRICK,

OF INDIANA,

IN THE HOUSE OF REPRESENTATIVES,

Friday, March 6, 1908.

On the bill (H. R. 16143) making appropriation for the payment of the Catholic Church claims in the Philippine Islands for the use and occupation and destruction of church property in the Philippine Archipelago.

The CHAIRMAN. The House is in Committee of the Whole House to consider bills on the Private Calendar under the rule. Mr. COOPER of Wisconsin. Mr. Chairman, I move to take up for consideration at this time the bill (H. R. 16143) to provide for payment of the claims of the Roman Catholic Church in the Philippine Islands.

The motion was agreed to.

The CHAIRMAN. The Clerk will read the bill.

The Clerk read as follows:

Be it enacted, etc., That there is hereby appropriated, out of any moneys in the Treasury not otherwise appropriated, the sum of _____ dollars and _____ cents, the same to be paid to the archbishop of Manila, in the Philippine Islands, as the representative (and trustee) of the Roman Catholic Church in said islands; and that the acceptance of said sum, paid under the provisions of this act, shall be in full satisfaction of all claims for use and occupation of the property of said church in said islands and for damages done thereto by the military forces of the United States prior to the date, to wit, August 31, 1905, of the official report of the "Board on Church Claims," which said board, composed of John A. Hull, lieutenant-colonel, judge-advocate; Alexander O. Brodie, lieutenant-colonel, military secretary, and J. W. Moore, first lieutenant, Second Cavalry, was duly convened August 1, 1905, at headquarters Philippines Division, in the city of Manila, in said islands, to consider and report upon said claims.

Mr. BRICK. Mr. Chairman, I want to say a brief word upon this appropriation to pay the just claims of the Roman Catholic Church in the Philippine Islands.

It is proposed to do this because our Army in 1898 and the following years, out of very necessity, which everybody appreciated and sympathized with, through its military power took possession of churches, parish houses, school buildings, seminary buildings, and other structures belonging to the church and converted them into hospitals, prisons, and barracks. This continued through all the hostilities and, in many instances, long after peace was restored.

Now, this happened because war and bloodshed left no alternative. The sick and wounded must be cared for. There was no other way.

But, whatever the emergency, our Government did occupy the church property, to the exclusion of the church authorities, and by so doing not only had their use, but prevented them from taking any measures for the protection of the property.

Many of the buildings were splendid structures; they were often seriously damaged and sometimes destroyed, in whole or in part.

Every instinct of fairness and justness demands full and complete recompense for all damage done and a fair rental for the use of the property.

The contention of the minority of the committee, as set forth in the minority report upon this bill, and as advocated by the gentleman from Virginia [Mr. JONES] upon the floor of the House, does not appeal to me either in law or in equity, nor in justice or reason.

They contend that the Roman Catholic Church was not the legal owner of the property, therefore that they should not receive the indemnity provided in the bill.

Well, who does own it, if not the Roman Catholic Church?

While answering that question the world would move on ad infinitum and the debt remain forever unpaid, to the everlasting disgrace of our country.

The truth is that everyone knows, who has any knowledge of church affairs, that from the dawn of Christian church organization these churches and church property were consecrated beyond and above the commercial use of man. They were not public property, nor were they private property, in the ordinary sense of private individual ownership.

They were property dedicated to the worship of God, but being material they must be looked after and cared for.

Now, that is the question. Whoever had the care and custody of them and the administration thereof in church affairs is the legal owner to receive this indemnity.

To me the question is a plain and simple one, easily answered.

Under Spanish rule there was no law putting them in possession of the state.

Under Spain there was, there is, but one religion, the Roman Catholic Church. By virtue of the laws of Spain there was only one body which could under any circumstances have possession or control over any of these churches dedicated to the worship of God. That was the Roman Catholic Church, and under these laws the church control was necessarily and actually exclusive.

When America, following the Spanish war, took possession of the Philippines, the church rights were fully recognized and protected in the treaty of Paris.

But it is not necessary to hark back to that treaty for an argument.

Neither the Government of the United States nor the government of the Islands has ever attempted to interfere with the rights which the Roman Catholic Church had in these buildings and property; but on the contrary they have always recognized and upheld them.

Now, the fact is beyond all question that no power—national, municipal, corporate, or individual—other than the Roman Catholic Church, has any right, title, or interest in this property.

If Aglipay with his few followers makes claim to any such right as a Catholic, thereby setting themselves up against the Vatican, that minute they become non-Catholics and are barred absolutely from our consideration.

When they attempt to set up a branch, an independent Catholic organization, by that act they go out of the Roman Catholic Church and lose all right to the name and possessions of that church.

Mr. Chairman, I am satisfied beyond any doubt that the Roman Catholic Church holds the full and only title to these church properties. All history fortifies it; the laws of Spain through centuries have recognized it and reaffirmed it by the concordat of 1851. The treaty of Paris proclaims it, and every act and deed of the United States have confirmed it. Indisputable evidence from everywhere on high authority has proven it, and the courts have all sustained it. Any attempt to becloud the truth of it has signally failed. Now, why should we delay this simple act of justice any longer? To my mind there could be no reason for further delay than utter neglect of duty, unjust alike to him who suffered it and to the church which would suffer from it.

Mr. Chairman, I hope and trust the bill will pass in the full amount recommended by the committee in the dictates of conscience and the behests of even-handed justice.

The Advance of the Republic.

SPEECH

OF

HON. EDMUND H. HINSHAW,

OF NEBRASKA,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, May 21, 1908,

On the bill (H. R. 21871) to amend the national banking laws.

Mr. HINSHAW said:

Mr. SPEAKER: The history of the United States is a history of political parties. Our Government is so constituted that it is and probably always will be governed by parties. For about sixty years before the civil war the Democratic party was almost continuously in control of our Government. Even yet that party points with pride to the record of those sixty years. It delights in this retrospect of its early achievements, because it feels and exhibits little pride in its record of the last fifty years. The whole world, but especially the United States of America, has made magnificent progress in the last half century. It has happened that during most of that time the Republican party has controlled and directed the financial and commercial affairs of this country. There have doubtless been some mistakes; there have been some miscalculations; there are a few stains upon the record, but no impartial historian as he reviews that marvelous record of war and peace, of growing and expanding industries, of the development of agriculture, of the digging of mines, of the improvement of lakes and rivers and harbors, of the spread of education and religious liberty, of the building of railroads, of telegraphs and telephones, the rearing of cities and the fertilization of arid lands, can say to the generations yet unborn that it has an equal in all the annals of man. Our towering mountains and our spreading plains, our magnificent rivers running to the sea, our wealth of harvests beyond compare attest that America is founded upon the eternal rock.

After war's desolation and loss of billions, when men and money disappeared like the leaves of the forest in autumn, the great Republic astonished the world by her recuperative powers and, with wise statesmanship and dauntless patriots in Congress and in the Presidential chair, rose with unconquered front and amazed mankind by her boundless material expansion and her constructive statesmanship.

The Republican party is not a party of negation. Its history exhibits continuous progress. No one can gainsay it. It is conservative in the sense that it conserves and saves that which it has won and made worthy of preservation. It has been conservative on the money question. It enacted the law for the resumption of specie payments in spite of the detraction and obstructive tactics of the Democratic party. Amid prophecies of disaster and forebodings of failure on the part even of many of its friends, the Republican party persevered unto the end and made the greenback, the child of war, assume the proportions of the full manhood of gold. The credit of our country steadily rose under the skillful treatment of its great financiers—its Chases, McCulloughs, and Shermans, until the fame of the stability of the Republic's finances, credit, and resources crossed the seas and invaded the uttermost parts of the earth. By wise legislation that party built up the industries of every section of the land and everywhere was hum of turning spindles, sound of woodman's ax, and music of farmer's reaper—the lord of valley and of plain.

As the years went by and the country grew, our people became dissatisfied even with the prosperity that had enriched them. At a period of great expansion, when all industries were developing magnificent proportions, when wages were high and production gigantic, the people, in 1892, returned to power in all branches of our Government the Democratic party, and once more intrusted the country's destiny to a party of untried statesmen of experimental policies and uncertain disposition. The memory of man may be short, but the history of the experiment of 1892 I do not believe will fade from the recollection of an intelligent people. Explain as you please the causes of the business failure and the financial and industrial depression of the years from 1893 to 1897, but I think the American people will always believe that the prime cause of it all was the threat of the destruction of protection to American industries. The protective policy needs no defense. It has come down from the very earliest days of the Republic. It has been tested by time, and however tariff schedules may change with changed conditions, I firmly believe that the American people will preserve intact the protective principle. In the midst of the midnight of financial despondency and industrial stagnation the Republican party went forth to battle for the gold standard. There is not, my friends, in the history of men a contest fraught with such far-reaching results affecting the happiness and prosperity of the race as the battle of 1896, championed, indorsed, and gloriously led to victory by the gentle, peace-loving, broad-minded, patriotic McKinley.

It marked an era in finance; it fixed for all time to come the financial credit and industrial stability of the Republic. It laid the foundations deep and wide for the prosperity of the coming years. McKinley's mighty host proclaimed to all the world that the obligations of this Government are sacred, that its escutcheon should never be tarnished, and that the foul finger of repudiation should never be laid upon its honor. This signal victory for sound money and the early passage of the Dingley tariff act of July, 1897, woke the nation from its slumber of stagnation, started again the wheels of industry, and engaged in busy and remunerative toil millions of idle men.

Mr. Speaker, it is a wise merchant who often takes an inventory of stock. It is a wise nation that takes an account of its progress and material development at proper intervals and learns whence it has come and whither it is drifting. Briefly, let me recount a part of the marvelous story of ten years. It is like a fairy tale. No nation has equaled it; none may ever hope to surpass it. It all happened during the Administrations of McKinley and Roosevelt. They had a hand in its development and are entitled to at least a part of the credit for its wonderful unfolding. The policies of government employed during that ten years have not hampered, but have accelerated the growth of our prosperity.

I take the ten years from 1897 to 1907. Eighteen hundred and ninety-seven was better than some of the years which preceded. We had emerged from a disastrous and long-to-be-remembered panic.

In 1897 our money of all kinds in circulation was \$1,640,000,000. In 1907 our money was \$2,772,000,000, an increase of \$1,132,000,000. In 1897 it was per capita \$22.87; in 1907 it was \$32.22, and on May 1, 1908, it was \$35.35 for each of more than 87,000,000 people.

In 1897 the total of deposits in all banks was \$5,094,000,000; in 1907, \$13,099,000,000, or two and a half times as great. In 1897 the number of depositors in savings banks was 5,201,000; in 1907, 8,588,000. This is a remarkable showing of the increased number of depositors and a phenomenal increase in the amount of money and credits of the American people. This money belongs to the people of all classes and conditions. It belongs to the people of the city and to the people of the country. The small savings bank in the small city has enjoyed a growth of business as great as the metropolitan bank.

The history of the exchange of the products of our toil is likewise a marvel. Both production and consumption have proceeded with giant strides. In this period of ten years the people have been better clothed, better fed, and better housed than ever before. Imports leaped from \$764,730,000 in 1897, one-half of which were on the free list, to \$1,434,431,000 in 1907, nearly one-half of which were brought in free of all duty. This merely takes account of our consumption of foreign products and in no wise covers that magnificent production and consumption within our own domains and of which the customs officer never takes toll.

But the astonishing chapter of this decade of prosperity is the record of our export trade. In 1897 we sent out to the world of all kinds of products, agricultural and manufactured, \$1,050,000,000. But in 1907 the world bought from us \$1,880,000,000 of the products of our toil, our genius, and our skill. In this ten years, therefore, our export trade rose \$830,000,000.

Now, look at the balance of trade. It certainly has much significance. If the merchant or the farmer for a series of years buys for consumption more than he sells, he is not likely to get rich. If the balance of trade runs against a nation for a series of years, it is likely to become poor. From these figures it is easy to calculate that in 1907 the balance of trade in our favor as a nation was \$446,000,000.

Now, look at a few figures of production. In 1897 we produced of corn 1,902,000,000 bushels; in 1907, 2,592,000,000 bushels, an increase of 690,000,000 bushels. But not only did the total yield increase nearly 40 per cent, but the price increased more than 100 per cent. The crop of 1896 was larger than that of 1897, but it was worth upon the streets of the city of my residence only 10 cents per bushel.

In 1897 we produced of wheat 530,000,000 bushels and in 1907, 634,000,000 bushels. The annual production of wheat has not varied greatly in the ten years. The farmer who has it to sell realizes that, in the increase during the ten years of 100 per cent on the price per bushel, he has advanced from a losing to a paying proposition. The reason of the advance is not far to seek. The demand has grown. People eat more bread. They do this because they have the wherewithal to buy.

To make his live stock grow and thrive the farmer seeks a well-balanced ration. To make its people expand and prosper a nation seeks to balance agriculture and manufacturing, commerce and trade. By indissoluble ties we are bound. Each man is his brother's keeper. No man lives unto himself alone. All must prosper or all must suffer loss. Why does the farmer receive such prices for his products? Here are some reasons: Note the wages paid in manufacturing. In 1890—I have not at hand the figures for 1897—there were paid \$1,891,000,000. In 1905, \$2,611,000,000, an increase of \$620,000,000; and the subsequent years are still greater. Now, note the result of all this toil: The value of manufactured products in 1890 was \$9,372,000,000. In 1905 it was \$14,802,000,000, an increase of \$5,430,000,000.

This vast production of foodstuffs and manufactured goods supplied the domestic trade, the most valuable commerce in all the world. About 8 per cent of this enormous elemental wealth went beyond the seas.

There are those who would have us believe that a protective tariff prevents exports and hinders foreign commerce. They say this in the face of the fact that our foreign commerce is larger than in all history and facing the fact that on the free list now are nearly one-half of all our imports. It has become the settled policy of this country to maintain our vast and necessary expenditures largely by customs duty. Direct Federal taxes have never been congenial to the American people. So long, therefore, as revenue must be raised on imports, who shall say that it is not the part of wisdom so to adjust these taxes that there shall be given to the American producer and wage-earner a preference over his competitor on foreign shores?

The history of tariff legislation in this country shows that periodically tariff schedules have been adjusted to meet the changing conditions of business and of trade. So it will happen now, but the principle of protection will be preserved. Who assails it does violence to American traditions, to American ex-

perience, and to American foresight. England is just now feeling the revulsion of sentiment against her free-trade policy. The propagandum of protection is abroad in her boundaries. Canada, her favorite child, disclaims the mother doctrine.

Entirely compatible with the doctrines and policy of the Republican party, a revision of the tariff will be made, with a view solely to American interests and the preservation of the rights and prosperity of the producer, the wage-earner, and the manufacturer. All are interdependent and must rise or fall together. When this revision takes place the representatives of the great Middle West must see to it that the productions of that great food-producing section of the world shall continue to have adequate and proper protection. The demand of the Eastern States for what they are pleased to call "free raw material" is, in my judgment, a menace to the industries of the West. It seems to me that they seek to put into unrestrained competition the great Middle West and the vast and productive reaches of Argentina. They insist upon adequate protection for their finished products, but are willing to sacrifice for near-by Canadian markets and cheaply transported South American raw material the products of the farms and ranges of the West. The farmer of the boundless Western prairie realizes that in building up and perpetuating American industries he pays some tribute to the manufacturing States, but in return therefor he insists that, since he is a large consumer of their finished products, his corn, his wheat, his cattle, his pork, and his poultry should have the equal protection of the tariff laws.

Mr. Speaker, in my judgment, the American people will demand, when a new tariff bill is framed, that it shall be an actual revision and not a restatement of the existing tariff schedules. Many of the rates now existing are too high and must be lowered. Many are unnecessary, and the free list should be extended. Protection to the American wage-earner and not extortion should be our watchword. I believe that a tariff bill can be so framed, perhaps, by the establishment of maximum and minimum duties that foreign nations will take down certain barriers that now exist to the admission of American products, especially of the farms and ranges, such as flour, beef, and pork, and thus materially extend our foreign markets.

Mr. Speaker, I believe that the American people have a right to be proud of the record of national legislation during the past ten years. As a comparatively new Member of Congress, I have a justifiable pride in the work of the last three Congresses, which have marked a material advance along the lines of progressive legislation. Note the railroad-rate bill, which provides for the establishment of rates when complaint is made to the Interstate Commerce Commission; which enforces publicity of the affairs of transportation companies; which, with other acts, has put an end to the evil of rebates, and, above all, has established, once and forever, the proposition that the Government can and does control the public-service corporations of this country, and that hereafter no one will seriously question that 230,000 miles of railroad are subject by Federal law to legitimate and complete regulation.

If competition has disappeared because of the enormous combinations of transportation lines, then it is high time for the Federal Government, which alone can regulate interstate commerce, to stretch forth its mighty arm and so direct the complex machinery of trade that the strong shall not consume the weak; that communities shall receive fair and equal favor, and that individuals shall receive only such preference as they are entitled to receive by reason of the endowments of nature. In my judgment, this law should further be amended and the Interstate Commerce Commission should be given the power, upon its own motion as well as upon complaint, to initiate and formulate rates and to prevent railroad companies from putting into force a new and different rate without the consent of the Commission. In the fixing of rates a fair return upon the investment, of course, should be permitted, but the expense of the service and the value of the property should be the basis of rates, rather than a levy of all the traffic will bear.

Mr. Speaker, I can but enumerate many of the beneficial acts that have been passed by Congress in the past few years. The meat-inspection law affords not only security to the consumer at home and abroad, but tends to expand our foreign commerce in all these products, and, in my judgment, is an unmixed blessing. Free denatured alcohol promises, when facilities are more adequate for its production, to bring decrease in price of fuel, light, and power. The pure-food law affords to the consumer a guaranty of quality heretofore unknown. The employers' liability law passed by this Congress affords a protection to the millions of men employed in this country by corporations which has heretofore been practically denied them and will result in increased vigilance on the part of the employers that all appli-

ances shall be safe and reliable and will bring about the exercise of great care that the men employed shall receive the fair and humane treatment to which they are entitled. The pocket-book is the nervous system of both men and corporations, and danger of the loss of its contents brings more salutary reform than the ethical discourse of the humanitarian.

In addition to the good legislation of the Fifty-ninth Congress, the present Congress has passed this employers' liability law in lieu of and to correct the errors in the one heretofore passed; also a model child-labor law for the District of Columbia, which, it is sincerely hoped, all the States of the Union will substantially copy upon their statute books. In my judgment, the most important provision of the railroad-rate law of the Fifty-ninth Congress was the provision for publicity of the acts of railroad corporations and a requirement for a uniform system of their bookkeeping and an inspection thereof by Government officials. This Congress has made effective this provision by an appropriation of \$350,000 to render certain such publicity and inspection as will forever make rebating and discrimination impossible. The House of Representatives has passed an emergency currency measure, which may not be entirely satisfactory to all, but which, it is hoped, will prevent the recurrence of currency contraction, financial stringency, and the hoarding of money.

The record of the Republican party is an open book, written amid the smoke of battle, the heat of controversy, and the peaceful march of industry. The history of its great leaders is the history of civilization for fifty years.

There was William H. Seward, the John the Baptist of a new and inspiring faith. There was Lincoln, the ridiculed, the slandered, the courageous, the far-seeing, the merciful, the just, whose life is an inspiration, whose memory is a benediction.

There was Sumner, stately, cultured, and magnificent, the very flower of New England statesmanship. There was Thaddeus Stevens, virile, sarcastic, inflexible, a born leader of men. There was Galusha Grow, the white-haired son of Pennsylvania, whose public life spanned two generations and who had touched hands with the men who could remember Washington, and Pennsylvania honored herself by returning him at a ripe old age to this House, where he first earned his fame. There were Chase, and Morton, and Logan, jurist, statesman, and warrior. There was Blaine, the fatally gifted, whose polished sword thrusts of wit, sarcasm, and invective left great gaping wounds which neither time nor his marvelous genius could heal, and his enemies pursued him to the last with a hatred as remorseless as death and as bitter as the ashes of hell.

There was John Sherman, the ablest financier since Hamilton. There was Grant, the greatest captain of the world's greatest contest, a Hannibal without guile, a Caesar without his imperialistic trend, a Napoleon without his all-conquering ambition. There was the gentle and the gentlemanly McKinley, enshrined forever more in the Republic's love and regard, honored and respected wherever the white-capped waves caress the shores of nations.

There is Theodore Roosevelt, who possesses to-day the confidence of the great mass of the citizenship of this country more unbounded and all-pervading than any President of our history. Mark this man well. He was cast in no common mold. His courage is not daunted by any difficulty. His capacity for battle is unlimited. With a virility invincible and a genius far-seeing and comprehensive, he compelled a reluctant settlement of a great coal strike in Pennsylvania which threatened the peace and happiness of the nation, and he brought the pressure of the world's opinion upon two great warring nations and forced them to terms of peace against their will. The common people believe he is their friend. You can not disabuse them of their faith. The Democratic party may denounce him as an imperialist, a usurper, an enemy of the Constitution. They may pursue here in this House the tactics of obstruction and delay. The American people have observed their acts and omissions of fifty years and will not confide in them now. As said King Richard to the banished Mowbray, so of that party it may well be said:

The slow, sly hours shall not determinate the dateless limit of thy dear exile.

The American people have an abiding faith in the doctrines, practices, and personnel of the Republican party and its great leaders, past and present.

In its next convention it will indorse the Administration of Theodore Roosevelt and lay a proud finger on the lines which record the progress of its triumphant ascendancy and appeal with all confidence to the vindicating judgment of the American people.

Eulogy on the Late Senator Mallory.

REMARKS

OF

HON. WILLIAM SULZER,

OF NEW YORK,

IN THE HOUSE OF REPRESENTATIVES,

Sunday, May 3, 1908.

On the following resolutions:

Resolved, That, in accordance with the order of the day, an opportunity be given for tributes to the memory of Hon. STEPHEN R. MALLORY, late a United States Senator from the State of Florida.

Resolved, That, as a particular mark of respect to the memory of the deceased and in recognition of his distinguished public career, the House, at the conclusion of the exercises of this day, shall stand adjourned.

Resolved, That the Clerk communicate these resolutions to the Senate.

Resolved, That the Clerk send a copy of these resolutions to the family of the deceased.

Mr. SULZER said:

Mr. SPEAKER: On this sad and solemn occasion we meet to pay a most deserved tribute to the memory of a good and worthy man—STEPHEN RUSSELL MALLORY—late a Senator in the Congress of the United States from the grand old Commonwealth of Florida.

It is fitting for us to pause for a short space of time to contemplate the march of grim death that within the past year has deprived us of seven distinguished Senators, who have passed away to their eternal reward. What a commentary on the uncertainty of this frail and transitory life. They were all great men and faithful public servants. The mortality in the Senate has, I believe, been greater during the past few months than in any other like time in all the history of our country.

Call the roll of the illustrious dead. MORGAN and PETTUS, the grand old men of Alabama; the genial LATIMER, of South Carolina; the stately WILLIAM PINKNEY WHYTE, of Maryland; REDFIELD PROCTOR, the sturdy oak of Vermont; and MALLORY and BRYAN, the popular idols of the land of sunshine. They were men upon whose like we shall seldom look again. Their places can not be taken. They leave a void which can never be filled. The death of these noble men is an irreparable loss to their States and a misfortune to the country they served so faithfully and so well. All dead within a year! All friends; and all gone to their eternal reward and final rest. They were all my friends. I knew them well. I served in Congress with them all. I was a friend of each. I grieve with those who grieve, I mourn with those who mourn.

They were all true men, all honest men, all great men, all loyal friends, heroically serving their country and working for the good of mankind in the vineyard of the people. How sad it all is to lose such friends:

Friend after friend departs;
Who hath not lost a friend?
There is no union here of hearts
That finds not here an end.

Mr. Speaker, the career of STEPHEN RUSSELL MALLORY is a most interesting one. It teaches a lesson we should all learn. He crowded much in the active years of his instructive life. He was a worker, a plodder, and he made progress and history. He was born on the 2d day of November, 1848, in Pensacola, Fla., of distinguished parents. He was the worthy son of an illustrious sire. The father made history; so did the son. That story is a part of the annals of our country. Every youth in the land should read it.

At the age of 15, in 1863, young MALLORY entered the Confederate army as a private, and subsequently served with distinction as a midshipman in the Southern navy. The great conflict over, he entered Georgetown College, in the District of Columbia, in November, 1865, and graduated with high honors in June, 1869. He taught a class at the college until July, 1871; then was admitted to the bar by the supreme court of Louisiana, at New Orleans, in 1873; subsequently, in 1874, he removed to Pensacola, Fla., and began practicing law; was elected to the lower house of the legislature in 1876; was elected to the senate of Florida in 1880, and reelected in 1884.

He was elected to the Fifty-second Congress and reelected to the Fifty-third from the First District of Florida, and then—the crowning glory of his career—the legislature of Florida elected him to the United States Senate for the term beginning March 4, 1897, and he was unanimously reelected in 1903. He received the degree of doctor of laws from Georgetown University in June, 1904; and, had he lived, his term of service in the Senate would not have expired until March 3, 1906. But in the midst

of his arduous labors came the inexorable call of the dread messenger of death.

In the month of November, 1907, he suffered a general breakdown as the sequence of an illness of some ten years' duration. On December 16 he announced that because of the condition of his health he would not be a candidate again for reelection to the United States Senate, and shortly thereafter, on the 23d day of last December, he died, in the fifty-ninth year of his life, respected and honored and loved and mourned by all who knew him. But he left us a priceless legacy—

One of the few, the immortal names,
That were not born to die.

Senator MALLORY, Mr. Speaker, was a Democrat of the old school, true to the teachings of the fathers. He had no pretense. He did not know what it was to be untrue to himself or false to any man. He was a man of the simple life, of courteous ways, and of genial manners. He was a quiet man, without display or ostentation. He cared naught for the pomp and circumstance of the world. He had a gentle manner, a lovable disposition, a magnanimous mind, a kindly character, and was hospitality personified. He had clear ideas of life, fixed views of things, well-defined principles, much determination, great force of character, and the love for his native Southland was the inspiration of his life.

He was broad minded in his views, tolerant of the opinions of others, and he believed in the greatest liberty for the individual consistent with the liberty of every other individual. He was farseeing and sagacious, a wise counselor, a true friend, and a safe guide. He was the foe of every special privilege and fought the good fight, in Congress and out of Congress, for equal rights to all.

He had a great mind, a good heart, a genial nature, and a kindly word for all. He was a student, a lawyer, a soldier, and a statesman. He was a cultivated gentleman without fear and without reproach. For years he suffered much, but he bore the ills and pains of mortal disease with Job-like patience. Amid all his suffering he worked on with a smile on his pallid face and a fortitude that commanded the admiration of all. He did his duty to the last. He died in the service of his country.

He knew that death was near, yet he had no fear. Beneath his calm exterior there beat an unconquerable heart that never quailed, that never doubted, that never failed, that never murmured, and that never complained. He welcomed the final summons, and when it came he bade farewell to earthly things, and in his quiet way, so characteristic of his earthly life, he quietly journeyed to that undiscovered country from whose bourne no traveler returns.

Sleep sweetly, tender heart, in peace!
Sleep, holy spirit, blessed soul,
While the stars burn, the moons increase,
And the great ages onward roll.

Catholic Church Claims in the Philippine Islands.

SPEECH

OF

HON. EVERIS A. HAYES,

OF CALIFORNIA,

IN THE HOUSE OF REPRESENTATIVES,

Friday, March 6, 1908,

On the bill (H. R. 16143) to provide for payment of the claims of the Roman Catholic Church in the Philippine Islands.

Mr. HAYES said:

Mr. CHAIRMAN: Uncle Sam, whether justly or unjustly, has the reputation of being a poor paymaster. I fear that in the adjustment of claims against the Government its agents and officers, actuated by a false sentiment of loyalty to the Government or an ambition to shine as watchdogs of the Treasury, sometimes deny the just demands of citizens or associations against the Government under circumstances which would give an undisputed right to compensation from private persons. Technical objections to the allowance of claims against the Government are urged and insisted upon too often without any reference to their equity. There has evidently been an effort to do this in this case. I have no sympathy with this spirit. I believe that when the Government of the United States equitably owes a debt it should promptly liquidate it, even though there be no legal right of action.

Fortunately the claims under consideration and embraced in this bill have been passed upon by an official board of Army officers appointed for that purpose in the Philippine Islands.

These men, after carefully considering all the evidence, found that the United States was justly indebted to the Roman Catholic Church in the sum of \$403,030.19 for damages done to, and the destruction of, the property of the church while in the possession of our forces during the military operations of our Army in the islands. Even a hasty examination of the majority report of the Committee on Insular Affairs and the evidence there set out or referred to will show beyond question that the commission was very conservative in its findings, and that it might have recommended the payment of a larger sum without exceeding the bounds of justice.

It therefore appears that the United States in all equity owes some person or association the sum of money named in this bill. To be sure, there is an intimation in the minority report of the committee that all this church property belongs to the United States, as the successor of Spain under the treaty of Paris; but there is nowhere any intimation that the Government of the United States now lays any claim to its ownership, nor ever has done so. There is also a claim in this minority report that the Independent Catholic Church of the islands has a larger membership in the Philippines than the Roman Catholic Church, and in some unexplainable way it is sought to be inferred that this fact has some bearing on the title to the church property in the islands or the right of the Roman Catholic Church to receive compensation for its damage or destruction.

On the other hand, it is denied on what seems to be the best of authority that the Independent Catholic Church has any large percentage of the people of the islands in its membership. But all this has no bearing whatever on the question. It is to be regretted that a question of this kind should be viewed through the eyes of religious prejudice. It seems plain to an unbiased mind that there is nothing in all this. It is admitted that the Independent Catholic Church is a seceding organization. Its members left the Roman Catholic Church without any agreement or understanding with that organization as to division of property. The founder, organizer, and present so-called "archbishop" of the Independent Catholic Church, one Aglipay, at the time of the damage and destruction of the church property for the payment for which this bill provides, was an unfrocked priest of the Roman Catholic Church, and there was then no such organization as the Independent Catholic Church in the islands. That church has been organized since that date. How, then, can the Independent Catholic Church have any possible interest or equity in any of the church property in the islands? Why is the Independent Catholic Church brought into the discussion, unless it be to cloud the issue? A few years ago, in my own city of San Jose, a large percentage of the membership of the First Presbyterian Church seceded from that organization and organized the Second Presbyterian Church of San Jose, but the members of this latter church never thought of claiming or suggesting that they had any possible interest, legal, equitable, or otherwise, in the property of the parent church, and if they had done so the courts of California would have made short work of their claims.

Happily the whole question of ownership of the damaged or destroyed property in question has been definitely settled by the supreme court of the Philippine Islands in the case of *Barlin v. Ramirez et al.* After a voluminous and careful examination of the Spanish law and precedents, the majority of the court decided that the Roman Catholic Church was the owner of the church property in the Philippine Islands. The language of the syllabus in that case correctly summarizes the decision in these words:

Prior to the cession of the Philippines to the United States the King of Spain was not the owner of the consecrated churches therein and had no right to the possession thereof. The exclusive right to such possession was in the Roman Catholic Church, and such right has continued since such cession and now exists.

This decision, coupled with the fact that the United States has never made any claim to ownership to any of this property, and has no intention of ever making such claim, is conclusive of the whole matter. It is true that the minority report claims that this decision only involves the right of possession of the particular church property involved in that suit, but the law and the facts applicable to all of the other churches involved must of necessity be substantially the same as in the case of *Barlin v. Ramirez et al.*, and hence, by a familiar rule of all courts, is conclusive of them all. There remains, therefore, but one thing for this House, in my judgment, to do, viz, pass this bill as it was reported by the majority of the Committee on Insular Affairs. By so doing I firmly believe that we shall be doing tardy and only partial equity to the Roman Catholic Church of the Philippine Islands.

Eulogy on the Late Senators John T. Morgan and Edmund Winston Pettus.

REMARKS

OF

HON. THEODORE E. BURTON,
OF OHIO,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, April 25, 1908.

The House having under consideration the following resolutions:

Resolved, That the House now proceed to pay tribute to the memory of Hon. JOHN T. MORGAN and Hon. EDMUND W. PETTUS, late Senators from the State of Alabama.

Resolved, That, as a special mark of respect to the memory of the deceased Senators and in recognition of their distinguished public services, the House at the conclusion of the exercises to-day shall stand in recess until 11 o'clock and 30 minutes a. m. on Monday next.

Resolved, That the Clerk communicate these resolutions to the Senate.

Resolved, That the Clerk send a copy of these resolutions to the families of the deceased Senators.

Mr. BURTON of Ohio said:

MR. SPEAKER: It is exceptionally appropriate that eulogies should be offered for Senators MORGAN and PETTUS at the same hour. Seldom, if ever, have two men engaged in the public service in any land who had more in common. Each lived to a very advanced age and died with his armor on. Each had his home for approximately a quarter of a century in the quiet shadows of the little city of Selma. In their death they were not divided, and those who tenderly watched over the survivor in his last days remarked how lonely he was after his beloved associate had gone. Both had borne a very important part in the late civil war and had reached the position of general in the Confederate army. Though four years of their most vigorous manhood were given to the great struggle which shortened the lives of so many, they remained active participants in the movements of the times for more than forty years after its close. Both, after the close of the struggle, sought to bury the animosities of the bloody strife and of the disagreement which had preceded and to acquiesce in the result, recognizing that God made this magnificent domain between the lesser and the greater oceans, between the Lakes and the Gulf, for one united country. Whichever side might have prevailed, destiny forbade disunion. Every crowned head of Europe might have frowned upon us and wished for the severance of the North and the South. But severance was impossible. The triumph of one or the other could have been only temporary, because in the very nature of the physical conformation of the continent, in view of the class of people who settled here, and the manifest advantage of their living together as one people, it was certain that all should follow one flag and be a part of one great nation surpassing all the nations of the earth.

Both were gentlemen and statesmen of the old régime. Their lives were spent for the most part in the country. They had not become absorbed with the commercial and industrial spirit of the time. The one duty which impressed them was to the people of their State and of the nation. Each had a genius for politics; each had a love for the people and a keen consideration of their interests and of the future prospects and achievements of this country. It is somewhat remarkable to consider that both of them lived contemporaneously with every President of the United States except George Washington and that they were of an age when they could appreciate and understand the throbbing movements of the time when the long reign of Queen Victoria commenced. They lived before the days of the railroad and of the telegraph, so that their early impressions were of life in its simplicity, without the feverish haste and the vaulting ambitions which are so manifest in this time. They were the contemporaries of Senator King, who, like MORGAN and PETTUS, lived at Selma and served in the Senate for a period of almost exactly as long as the service of Senator MORGAN. They knew Yancey, the fiery, erratic, but entrancing orator. They were the contemporaries of Fitzpatrick and of all the great men of Alabama in the days before and since the civil strife. Two such grand old men can scarcely be found in the history of any State or any country.

It was my good fortune to enjoy an acquaintance of some intimacy with both of these men. Of course the career of Senator Morgan was a much longer one. His service continued until nearly the maximum period in the United States Senate—for a little more than thirty years. During all that time he was a commanding figure in that great legislative body, noted for his learning on all subjects. It was easy for him to speak extemporaneously upon any of the great topics before that body

with vigor and understanding and to awaken the interest of all his fellow-Senators. But the retentiveness of his memory and wide range of his information did not prevent him from being one of the most careful students in legislative life. He added to the store of learning which he already possessed a careful study of all the contemporaneous literature upon any subject of interest to the people. He abhorred sham. While a partisan, he was ready to step over partisan lines at any time when he thought his party was out of line with that which was for the future interests of the country. He was one of the most steadfast adherents of the principles of civil service. Notwithstanding the fact that an educational bill which was pending for many years would have caused the disbursement of very large sums of money in his own State, he opposed it earnestly and successfully as an unwarranted expenditure of public money, believing that as the family and the home are matters which are local and pertain to each individual community, so education is a subject which should be under the control and direction of the State.

His name in history will be most identified with the Isthmian Canal. In season and out of season he favored this long-desired waterway between the two oceans, and it is no exaggeration, it is but a just tribute to him, to say that he more than anyone else contributed to the triumphant accomplishment of that great enterprise. Although he favored one route to the exclusion of the other and was extremely earnest in his views, I well remember an occasion, on the 2d of March, 1899, when the proposition was made in a conference between committees of the two Houses to appoint a commission to examine all routes. The members of the committee from the Senate called in Senator MORGAN, being unwilling to agree upon any compromise that did not have his approval. There was some apprehension that he would not acquiesce in any measure which looked to the possibility of selecting any other route except that which he favored. But, with that tolerance which was characteristic of the man, he agreed in a moment upon the proposed settlement, being perfectly willing that the best expert examination should be given to all routes and that the advocates of all might have a chance. It is greatly to be regretted that his life was not prolonged until the final day when this canal shall be opened to the traffic of the world, that his eyes might have beheld the result of his efforts, of his constant and untiring interest in this great undertaking.

As regards the problem of our foreign policy he had grasp of the conditions in the different countries and of our own proper relations with each of them, which has rarely, if ever, been surpassed in the history of the Government. He was a stalwart American, and yet like those in cooperation with whom he worked, as Secretary Hay, who was his friend and collaborer, he believed in a diplomatic policy which should be at once without bluster and without cringing; and he advocated that the stalwart maintenance of our strength and position among the nations of the earth should be coupled with justice and fair dealing.

Senator PETTUS served for a much shorter time in the United States Senate. His record in having entered the Senate when he was already 76 years of age was almost without a precedent. He was courageous; he was brave; he was vigorous to the last. Massive in brain and big of heart, he was in a peculiar sense a man of the people. No one could listen to him without recognizing how formidable he would be upon the stump or as an advocate in convincing a jury. He was a close student of human nature—a man possessed of sturdy common sense, and with a vigor of intellect which made him always able and ready in solving any great question.

These men, both of them, were men who in the legal profession relied rather upon the mastery of the great principles of the law than upon text-books. They might not have spent so much time as the modern lawyer in the examination of cases, but they were grounded in those great fundamental doctrines which rest at the foundation of private and public law. Their professional affiliations were never with those who seek to evade the law, but their services in the court had been to obtain the rights of their clients and to enforce those great principles which were at the base of our jurisprudence. And in the great questions which are before the nation they also were thoroughly founded in those same principles. They could look back to a long career prior to the great civil struggle and remember those days when much of the earlier simplicity prevailed in our national life.

They were strong believers in the principle of States rights, in the spirit of autonomy of communities, and yet they were not unwilling or unready to accept those changes which worked inevitably to bring the different States together and weld them into one strong nation. They never forgot Alabama; they

were never without love and attachment for the State which they represented, but at the same time they were never unmindful of the grandeur and of the future of this great country of ours. They sought to promote its strength, to solve its problems of statesmanship, with all their complexities and difficulties, mindful of the fact that there was a future before this nation even beyond the comprehension of those who are most far-seeing in their wisdom.

They recognized that Alabama is a great unit in this union of States, but also that she has her greatest strength and her greatest possibilities because she is one of forty-six united States which, when symbolized on our flag, stand forth with more of sublimity and with more of beauty than any of the constellations in the heavens.

I can not but feel, in the case of men so advanced in years, who not only had passed threescore and ten, but who, by reason of strength, had exceeded fourscore, that the sorrows which we feel at the graves of younger men are entirely inappropriate. Life might have been prolonged to them for a few more years, but they tarried with us for their full measure of days, they filled the full complement of achievement. They were the actors in a day of great progress, beholding many changes, and the development of new and greater things. They were always actuated by patriotism, by love of State and of country, and, most of all, were both entirely unstained in public or private life.

Thus it is with a feeling of satisfaction in the triumphant completion of their careers that we can say of each, "Well done, good and faithful servant," and that our thoughts go out to them to-day as laid away among the oaks in the beautiful cemetery at Selma. No lofty pinnacle or dome rises over their graves, but there is a commemoration greater yet in the remembrance of their lives and of that which they have done for their age and generation. To them belongs a record of achievements which will not only survive in the future, but give to their memory in the coming days increasing honor and affection.

Post-Office Appropriation Bill.

SPEECH

OF

HON. HERMAN P. GOEBEL,

OF OHIO,

IN THE HOUSE OF REPRESENTATIVES,

Friday, March 13, 1908.

On the bill (H. R. 18347) making appropriations for the service of the Post-Office Department for the fiscal year ending June 30, 1909, and for other purposes.

Mr. GOEBEL said:

Mr. CHAIRMAN: On March 3 last, the Committee of the Whole House having then under consideration the post-office appropriation bill, I took occasion to make some remarks on H. R. 4068, by Mr. HUMPHREY of Washington, which bill seeks to amend the act of March 3, 1891, entitled "An act to provide for ocean mail service between the United States and foreign ports and to promote commerce." On March 10 my colleagues on the Committee on Post-Offices and Post-Roads [Mr. FINLEY and Mr. SMALL] undertook to reply to me. I thought I had convinced them that this was an ocean mail proposition, and was somewhat surprised when they presented in this instance the Democratic view which has been so often presented on ship subsidies. It is not my purpose to follow these gentlemen in that respect. However, in the course of their remarks reference was made to the cost of the construction of American ships, and as that has some bearing upon the possibility of obtaining ships for the proposed routes, I desire to present for information Senate Document No. 225, pages 47 to 55, as follows:

All materials of every kind required for the construction, equipment, or repair of vessels built in this country for the foreign trade or for the long-voyage coastwise trade between our Atlantic and Pacific seaports are free of duty under sections 12 and 13 of the free list of the Dingley tariff, as follows:

DINGLEY TARIFF FREE LIST.

"SEC. 12. That all materials of foreign production which may be necessary for the construction of vessels built in the United States for foreign account and ownership, or for the purpose of being employed in the foreign trade, including the trade between the Atlantic and Pacific ports of the United States, and all such materials necessary for the building of their machinery, and all articles necessary for their outfit and equipment, may be imported in bond under such regulations as the Secretary of the Treasury may prescribe; and upon proof that such materials have been used for such purposes no duties shall be paid thereon. But vessels receiving the benefit of this section shall not be allowed to engage in the coastwise trade of the United States more than two months in any one year, except upon the payment to the United

States of the duties of which a rebate is herein allowed: *Provided*, That vessels built in the United States for foreign account and ownership shall not be allowed to engage in the coastwise trade of the United States.

"SEC. 13. That all articles of foreign production needed for the repair of American vessels engaged in foreign trade, including the trade between the Atlantic and Pacific ports of the United States, may be withdrawn from bonded warehouses free of duty under such regulations as the Secretary of the Treasury may prescribe."

Under this law not only steel plates and shapes, but articles of equipment so elaborate and costly as ships' compasses, have been imported free of duty for the use of vessels built in this country for the foreign trade and for the coastwise trade between the Atlantic and Pacific.

Nor are there any difficult customs regulations in the way. Arthur Sewall & Co., of Bath, Me., who imported from Great Britain duty free all of the steel plates, shapes, etc., for the construction of a large steel ship, the *Dirigo*, state that so far as the passing of these free materials by the Treasury officials was concerned, there was no trouble whatever.

The law is as liberal as it could possibly be made. Nothing which Congress by statute could do to give American shipbuilders the widest freedom of materials for ships for ocean commerce has been left undone. The only criticism which could be made of this free-material legislation is that it is only partially applicable to ships for the coastwise trade—a trade in which American vessels are not subject to competition with foreign ships, because foreign ships are and long have been absolutely prohibited, under penalty of forfeiture, from carrying freight from one American port to another.

THE COASTWISE RESTRICTION.

But this free-material privilege does apply unconditionally to the important coastwise trade in large and valuable ships between American ports on the Atlantic and American ports on the Pacific Ocean. This coastwise traffic, already a large one, will be increased many fold by the completion of the Isthmian Canal. Under existing law ships built for this great coast trade through the canal can be constructed, equipped, and repaired entirely with free materials.

Moreover, ships built of free materials can, under existing law, be employed for two months in a year in the general coastwise trade of the United States. This apparent exclusion of free-material ocean ships from the coastwise service for ten months in a year is more of apparent than of real importance. Vessels adapted to ocean service and the long-voyage foreign trade as a rule are not suitable in size, draft, and general arrangement for the ordinary coastwise service, and would not engage in it in any event unless they were driven out of the ocean service, for which they were especially designed.

It has happened of recent years in a very few instances that American ocean vessels, forced out of the foreign trade by foreign subsidies or cheap wages, have fallen back upon the coastwise trade and have found in certain shorter voyages at least that the limitation of two months on free-material ships caused some inconvenience. But if there were a law for the encouragement of American shipping in the foreign trade, like this bill for the establishment of great ocean mail lines, American ocean vessels, having a fair chance in the foreign trade, would not fall back into the shorter coastwise voyages for which they were not designed and are not especially adapted.

"FREE MATERIALS" NOT ENOUGH.

One reason why larger use has not been made in this country of the free-material privilege for ocean shipbuilding is that our laws give no real adequate encouragement to shipowners to employ ocean ships after they are built. Since June, 1901, not one order for a steamship for overseas commerce has been given to any yard in the United States, with the exception of four steamers constructed in the Cramp yard at Philadelphia for the Ward Line to the West Indies and Mexico—a line receiving a moderate mail subvention under the ocean mail law of 1891. Two of these four steamers, by the way, were built to take the place of two similar liners purchased by the Government.

Yet during all this time, and for years before, any shipowner or builder who desired to send to Scotland for his steel plates and shapes and other materials, not only for the construction but for the equipment and repair of a vessel for the deep-sea trade or for the coastwise trade between our Atlantic and Pacific ports, could have brought in such material by the shipload and received a rebate of every penny of the duty. If our ocean fleet has not increased, it has not been for lack of free access to the free materials of the world; it has not been because of the "extortion" of any trust or the "barriers" of a protective tariff.

The truth is that "free materials" alone, as has so often been demonstrated, are not a determining factor in the prosperity of any industry. Take, for example, the manufacture of cotton fabrics. The raw cotton of which they are made is on the free list, for the good and sufficient reason that the United States has had almost a natural monopoly in the production of this important fiber. But nobody has assumed that free cotton was all that was required to make cotton manufacturing prosperous. On the contrary, the cotton manufacturer of New England, the Carolinas, Georgia, and Alabama is protected and encouraged to use this free cotton by tariff duties on the finished product ranging from 25 to 50 per cent ad valorem. But the ocean shipowner has no protection at all.

A PARALLEL INSTANCE.

To put the case in another way: Suppose that the pig iron, the steel, and other materials required for the making of textile machinery were admitted free of duty. Would it be seriously contended that, because there were free materials for the making of the machinery of his trade, the cotton manufacturer ought therefore to be deprived of all of his tariff protection of 25 to 50 per cent and be compelled to compete under free-trade conditions with the cotton manufacturers of Europe? Does anybody imagine that if all protection were thus stripped away from the cotton-manufacturing industry there would be much of a demand for new looms, or that very much cotton weaving or spinning machinery would be constructed of free materials or of any other kind of materials in the United States?

The ship is the machinery of the shipowner's trade, just as the loom is the machinery of the trade of the cotton manufacturer. If the manufacturer of cotton were denied all protection and encouragement in this country, he would dismantle his mill and either quit the trade altogether or invest his capital and his skill in manufacturing in Europe.

This is exactly what has been done by some American shipowners. Denied protection at home on their industry of ship sailing and management—that is, on the use of the machinery of their trade—the mere fact that the materials of this machinery can be imported free of duty has proved of absolutely no avail. These shipowners have trans-

ferred their capital and their skill to foreign shipping. They have taken advantage of the cheap wages and sometimes of the subsidies of Europe. They are operating ships built, officered, manned, supplied, and repaired by foreigners. Their dividends, if there are any, come to this country, but every dollar expended for labor goes abroad. Their money and their business ability are utilized to develop the shipyards and to strengthen the naval reserves of foreign governments—to create a great alien sea power which could be turned with terrible force against their own country in case of war.

Of course most of the capital invested in foreign merchant marines is foreign capital, but Americans are part owners in foreign shipping estimated at upward of a million tons. It is a significant fact that the heaviest American owner of foreign ships—the American element in the International Mercantile Marine Company—has been compelled by the British Government to keep these ships beneath the British flag, to build their successors in the United Kingdom, to officer and man them with British subjects, and to maintain the executive control of British tonnage in British hands. Therefore, if a "free-ship" law were passed by the United States, it would be entirely ineffective, so thoroughly clinched is this international fleet to its British allegiance.

TO MAKE FREE MATERIALS EFFECTIVE.

In order to make the "free material" privilege genuinely effective, the United States Government must protect and encourage American shipowners, as it has long protected and encouraged American cotton manufacturers. This can not be done by the tariff, but it can be done, as the history of the whole maritime world demonstrates, by a careful system of ocean mail subventions, like that proposed in this bill now before the House. It is under such a system as this that Japan has increased her merchant fleet from about 300,000 tons to 1,000,000 tons within a decade. And Japan, unlike the United States, had no shipyards to begin with, no maritime traditions, no experience in long-voyage navigation, no great bodies of skilled labor.

All foreign shipowners, all foreign manufacturers and merchants, all foreign governments, dread the application of the protective principle by the United States to the one great American industry exposed to foreign competition which has thus far remained unprotected. They know well that protection once adequately applied to American ship owning will do what it has done for American manufacturing. It is probable that the chief hope of the enemies of the American merchant marine is to obstruct the proposed legislation by exploiting the idea that these subventions, if paid, would largely go to enrich the steel trust, which would charge extortionate prices for the materials of which new American ships were built. Therefore, a thorough understanding of the real facts of the case is of very great importance.

A MISUNDERSTANDING CORRECTED.

There have been some statements that American steel makers were selling ship steel abroad at a lower price than to American shipbuilders. The most explicit and authoritative assertion to this effect was that made on June 28, 1904, by Mr. James C. Wallace, then vice-president of the American Shipbuilding Company (engaged exclusively in lake work) before the Merchant Marine Commission at Cleveland. (Volume II, page 811 of the hearings of the Commission.) Mr. Wallace said:

"Recently one of our largest steel mills sold abroad 100,000 tons of steel plate. They delivered it, I understand, at Belfast at \$24 a ton. That would practically mean, with ocean rates as they are, \$22 a ton at tide water. They are charging us to-day at Pittsburgh \$32 a ton."

A little further on:

"Representative GROSVENOR. I want to know who bought the steel you speak of."

"Mr. WALLACE. The Harland & Wolff Company, Belfast."

"Representative GROSVENOR. From whom did they buy it?"

"Mr. WALLACE. The United States Steel Corporation."

In one or two other hearings of the Merchant Marine Commission similar statements were made by other persons, but nowhere so definitely as at Cleveland. It has since appeared, however, that all these witnesses were misinformed. On April 11, 1906, Judge Gary, chairman of the board of directors of the United States Steel Corporation, was questioned directly before the House Committee on Merchant Marine and Fisheries as to this testimony of Mr. Wallace. Judge Gary said:

"I notice that Mr. Wallace apparently speaks from information. If he had such information it was entirely unreliable. The statement is not founded in fact. The companies in which we are interested sold no ship plate in 1905 to Europe, only a little over 3,000 tons in 1904, not any in 1903, and I think not any in 1902. (Page 275 of the Hearings before the Committee on Merchant Marine and Fisheries, April 4 to 13, 1906.)"

THE ACTUAL FIGURES.

Further on Judge Gary declared that "the export prices of ship plate at the present time are nearly equal to the domestic prices." There is specific proof of this fact in figures submitted by ocean shipbuilders to Senator J. H. GALLINGER, chairman of the Merchant Marine Commission. While the shipping bill was being considered by the Senate, before its passage, Chairman GALLINGER wrote to two great shipyards on the Delaware River asking what was the actual difference in cost between American and foreign ship steel and what proportion this constituted of the cost of the completed vessel.

These were the replies received:

THE WILLIAM CRAMP & SONS SHIP
AND ENGINE BUILDING COMPANY,
OFFICE OF THE VICE-PRESIDENT,
Philadelphia, January 15, 1906.

DEAR SIR: Referring to your letter of the 11th instant, requesting to be informed as to the number of tons of steel plates and shapes required for the construction of each of four such steamers as we are now building for the New York and Cuba Mail Steamship Company, and how much more the steel would cost if purchased at the ruling prices in this country than if imported from Great Britain, I beg to state as follows:

The amount of steel plates in one vessel is 1,900 tons and the amount of steel shapes in one vessel is 990 tons.

Recently, by reason of the rapid rise in the prices of materials in Great Britain, the foreign builder pays almost as much for plates and shapes as we do; in fact, the difference in cost between steel purchased in this country and abroad for vessels of this size would be as follows:

Plates \$5,328
Shapes 5,880
making a total saving of \$11,208 in the material purchased abroad.
The steamers referred to will cost complete upward of \$900,000 each,

so that the difference in the cost of their steel plates and shapes between here and abroad represents only a little more than 1 per cent of the total value of each steamer.

Where vessels have been intended for the foreign trade alone, the various steel interests have offered to sell us the materials at the best export prices.

Very truly, yours,

EDWIN S. CRAMP, Vice-President.

HON. JACOB H. GALLINGER,
Chairman Merchant Marine Commission
of the United States, Washington, D. C.

NEW YORK SHIPBUILDING COMPANY,
Camden, N. J., January 16, 1906.

SIR: In response to your inquiry of the 11th instant, I beg to say that the last quotation which we have on foreign steel was under date of November 20, 1905, when we obtained prices for the purpose of quoting on a steamer to be built under sections 12 and 13, free list, Dingley law. It was afterwards decided to build the steamer abroad.

The foreign and domestic prices at that date appear below. I may add that the domestic prices of steel are the same at the present time, and I am not advised whether there has been any change in the foreign prices.

	Cents per pound.	
Plates: Steel Company of Scotland, f. o. b. Philadelphia, in bond	1.73½	
Shapes: Steel Company of Scotland, f. o. b. Philadelphia, in bond	1.64½	
Plates: Domestic, f. o. b. Philadelphia	1.73½	
Shapes: Domestic, f. o. b. Philadelphia	1.83½	

Difference in cost of plates and shapes for a 500-foot freight and passenger steamer built of foreign and domestic steel at the above prices estimated as follows:

	Domestic.		Foreign.		Difference.
	Cost per pound.	Total.	Cost per pound.	Total.	
	Cents.		Cents.		
8,000,000 pounds plates	1.73½	\$138,800	1.73½	\$138,600	\$200
3,000,000 pounds shapes	1.83½	55,050	1.64½	49,350	5,700
Total		193,850		187,950	5,900

We would regard the above as a fair estimate of the amount of steel plates and shapes required in the building of a 500-foot steamer, but the amount, of course, would vary according to the type of vessel. A ship of this size would probably require from 4,500 to 5,000 tons. The completed value in this country of a vessel of this description would be about \$800,000 to \$900,000.

It is only fair to add that at the time the above foreign quotations were received ship plates and shapes were very high abroad, owing to the great activity there in shipbuilding.

Yours, respectfully,

S. M. KNOX,
Secretary and Treasurer.

HON. JACOB H. GALLINGER,
United States Senator, Washington, D. C.

In the case of one yard, the difference in the cost of American and foreign material was only a little more than 1 per cent of the entire cost of the completed steamships; in the other yard, about one-half of 1 per cent. Thus both Mr. Cramp and Mr. Knox confirm the statement of Judge Gary, that the domestic price and the foreign price of ship steel are very nearly equal. It should be understood that there is an advantage to the shipbuilder in procuring his materials at home, from the fact that he can be in closer touch with the domestic manufacturer, a few hundred miles away, than with the foreign manufacturer in Scotland, and that changes can be more quickly made and deficiencies rectified. American steel, therefore, is actually worth a somewhat higher price to American shipbuilders than are foreign materials.

Mr. Cramp, Admiral Bowles, and several other shipbuilders testified at length in April, 1906, before the House Committee on the Merchant Marine and Fisheries, and with the exception of one builder, who acknowledged that he had had no recent experience, these practical men declared that there was little if any difference in the price of ship steel between the American and the foreign article.

TESTIMONY OF MR. CRAMP.

Mr. Cramp's evidence on this point was as follows:

"In the case of an ordinary ship, whether it is a cargo boat or a merchant ship, about 33 per cent of its value is in the material that is delivered to the shipyards which the works themselves do not manufacture. That means plates and shapes. We make brass casings, but not the raw pig or the pumps and forgings. Now, in the present condition of prices we can purchase forgings in this country, notwithstanding that there is a boom on and notwithstanding that labor is as high as ever it has been in the history of the country, we can buy forgings, steel castings, and such materials in this country for less money than abroad, and we get the other materials for practically the same price."

"Mr. WILSON. What part of the ship's castings and materials can you buy in this country cheaper than abroad?"

"Mr. CRAMP. I said the forgings and steel castings."

"Mr. WILSON. What part of the value of the ship does that constitute?"

"Mr. CRAMP. Of the materials that enter into the ship I have no details. The forgings represent a certain percentage of the vessel, but we never work it out that way. At present all of the materials that enter into the cost of the construction of a ship can be bought at the same price in this country as abroad. Many details we can buy for less."

"Mr. LITTLEFIELD. Does that mean f. o. b. or delivered here with freight added?"

"Mr. CRAMP. That is without the freight added, but that is a very small item, being only about \$2.50 or \$3 a ton across the ocean."

"Mr. HINSHAW. Please make that plain. You say that a vast majority of the materials which enter into the construction of a ship can be bought in this country as cheaply, at least, as abroad?"

"Mr. CRAMP. Yes, sir."

"Mr. HINSHAW. And some cheaper?"

"Mr. CRAMP. Yes, sir. A few months ago Senator GALLINGER wrote us a letter and asked what difference it would make had we purchased abroad the materials for some of the Ward Line ships that are going to trade between New York and Cuba and Mexico, and we investigated the matter very carefully, and we found that in a ship that would cost us \$900,000 the only difference in favor of purchasing abroad at that time was \$11,000, and since that time materials have risen over there and practically kept still here.

"Mr. WILSON. According to that, there is practically no difference to-day between the cost of foreign-built vessels and American-built vessels?

"Mr. CRAMP. No, sir; the materials that enter into the ship.

"Mr. WILSON. There is no difference in the materials?

"Mr. CRAMP. No, sir.

"Mr. GOULDEN. Does that apply to the coastwise steamers?

"Mr. CRAMP. Yes, sir.

"Mr. GOULDEN. There is no difference whatever?

"Mr. CRAMP. No, sir; but there have been times when the prices went up. For instance, the effect of the steel corporation during the last three or four years has been to steady the price for the market. Previously, in 1896, the price of steel went down under the influence of bad times to 1 cent a pound, the lowest price ever known in this country and very much lower than in England. That was caused by the depression following the panics of 1893, that carried so many steel companies into bankruptcy.

"Mr. GOULDEN. The average cost of the materials that enter into the coastwise steamers is about the same here as abroad?

"Mr. CRAMP. Yes, sir.

"Mr. SPIGHT. At this time the cost of material is no more in this country than in foreign yards?

"Mr. CRAMP. Yes, sir.

"Mr. SPIGHT. And the only difference in the cost of construction in American yards and foreign yards is the labor?

"Mr. CRAMP. Yes, sir; absolutely.

"Mr. SPIGHT. How much is that difference?

"Mr. CRAMP. Practically double.

"Mr. WILSON. What is the cost of the material in a million-dollar ship in this country?

"Mr. CRAMP. It will be from 30 to 35 per cent.

"Mr. WILSON. That is the cost of the material?

"Mr. CRAMP. Yes, sir; and labor is the other two-thirds.

"Mr. HUMPHREY. The material delivered to your yard?

"Mr. CRAMP. Yes, sir. Of course you must remember that of the 35 per cent we purchase about 95 per cent of that is labor at the other places where they are manufactured."

(Pages 210-211 of the hearings before the Committee on the Merchant Marine and Fisheries, April 4 to 13, 1906.)

STATEMENT OF ADMIRAL BOWLES.

Admiral Francis T. Bowles, formerly chief of the Bureau of Construction of the United States Navy, and now president of the Fore River Shipbuilding Company at Quincy, Mass., also made a careful statement as to the cost of materials before the House committee, saying:

"There have been various questions raised here about the influence of the cost of structural steel upon our present situation. I have had an instance within my own knowledge of the building of a vessel in our shipyard from English plans, in which I knew the exact cost of that vessel in an English yard. We took the greatest pains with our ship, not only to keep an accurate account of the cost, but to keep it as low as possible. The actual facts there were that that ship cost us 50 per cent more in our own yard, the cost being kept exactly in the same way as it was on the other side.

"Mr. GOULDEN. How long ago was this? When did this occur?

"Mr. BOWLES. It was for a ship completed last December.

"Mr. GOULDEN. December, 1905?

"Mr. BOWLES. Yes.

"Mr. SPIGHT. I understood you to say a while ago, Admiral, that the difference in the cost of wages and the cost of materials was about equal. Did I understand you correctly?

"Mr. BOWLES. No; I did not make that statement.

"Mr. HINSHAW. This difference of 50 per cent is almost entirely in the wages, is it?

"Mr. BOWLES. I am unable to state exactly, but from what I can find, the wages in our yard are from 50 to 75 per cent higher than they are in the English and Scotch shipyards.

"With regard to materials at the present day, the state of affairs is this: Steel delivered in an English shipyard costs from 15 to 20 per cent less than ours at the present time. On other materials the difference is greater. I want to keep my percentages applied in the same way, so I will say this: The cost of steel delivered in our shipyard is from 15 to 20 per cent greater than the price to-day of steel delivered in an English shipyard.

"Mr. HINSHAW. By English manufacturers?

"Mr. BOWLES. By English manufacturers. For the English steel delivered in our yard, the price is almost exactly the same to-day as if we bought it in Pittsburgh.

"Mr. GOULDEN. Delivered on the ground?

"Mr. BOWLES. Delivered on the ground.

"Mr. GOULDEN. In both cases?

"Mr. BOWLES. In both cases.

"Mr. WACHTER. What makes that difference, Admiral?

"Mr. GOULDEN. There is not any difference.

"Mr. BOWLES. The difference between the cost—

"Mr. WACHTER. Delivered in London.

"Mr. BOWLES (continuing). Delivered in our yard and delivered in England is covered by the freight and insurance and transfer.

"Mr. WACHTER. But the difference over there, the reason they can deliver it so much more cheaply to the English yard than our manufacturers can to our yards is because of the difference in the cost of labor, is it not?

"Mr. BOWLES. Yes. Now, the price of steel has not a great influence upon the cost of the vessel, which you can see from the fact that in an ocean-going steamer the proportion of the cost of the structural steel to the whole cost is about 15 per cent. A small variation in the price of steel will, therefore, you see, produce a very small variation in the total cost of the ship.

"Mr. SPIGHT. Admiral, did I understand you to say that the cost of English steel in our yards is about the same as the cost of American steel?

"Mr. BOWLES. Yes, sir.

"Mr. SPIGHT. And yet in the British yards the English steel costs from 15 to 20 per cent less than ours?

"Mr. BOWLES. Yes.

"Mr. SPIGHT. Now, why is that?

"Mr. BOWLES. That is because that difference to us would be absorbed in freight, insurance, and handling.

"Mr. SPIGHT. It would cost 15 or 20 per cent to get it here?

"Mr. BOWLES. Yes."

(Pages 415, 416, and 417 of the Hearings before the Committee on the Merchant Marine and Fisheries, April 4 to 13, 1906.)

SOME RECENT EXPERIENCE.

FORE RIVER SHIPBUILDING COMPANY,

Quincy, Mass., February 3, 1908.

MY DEAR SENATOR: When the ocean mail bill comes before the Senate, I presume there will be questions raised as to the influence of the tariff upon the cost of shipbuilding, and particularly as to the tariff on steel.

For this reason I wish to lay before you certain facts in my experience.

We have built during the last eighteen months nine vessels for the coasting trade, all of which, however, are of a type which would render them adapted to the foreign trade. The price paid for American structural steel in these vessels was \$42 per ton delivered in our shipyard. At the time this steel was purchased the market price in England for ship steel delivered at any port or shipyard was \$38.75 per ton. The cost of English ship steel delivered in our shipyard would have been \$41.50 per ton if imported free of duty. Therefore if we had purchased the steel in England free of all duty we would have saved \$0.50 per ton on the steel used, which would have amounted to a saving of about one-fourth of 1 per cent on the cost of the vessels, the cost of structural steel in these vessels averaging about 18 per cent of their total cost.

I know of no other item of building material upon which any saving would have been made by importing free of duty. The shipbuilder classes as material a large amount of manufactured goods which he buys in the open market, such as piping, valves, pumps, steam winches, windlasses, steam steering gear, electric motors, generators, evaporators, distillers, hardware. If we could purchase these items at the same price as they are purchased in England, we might effect a further saving of 10 per cent in the cost of the vessel.

The shipbuilder's cost of the vessel is divided almost equally between labor and his materials, and of the items that he calls materials from 50 to 75 per cent is labor, depending on where you start with raw material, and from the facts in my possession the average cost of wages of the classes of labor employed in shipbuilding and allied arts is from 60 to 80 per cent greater in this country than it is on the other side.

That is to say, the fact that ships cost from 30 to 50 per cent more to build in this country is due almost wholly to the difference in the wages paid.

Very sincerely, yours,

FRANCIS T. BOWLES,

President.

HON. HENRY CABOT LODGE,

U. S. Senate, Washington, D. C.

These expert witnesses emphasize not only the fact that there is very little difference in cost between the American and the foreign ship steel, but also the fact that the cost of materials is of minor consequence anyway, and that the price of a ship is made up chiefly of the cost of the labor employed in working up the materials and putting them together.

Mr. Chairman, in the course of my remarks I was interrupted by the gentleman from Kentucky [Mr. SHERLEY] who desired to be informed as to the cost of transporting the mails to the ships and how the profits were arrived at. I did not then have time to go into the matter in detail. Answering his question now, permit me to say that the total weight of all mails originating in the United States for the year ended June 30, 1907, was 1,315,833,408 pounds. The total weight of the foreign mail dispatched by sea to foreign countries for the same year was 15,422,830 pounds, or less than 1.2 per cent of the total.

The total post-office revenue from all sources for the same period was \$183,585,005, and the total postage collected on articles exchanged with foreign countries other than Canada and Mexico is estimated at \$6,579,043, or 3.6 per cent of the total revenue. Thus the ocean mails, constituting only 1.2 per cent of the weight of our mails, brought in 3.6 per cent of our postal revenues.

Our post-office expenditures for the past year were \$189,935,242.79, and the actual net cost of the foreign mail service, according to the superintendent of foreign mails, was \$2,941,816.67, exclusive of the cost of transporting such mails to the United States exchange post-offices at the seaboard and from the places where they were mailed. Our foreign mail service may be charged also with its share of railroad transportation. The foreign mails, as stated, were less than 1.2 per cent of the total volume of mails. The cost of railroad mail transportation was \$43,896,928.32. Of that sum 1.2 per cent is \$526,800. Large portions of our foreign mails arise in the seaboard cities which are the centers of export and import trade, and such letters and papers never touch a railroad car. Evidently, therefore, the cost of transporting to the seaboard mails for foreign countries is much less than \$526,000.

By weight, out of every 1,000 letters, cards, newspapers, and so forth, mailed in the United States, only 12 are for foreign countries. The largest item of postal expenditures is \$51,214,695.90 for pay of postmasters, their assistants, and clerks. Our domestic mail business is so enormous in proportion to our foreign mail business that not one postmaster or assistant owes his position to the foreign mails, and only a few clerks in New York, San Francisco, New Orleans, and other seaboard cities. The proportion of the postal salary list which

may be fairly charged against the ocean mails is inappreciable.

The third great item of postal expenditure is \$26,653,304.36 for rural free delivery, a system maintained and developed entirely apart from the foreign mails, except perhaps in those parts of the country devoted to agriculture and tilled by a large immigrant population.

The city delivery—\$23,248,539.90—and the railway mail service—\$15,175,587.76—are systems owing their creation and maintenance to domestic necessities, entirely apart from the foreign mails, and only inappreciably supported out of the foreign mails.

Thus, in addition to \$2,941,816.67 for ocean mail transportation, the foreign mail service of the United States can not on any reasonable basis be charged with more than \$800,000 for other items, or, say, a total cost of \$3,750,000, against total receipts of \$6,579,000, leaving a surplus of \$2,829,000.

The Postmaster-General reports that since 1857 the receipts of his Department have nearly doubled every ten years and the expenditures have increased accordingly. The following shows the increase in volume and finances of our foreign ocean mails:

	Weight.	Receipts.	Cost.	Surplus.
	<i>Pounds.</i>			
1907	15,422,000	\$6,579,043	\$2,941,816	\$3,637,226
1900	8,325,000	\$3,467,139	\$2,014,537	\$1,452,601
Increase	7,097,000	\$3,111,904	\$927,279	\$2,184,625
Per cent increase	85	89	46	150
Annual increase	\$1,013,857	\$444,129	\$132,468	\$312,939
Per cent increase	12.1	12.7	6.5	21

On the average for the past seven years the volume of the ocean mails has increased annually a trifle over 12 per cent, the postage for ocean mails nearly 13 per cent, the cost of ocean transportation only 6½ per cent, and the profits, so to speak, and subject to the qualifications already stated, 21 per cent. Thus the volume and receipts of the ocean mail service are increasing faster than the average postal business of the country, and by maintaining a cheap and inefficient mail service to South America, Australia, and Asia the cost increases less than the general cost of the postal system and a surplus is created in that branch of the business—exceptional in postal administration.

Banking Laws of the United States.

SPEECH

OF

HON. CHARLES A. LINDBERGH,

OF MINNESOTA,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, May 14, 1908.

On the bill (H. R. 21871) to amend the national banking laws.

Mr. LINDBERGH said:

Mr. SPEAKER: I had hoped that there would be no necessity for explaining my vote against the Vreeland currency bill, on any party line. Some may, however, get the impression that the measure is a political one, from the fact that most Republicans vote for it and all Democrats vote against it. This idea would seem to be somewhat reinforced because of the fact that both Republicans and Democrats had their separate caucuses to figure out what might be their action, but even all that does not make the Vreeland bill a party question except for those who wish to consider it so.

It is eminently proper for Representatives of any party, or for any number of Representatives outside of party, to meet in caucus for the purpose of considering any question of importance, provided the individual Members are left free to act in good faith with their respective constituents. No Member has a right to pledge his individual Representative vote on any question to a majority of any separate body from that of the House of Representatives. Every Member must represent his district on the floor of the House free from any outside domination. Otherwise the district might lose its representation on the floor of the House in the final analysis of any question.

Neither caucus, as I understand, required anyone present to be bound by the caucus. The idea, as I understand it, was to consider what might be best, and, if possible, to agree on something reasonable.

My vote against the Vreeland bill is based upon my opinion that the bill is unsound and, if passed, will at some future day prove to be a serious damage. Hasty action on any money bill is likely to lead to danger. We had a very costly experience with the silver-purchase act that everybody remembers. Several bills before this Congress have met with favor at first and with disapproval later. This Vreeland bill has had a series of evolutions within the period of the present session. I think the seventh edition confronts us in fresh ink this morning. It was not to be had when we first came upon the floor. It has been materially amended, and we are asked to pass it on a three-hour gag debate, without a chance to sound the wishes of those who sent us here to represent them.

In view of the above facts, I am acting upon my independent judgment, based upon the amended bill. My constituents are opposed to the Vreeland bill so far as they have had a chance to see it. They can not know this morning what this bill is.

There are numerous objections to the bill, but I shall confine my explanation to one alone that I consider sufficient to justify my vote against the rule of limit of debate to three hours and against the bill.

First. If this bill becomes a law as supplemental to our present laws, we will have on our statutes laws that make it legal for ten men—five may organize, but no less than ten can legally borrow all the capital and surplus—to organize a national bank with \$500,000 capital stock by paying in \$250,000 on opening. These same ten men could legally borrow from their own newly organized bank from the deposits that usually come to a bank with that capital, \$500,000, and pay \$250,000 of their loan into the bank and the other \$250,000 would fully pay their capital stock. Or they could borrow their original \$250,000 and give their notes for \$500,000. That would leave the bank their ten individual commercial notes that would be legal assets on which to base emergency currency. In the same way they may legally add the 20 per cent surplus.

Second. The same ten men with the original \$250,000 in their hands, could start a second national bank with the same capital in the same or some other town, and borrow its funds in the same way as they did from the first, and with their original \$250,000 back again start a third national bank. The same process could be repeated ten times. They would have the ten banks and the \$5,000,000 required by the Vreeland bill to incorporate as a national clearing-house association.

They could legally take the \$5,000,000 commercial paper of these same ten men and pledge it to their own national clearing-house association and apply to the Comptroller of the Currency to secure emergency currency, and, if in the judgment of the Secretary of the Treasury, business conditions in the locality demanded additional currency he could direct it. These ten men sharpers might create some such conditions.

These ten men who had up their \$5,000,000 notes in their own association, over which they themselves preside, might spend their original \$250,000 and each be insolvent and even worthless. The name only of the association requires approval for incorporation.

Money may be legally secured from the United States by such an institution as I have named under the Vreeland bill. No fraud need be practiced to do it. All that would be necessary would be to follow the law with a little care to conceal the insolvency of the makers of the notes. Law presumes them to be solvent. It must be discovered if they are not.

I do not say that what is made possible under the bill would happen. It probably would not. But in the full light of what frenzied finance has done in the last ten years it is not free from objection.

It seems to me it is our duty to legislate with a view to a better equilibrium in the distribution of commercial opportunity in favor of the plain, producing people. That has been the object of the last few years' strenuous agitation. We have made progress. It seems unfortunate that we should now be in such haste concerning our own little individual election affairs as to be willing to jeopardize the interests of a nation in the limit to a three hours' debate to pass a bill on the money question that in its new form first appeared this morning—a bill that carries an amendment that the country knows nothing about and has had no time to consider. On the law of general averages alone it might be safe to vote against a bill that has been changed seven times in less than six months, and the last change within three hours, less than half a day from the time we are compelled to vote for or against it.

Agricultural Appropriation Bill.

SPEECH

OF

HON. WILLIAM E. COX,

OF INDIANA,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, April 1, 1908.

The House being in Committee of the Whole House on the state of the Union, and having under consideration the bill (H. R. 19158) making appropriations for the Department of Agriculture for the fiscal year ending June 30, 1909—

Mr. COX of Indiana said:

Mr. CHAIRMAN: This discussion has taken a very wide latitude. Like the first gentleman from New York [Mr. DRISCOLL], I received a petition from the National Grange, asking my support for a bill which proposes for the Federal Government to formulate some plans to improve the highways of the country, and along with the petition I received a copy of a bill introduced in this House by the gentleman from New Hampshire [Mr. CURRIER]. I am one of the men whom the gentleman from New York [Mr. DRISCOLL] calls a Democrat, and says that he found that I had introduced a bill seeking to procure aid from the Federal Government for the improvement of the public highways of the country. I am perfectly willing that he make my bill a part of his remarks, and, for fear he will not, I will myself.

On December 19 last I introduced the following bill, which was referred to the Committee on Agriculture:

A bill (H. R. 10501) to establish in the Department of Agriculture a bureau to be known as the Bureau of Public Highways, and to provide for national aid in the improvement of the public roads.

Be it enacted, etc., That there shall be established in the Department of Agriculture a bureau to be known as the Bureau of Public Highways.

Sec. 2. That the object and purpose of said bureau shall be to cooperate with the various States and Territories of the United States, or civil subdivisions thereof, in the construction and improvement of permanent public roads according to the provisions of this act; to make investigations and experiments in regard to the best methods of road making and the best road-making materials; to cooperate with the various States and Territories of the United States, or the civil subdivisions thereof, in the construction of object-lesson roads; to publish and distribute bulletins and reports on the subject of roads and road improvement; to bring about, as far as may be, a uniform system for the repair, improvement, and construction of the public roads throughout the United States.

Sec. 3. That the said bureau shall consist of three commissioners, to be known as "Commissioners of Highways," two of whom shall be appointed by the President, by and with the advice and consent of the Senate, in the following manner: One from the political party in control of the Executive branch of the Government, who shall be the chairman of the commission; one from the largest minority political party. Both of the aforesaid commissioners shall have practical knowledge of road engineering and construction and shall receive a salary of \$5,000 per annum each. The President shall detail to service as the third member of said commission an officer of the Engineer Corps of the United States Army, on the active list, of rank not below that of captain, who shall receive, in addition to the pay allowance of his rank in the United States Army, a sum sufficient to make \$5,000 per annum. The said commissioners of highways shall appoint, subject to the approval of the Secretary of Agriculture, such other officers, agents, and servants as may be required to carry into effect the provisions of this act: *Provided*, That the said commissioners of highways shall be under the general supervision of the Secretary of Agriculture, who shall exercise general jurisdiction over all matters and acts coming under their control by virtue of this enactment.

Sec. 4. That after the expiration of six months from the date of the approval of this act any State or Territory or civil subdivision thereof, after complying with the provisions of this act through the proper officers having jurisdiction of the public roads, may apply for aid in the improvement or construction of the public roads or sections thereof located in said State or Territory or civil subdivision thereof.

Sec. 5. That no State or Territory, or civil subdivision thereof, shall be entitled to receive the benefits of this act until it shall have established to the satisfaction of the said commissioners of highways: First, that the highway or section thereof sought to be improved or constructed is of sufficient public importance as to come within the purview of this act, taking into account the use, location, and value of such highway or section thereof for the purposes of common traffic and travel and for the delivery of the mail of the United States; second, that the requisite right of way for the improvement and construction of the highway or section thereof has been secured; third, that the highway or section thereof when constructed or improved will be maintained and kept in repair without recourse upon the United States; fourth, that the State or Territory, or civil subdivision thereof, has by its proper authority having control of the highways in said State, Territory, or civil subdivision thereof, signified its willingness and desire to improve said highways by draining, rocking, or macadamizing the same and by causing said highways so sought to be improved to be surveyed by a competent engineer, and an estimate of the cost thereof made and filed in the office of the court, commissioner of highways, or with any person or persons who has control and jurisdiction of the highways of any State or Territory or civil subdivision thereof, together with a map, plat, chart, or profile of said highway or highways sought to be improved as aforesaid: *Provided further*, That said States or Territories, or civil subdivisions thereof, shall stand all costs of said survey, making and filing of said profiles, maps, or plats of said highway sought to be improved as aforesaid, together with one-half the cost

of construction and building of said highways by draining, rocking, or macadamizing the same with rock, gravel, or some other solid or durable material: *Provided further*, That when a certified copy of said survey, profile, map, or plat of said proposed highway, duly certified under the seal of the court, commissioner of highways, or any person or persons who may have control of the highways in said States or Territories, or civil subdivisions thereof, or with whom or in whose office said profiles, maps, plats, or charts of said highway and the estimated cost thereof has made suitable provision by taxation, appropriation of money, or otherwise to pay for one-half of the cost of the improvement or construction of said highways sought to be improved or constructed, be filed with the Bureau of Public Highways, and if said bureau approve the improvements of said highways as therein set out said bureau shall mark the same approved, or if said bureau shall not approve the same said bureau shall cause said highways to be again surveyed by an engineer to be appointed and paid for by said bureau, whose duty it shall be to carefully survey said highways sought to be improved, make and file profiles thereof, together with the estimated cost thereof, with the bureau, and it shall then be the duty of said bureau to mark the same approved.

Sec. 6. That when said Bureau approves of the plan of improving the highways of any State or Territory, or civil subdivision thereof, as set forth in section 5 of this act, then one-half of the expense of the improvement or construction of said highways of any State or Territory, or civil subdivision thereof, as are herein sought to be improved (except the cost of making said original survey, making and filing profiles, maps, or plats thereof) shall be paid by the Treasurer of the United States upon the warrant of the Secretary of Agriculture, issued upon the requisition of said commissioners of highways, out of any specific appropriation made to carry out the provisions of this act: *Provided*, That nothing herein contained shall prevent the said States or Territories from distributing their portion of the costs among their several subdivisions: *Provided further*, That nothing herein contained shall prevent the said States or Territories, or civil subdivisions thereof, from receiving credit for all labor, material, and machinery used in the construction or improvement of said highway or section thereof: *Provided further*, That no money shall be advanced by the United States in payment of its proportion of the expense of the improvement or construction as herein provided for, except as the work of actual construction progresses, and in no case shall the payment, or payments made prior to the completion of the work, be in excess of 80 per cent of the value of the work actually performed.

Sec. 7. That there is hereby appropriated, out of any moneys in the Treasury not otherwise appropriated, for the purpose of carrying out the provisions of this act, the sum of \$30,000,000, the said appropriation to be available at the rate of \$10,000,000 a year during the years 1908, 1909, and 1910. If any of the appropriation herein made is not expended in the year named, that portion not expended shall become available the succeeding year: *Provided*, That the provisions of this act shall only apply to post-roads now or hereafter to be established by the United States in any State or Territory, or civil subdivision thereof.

I have no apologies to offer for having introduced this measure, believing then and still believing that the principle aimed at in the bill was a just as well as a righteous principle. I do not claim perfection for it—far from it; but I do claim it contains a correct idea, an idea I sincerely hope in the not distant future to see incorporated into a Federal statute.

Section 1 of my bill provides that there shall be established in the Department of Agriculture a Bureau of Public Highways.

Section 2 provides for a cooperation between the States or civil subdivisions thereof and the Federal Government as to the best plans to be adopted for making, building, and improving the public highways of the country.

Section 3 provides that the Bureau of Public Highways shall consist of three commissioners, to be known as the "commissioners of highways," and said board to be nonpartisan.

Section 4 provides that after the expiration of six months States or civil subdivisions thereof, after complying with the various provisions of the act, may apply to the Federal Government for aid in the construction of their highways.

Section 5 provides what the States or civil subdivisions thereof must do before they can receive aid from the Government in the improvement of their public highways; and further provides that after the States or civil subdivisions thereof have done certain things, that then it becomes mandatory upon the Federal Government to do its part.

Section 6 provides that one half of the cost of improvement of the highways shall be borne by the United States, and that the other half must be borne by the States or civil divisions thereof, except the cost of the original survey, making and filing of maps, plats, etc., which must be borne by the States or civil subdivisions thereof.

Section 7 appropriates \$30,000,000 for carrying into effect the provisions of the act, and makes \$10,000,000 available for the year 1908, \$10,000,000 for the year 1909, and \$10,000,000 for the year 1910, and further makes the act apply only to postal roads as are now or hereafter established by the United States in any State or Territory or civil subdivision thereof.

Mr. Chairman, I doubt the wisdom or the propriety of the United States building the highways upon which it has now established postal roads, but I do not doubt its right or its power so to do. I doubt the wisdom of it for several reasons: First, if the Federal Government built the roads, it would have complete power and dominion over them after they were built and constructed. Second, it may involve the States and the Federal Government in numerous wrangles and disputes, which ought to be avoided whenever and wherever practicable so to do. Third, it would destroy, or at least tend to destroy, the am-

bition and the initiative of the States or civil divisions thereof and cause them to lean upon the Federal Government for support in all things which the States themselves could and ought to do. To avoid these objections and to stimulate and throw the burden upon the States, or civil subdivisions thereof, of doing something along this line of improving the highways of the country, a careful reading of section 5 of my bill will, in my judgment, avoid the objections spoken of.

Under this section, before one dollar can be appropriated out of the Federal Treasury to aid in the construction and building of highways, the States or divisions thereof must do four things, namely: First, establish the fact that the highway sought to be improved is of sufficient public importance, taking into consideration the public travel thereon, the carrying of United States mails, etc. Second, that the right of way has been procured by the States or civil subdivisions thereof. Third, that the highway, when constructed and improved, will be kept in repair by the States or divisions thereof without recourse upon the Federal Government. Fourth, that the States or civil divisions thereof have signified their willingness to improve their highways by having the same surveyed, profiles thereof filed, and making arrangements for the construction of at least one-half of the total cost of the highway, including all of the original cost of making survey, filing profiles, etc. Then, and not till then, will any State or any part of any State be permitted to share in any aid from the Federal Government in the improvement of the highways.

Mr. Chairman, I believe in the doctrine of self-reliance as applied to a State or civil subdivision thereof, such as county, parish, or township as much as when applied to an individual, but when questions of such magnitude as improving the public highways of the country have outgrown the power or ability of the States to cope therewith, then I believe the Federal Government should come to the aid of the States and aid them in this commendable enterprise. If the Federal Government is to assume complete control over the highways of the country by determining what highways shall be improved, where they shall be improved, and how, or in what way or manner they shall be improved, to the exclusion of the States, or the body politic in the States, having control and jurisdiction of the highways within the States, this is one thing, and one thing, I may say, to which I am unalterably opposed. But, on the other hand, if a State, or any civil subdivision thereof, having jurisdiction of the highways of the State, county, or township is desirous of improving the highways in its jurisdiction by determining the time, place, and method of improving the same, and desires aid from the Federal Government on this line, this is indeed quite another thing, and it is this last proposition that I am unalterably in favor of and to which I heartily give my support. But before this can be accomplished one of two things must of necessity occur: Either the States must be induced to adopt and enact uniform laws as to taxation for highway-improvement purposes, or else a Federal statute must be passed by Congress fixing the terms and conditions upon which States, counties, or townships can share in this Federal aid, thereby forcing the States to take the initiative in road improvement.

Last summer I procured a copy of the road laws of thirty-one States of the Union, and upon reading the laws of these various States, I find as much diversity as there are States, no two States having exactly the same law. Under the law in my own State (Indiana) all of the highways of the State are under the control of the board of commissioners in each county in the State, and the board of commissioners is composed of three men, elected by the electors of each county. If fifty freeholders or more in any township petition the board of commissioners of a county, stating in their petition the desire to improve certain highways in their township by grading, rock-ing, or macadamizing the same, it then becomes the duty of the board of commissioners to submit this question to a popular vote of the township; and if a majority of the voters of the township decide in the affirmative, the board of commissioners is then authorized under our statute to sell the bonds of the township, based upon the total assessed valuation of all the property in the township, equal to 4 per cent of the value of said property and payable in semi-annual payments for twenty years. To illustrate: If the total assessed value of all the property in a certain township is \$500,000, the board of commissioners would be authorized to sell the bonds of the township to the amount of 4 per cent of the \$500,000, creating a fund of \$20,000 for the improvement of the highways in the township. One-fortieth of these bonds mature every six months, and the entire amount matures in twenty years. This looks like a heavy drain upon the taxpayer, yet the payments are so arranged that it does not operate as a burden upon the people, and especially is the burden small as compared to the benefits accruing to the farmers or people living in the rural districts.

Mr. Chairman, practically every State in the Union has some system of taxation for the improvement of its highways, but the lack of uniformity of legislation among the States makes it indispensable for the Federal Government, if it enters upon this era of legislation—and I hope it will—to either enter upon it itself, independently of the States, or else enact a law fixing the terms and conditions upon which the States may receive aid from the Federal Government in the enterprise of improving the public highways of the country.

POWER OF THE GOVERNMENT TO IMPROVE THE HIGHWAYS OF THE COUNTRY.

By section 8, subdivision 3, of the Constitution of the United States it is provided that Congress has power "to regulate commerce with foreign nations and among the States and with the Indian tribes."

By subdivision 7 of section 8 it is provided that "Congress has power to establish post-offices and post-roads."

By subdivision 12 of section 8 it is provided that Congress has power "to raise and support armies, but no appropriation of money to that use shall be for a longer term than two years."

By subdivision 13 of section 8 it is provided that Congress has power "to provide and maintain a navy."

By subdivision 18 of section 8 it is provided that Congress has power "to make all laws which shall be necessary and proper for carrying into effect all of the foregoing powers."

That Congress has power to establish post-roads goes without saying. Indeed, it is plainly provided for in the Constitution itself. If it has the power to establish post-roads, it likewise has the power to acquire an easement over the real estate for this identical purpose, and it has equal power to determine the kind and character of the road, the way and manner it shall be made, the kind of material, and so forth, to be used in the improvement of the road—all these powers are plainly and expressly written in the Constitution itself. And if the power be not expressly given in this clause of the Constitution by subdivision 18 of section 8, it is plainly provided that Congress shall have the power to make all needful rules and regulations which may be necessary for the carrying into effect the provisions of the foregoing articles of the Constitution. Under this provision it is plain that Congress has complete and plenary power to enact laws to improve the post-roads of the United States. If it has this power, then it necessarily follows that it has the power to enact a law fixing the terms and conditions upon which the States, counties, or townships may participate in Federal aid for the improvement of the post-roads throughout the country.

Under the part of the Constitution giving Congress the power to raise and support armies, and appropriate money therefor, Congress has from time to time since the adoption of the Constitution down to the present day appropriated of the people's money for this very purpose, as follows:

Congress appropriated for the Army during the years—

1899	\$23,193,392.00
1900	80,430,204.06
1901	114,220,095.55
1902	115,734,049.10
1903	91,730,138.41
1904	77,888,752.83
1905	77,070,300.88
1906	70,398,631.64
1907	78,634,582.75
1908	85,007,566.56
Total	\$814,305,711.78

or an average of \$81,430,571.17 per year.

Under the provisions of the Constitution authorizing the Government to maintain a navy, Congress appropriated therefor during the years—

1899	\$56,098,783.16
1900	48,099,969.15
1901	65,140,916.67
1902	78,101,791.00
1903	78,856,363.13
1904	81,876,791.43
1905	97,505,140.94
1906	100,336,679.94
1907	98,958,507.50
1908	149,756,476.00
Total	\$61,974,943.77

or an average of \$86,197,494.37 per year.

Congress appropriated for the Post-Office Department during the years—

1899	\$99,222,300.75
1900	105,634,138.75
1901	113,658,238.75
1902	123,782,688.75
1903	138,416,598.75
1904	153,511,549.75
1905	172,546,908.75
1906	181,022,093.75
1907	212,091,193.00
1908	220,765,392.00

making a total amount of money appropriated by Congress for postal purposes in ten years \$1,520,651,193, or an average of \$152,065,119.30 per year.

Congress has always assumed control over all navigable rivers and lakes in the United States, and to improve the rivers, harbors, and canals Congress appropriated during the following years: (This does not include any appropriation for the construction of the Panama Canal.)

1890	\$40,207,778.46
1900	1,516,694.48
1901	24,330,795.94
1902	1,391,121.03
1903	54,284,317.80
1904	12,302,592.81
1905	28,037,711.23
1906	2,034,419.32
1907	62,371,639.80

making a total amount of money appropriated for rivers and harbors during the nine years of \$225,477,070.87, or an average of \$25,053,007.87.

Congress appropriated for the Agricultural Department during the following years—

1899	\$3,509,202.00
1900	3,736,022.00
1901	4,023,500.00
1902	4,582,420.00
1903	5,288,960.00
1904	5,978,160.00
1905	5,902,040.00
1906	6,882,690.00
1907	9,447,290.00
1908	11,431,346.00

a total in ten years of \$60,771,630, or an average of \$6,077,163 per year.

First session Fifty-fourth Congress appropriated..... \$469,494,010.41
Second session Fifty-fourth Congress appropriated..... 485,002,044.72

Total appropriations for Fifty-fourth Congress..... 954,496,055.13

First session Fifty-fifth Congress appropriated..... 862,682,487.06
Second session Fifty-fifth Congress appropriated..... 690,607,188.54

Total appropriations for Fifty-fifth Congress..... 1,553,349,675.60

First session Fifty-sixth Congress appropriated..... 719,278,826.80
Second session Fifty-sixth Congress appropriated..... 757,607,464.72

Total appropriations for Fifty-sixth Congress..... 1,476,886,291.61

First session Fifty-seventh Congress appropriated..... 796,633,864.79
Second session Fifty-seventh Congress appropriated..... 736,578,402.76

Total appropriations for Fifty-seventh Congress..... 1,533,212,267.55

First session Fifty-eighth Congress appropriated..... 781,172,375.18
Second session Fifty-eighth Congress appropriated..... 820,184,634.96

Total appropriations for Fifty-eighth Congress..... 1,601,357,010.14

First session Fifty-ninth Congress appropriated..... 879,589,185.16
Second session Fifty-ninth Congress appropriated..... 920,798,143.80

Total appropriations for Fifty-ninth Congress..... 1,800,387,328.96

Estimated appropriation for this session of Congress..... 1,000,000,000.00

Mr. Chairman, I am not finding fault with these enormous appropriations, but I am simply calling attention to them, along with the several appropriations made for the support of some of the Departments of the Government, particularly military, Navy, post-office, rivers and harbors, and Agriculture, that the people of the country may draw their own conclusions and deductions therefrom, with a view of seeing whether or no the agricultural class of the country is receiving its just share of appropriations in proportion to its population, its wealth, and its share of taxes that it contributes for the support and maintenance of the Federal Government. That the Army and Navy must be kept and maintained no one denies, but all admit, because both of these branches of the Government are provided for in the Constitution and are therefore national in character, but they are no more provided for in the Constitution than the establishment of post-roads in the United States, and therefore no more national in their scope or power than these thoroughfares of commerce.

In the past ten years there has been expended upon the Army the enormous sum annually of \$81,430,571.17, and during the same period of time there has been expended yearly on the Navy more than \$86,197,494.37, making a constant drain upon the resources of the country yearly in these two Departments of the Government of \$167,628,065.54. I am not criticising this enormous expenditure of the people's money along the line of militarism, but it strongly argues the proposition that we are fast becoming and fast approaching a military oligarchy, depending for our safety as a Union not upon our patriotism, nor upon the doctrine taught by the Redeemer—"On earth peace, good will toward men"—nor upon our natural resources, but solely by taxing our resources to the utmost in appropriating

the people's money to maintain armies and build powerful navies, both of these being engines of destruction, instead of being munitions of peace, happiness, and prosperity. It strikes me that the true and correct policy to pursue is to stop this unwise and pernicious practice of building up a strong army and a strong navy and turn our attention to aiding the people in the commendable and laudable purpose of improving the highways of the country.

During this same period of time Congress appropriated for the Agricultural Department the small sum of \$6,077,163 per year.

In 1904 the total assessed value of continental United States was \$107,104,211,917. This included all kinds of property, real and personal, corporate, and every other species and kind of property whatsoever.

In 1900 the total value of all farm property in the United States was.....	\$20,514,001,838
Land and improvements, except buildings.....	13,114,492,056
Buildings.....	3,560,198,191
Improvements and machinery.....	761,261,550
Live stock.....	3,078,050,041
Value of farm products.....	4,717,069,973
Value of crops.....	2,998,704,412
Value of products not fed to live stock.....	3,742,129,357
Animal products.....	1,718,365,561
Value of crops not fed to live stock.....	2,023,763,796

Total value of farm property, real estate, buildings, machinery, live stock, and crops..... 57,946,352,236

Mark you, this was in 1900, eight years ago. In my judgment the value of this same property to-day is at least \$75,000,000,000.

The estimated population of continental United States June 1, 1907, was 85,523,761; in 1900 the population in country districts, including towns having less than 2,500 inhabitants, was 45,411,164. The number of farm families was 5,689,838. The total number of farms was 5,737,372.

Mr. Chairman, it will be seen by these figures that as far back as 1900 more than one-half of the combined wealth of the country was owned by the farmers. This class of people always have contributed their share and much more than their share to the support and maintenance of the Federal Government.

The bill under consideration appropriates for public roads \$87,390.

The total amount of money appropriated by this bill for the Department of Agriculture is only \$11,431,346.

I invite a comparison of the appropriations for the Agricultural Department with the appropriations made for the Army, Navy, post-office, and rivers and harbors and the appropriations for the highways in this Department, as compared with the total wealth of the United States, and the division of this wealth among the farmers of the country, with a view of seeing whether or not the farmers of the country are receiving their share of the appropriations.

It was not, Mr. Chairman, until February 9, 1889, one hundred years after the Government was organized, that the Department of Agriculture was organized, and as such entitled to a seat in the President's Cabinet. No doubt this Department, since it was organized, has done an incalculable amount of good for the farmer in the way of making experiments, distributing literature, disseminating knowledge and information upon scientific farming, and so forth, and in various other ways; but, in my judgment, nothing would improve the financial and social condition of the farmers like the improvement of their highways, by grading, rock, or macadamizing them. They are willing to undertake this huge task and do their whole duty, and do it patriotically; but the task for them is too huge, it is too great, it is insurmountable so far as they are individually and personally concerned, and they only ask in return from the Federal Government a reasonable aid along this line. All these years they have withstood the mighty drain upon their resources in these vast appropriations without receiving any direct benefits in return. It is time that some of this vast amount of money raised by appropriations for the purposes of the Government was given to them for the improvement of the highways of the country, and thereby equalize, as far as practicable, the burden of taxation.

On March 3, 1893, Congress appropriated \$10,000 to be used by the Post-Office Department as an experiment, with a view of determining whether or not it was practicable to establish rural free deliveries in the country. This experiment was carried on until 1902, when Congress by law made it a permanent branch of the Post-Office Department. Appropriations for this purpose have consequently grown from year to year, until the year 1907 Congress appropriated for this purpose \$34,900,000, and for the year 1908 it appropriated the enormous sum of \$35,000,000. From a small beginning this system of free rural delivery has grown until April 1, 1908, there were in the United

States 39,038 rural delivery routes in operation throughout the United States, the approximate total mileage of these routes being 935,579 miles, divided among the States and Territories as follows:

States and Territories.	Mileage.	States and Territories.	Mileage.
Alabama.....	20,826	Nebraska.....	25,959
Arizona.....	221	Nevada.....	25
Arkansas.....	7,736	New Hampshire.....	4,797
California.....	6,650	New Jersey.....	6,020
Colorado.....	2,622	New Mexico.....	201
Connecticut.....	5,584	New York.....	40,828
Delaware.....	2,385	North Carolina.....	27,594
District of Columbia.....	121	North Dakota.....	9,056
Florida.....	3,215	Ohio.....	59,506
Georgia.....	35,823	Oklahoma.....	21,750
Idaho.....	1,633	Oregon.....	4,814
Illinois.....	67,239	Pennsylvania.....	47,879
Indiana.....	59,720	Rhode Island.....	685
Iowa.....	59,669	South Carolina.....	15,946
Kansas.....	45,126	South Dakota.....	12,784
Kentucky.....	15,771	Tennessee.....	35,739
Louisiana.....	2,329	Texas.....	40,032
Maine.....	10,010	Utah.....	1,040
Maryland.....	8,789	Vermont.....	7,193
Massachusetts.....	6,008	Virginia.....	20,188
Michigan.....	47,688	Washington.....	5,780
Minnesota.....	40,484	West Virginia.....	6,783
Mississippi.....	13,549	Wisconsin.....	38,555
Missouri.....	47,232	Wyoming.....	188
Montana.....	804		

When this work was started it was believed to be impracticable, because it was thought the task was too great. Notwithstanding these prophecies, the work has gone right along until to-day it is an assured fact. No man would to-day think of the Government abandoning this policy. It will be pushed until the entire domain of the United States is one network of rural routes.

If an appropriation of \$35,000,000 had been asked for this project at its beginning, it would have met with determined opposition, so much so that no doubt it would have been defeated. But by beginning with a small amount of money, appropriated for this purpose, the people have become educated along these lines. Practically all the people are to-day in favor of rural routes.

No one believes for a moment that the Government could withstand the drain upon its resources to undertake to aid the States in improving all the rural routes throughout the United States at one and the same time; but a beginning is all they want, and if we but begin this matter by making an appropriation for this purpose of only \$10,000,000 for the first year, I believe that such unbounded beneficial results will flow from it that people will soon see its wise and beneficent effect, and, like the rural routes, they will continue it, until at the end of a quarter of a century we will see all the great thoroughfares of commerce rocked, bought, paid for, and owned by the people.

The National Congress of Deep Waterways is now openly demanding of Congress an annual appropriation of the people's money of not less than \$50,000,000 for the purpose of increasing the transportation facilities of this country. Why not the farmers of the country make a similar demand, and why not give it to them?

There is no politics in this question. It is simply a question of equal and exact justice to all, with exclusive privileges to none. It is but a demand for an equal appropriation of the people's money to a class of people who have always stood their share of the burdens of the Government; it is but a demand for equality under the law. No better time to begin than now. To-day there is an available cash balance of the people's money in the Treasury of the United States of \$250,696,614.18.

Let this money go out into circulation by improving the highways of the country, and you will furnish work for the vast army of unemployed men now idle, and begging for bread; and in so doing we will build the country up, as it deserves to be built up, and aid a class of people that are deserving in their demands.

Sixty-seven and one-half per cent of the total revenues of the Government are to-day being expended in support of militarism directly and indirectly. This is, indeed, an appalling statement, nevertheless a veritable fact. If only one-third of this amount was given by the Government to aid the States or civil divisions of the States in the improvement of the highways of the country, in my judgment, in years to come by far a larger per cent of interest would be yielded to the Federal Government than will be if the policy be continued of constantly taxing the people for the support and maintenance of the military branch of the Government. This question is not

a new question by any means, but it is as old as Rome. The policy of the Government building roads was practiced by the Romans before the birth of Christ, and the roads built by the Roman Empire stand to-day as the wonder and admiration of the world.

Other governments in modern times, seeing the necessity of building up the highways of the country, have come to the rescue of people living in the rural districts. The Governments of France, Germany, Switzerland, and Italy are to-day appropriating millions of dollars to aid the people living in the rural districts to build and maintain the highways of the country.

Shall we, the most enlightened Government upon the face of the earth, take a backward step upon this advanced ground, or shall we be equal to the task and listen to the appeals of the people living in the rural districts, and aid them in the improvement of their highways? The strength of this country does not lie in the maintenance of standing armies, the building and equipment of powerful navies, but its strength lies, and I trust it always will lie, in the farmers of the country; and in order to strengthen them along these lines, it is time that the Federal Government should realize the just claims which they have upon it and begin the wise process of aiding them in the improvement of their public highways. [Loud applause.]

Catholic Church Claims in the Philippine Islands.

SPEECH

OF

HON. EDMUND H. HINSHAW,

OF NEBRASKA,

IN THE HOUSE OF REPRESENTATIVES.

Friday, March 6, 1908,

On the bill (H. R. 16143) to provide for payment of the claims of the Roman Catholic Church in the Philippine Islands.

Mr. HINSHAW said:

Mr. CHAIRMAN: H. R. 16143 is a bill reported favorably by the Committee on Insular Affairs. All the Republican members of that committee favor it, but four of the Democratic members for some reason oppose it. It provides that the sum of \$403,030.19 be paid to the Archbishop of Manila for the use and occupation of various cathedrals, other church property, and school buildings in the Philippines during the insurrection there and for a part of the damages done to such property during such occupancy. The chief questions involved are: First, to whom should this money be paid? There is no controversy about the use of the property and the damages done. The highest Catholic Church authority in those islands is the Archbishop of Manila, and, under a decision of the supreme court of the islands, the Kingdom of Spain had no interest in these church and school properties and no interest therein passed to the Government of the United States under the treaty of Paris. There is really no doubt that whatever compensation is made should go to the Catholic Church of the islands, represented by the archbishop.

Secondly, for what particular items should compensation be made? A board of church claims was appointed under a special order of the War Department to pass on all these claims. This board made a careful and exhaustive investigation. It appears that the military forces took possession of churches, contiguous parish houses, school buildings, seminary buildings, etc., and used them as hospitals, prisons, or barracks. After hostilities ceased the occupation continued until suitable quarters could be constructed for the garrisons. Of course during all this time the church authorities could have no use of these buildings and could not protect them. Much damage was necessarily done. The award of the board did not give compensation for damages done by the insurgents, nor for damages incident to military operations, nor for wanton damages by soldiers of the American Army, nor for the use and occupancy and damages by servants of the civil government. After excluding all these elements of damages the board made an allowance which is very conservative, \$363,030.19.

Many claims were excluded entirely on the ground that no rent was due, or that the damages were inflicted by the enemy. To this award the committee has added \$40,000 for damages to vestments, images, and sacred ornaments, for which, however, the church claimed a much larger sum. Colonel Hull, a member of the board, testified that the allowance should be \$500,000. Secretary Taft, who was thoroughly familiar with all of the facts

and conditions, also stated that the allowance should be not less than \$500,000. The absolute justice of this claim can not, therefore, be successfully disputed. These people, as the testimony tends to show, were noncombatants, not engaged in the strife, but their property offered the most convenient protection for our soldiers in their need and the exigencies and hardships of war demanded that they should use it; but that fact does not excuse the Government from making proper payment. There are numerous cases where the Government has paid similar claims in the United States. Many cases can be cited. Here are some: The Kentucky University was paid \$25,000 for the use and occupation of their buildings by the United States troops; East Tennessee University, \$18,500; the University of Alabama was given 46,000 acres of land by Congress to reimburse for their buildings destroyed by fire in 1865, during military operations, and there are many others. The horrors of war can not be compensated for, but a just Government can and will make proper restitution to those who suffer loss, due to no fault of their own, and where a direct benefit has accrued to the Government.

The Vreeland Bill Fair to All Sections of the Country.

SPEECH

OF

HON. JOSEPH R. KNOWLAND,

OF CALIFORNIA,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, May 14, 1908.

On the bill (H. R. 21871) to amend the national banking laws.

Mr. KNOWLAND said:

Mr. SPEAKER: President Roosevelt, at the opening of the present session of Congress, appreciating the necessity and general demand throughout the country for currency legislation, expressed himself as follows:

We need a greater elasticity in our currency; provided, of course, that we recognize the even greater need of a safe and secure currency. There must always be the most rigid examination by the national authorities. Provision should be made for an emergency currency. The emergency issue should of course be made with an effective guaranty and upon conditions carefully prescribed by the Government. Such emergency issue must be based on adequate securities approved by the Government, and must be issued under a heavy tax. This would permit currency being issued when the demand for it was urgent, while securing its retirement as the demand fell off. It is worth investigating to determine whether officers and directors of national banks should ever be allowed to loan to themselves. Trust companies should be subject to the same supervision as banks; legislation to this effect should be enacted for the District of Columbia and the Territories.

The demand for currency legislation is now no less insistent than it was when Congress convened. The country has waited patiently, hoping that out of all the discussion there would finally result a measure that would at least provide an emergency currency, and thus prevent a recurrence of conditions which confronted the country last year. The close of the session approached and the prospects for currency legislation apparently grew less bright. A majority of the Republican Members of the House realized that the party would be held accountable for a failure to meet the situation, the result being that a conference was called, at which there was a full and free discussion, the conference adjourning over in order to afford every Member full opportunity to express his views. At this second conference a motion prevailed by an overwhelming vote that the recognition of commercial paper through clearing-house associations be approved as a safe and logical asset for emergency currency, and that the Chair appoint a committee of five to perfect a bill, the perfected bill to be reported to the conference at an adjourned meeting to be held within five days. The conference also expressed itself in favor of a currency commission.

The committee of five, of which committee I had the honor of being a member, took the Vreeland bill as a working basis, embodying as it did provisions recognizing commercial paper as an asset for emergency currency as indorsed by the Republican conference. The special committee addressed to every Republican Member of the House a letter in which certain questions were propounded touching features of the proposed measure, and asking for additional suggestions. Fully one hundred replies were received, and in addition to these many Members verbally expressed themselves to the committee. There was a

marked unanimity of opinion among the Members generally on the main features of the bill which the committee of five finally reported to the conference. This bill was indorsed by the Republican conference by a decisive vote of 183 to 16.

One of the strongest features of the Vreeland bill is its absolute fairness to all sections of the country. The money centers are not favored to the detriment of other sections. In case of a money stringency, the State of California, for instance, will be independent of New York. At my request the Treasury Department has compiled a table showing the amount of emergency currency to which each State will be entitled under the provisions of the Vreeland bill should it become a law. To my mind this table, which is appended, is the most convincing argument in favor of this measure and should appeal to business men in all sections of the country. It means commercial independence to the West particularly. While the Vreeland bill is not a perfect measure, as even its authors admit, it is nevertheless a workable emergency measure that will unquestionably prove most satisfactory in case of another money stringency.

TREASURY DEPARTMENT,
Washington, May 18, 1908.

HON. JOSEPH R. KNOWLAND,
House of Representatives, Washington, D. C.

SIR: In reply to your verbal request of the 15th instant, you will please find herewith a table showing the distribution, by sections and States, of additional bank circulation under the provisions of the bill (H. R. 21871) providing for \$500,000,000 of emergency currency.

Respectfully,

CHAS. H. TREAT,
Treasurer of the United States.

Memoranda relative to the distribution of additional bank circulation under the provisions of the bill (H. R. 21871) providing for \$500,000,000 of emergency currency.

States and Territories.	Bank capital and surplus Feb. 14, 1908.			National bank notes outstanding.	Proportion of \$500,000,000 additional circulation.

Emergency Currency Bill.

SPEECH

OF

HON. JAY F. LANING,

OF OHIO,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, May 14, 1908,

On the bill (H. R. 21871) to amend the national banking laws.

MR. LANING said:

MR. SPEAKER: I shall vote for the Vreeland bill because I believe its enactment will be not only a step in the right direction, but it may be an example that will be courageous enough to at some time lead us away from the present system of bond-secured currency to something more potent for the monetary good of the country.

The national-bank notes are an emergency currency, having been evolved as a war measure. Congress adopted bonds as the method of securing currency for the purpose of creating a market for a large amount of Government bonds, the issue of which was a war exigency. This then seemed the only means of obtaining a perfect guaranty for United States notes. Such a security was needed for the currency in the critical times following the rebellion. Our bond-protected national-bank circulation has many good features to recommend it; but, like everything else, it has some defects.

Whoever thinks a faultless piece to see
Thinks what ne'er was, nor is, nor e'er shall be.

I presume that it will be conceded that to be a perfect circulatory medium any form of money must keep itself automatically in circulation up to its maximum point. The present bond deposit secured currency is not productive, but destructive of the free and full use of the money. It is not an accommodating medium for the wants of borrowers, for it is not elastic enough to expand to meet the periodical demands of the commercial, agricultural, and industrial agencies of the country.

It has its days of feast and its days of famine. It is out in plenty one season and becomes scarce another. It plays "hide and seek" with celerity. It is like the wind; no man can tell "whence it cometh or whither it goeth." Mr. Speaker, agricultural communities use but little money, except at crop-moving periods, and local bankers, rather than hoard it, send it to monetary centers and put it out at low-interest rates. From March to August it is finding its way from many country points to the cities, and from small cities to large ones, at cost of expressage and loss of interest, and it becomes concentrated, stagnated, and contracted for a while. Its holders loan it out on call to speculators, and then the autumnal trade expansion comes on and it is recalled and becomes dissipated, and goes through the process of redistribution and thus gets back into local use again. In these movements there is often delay and inability to get an adequate supply, and an ever-present suspense that puts dissatisfaction and expense upon farmers and makes it a dear money for manufacturers and merchants.

In an ideal system of currency banks should be able to put out directly with the people all the circulation possible, keeping it out in borrowers' hands as long as possible, instead of

reaching them indirectly through middlemen, who derive a profit in handling it.

When the demand for money and the supply of it work in unison, both being reasonably plenty, we have a cheaper money to the user and a more profitable money to the loaner of it, and it is a potent business stimulant.

A system of currency like the Fowler bill provides, which allows each bank to issue it at such times and in such quantities as to its officers seems desirable and profitable, and then retired, as it wills, without expense to itself while idle, and which can be properly guaranteed, is undoubtedly one "devoutly to be wished."

MR. SPEAKER, one great objection to the national-bank notes as a financial factor is that they are conducive to dear money and harmful to the debtor class.

For a long time the banker had to put up \$100 of bonds for \$90 of circulation, and had to pay about \$112 for the bonds. It took \$11 to get \$9 of currency to put into the hands of the people. Thus, for business use, about 25 per cent of the money for which a banker put up bonds was idle, and of course the banker, not being philanthropic enough to lose this, added it to his income by an increase of the interest rate he charged the borrower. The bank now gets about \$10 in notes for its \$11, and the loss is not so great, but still not an inconsiderable exaction from the borrower.

Bankers have all the time complained that the security forced from them was excessive, broader than the Bank of England puts up, or any other bank of the world—superfluously ample—thus placing a large amount of their capital beyond the bank's control and depriving it of that freedom in handling its resources which is essential to make the most of its facilities, to meet emergencies, and do an efficient banking business.

Because of the absence of profit in national-bank circulation money of that kind can not be made cheap to borrowers.

To illustrate further, Mr. Speaker, it takes bonds which cost 112 and are yielding 2½ per cent on their face only, a 5 per cent redemption fund, and a half per cent tax to satisfy the price of issuing national-bank notes. When the demand for money is light, banks send notes in for redemption, as they are doing now, there being \$50,000,000 of it now placed in the United States Treasury for that purpose, because it is more profitable for the banks to surrender it than keep it in their vaults with little chance to loan it. In times when it can be used, as the average income from it is so small, banks are loath to take it out again. If they do not send it in for redemption, when they have plenty, it is sent to New York, where Wall street gamblers are always willing to pay for its use, and where in times of panic they can never get it back.

As an illustration of this it may be said that there never has been a time since national-bank notes began when anything near the authorized amount of them to banks has ever been taken out for circulation.

In proof of this I want to read a table giving the number of national banks in the United States for the years given and their capital stock and circulation, in round numbers.

Year.	Number of banks.	Capital.	Circulation.
1873.....	1,940	\$483,000,000	\$336,000,000
1883.....	2,308	485,000,000	315,000,000
1891.....	3,573	658,000,000	128,000,000
1893.....	3,784	690,000,000	146,000,000
1900.....	3,602	607,000,000	205,000,000
1903.....	4,766	731,000,000	335,000,000
1907.....	6,429	883,000,000	610,000,000

It will thus be seen that in 1873 there was \$147,000,000 the national banks could have issued, while in 1893, the time of the panic, \$544,000,000 was due them on demand. In the close times of 1903 \$396,000,000 could have been taken out, while in 1907 \$273,000,000 was available.

This authorized additional circulation in any panic year would have been sufficient, if taken out, to meet the currency emergency and to have stayed the ravages of either of the money scourges that have been inflicted upon the innocent business, manufacturing, and industrial classes by the neglect of the banks to provide against such always possible, if not probable, events.

In 1874 General Grant vetoed an act of Congress increasing the national-bank and legal-tender notes on the ground that several millions of national-bank currency could be taken out voluntarily by the banks that were below their quota, without new legislation.

The principle involved in the Vreeland bill recognizes commercial paper as a proper basis for a circulating medium; that is, if a national bank has so far loaned out its funds that its limit has been reached and further demand exists, the com-

mercial paper it has taken is an asset upon which more bank notes may be issued. But the issue of this currency is safeguarded by compelling banks to a certain number and of a stipulated capital to go together, pass upon the paper, and become jointly and severally liable to the Government for the redemption of the additional currency taken out. The principle has been suggested before, but never worked out so completely. So far as actual practice is concerned, it is a new idea, and may develop great possibilities in the world of finance. Let it be well tried.

This additional currency can be issued only when the Government decides that an emergency exists, and whether the law is sound or unsound finance, the remoteness of the probability that its provisions will ever be invoked overrides any weakness it may be imagined to have, while the possibility that it may be serviceable makes it necessary that we have such a law in existence, lest we again be visited with our disastrous experience of 1893 and 1907.

Now, Mr. Speaker, it is not unlikely that this bill will be opposed by the Democratic side of this House. But that should not influence our action. It always opposes Republican measures, no matter how good they are. It never did anything else. The best definition lexicographers can give to the word "democracy" is, "opposition to republicanism." It is the party of negation and do-nothing opposition, while the Republican is the party of affirmative action and constructive legislation, from which the country has had benefits of great, incalculable value. [Applause on the Republican side.]

Democracy is a party with scarcely a success to its credit for fifty years. About the only affirmative legislative act it has given to the country during the short season of its control of Congress was the Wilson-Gorman tariff bill, which its own President said was "perfidy and dishonor."

Democrats may chide us that we had a panic in 1907 under our management of the Government, but they had a worse one in 1893, growing out of their positive mismanagement of its financial and economic affairs.

But, Mr. Speaker, the Democratic party has nothing to brag on, over the Republican party, as to its record on financial affairs and measures, and notwithstanding we have done so much of legislation and administration and it so little, we point to a record of almost unbroken successes and it to a series of admitted failures in nearly every effort.

During the four years ending July 1, 1860, the nation then being small and business being but little as compared to now, it made a deficit of \$63,000,000 in four years of administration, when the country was in a state of profound peace. Instead of meeting the deficiency squarely by some method of taxation, it borrowed money by the issue of Treasury notes, and the Government was made to pay a rate of 12 per cent to convert its issues into coin.

Prior to 1861, 1,600 different bank corporations, organized under the varying laws of thirty-four States, issued the money of the country. It was unsound in quality, subject to heavy discounts and exchange charges, and the frequent insolvency of some of the banks so often made it worthless, that it was not only burdensome to business, but brought many losses to the depositors. That currency was often known as "wild-cat" money. This was the Democratic system of banking, having grown up under and been fostered by its laws.

When the Republican party was inaugurated in 1861, it set about the task of lifting this unsafe and unsatisfactory currency and providing one in its place that would be uniform, adequate, and secure, and in the spring of 1863 the splendid national-bank system we have since used with such security for business and great satisfaction to the people was enacted against the almost solid opposition of the Democrats in Congress, who predicted that it was unworkable and unconstitutional and a damnable usurpation of the powers of the Government.

This currency, Mr. Speaker, was devoid of the faults of the Democratic antebellum money, and was not only a great service to the maintenance of the war, but brought the benefits of a stable currency to the business of the times to an extent that was beyond computation. The experience of the past forty years with it has developed a more highly educated set of bank officials and great improvement in banking methods, and the public have become so much more intelligent and exacting that they have been willing to suffer its few shortcomings rather than risk a return of the evils of a "wild-cat" currency they would assume in making a change.

In January, 1862, it became necessary for the Government to adopt a legal-tender circulating medium, the banks of the country having suspended specie payment December 31, 1861. This legislation met all sorts of objection from the Democrats in

Congress, obstruction being their tactics. They predicted disaster to the Republican party and the country, as they are now doing, but it is to be noted that their predictions never come true. They assailed the currency measure as "involving the destruction of all standards of value," as "disordering the operation of trade and commerce," and as bound eventually to bankrupt the Government, the banks, and the people. It was denominated as a measure without precedent in the history of the country, and the exercise of dubious powers no one had ever before claimed the Government possessed. Democratic orators unitedly and vindictively depicted the disasters an inflated currency without intrinsic value would engender, and their alarmists predicted that it would in time become so worthless that it would require a cord of greenbacks to buy a cord of wood. [Applause on the Republican side.]

In 1875, having reduced and funded the national debt to a point that confidence in the financial ability of the Government to maintain a stable currency was restored, the Republican party, Mr. Speaker, undertook the task of ridding the country of the evils of a fluctuating, depreciated paper currency which had been issued as a military necessity, and set January 1, 1879, as the date when the United States legal-tender notes were to be redeemed in coin, a four years' probationary period being taken to put the people in preparation for it.

In 1872 the platform of the Democratic party, adopted by its national convention, declared that—

A speedy return to specie payment is demanded alike by the highest considerations of commercial morality and honest government.

And they could, from their record of opposition to a paper money, naturally have been expected to favor resumption. But their habit of opposition got the better of them, and they missed a favorable psychological moment to be right and strong before the country.

Democratic politicians who had so ardently and vehemently opposed a greenback currency in 1862 as being unconstitutional, and gone to the Supreme Court to be beaten on that issue, and had called this money an unauthorized and dishonored forced loan, a menace to business, and the unjust invasion of the sanctity of private rights, now had a chance, Mr. Speaker, to cover themselves with glory by sticking to their original contentions. Here was an opportunity to get rid of this naughty circulating medium and get back to the "constitutional money of the fathers," as they called it, and of wiping out the dishonor that had, according to their arguments in 1862, been perpetrated by the Republicans.

And what did they then do? Just what they are doing today. Some of them claimed they were for resumption, but the kind they were getting was not good enough; some of them thought conditions throughout the country did not warrant it, and presenting one excuse and another as a justification nearly all the Democrats voted against a return to specie payments.

They pretended, Mr. Speaker, to know that resumption could not become a success, that we would be further from it in 1879 than in 1875, and they stood like a wall for continuing the currency they had so fiercely denounced, and in favor of perpetuating the alleged dishonor they formerly so vehemently decried.

Not only this, they went further and shouted that the irredeemable currency of 1862 was "a thing of beauty" to be held onto, "a joy forever" that should be kept unredeemed, and be made the feature of the financial system of the United States.

A Democratic Congress met in 1875 and voted to repeal the authority of the Secretary of the Treasury to sell bonds to get specie for a redemption fund; also to repeal the clause of the redemption law fixing the day for resumption. It pledged itself against the proposition to resume, and did everything possible that the votes of a majority in this House can do to make resumption impossible.

We had to fight out the political issues of "flat money" and of "rag baby" currency propositions they advocated, and it was with difficulty we finally triumphed over them at the polls.

In 1876 the Democratic party in its national convention nominated Tilden, and denounced the "financial imbecility of the Republican party" for not having theretofore resumed specie payments. It also denounced the resumption clause of the act of 1875 as a "hindrance" to resumption, and demanded "its repeal." Samuel J. Tilden, the Democratic candidate for the Presidency, characterized the fixing of the day as a "sham," and predicted it would end in "fresh calamity, distrust, and distress."

Then, as now, Mr. Speaker, the Democratic party was the party of inaction, while the Republican was the party of action. It was a party of destruction while the Republican was a party

of constructive statesmanship. Not one of their calamity predictions came as alleged, but on the contrary, resumption was ushered in ahead of time without a shock to the commercial, manufacturing, or industrial interests of the country.

It was the courage and brains of the Republican party in a critical time that made the issue of the greenback possible, and that party redeemed it by its courage, and thus kept the faith it had asked the people to repose in it. And so it will now have to be the leader in furnishing the people with a system of emergency currency to meet this new phase of the banking business, which the evolution and progress of the times have made necessary. The Democratic minority of this House has nothing to offer the country, and is practicing the same carping, criticising, opposing tactics it has made use of heretofore every time it has had an opportunity to do similar business. Like the dog in the manger, it refuses to eat, itself, and at the same time tries to prevent everybody else from eating. [Applause on the Republican side.]

The Forty-fourth, Forty-fifth, and Forty-sixth Congresses, for the six years extending from March 4, 1875, to March 3, 1881, and the Forty-eighth, Forty-ninth, and Fiftieth, for the six years from March 4, 1883, to March 2, 1889, were Democratic, and from March, 1879, to December, 1882, the Senate was Democratic, and these were halcyon days for freak currency propositions for legislation in Congress. What the Democrats tried to do to break down the wise monetary system previous Republican Congresses had enacted and a Republican President was trying to enforce was "a plenty."

Most of the Democrats had voted for the resolution of Weaver, the Democratic-Greenback leader of the House in 1876, and its nominee for the Presidency, substituting greenbacks for national-bank notes.

In February, 1878, Congress passed the act to remonetize the silver dollar and issue silver certificates over the veto of President Hayes. In 1879 the Democratic House passed a free-coinage act, but the Republican Senate defeated it. All these measures were designed to defeat the resumption act. Notwithstanding those were strenuous times for Republicans, when it seemed they had been deserted by the people, as judged by their verdict at the polls in electing a Democratic House, they stood manfully for the right, as God had given them to see the right, believing that the righteousness of their cause would be sure to win its triumph ultimately, and they were not to be disappointed. [Republican applause.]

In 1880, Mr. Speaker, the Democratic party straddled again and tried to be apparently on all sides of the money question by declaring in its national platform for—

Honest money—consisting of gold and silver, and paper convertible into coin on demand.

It did not propose to "get lost," no matter what phase of the question was laid before the people.

When it failed to get a greenback currency by direct means, Mr. Speaker, it tried indirect ones. It wanted "fiat money," honestly if possible, but if not, it wanted "fiat money."

The surplus of the United States Treasury has also been a source of discomfort to the Democrats, and they have always been anxious to dissipate it when one has been accumulated. The Republicans had then amassed one of about \$125,000,000 of gold reserve, to maintain resumption of specie payments, and that fact being accomplished, the Democratic statesmen laid awake at night to concoct schemes to get rid of it. But the Republicans stood steadfast for its maintenance in earnest of the continuance of sound finance.

The Morrison bill presented in this House proposed to let the greenbacks stand on their own bottom as a circulating medium, and become practically irredeemable currency, by taking away the reserve fund that supported them, and buying and retiring Government bonds with it. The Democrat Members of Congress were almost unanimous for this bill, and it passed both branches to be defeated by the refusal of a Republican President to sign it.

In 1882 they blandly voted to get rid of the national banks altogether, and go to a greenback currency in a simple way, by opposing the law to extend national-bank charters.

Following the greenback agitation, in which the Democratic party took the side of inflation, the silver movement developed. The "dollars of the daddies" and the so-called "bi-metallic currency" were simply inflation ideas.

The purchase of silver for coinage at 4,500,000 ounces a month was not fast enough for them, they wanted full and free coinage without waiting for it at the rate of that extensive acquisition per month.

In 1882 the Republicans provided for the issue of gold certificates against the gold reserves in the Treasury, and made the silver certificates available for bank reserves, and thus added a large amount to the per capita circulation of the country.

The campaign of 1884, when Cleveland was first elected, was not conducted on money lines, but the Democratic party again adopted its former blanket policy by declaring in its national platform:

We believe in honest money, the gold and silver coinage of the Constitution, and a circulating medium convertible into such money without loss.

Experience had been developing the fact that we were fast going to an exclusive silver basis, gold was being hoarded, and its effect was being felt in the business of the country, so that when Grover Cleveland became President, in order to be true to the principles of his party, as set forth in the platform on which he was elected, he attacked the silver purchase and coinage law and sought its repeal. But the Democratic Congress elected with him was deaf to his entreaties and insisted on trying to force the country upon a silver basis.

The money question was a subordinate one in the campaign of 1888. The obstinacy of the Republican Senate had prevented any change in the tariff laws, or any financial experiments, and the surplus in the Treasury had been gradually growing, until it was alarming to Democrats. Instead of paying it out to redeem bonds or currency notes, and thus cut down the public debt, President Cleveland, in 1887, proposed tariff revision and reduction as a surcease of the growth of the surplus, and in that recommendation lies the tale of his undoing in November of that year. In its national platform the Democratic party declared:

The money now lying idle in the General Treasury resulting from superfluous taxation amounts to more than \$125,000,000, and the surplus collected is reaching the sum of more than \$60,000,000 annually.

It also set forth a declaration for a "revision of the tax laws" and recommended a bill for the "reduction of revenues" then pending in the House of Representatives. I need not repeat the result of that election, as it is modern history.

Cleveland was elected the second time in 1892 and we were doomed to "four years more of Grover." From that time to March 4, 1897, he was in supreme command, supported by a Democratic Congress.

The platform on which Grover was then elected denounced the Sherman silver-purchase act, against the repeal of which the party had stood under his former Administration, as being a "makeshift" and declared for "both gold and silver" of equal value through "international agreement."

Cleveland tried to maintain the integrity of the Democratic party on the financial question, but was unable, Mr. Speaker, to do so. His party in Congress was against him, and it quarreled with him and continued its vacillating, soft money indorsing course until the close of his second term, when the party came out for "the unlimited coinage of silver at 16 to 1," and, following "Coin's Financial School," left Grover behind "poor, despised, forsaken," with scarcely a friend to do him reverence; and all because he was honest and stood for sound and sane finance.

Mr. Speaker, his traducers in 1900 to-day acknowledge him as a monument of intelligence and integrity, whose advice, if followed then, would have saved them the heartaches they have suffered by reason of subsequent defeats. The leaders of his party who maltreated him then did not have and never yet have shown him the courtesy of the apology which is due him for the insults it gave him, but the people have resented them and the party is so disestablished in the confidence of the people that it is not likely that it will ever again be permitted to reign over the halls of Congress, where financial legislation is to be prepared and enacted.

When the silver contest was over, Mr. Speaker, the Republican gold standard of 1900 was adopted, but the Democrats under Bryan did not have foresight enough to accept the inevitable. Five days after the passage of the "gold-standard law" the Bryan Democratic-Populist party in Nebraska met and declared for the free and unlimited coinage of silver and the substitution of greenbacks for bank notes. The national Democratic party that year "reaffirmed and indorsed" 16 to 1, and told again of the inadequacy of the gold supply and the oppressive effects of the gold standard. But prosperity had gained so much headway that such declarations were unheeded, and McKinley was reelected by such an increased majority that the gold standard was universally accredited as the choice of the American nation.

Certain it is, Mr. Speaker, that our Democratic friends, the enemy, could not have done us a more friendly and profitable act than they have committed by taking the position they have on the financial question.

In 1904 the national Democratic platform was silent as the grave upon the money question, but the party voted for the man who sent to the convention his memorable declaration that he

would not stand for anything other than an acquiescence in the gold standard, and thus committed itself to that policy.

And so it is that we have the triumph of honest money, brought about by and through the Republican party and its great leaders, an achievement over which all Christendom rejoices, and notwithstanding that Democrats have ceased their wails of opposition to it I am satisfied that the people who know of their crazy-quilt record will not want to give them another chance to be conspicuous in the financial legislation of the times. [Republican applause.]

And, Mr. Speaker, what can it say in its platform of 1908? It has no record to point to with pride, no policy to present for the future. It is, upon this question, like was said of the mule, "it has no pride in its ancestry or hope of posterity."

Democratic orators will undoubtedly talk in high-sounding phrases about the panic of 1907, but it will fall as flat as did their song about the "crime of 1873." I do not believe the American people will be deceived into letting them make capital out of such calamity howls. This disturbance was a baby beside the one of 1893, a direct outgrowth of Democratic imbecility in managing the affairs of the Government, while that of 1907 was one that came from nonpolitical causes, inasmuch as everybody had the utmost confidence in the Government and its operations.

Legislation like that provided for in the Vreeland bill is going to establish confidence that we can not again be hit by a scarcity of money and a panic created, and business will go ahead with confidence.

Mr. Speaker, manufacturers, merchants, and laborers complain that in times like those through which we have recently passed the bankers hoard the money, and the cry is to "save the banks." Business enterprises have to be shut down and sacrificed, and an army of clerks and laboring men put out of employment because their employers' money is sealed up in the vaults of the bank that is protecting itself at the expense of every other enterprise.

What I want to see is the passage of such a financial bill as will establish a monetary system that will do away with a recurrence of such events, that will not only save the banks from undue strain, but will operate to save the country and the people, who are ten to one to the banks, from such dire and painful results as flow from a financial panic. Such measures as the Vreeland bill or the Fowler bill are adequate to such needs, and their passage will be a further monument to the wisdom of the Republican party and its leaders in this Congress as well as another regulement to the passing of the Democrats who oppose it. The national Democratic platform will this year again declare for "tariff for revenue only." We are already committed to revision, and we welcome that "gauge of battle." We can defeat them again on that issue, as of old.

Mr. Speaker, the Democratic party is like an untamed bird in a cage. It sings sweetly, but it is imprisoned behind the wires of public opinion, that keep it from freedom. If it had full liberty, no knowing where it would fly to and how great the political mischief it would accomplish, as it has the capacity for a large amount. The people have believed in the sweet cadence of its songs a few times, but its conduct was such that it has always had to be caught and restrained again within a short time. The doleful and pitiful notes it pours out from its place of confinement sometimes excites the people's sorrow for it and sympathy for its condition, but knowing that its lamentations are only sentimental they never take them deeply to heart. [Applause on the Republican side.]

The Republican party is not one of omnipotence or divine purity. It is not "just and righteous altogether," but it has been trusted and found to be "of the people, for the people, and by the people," and its glorious achievements in politics and statecraft are a sufficient incentive and an adequate inspiration to keep it from perishing from political power.

When we consider, Mr. Speaker, the hesitating, shuffling, bobbing, changing position the Democratic party has occupied from time to time in reference to the issue and retirement of greenbacks and bank notes, the questions of specie payments, sound money, and the maintenance of a high-class monetary system for the country, is it any wonder that the people have been afraid to trust it in this body, from which it took its departure when Grover went out in 1896, and during the twelve years that followed has, by the voice of the people, been kept in a sad minority?

I suppose, in its lonesomeness, and while looking upon what it has lost by being banished from power by reason of its inconsistencies, it has been saying over to itself:

Of all sad words of tongue or pen,
The saddest are these, "It might have been."

But, Mr. Speaker, it was not to be, nor will not be. The militant Democratic party has never measured up to the great demands of the people for statesmanship. When the country has been asking for practical and needful legislation it has never been able to produce it, as is now exemplified in the present demand for an emergency currency.

The Democratic party has been a dreamer, has lived in the realms of fancy and has fed on the ethereal stuff that dreams are made of so much that it can not produce the real solid, substantial ideas that are wanted for successful constructive legislation.

It is the party of pessimism, always seeing the defects and foreseeing the calamities which will follow every legislative business proposition, while the Republican party sees the good things in it and the benefits it will accomplish. For my part, the Democrats are entitled to continue to see the hole in the doughnut, but Republicans prefer to see the doughnut itself.

Politics, Mr. Speaker, is one of the emotional traits of the human mind. Being a sentiment, and not a substance, no one can measure its force and extent with mathematical certainty. None of us have the gift of prophecy, nor can we "see ourselves as others see us," but I venture the prediction that if we could our Democratic brethren at least would be doing things much different than they are. If they had foresight instead of hindsight they would be spared some of their many mistakes.

I am no political sightseer or clairvoyant, but I think that with my vision I can foretell the effect—to reelect Republicans—which the agitation of the tariff question will have upon the people this year.

Prosperity has its "ups and downs." The lowering clouds that are now in the sky of the industrial world can not be gotten rid of by any single or hasty act of legislation, but they can be kept floating on to paralyze business weather by the continuance of a crusade against the doctrine of protection to American industries. Already, Mr. Speaker, they are disappearing before the radiance of the rising sun of returning prosperity. The winter of the laboring man's discontent will soon be made a glorious summer of hope and satisfaction, if not intervened by the disturbing action of the American people, through a reversal of the political control of this body and the nation at the forthcoming election contest.

The depression will disappear for good when the voice of the people is announced in November, that they will not again, by the same improvident action, permit it now to last for four years more, as it lasted four years from 1893 to 1897, by the election of a Democratic Congress and President. God forbid that the voters of my country shall so far forget themselves as they did in 1892, to reenact the verdict that then sent the country through four years of desperate business gloom. The repetition of such a verdict, Mr. Speaker, will compel all of us to endure four years of punishment for such political sins, from which we must wait till 1912 to be redeemed by another rising tide of the sentiment of an aggrieved people that will sweep the Democrats out of power if they enter again, and put the Republicans in possession of all the Government, as was done twelve years ago. [Loud applause by the Republicans.]

Catholic Church Claims in the Philippine Islands.

SPEECH

OF

HON. ADOLPH J. SABATH,
OF ILLINOIS,

IN THE HOUSE OF REPRESENTATIVES,

Friday, March 6, 1908.

On the bill (H. R. 16143) to provide for payment of the claims of the Roman Catholic Church in the Philippine Islands.

Mr. SABATH said:

Mr. CHAIRMAN: The reasonableness and justice of the appropriation which this bill carries are manifest.

In 1808, during the hostilities in the Philippine Islands, our troops took possession of churches, convents, seminaries, and school buildings belonging to the Roman Catholic Church and transformed these buildings into hospitals, barracks, and prisons. In many instances these buildings were held long after peace was brought about. Great damages were done to these buildings, many of which were of beautiful architecture and elegantly furnished and decorated. Crucifixes, chalices, candelabra, vestments, organs, and scriptural paintings of great value were either damaged or destroyed by the soldiers through care-

lessness, reckless use, and in some instances by deliberate wantonness.

Because of military necessity we took these properties, practically evicted the rightful owners, and maintained absolute control and use of the premises.

I am satisfied beyond the slightest of doubt that the members of the board of church claims, created by an order issued by the War Department, who were sent to the Philippine Islands, clothed with the authority to investigate these claims, did their work in a most intelligent, conscientious, and thorough manner. Their estimate of the damages actually sustained amounts to a total of \$403,030.19; and in these figures the majority of the members of the Committee on Insular Affairs concur and report.

I am a firm believer in the doctrine of "equal rights to all, special privileges to none," whether it applies to individuals or religious denominations. Equity should govern this claim, because it is meritorious, and all religious prejudices should be eliminated. We are morally, if not legally, liable for the damages sustained to these properties. It is a just debt and should be paid. The amount of the appropriation for the liquidation of this claim is very meager, when the inherent values of the property damaged or destroyed are taken into consideration. The records in the Court of Claims disclose hundreds of instances where we have reimbursed churches and individuals whose property was either damaged or destroyed during the late wars. Therefore let us not now, nor at any other time, deviate from the course which we have pursued in the past.

The objections against this appropriation, as stated in the report of the minority, are frivolous, to say the least. For centuries and centuries governments have recognized officially the title of the Roman Catholic Church to all properties which it possessed. This free country of ours recognizes the right of all religious denominations to acquire and hold title to property.

It is not our purpose to interfere with the schism that exists between the Roman Catholic Church and the "Aglipayan" or Independent Philippine Catholic Church. I am of the opinion that the claim of the latter church is absolutely groundless and without foundation by reason of the fact that Aglipay and his followers forfeited every natural, moral, or legal right or interest which they might have had from the very moment they seceded and withdrew from the Roman Catholic Church.

In conclusion I wish to state that my views in the premises conform with the majority report as to the equity and justness of this claim.

The Vreeland and Williams Financial Bills.

SPEECH

OF

HON. JOHN C. CHANEY,
OF INDIANA.

IN THE HOUSE OF REPRESENTATIVES,

Thursday, May 14, 1908.

On the bill (H. R. 21871) to amend the national banking laws.

Mr. CHANEY said:

Mr. SPEAKER: Last fall unfaithful bankers, overspeculators, and visionary capitalists in New York precipitated a money panic which, but for the inherent soundness of our circulating medium and the sturdy integrity of local financial institutions throughout the country, would have set back the country's prosperity a decade. There was no lack of money with which to do the business of the country. The speculators had only gobbled up the money, or caused it, through fear, to hide away in the great New York money and business center and other "centers" incident thereto, so that for the time being there was an actual lack, though anomalous, of the requisite money to carry on the daily transactions in those places. The entire country sympathized with this situation and suffered in common with the centers of trade. It was so sudden and surprising as to almost take the business world off its feet. The most fertile minds in accustomed finance stood in wonderment at it. With patriotic impulse the Secretary of the Treasury and the substantial men of large means cooperated together to equal the emergency; and they stayed the storm and turned back the ominous clouds of doubt and fear, for which relief the heart of the impassioned public beats with gratitude and pride. It proved to us that however excellent is our industrial system, and sound though our money may be, honesty must govern our banking institutions and business

integrity must be maintained if we would be sure of "the even tenor of our way."

The "quantitative theory" of money advocated by "Coin's Financial School" was, by this "financial flurry," shown to be utterly without reason, for there was known and acknowledged to be more money in the country than ever before—the actual per capita circulation equaling \$35.54. The great "industrial system" of the Government had prospered our people and filled the United States Treasury with money to spare. Instead of the people coming to the help of the Government, as was necessary in 1893, the Government found it easy in 1907 to second the efforts of the people and help stay the storm created by speculative hysteria in the great financial center of New York.

It is no discount of a man's business acumen that a thief breaks his strong box and steals his cash. It is no fault of the money that somebody takes it out of business and hides it away. Our money is good, and there is enough of it with which to do the business of the country if honest men are enabled to make it perform its functions. It is therefore plain that the remedy is to enable the honest business of the country to enjoy its circulating medium to the full. How is this to be done? It must be accomplished in one of two ways, namely: Secure the bank depositor directly, so that he will leave his unoccupied money in bank; or supply the place of the hidden money with an emergency currency equal to the demands of business. This was the problem of Congress at the beginning of the session. To meet this duty the Speaker appointed a Banking and Currency Committee immediately upon the assembling of the Congress. The President was so impressed with the necessity of legislation to meet the demands of the situation that he called emphatic attention to it in his annual message. Indeed, for a time after the panic broke he seriously contemplated an extra session to treat the subject. A study of the question soon disclosed the magnitude and delicacy of the money problem.

The fact that our paper-money circulation is based, for the most part, on the Government debt admonishes anyone and everyone that sooner or later some other basis of note circulation must be found, for in good business progress we must eventually discharge this debt. And again, although in normal times the Government debt is a safe basis for note circulation while it exists, it does not admit of such prompt expansion as is required in abnormal times, like that of last October. In fact, our plan of issuing paper money is not suited to emergencies like the panic of last year. It is doubtful whether men can be made honest by legislation. The idea, therefore, to pass a law to compel the honesty of a bank official is, upon reflection and due consideration, deemed of doubtful wisdom, and this is the reason why it is deemed impracticable to pass a law to secure bank depositors directly, however beautiful the notion is in theory. Honest officials must depend upon the stockholders of a banking institution, as a study of the question proves, and the directors must see to it that bank presidents and bank cashiers shall be faithful to their respective trusts. Concluding, therefore, that depositors will at times withdraw their money from the banks and hide it away from the channels of business, we are compelled to turn to the other plan of meeting the situation, namely, provide an emergency currency until we shall adopt some enduring basis for a paper-money circulation.

The Fowler bill is a plan for a permanent money system, and something of the fashion of this bill must take the place of the present system, and yet we are not sure of it. We are not sure that it is just the thing. We must study the question yet more. The money system we have has served all the important purposes of business since the days of Abraham Lincoln, and served them well. With integrity in control everywhere, the system we have would probably serve us for some years to come, and we can not make a radical change in it just now. There has, however, been misgivings for a few years as to the efficiency of our circulating medium in times when extraordinary amounts of money are required in the daily transactions of trade, as, for instance, in the crop-moving season. Careful business men have had ominous feelings about it several times, and mutterings of danger have been heard.

The currency we have is not elastic. It does not expand. It resists expansion. Notwithstanding it is the general consensus of opinion that we may not have a recurrence of the stringency of last fall, it is yet believed that a means of preventing such recurrence, in the event it does come, should be provided, and this session of Congress is expected to produce an emergency measure, at least. The House has been disappointed in the failure of the Committee on Banking and Currency to report a relief measure and has had to take up the subject independently of the committee. The result of three conferences among the majority Members is the Vreeland bill. The main features of this bill embrace principles adopted by the Bank-

ing and Currency Committee, however, namely, the creation of a commission to formulate a permanent currency for the bond-secured currency we have, and it provides a credit-currency circulation also, exactly what the committee proposes.

It is, however, not intended by the Vreeland bill to interfere with the note circulation we now have, but preserve it in all its integrity and usefulness and to supplement it with a credit-currency circulation of \$500,000,000, in case a money stringency comes to the business of the country. It is demonstrated that we have an abundant paper-money circulation for normal business, and that so far as ordinary business conditions are concerned the per capita circulation of \$35.54 is equal to all demands. It is the abnormal and extraordinary demands of business which require our attention now. It is to meet this latter demand that the Vreeland bill, after providing for a currency commission, enters the field. This extra \$500,000,000 may never be needed, and we hope it will not be needed, but we want to be ready should trouble come, as it did last fall.

The Vreeland bill provides that not less than ten national banks within a neighborhood territory, with a capital of \$5,000,000, may form a clearing-house association under the direction of the Secretary of the Treasury and become a corporate body, which shall be managed by a representative from each bank. Commercial paper held by the banks shall be a basis for an emergency paper-money circulation, provided that these banks have out, under existing law, notes based on Government bonds equal to 40 per cent of their capital stock, and also have on hand a surplus of not less than the 20 per cent of the capital stock of the bank.

The commercial paper offered by these banks shall be carefully examined and selection of such securities made therefrom as shall be sufficient to make good any paper money which may be issued thereon. These securities shall be submitted to the Comptroller of the Currency, and if satisfied of their soundness he shall authorize the issue of paper money thereon equal to 75 per cent of the cash value of the same, subject, of course, to the approval of the Secretary of the Treasury. By this bill the banks and the assets of all of the banks of each clearing-house association are made jointly and severally liable to the United States for the redemption of the notes thus issued, and the United States guarantees the redemption thereof. To make assurance doubly sure, the lien created by section 5230 of the Revised Statutes of the United States is made to "extend to and cover the assets of all banks belonging to the clearing-house association and to the securities deposited by the banks with the association pursuant to this act." As between the banks themselves, their several liabilities are in proportion to their respective shares in the association. This paper money is to be treated exactly like the present national-bank notes.

A section of the bill provides that each and every bank of the association shall have on hand at all times in gold or lawful money of the United States 25 per cent of its circulation taken out under this act. The banks at the reserve centers shall keep on hand 25 per cent of this additional circulation, and all other banks 15 per cent of such additional circulation, with suitable penalties for its violation.

Each and every section of the country is to have its share of this possible note circulation.

A heavy tax is placed upon this proposed emergency circulation, so as to insure its retirement when the occasion for its circulation has passed.

The details of the measure are to be carried out under appropriate rules and regulations of the Secretary of the Treasury.

As an emergency measure this seems to be a workable and practicable bill. It is doubtful if the \$500,000,000 of circulation authorized by this measure will ever be issued. It may be that none of it will ever be needed. The emergency for it may never come. It is simply for an emergency and nothing more.

The bill provides for a commission of six members from the House, six from the Senate, and six men to be selected by the President, to study out a permanent money system and report to a future session of Congress for consideration and action. We shall have a permanent financial system in due time, we may be assured.

This bill also provides for interest on Government deposits, which is demanded by a great number of the people.

It would seem, therefore, that the Vreeland bill looks in the right direction, and that it meets the demand of the hour.

THE WILLIAMS BILL.

In contrast with this bill is the Williams bill (H. R. 16730), which has the approval of "the peerless one," Mr. Bryan. Aside from the provisions of the Williams bill to secure bank depositors there is nothing in it to give it favorable consideration in this House. The first section of the Williams bill repeals the banking act in so far as there is permission given to

national banks to keep reserves in reserve cities, and that, by the next section, half of the reserves shall be gold or gold certificates. This, coming from the free-silver party and indorsed by Mr. Bryan, presents a paradox. Sections 4 and 5 limits the discretion of bank managers and bristles with penalties for violations of the act. Section 6 permits a bank to keep the half of its reserves now required in United States bonds, in bonds of a city or State, provided the State or city has not defaulted on the interest on its debts for ten years and whose debts are but 18 per cent of its taxable property, averaging the same for the last five years. Upon this sort of security the bill proposes an "emergency currency." Any State bank, savings bank, or trust company may accept the provisions of this Williams bill, and, holding any of the above-named bonds, may apply to the Secretary of the Treasury for emergency currency. Upon this currency issue the bank taking the same must pay one-eighth of 1 per cent per month for the first four months and one-half of 1 per cent per month for the second four months and 1 per cent per month thereafter.

This would not be a workable or practicable measure and would be impotent to provide an emergency currency.

Section 11 of the Williams bill puts up Government deposits to the highest bidder and provides details of which a fair distribution may be made among all the States. It requires also 2 per cent interest on deposits from all national depositories.

Section 13 secures common deposits in all national banks through a tax assessment up to an accumulation of fifteen millions.

Section 14 sets forth—

That any officer or director of any national bank who shall negotiate or make a loan where the purpose of the loan is a stock or produce gambling purpose, and that purpose is known to him or them, shall be guilty of a misdemeanor, and upon conviction shall be subject to a fine equal to the amount of the loan so unlawfully made and negotiated, or shall be punished by imprisonment for not less than thirty days, or by both such fine and imprisonment.

In short, this bill requires the cashier of the bank to inquire of every man what he wants with the loan, a thing which can never be any of the bank's business interest, and should not be. The bank officer's duty is to take ample security for each loan made, and, as to the moral risks of the loan, this should ever remain in the discretion of the bank, and it is doubtful if such a thing can ever become an essential business question.

As between the two bills before the House, it is not difficult to make a selection. The Vreeland bill is far superior to the Williams bill, which is in contrast, not in comparison, with the Republican measure.

I favor the Vreeland bill as against the Williams bill, believing that it meets the demand of the hour, whereas the Williams bill fails to point the way to wise financial legislation.

Increase of Pensions of Widows and Minor Children.

SPEECH

OF

HON. JAMES P. CONNER,

OF IOWA.

IN THE HOUSE OF REPRESENTATIVES,

Monday, February 3, 1908.

On the bill (H. R. 15653) to increase the pension of widows, minor children, etc., of deceased soldiers and sailors of the late civil war, the war with Mexico, the various Indian wars, etc., and to grant a pension to certain widows of the deceased soldiers and sailors of the late civil war.

Mr. CONNER said:

Mr. SPEAKER: The proposition to amend the pension laws, by a bill reported from the Invalid Pensions Committee, whereby pensions of widows are increased from \$8 to \$12 per month, is just and reasonable, and meets my approval.

The amendment relates to the act of Congress of 1890, which gives to widows of soldiers \$8 per month; it does not change existing law, except in two particulars.

First. It increases the pension of a widow from \$8 to \$12 per month.

Second. It relieves her from the necessity of showing a net income from all sources of less than \$250 per year.

If this bill becomes a law, all widows of soldiers, where the marriage occurred prior to June 27, 1890, will be entitled to receive a pension of \$12 per month, regardless of the amount of their income.

While I approve the proposed change in the law as to widows of soldiers, it does not follow that other changes are not as desirable. It would seem that a widow in case of marriage to

a soldier after the act of June 27, 1890, would be as much entitled to a pension as one where the marriage occurred immediately prior to the act of 1890. It only proves the difficulty of enacting a law which does not discriminate against some one, and the committee evidently thought it would increase the appropriation too much to have the law apply to all cases where the marriage to the soldier occurred since 1890.

I have in mind a change which I regard as important as the one in this bill, and that is the proposition to amend the act of February 6, 1907, known as the "McCumber law," which provides for the payment of \$12 per month to the soldier who has reached the age of 62 years, \$15 per month to one who has reached the age of 70 years, and \$20 per month to one who has reached the age of 75 years. In my opinion the proposition to reduce the age to which the \$20 per month payment shall apply from 75 years to 65 years is not only just and reasonable, but in all fairness is demanded. There ought, at least, to be a material reduction below the age of 75 years at which the \$20 payment should apply.

Very few soldiers live, or expect to live, to reach the age of 75 years, when they can claim the benefit of the twenty-dollar payment under the McCumber law, and if it is not changed, as I suggest, it will prove of little practical benefit to the soldier.

There are 278,911 survivors of the civil war who have been granted pensions under the act of February 6, 1907; of this number 188,550 have reached the age of 65 years, 110,068 have reached the age of 70 years, and 44,529 the age of 75 years.

It is not an easy matter to determine just what will be the annual increase of the pension roll, but it probably will not exceed twelve or fifteen million dollars in the start, and will be reduced from year to year by reason of the great mortality among soldiers who served in the civil war. During the last year the number of deaths amounted to 31,201, or a little less than 5 per cent of the soldiers now on the pension rolls.

I have introduced a bill to make the twenty-dollar per month payment apply at the age of 65 years, in lieu of 75 years, as the law now provides, and I sincerely hope the committee, before the close of the session, will recommend the passage of this bill.

It may be claimed by some that the increased expense will be too great, but I do not believe the criticism is a just one. Of all the items of expense of the General Government, the one most patiently borne by the people relates to the pension of soldiers and seamen and those dependent upon them, and while the Government has been liberal in its policy of paying pensions—much more so than any other nation—still, in comparison with the great value of the services of the soldiers to the country and our immense wealth, it can not be said to have been extravagant in this regard.

My judgment is that the country is willing to adopt the policy which means a reduced number of battle ships each year and fewer appropriations for expositions and larger appropriations for its soldiers, whose heroic services and sacrifices saved the Union from destruction and made possible the greatest and most magnificent Government on earth. This generation can do nothing to honor itself more than to honor the soldiers who have fought the country's battles.

The Vreeland Currency Bill.

SPEECH

OF

HON. WILSON S. HILL,
OF MISSISSIPPI,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, May 14, 1908.

On the bill (H. R. 21871) to amend the national banking laws.

Mr. HILL of Mississippi said:

Mr. SPEAKER: In the limited time allowed by the drastic rule just adopted for debate there can be no elaborate or intelligent discussion of the currency question; neither can there be an intelligent discussion of the two bills which, by the rule adopted, are the only bills that can be considered by the House. This is indeed an unusual course. The bill that Congress is called upon to vote for or against is known as the "Vreeland bill" and was not brought into the House by a majority report of the Committee on Banking and Currency, which is constituted to deal especially with such questions, but that committee has been discharged, and the House has proceeded at once to the consideration of the Vreeland bill, which essays to reform the cur-

rency and to meet the demands of the country for an emergency measure.

No question is fraught with greater importance to the country than this, and yet the House of Representatives is required to deal with this question on the spur of the moment, as it were. The bill has just been placed upon the desks of the Members. They have not had an opportunity to carefully consider either this bill or the only one which can be proposed as its substitute. The House has not had the benefit of a committee report explaining the merits of the bill, nor has it had the benefit of a minority report pointing out its demerits.

It is true, no doubt, that this bill has been considered in the several caucuses or conferences held by the Republican party of this House recently, and it has been decided to present it, but no opportunity has been given the minority to examine into this question, and this legislation is to be "railroaded" through the House because the Republicans assume responsibility for all legislation. There can be no valid reason for such a case. This session of Congress could last until next December, and there is no reason for an early adjournment. If the business of the country requires it, Congress should stay in session long enough to fairly, carefully, and properly consider all matters of currency legislation.

It is true the House of Representatives has ceased to be a deliberative body, and it is unfortunate, but this bill is to be put through under whip and spur and marks a new era in the legislation of the House. Under the rule adopted no points of order can be made against any portion of the bill, no amendments can be made thereto; but the rule is magnanimous enough to permit one bill selected by the majority of this House to be offered as a substitute, and only that bill can be offered as a substitute. The poor privilege is not granted to the minority of selecting their own substitute. This has been done for them by the majority.

It is no defense of this action to say that the bill permitted to be offered as a substitute was drafted by the gentleman from Mississippi, the leader of the minority. The bill was drawn by Mr. WILLIAMS as a Member of this House, and it is not, nor was it intended to be, a party measure. The minority of the House has never considered in caucus or conference the Williams bill, and it is simply the bill of an individual Member, which was introduced in the early days of this session, and which, no doubt, even its author would like to amend and perfect at this time.

However, it is a splendid bill as it stands and well worthy the support of this House, and it would, no doubt, receive the indorsement of the country.

But, Mr. Speaker, I understand that, however good it may be, the Democrats will not be "made to take it." There have been many bills introduced at this session on the subject of currency reform, and we are entitled to the privilege of selecting from them one that is in accord with the combined wisdom of all the minority, and it is for us to say first what substitute we desire to offer and not for you to say what substitute we must offer.

If opportunity permitted, much could be said against the Vreeland bill. It contains two provisions, both equally objectionable. The first feature provides for an emergency currency, based on collateral of banks belonging to a certain association approved by a committee of that association of banks. This is asset currency, pure and simple; indeed, it is asset currency run wild, because it provides for an emergency currency based on such collateral as banks are willing to accept and lend to men upon, and this embraces almost every species of personal property. We would know many instances of an emergency currency based on cattle, horses, swine, and individual promissory notes. This is neither sound nor safe, nor is it such a currency as a people want nor as this great Government should allow.

Asset currency has long been condemned before the public, and yet the first feature of this bill means simply that.

The second feature of the bill provides for a currency commission, which of itself is an admission that the first provision of the bill—the asset currency—is only a makeshift and is not sufficient, for this commission is to examine into the currency question and make its report to the President of the United States by January 1, 1909, and he in turn can submit the report to Congress for its approval or disapproval.

In the first place, why have a commission at all? There is a Committee on Banking and Currency in this House, whose duty it is to deal with such questions. This committee is composed of men first elected to Congress by their constituents upon the idea that they are fit to deal with the great public questions, and they are then assigned to this committee by the Speaker upon the theory that they are specially fit to deal with that especial question. There is a corresponding com-

mittee in the Senate, and certainly it is not asking too much that the gentlemen of these committees should deal with this particular subject.

I am opposed to government by injunction, and am just as much opposed to government by commissions. Already there is a clamor in certain quarters for a "tariff commission," and there is already in existence a "Waterways Commission," which Congress will be asked to maintain and appropriate for. These are entering wedges and, if we engage in the commission business, it is not extravagant by any means to believe that we will be asked to appoint a commission to do everything that the committees of the House and Senate are required to do. Certainly we cut a sorry figure before the country when we abdicate our functions of legislating in favor of some commission, and it will not be long before the question can properly be asked, "What is the need of a Congress at all, if a commission is to do all its work?" Again, it may be properly asked "Why should this commission report to the President; why not to Congress direct, its creator?" "Why should the President be the intermediary between it and Congress?"

I am glad, indeed, that the Republican party assumes responsibility for the Vreeland bill; am glad that it goes to the country that it was solely responsible for the measure. Every Democrat will, no doubt, vote against it, and the people will understand how brief was the consideration of this most important question in the House of Representatives.

In the early days of the recent panic there was talk of an extra session of Congress to deal with the currency question, and when we convened in regular session the President in his annual message recommended the enactment of suitable laws at this session, and although we have been in session more than four months, nothing has been done, but to-day we are rushed into the consideration of the measure adopted by the Republican majority and brought before the House by the adoption of one of its most drastic rules, and, as I said before, the Williams bill, which, by the course of the majority, can alone be offered as a substitute for the Vreeland bill, has many good features and no doubt is a good bill.

But no Democrat can be forced by the majority to vote either for or against this or any other bill selected by the majority for them, and as there is no probability of the Williams bill's passage, it makes little difference what attitude we assume toward it when it is offered as a substitute.

This bill provides for an emergency currency to be issued upon approved State and municipal bonds. Everyone knows that currency based upon the taxing power of the United States Government rests upon a safe and solid foundation, and we know equally well that an emergency currency based upon the taxing power of States and municipalities rests upon a safe and secure foundation vastly different from the foundation asset currency necessarily rests upon.

It has been said in the discussion of this bill that the Williams bill meets the approval of William J. Bryan, and he is quoted as saying that it is the best currency bill that has been introduced. What Mr. Bryan says has and ought to have great weight not only with the Democrats in Congress, but the Democrats and the people of the country. His integrity, his patriotism, and his ability are unquestioned and, if called upon to follow the lead of any man, no doubt, the majority of us would prefer to follow the lead of William Jennings Bryan. But in matters of this kind the combined wisdom of the Democratic membership should be superior to that of an individual, and we should at least be allowed to say what we want and not be forced to do something that is indorsed by even such brilliant leaders of the Democracy as William J. Bryan and JOHN SHARP WILLIAMS. It is no repudiation of these great men for the party in the House to refuse to adopt the measure prepared by one and indorsed by the other when it is forced upon us by those unfriendly to the measure, to the author, and to the indorser.

Much talk has been indulged in about the closing days of this session. Why are these the closing days of the session? What is the occasion for this session to close? It has not been a long one by any means. The law does not require it to close, and it is only the excuse that attempts to justify the manner of legislation. We have seen passed in this House appropriation bills carrying millions of dollars, without any right to make points of order against any items in the bill, without any right to amend, and without the poor privilege of discussion. They have been passed under suspension of the rules, with twenty minutes' debate on each side—not a sufficient time to explain the purposes of the bill and not a sufficient time to intelligently assail the provisions of it.

But thus it is that the majority are pushing things to a close at this session, and as an excuse for their conduct claim that

the attitude of the Democrats makes it necessary. This is a poor plea, after the proud boasts that the party in power will proceed to legislate in its own way and in its own good time.

The people of America will be called upon this year to indorse or repudiate the course of the party in power. The intelligent, fair-minded citizens of this country expect and demand fair and full consideration of all matters before Congress and they will require of the party in power an explanation of these hasty acts of legislation, and the time is not far distant when the minority of this House will be converted into a majority, and then we can present the spectacle to the country of wise and wholesome legislation enacted into law after a fair, full, and careful consideration by the national legislators.

Of course, Mr. Speaker, this bill will pass. We are powerless to prevent it, but I predict it will not long remain a law if it is ever passed in its present form. The Senate has yet to act upon it, and, whatever may be the measure offered by that body, I predict here and now that the Vreeland bill will find no favor there.

Post-Office Appropriation Bill.

SPEECH

OF

HON. EDMUND H. HINSHAW,

OF NEBRASKA,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, March 14, 1908,

On the bill (H. R. 18347) making appropriations for the service of the Post-Office Department for the fiscal year ending June 30, 1909, and for other purposes.

Mr. HINSHAW said:

Mr. CHAIRMAN: At this point in the consideration of this bill I desire to submit a few remarks on the subject of the compensation of rural carriers. We are herein appropriating \$35,000,000 for the rural mail service. It is growing with the growth of the country. No one could have foreseen the vast expansion of this useful service, and no one would suggest its discontinuance. It is now as much a part of our postal service as the carrying of mails on trains, and the agents who so faithfully carry daily to every farmer his newspapers and letters are entitled to the same consideration given to the clerks on mail trains or in post-offices or to city carriers. The maximum salary now paid to city carriers in second-class offices is \$1,000, and under this bill the maximum salary allowed carriers in cities having first-class offices will be \$1,200. Some increases are made in this bill for clerk hire in third-class offices. Last year the salaries of rural carriers for standard routes was fixed at \$900.

I have a bill now pending before the Post-Office Committee allowing the salary of \$900 to apply to all routes of 24 miles or less, and for each mile a route exceeds 24 the carrier shall receive each day 10 cents per mile. I do not think this a sufficient increase to compare favorably with those who render a like service in cities and on trains, but it appeared to me to be the best advance that could in all likelihood be obtained at this time in view of the increase of last year. No doubt a provision should be inserted to deduct 10 cents per mile on routes of less than 24 miles in those regions where such routes prevail. In Nebraska there are few routes less in length than 24 miles, and many if not most of them are 28 to 30 miles in length. While it is true that most of our roads are good, many of them are hilly and cross rivers and smaller streams. The rural carrier has a great expense that no other postal employee must undergo. All keep two horses, many keep four. Feed is expensive, repairs to harness and wagon are almost a daily experience; the expense of horseshoeing alone is a large item. In addition to the salary, the Government should make an allowance of a lump sum large enough to defray all these expenses. The Government can well afford to be just to these men, who go through rain and snow, heat and cold, and carry information and entertainment to every section. It was anticipated that the postal deficit would keep pace with the expense of this service, but it has not done so. There has been such an unexpected and large increase of revenue arising on the rural routes from the enlarged use of the mails that the rural mails are now almost self-sustaining. I sincerely hope that Congress will speedily enact some comprehensive measure to equalize conditions among the various employees of the Postal Department and give the rural carriers an increase commensurate with the expense, the duties, and the exactions of the work involved.

Postal Savings Banks.

SPEECH

OF

HON. WILLIAM E. HUMPHREY,
OF WASHINGTON,

IN THE HOUSE OF REPRESENTATIVES,

Monday, May 18, 1908.

On the bill H. R. 21946, the general deficiency appropriation bill.

Mr. HUMPHREY of Washington said:

Mr. CHAIRMAN: It is true that the House has passed a currency bill, but the most devoted advocates of that bill do not claim that it is more than a temporary measure, designed merely to meet a possible emergency. Its strongest friends claim that the greatest benefit from its enactment will be to produce conditions that will make a trial of it unnecessary. As a temporary measure, to be used in case of panic, it will, I believe, be a benefit to the country. I regret that we can not also at this session pass a postal savings bank bill. Such bill would be of real and lasting benefit to the country, both in times of panic and prosperity.

I believe that this Congress should pass a postal savings bank bill along the general plan approved by the President and suggested by the Postmaster-General. I am in favor of a postal savings bank system for the reason that I believe it would have the following results:

First. It would relieve the present industrial condition.

Second. It would be a powerful influence in preventing panics in the future.

Third. It would encourage thrift and saving among a class of people where it is most greatly needed, those whose earnings are small.

Fourth. It would increase legitimate banking business.

Fifth. It would furnish an absolutely safe place for the savings of the poor.

The recent panic was different from any in our history. Panics are usually caused by crop failure, by stagnation of business, by low prices, and little demand for labor. But this time our panic came when our harvests were the most bountiful, when the people were busier than ever before, when prices were better than ever before, when wages were higher than ever before, when the demand for labor was greater than ever before, when the amount of business was larger than ever before, and when there was more money per capita than ever before. It was a panic of plenty. It was a panic of unfounded fear, a panic that was brought upon us because of lack of confidence of the people in banks. It was the panic that seizes the man who has loaned his money to his neighbor when he thinks that neighbor can not repay it or that he is gambling with it. Whether this panic was caused by speculation, by Wall street gambling, or by prosecution of millionaire criminals, it is unnecessary for the purpose of this consideration to inquire, for the financial result on the country was the same.

This panic was most pronounced among small depositors. If we had had at that time a postal savings bank system, this panic-stricken depositor would have placed his money in the postal savings bank instead of hiding it. The Government would then have given it to the bank of deposit in the community where it was received and this money would again have been put into active circulation. If we had a postal savings bank system to-day, millions now concealed would immediately appear and again be put to work doing the business of the nation.

As this amount increased, business would increase, confidence would increase, and our prosperity would be restored. The foreigner with his fear of private institutions, the ignorant with his suspicion of banks, the poor man with his small savings, the rich man with his millions, all have confidence, absolute and unshaken, in the Government. Every one would take the Government's promise. A run upon a postal bank would never occur. It is almost unthinkable. No man could ever lose a dollar. Consequently no man would ever be thrown into a panic for fear of its loss. In times of panic there would be a run, not on, but to, the postal savings bank; not to get money, but to leave it. The recent financial difficulty shows this faith in the Government, if any evidence was needed of the fact, for thousands bought postal notes payable to themselves and paid for the privilege. Take the one item alone; the amount of money sent out of the country by the foreigner. During the fiscal year of 1907, \$84,080,711 international money orders were issued by our Government. During the calendar year 1907, \$94,000,892

were issued, and from July last until December the first, inclusive, \$53,811,683 were issued. Why has this vast sum been sent abroad? Undoubtedly a large part of it was because the sender thought it was safer in foreign countries than here, but all these foreigners have demonstrated their absolute faith in our Government, and if we had postal savings banks, not a dollar would be sent out of the country because of fear that it would be lost. These vast sums, if we had postal savings banks, would undoubtedly very largely be deposited here while it was being accumulated, and most of it would now be here and in circulation. Of course, these sums, vast in the aggregate, are small compared with the entire earnings of those who sent them abroad. A great part of such earnings, under a postal savings bank system, would also go into the bank. If the foreigner has his money deposited here it has a tendency to give him more concern and a higher regard for our country. Then it most frequently happens that if they accumulate money and have it on deposit here that they will invest it here, and this must inevitably lead to keeping both the money and the man permanently in this country.

WHERE THE MONEY IS.

The amount of money in the United States is estimated to be a little over \$3,000,000,000. Of this sum, over \$300,000,000 is in the National Treasury; \$1,000,000,000 in the banks of the country, leaving over \$1,700,000,000 in the pockets of the people. This last mighty sum is the one that the postal savings bank would largely receive. We can realize how easily a shortage of money can be created and a fearful panic produced when we remember that this sum, vast as it is, can be entirely absorbed when fear seizes the people by a hoarding of less than \$25 by each person. This great fact demonstrates the tremendous importance of absolutely preventing any fear that will cause those of small means to withdraw from circulation even the little that they have. Think of the vast sum represented by \$25 per capita of this country and then remember that the average account in the savings banks of this country is over \$433 and the great necessity for a postal savings bank forces itself upon you. These figures show that only depositors of comparatively large means patronize the savings bank to-day. It demonstrates that the small depositor, either because of lack of convenience or because of lack of confidence, does not place his money in the banks. The small depositor is the one to be reached. If you will protect his deposits, he will protect the prosperity of the country.

Of the \$369,000,000 in the savings banks of this country, more than two-thirds are in New York and New England alone. Only 4 per cent is in the great State of Pennsylvania, and 5 per cent in the State of Illinois. These figures demonstrate that there is great necessity for some system that will be more generally patronized by our people, some system in which the people have more confidence. These figures further demonstrate that it takes but few, very few, dollars to be kept out of circulation by each person to absolutely paralyze business. And in times of financial trouble this is the very thing that does happen. This holding out of a very small sum by a very large number of people in times of panic is one of the greatest weaknesses and one of the greatest evils of our present financial system. A postal savings bank system would absolutely cure this trouble. We have seen tens of thousands all over the country rushing to the post-offices buying money orders. With postal savings banks every man that has a fear that his money would be lost would deposit it. Such bank in such time would be the one city of refuge for the panic stricken.

NO ADEQUATE FACILITIES.

We do not have proper facilities in this country in the way of savings banks. Private banks can not furnish these conveniences. It is not profitable for them to do so. This lack of proper facilities is strikingly shown by comparing our own with other countries. The following shows the number of savings banks in the countries named in proportion to their population: In Sweden, 1 bank for every 1,250 people; in England, 1 bank for every 3,000 people; in France, 1 bank for every 5,000 people; in Belgium, 1 bank for every 7,000 people; in Italy, 1 bank for every 7,000 people; in the United States, 1 bank for every 67,000 people.

This comparison is distinctly discreditable to us as a nation. There is only 1 savings-bank depositor in every 6 persons in New England. In the Western States there is 1 to every 18 persons; in the Middle States, 1 to every 48 persons; in the South, 1 to every 306 persons. In England the ratio of depositors is 1 to every 4.35 of its population. At this ratio we should have 20,000,000 depositors, and if their average deposit equaled those of England it would give us the tremendous sum of \$1,700,000,000. Certainly we could not expect that it would be less than this sum, for the earning capacity of our

people is greater and their wages are higher. This sum of \$1,700,000,000 is approximately equal to all the money in the United States outside of the Government vaults and the banks. This vast sum represents the money that is in the pockets of the American people, and this sum represents more than 60 per cent of all of our money. And this amount in the pockets of the people has greatly increased within the last few months. This vast sum is sufficient to do almost the entire business of the country, and yet to-day it is largely out of the channels of trade. If postal savings banks would make it available, it would solve the financial stringency. That postal banks would largely place this sum again in circulation is a proposition so plain that it seems to me that no man can doubt it if he will study the question. If it resulted only in getting from our depositors, per capita, one-third as much as is given by the English depositor, it would give us over \$560,000,000, a sum sufficient in itself to tide over any ordinary business depression. Take New England, the best-served portion of our country with savings banks—she has about 500 banks and 2,500 money-order post-offices. In the entire country we have 1,300 savings banks.

If we passed a postal savings bank law, immediately we would have 38,000 commodious savings banks conveniently located, known to the people, and sufficiently manned by competent officials. Every man, woman, and child would know the location of these banks, and every man, woman, and child would believe the security was absolute. It would take no advertising to get depositors. No question would be asked, no investigations made, relative to its safety. Every person that had a dollar who had no faith in private institutions would immediately place it in this bank. Does any sane man doubt the truth of these statements? Can any man doubt that immediately the countless millions now hidden in the pockets of the people would begin to come out of hiding? Can any man doubt that at least 50 per cent of the \$1,700,000,000 now in the pockets of the people—that is, the enormous sum of \$850,000,000—would soon be in the channels of trade? Can any man doubt that the panic that we have been suffering from, a panic caused entirely by the people's fear of banks and the banks' fear of themselves, would not have occurred if we had had in operation a savings-bank system?

Private banks do not meet all the requirements. They can not give the needed security, nor the needed convenience. The motive of gain will not permit them to give either. The first and the greatest of all requisites for a savings bank is the privilege of depositing small sums with absolute security. The working people of this country do not ask charity; all they ask is security; and this nation is a financial failure until it gives them the security. After one becomes a depositor he has more interest in the Government. It helps to make him a better citizen. It teaches him to hate anarchy and to despise socialism. He is better able to protect those for whom he toils. It prevents him from becoming a public charge.

WOULD BENEFIT REMOTE LOCALITIES THE MOST.

It has been urged that savings banks would work best where the population was densest. It has been said that this was one reason why European countries can use this system to more advantage than could be done in this country. I think exactly the opposite is true. To illustrate: It has been estimated that the average distance from the post-office to the savings bank in the different parts of our country is as follows: New England, 15 miles; Middle States, 25 miles; Southern States, 33 miles; Pacific coast and Rocky Mountain States, 55 miles. Thus, opportunity to deposit at the post-office would be of the greatest advantage in the most sparsely settled districts. It would furnish banking facilities where none now exist and where they are most needed. It would cause those who have no savings accounts to strive to get one. The difference in the cost of operation in the different portions of the country would be practically nothing, because the machinery is already furnished and in operation everywhere.

WOULD NOT INJURE BANKS.

Postal banks would not injure the regular banks. The only deposits that would go to the postal banks would be those that others could not get. No man would put his money in a postal bank at 2 per cent interest, if he had faith in another bank that would pay him 4 per cent. In places remote from other banks, the depositor, after making considerable of an accumulation, would often then go to the regular bank and deposit where he could get more interest. But if he had to go to the distant bank to deposit each sum no deposit would ever be made. It would cause many a depositor to learn the habit of saving that would eventually go to the banks who otherwise would never have anything to take to the bank. If we had postal savings banks, then in time of panic the money would go into the postal savings bank and then into the national bank and then back to the channels of trade. In times of greatest financial

stress, instead of money being secreted and withdrawn, it would come out of hiding, for every one would want to place what little he had where it could not be lost or stolen. It is true that if we had postal savings banks, in time of stress money would be drawn from other banks and deposited with the postal bank, but no more would be withdrawn than if the postal savings bank did not exist. Postal banks would not save other banks that did not have the confidence of the people, but it would largely save the business of the country. It would keep the money in circulation to do the business of the country.

COST OF THE SYSTEM.

The cost of a postal savings bank system would be almost nominal. The Government already has all the machinery and practically all of the agents necessary. Judging by Canada's experience, I do not believe that it would cost this Government \$100,000 per annum, and while I would not advocate that the Government should make money out of the system, yet undoubtedly the interest received on deposits over and above what the Government would pay, should the Government see fit to charge it, would much more than cover all expenses and guarantee all losses in connection with the system.

PROTECTING THE GOVERNMENT.

I fail to see any great danger of loss to the Government in postal savings banks. I can not see any great danger in the Government guaranteeing to pay a man a dollar if that man first gives the dollar to the Government. Honesty of the agent is the only thing necessary, and the history of this and every other nation demonstrates that this is easy of insurance always where the agent is not permitted to use the money or in any way to handle it except to hold it as the representative of the Government. This is an entirely different proposition from doing a banking business. That it is easy to absolutely protect the Government from loss is shown by the record of Canada where only \$25,000 have been lost in thirty years out of \$465,000,000 received and disbursed by postal savings banks. The Government should immediately deposit the funds received in postal savings banks with the nearest bank of deposit. The Government could easily protect itself from loss by these banks.

SHOULD THE GOVERNMENT ENGAGE IN THE BANKING BUSINESS?

The one great objection urged to postal savings banks, and it seems to me the only objection of much merit, is that the Government should not go into the banking business. This objection demands most serious consideration. I am unalterably opposed to Government ownership as a general proposition. I am opposed to the Government doing any business that can be as well done by private enterprise. We know only too well that the Government way of doing business is the most costly way. Government ownership tends to kill competition. It stifles individual effort. It destroys the greatest incentive to human endeavor—that is, that the reward shall be given to him who earns it. Government ownership is a dangerous doctrine, and anything approaching it should be adopted with greatest caution. It was with this feeling that I began the study of postal savings banks, and it was still retaining this feeling that I became convinced that we should establish such system. "Postal savings banks" is largely a misnomer. The Government would go into the banking business to this extent and this only: It would receive deposits and it would repay them. Even this much would be objectionable in any business that private enterprise could as well conduct. But our history is filled with panics. They come in time of prosperity. They come in time of adversity. They come without warning. They sweep over the country in a day, withering our prosperity as does the hot winds of the desert the blossoming harvest. The people rush to the bank, they withdraw their deposits, their money is taken out of circulation. And why is all this true? It is answered in a single sentence: Lack of confidence in the places where their money is kept. The people are afraid of banks; they are afraid of private institutions. Foolish they may be; their own action brings their own destruction, it may be; but, nevertheless, the great fact remains that they do it, and they will continue to do it as long as our present system remains.

What is the remedy for these evils? We may theorize as we will. We may argue as we will. We may travel around the circle as often as we will. But always and ever we will come back to the same point, always to the same answer, seek where we will, to the only remedy—the promise of the Government. Every human being in this country has absolute confidence in that remedy. The confidence in the remedy being complete, the remedy is complete in so far as it is applied. The promise of the Government is the only thing that can ever give us a satisfactory financial system. The promise of the Government is the only absolute remedy for panics. Some way and somehow we must provide a plan and a place where the promise of the

Government will stand behind every honest dollar deposited. Postal savings banks will do this, and this is why I am in favor of postal savings banks. No other scheme has yet been devised, even that the bankers themselves can agree upon, that will give absolute safety. While the operation of savings banks would be limited, it would be given almost entirely to those who need it most, to those who are most easily affected by panics to those who would suffer most severely from financial loss, to those of small earning capacity—the laboring classes; the poor.

THE GOVERNMENT ALREADY IN THE BANKING BUSINESS.

The Government is already in the banking business. We have more than 30,000 money-order offices in connection with the Post-Office. The business done by these offices last year amounted to over \$300,000,000 and involved 60,000 transactions. And this is a banking business, a money-exchange business, done in direct competition with the banks of the country. The Government also does other banking business. More than 25,000 soldiers deposit their money with the Government in military banks. Seamen deposit with the Government great sums of money. These deposits of our soldiers and seamen amount to millions, and the Government pays interest upon these deposits at the rate of 4 per cent. It has done this large business without loss. The Government is in the banking business in many other ways. It comes to the relief of banks in financial stress. It assists those who should be able to protect themselves. Instead of having the Government protect those that handle the depositors' money, that loan the depositors' money, that live off of the depositors' money, that speculate with the depositors' money, why should not the Government directly assist the depositor? The present system is exactly wrong in principle. The Government should directly protect the people and compel the banks to protect the Government. The one that uses the money, that profits by it, that controls it—the bank—should take the risk and stand the losses and not the depositor that has no control over his own after it goes into the bank. The Post-Office is already in the banking business. It does this successfully. It does it without loss, and the same machinery can, with equal safety and with equal success, accept and pay out money deposited with it. And this is all that would be required in postal savings banks.

WHAT THE PEOPLE DESIRE.

It has often occurred to me that occasionally it might be well for us to consider whether or not the people themselves might not know what they wanted. There seems to be an impression that there is something so sacred and so mysterious about the banking business that only the expert should be consulted about it, or is able to advise about it. But the experts to-day can not agree among themselves. The men in this country that take your money and mine can not agree upon a plan that they themselves believe will insure us that after they get it that we can ever get it again. How, then, can they expect us to have more confidence in them than they have in themselves? I have almost come to the conclusion that the votaries of the banking system are like the votaries of every other system that seek to cover it with mystery and sacredness, that it is done in order to further their own purposes. I am almost constrained to believe that the reason the bankers of this country can not agree as to what should be done is because they fear that any change may injuriously affect their interest. Nine people out of every ten in this country to-day want postal savings banks. This statement will not be controverted by any man that has attempted to know public sentiment upon this question. For one, I have concluded that perhaps this vast majority who agree are as wise as the few experts who can not agree. For one, I am willing to take the judgment of the people and let the people have what they want.

RESULTS.

Always the greatest stimulus to industry is the certainty that its fruits may be enjoyed.

I do not believe that the system of postal banks would be a universal panacea for all the financial ills that afflict us, but I do believe that such system would be of great help. It would greatly tend to produce industry, economy, and saving. These are the enemies of pauperism and the foundation of competence. He who has learned how to save a dollar has learned the first lesson of financial success. He who forms the habit of saving is building against intemperance and immorality. Frugality and morality are united everywhere throughout the world. Such system would furnish a safe place for the earnings of many who are now denied that privilege. In times of panic it would keep millions in circulation that now hide in secret places under lock and key. And above all it would say to that great class that is the foundation of all our greatness, our country's hope and our country's glory, the salvation of our

race, that class that needs the most protection from the Government and gets the least, those who in the sweat of their brow eat bread, the countless millions of our wage-earners, at least you have a place where you can put the dollar that represents your toll of hand or brain, your savings, your economy, your prudence, your privations, where it is absolutely secure and where you know you can get it in the dark hour of need. You have your country's promise and greater security than that no man can have.

In accordance with the rule adopted by the House giving leave to print on the currency question, Mr. Sherley submits the following paper, written by Mr. John M. Atherton, of Louisville, Ky.:

CURRENCY QUESTION.

Panics or financial disturbances have their origin generally in overtrading and expansion of credit. They may occur from other causes—unsound money, wars, internal dissensions, bad crops—but none of these conditions exist in this country at this time. We have peace at home and abroad. We have a sound money system, based upon gold and secured by the national faith. We have had a succession of bountiful harvests. We have been prosperous beyond any past experiences, and yet we have just passed through a severe financial storm, which may be followed by considerable depression for months. The development can not be too rapid without producing unhealthy conditions, industrial, financial, and social. Between cramping a steady, sound, and vigorous growth through a scarcity of money, with too high rate of interest, and encouraging a rapid, feverish, and extravagant growth through an abundance of money, with a too low rate of interest, there should be obtained, if possible, the happy middle course. The difficulty lies in the selection of the means to be employed to ascertain this middle course and keep in it. In some countries all legitimate methods of stimulation might be required to excite the people to the degree of energy necessary for great progress in all fields of industry. In this country stimulants are not needed, and our attention can be directed to the object of restraining an energy all too impulsive and impatient.

Experience teaches us that we are peculiarly given to overtrading and to overdiscounting the future. We go ahead, so long as money can be had, enlarging factories, extending modes of transportation, improving our cities and our farms, and adding to our amusements and pleasures in a thousand ways, until our very business life as well as our individual habits become extravagant.

How can this exuberance of growth and enjoyment be restrained to healthy limitations? If it is not possible to construct any efficient method of restraint, and if we accept these financial storms as unavoidable, we can then turn our attention to the task of devising the best mode of relief. But until every reasonable effort to restrain has been tried and found wanting, the country should not accept the hard conclusion that nothing can be done to ward off these recurring panics. If they can not be avoided, the intervals between them may be made longer and the loss resulting from them may be made less. In other words, if no restraint can be found and exercised adequate to the task of avoidance entirely, we may through some means or other manage to have fewer of them. It may be possible to make it more expensive for the country to run into conditions that usually end in panics, and yet the expense of prevention be infinitely less than the cost of cure. Fortunately the effort toward prevention will not add to the violence of the storm. A judicious mixture of restraint and relief should not be impossible either of conception or execution. There may be something defective in our present method for the circulation of our currency—some weak spot in the handling of our loan fund.

Banking facilities in this country consist of the national and State banks and other State institutions. These banks are organized and operated for private gain. The capital is the property of the stockholders and used to make profit for dividends. A bank considers the rate of discount and the security in making loans and does not consider the effect the loans may have on either expansion of trade or of credit. In fact, the banks are in a certain sense, subject to laws made to insure safety, money merchants, buying and selling money. They are a part of the great business life of the country and subject to the same impulses.

In a prosperous period, such as this country has experienced for many years, every branch of business has expanded and has required more money as the volume of business has increased and prices have advanced. Notwithstanding the increase of money, the use and, so to speak, the consumption of money have outrun the increase.

How is the use or consumption of anything, say wheat, regulated? By what we call supply and demand, and as the stock of wheat runs down price goes up. At least, assuming that the country had a limited supply of wheat for use during the year, the use would be restrained and controlled by the price. Is not money—the loan funds of a country—to be regulated by the same rules? Every borrower consumes so much of this loan fund. The banks put out more or less of this fund every day and in all parts of the country. Each bank has its customers whom it tries to hold and to whom it lends money. When these customers, in dull seasons of the year, do not require all the money the bank can lend, the bank seeks other customers, and if need be lowers the rate of interest—cuts the price—to get the money out. While this daily grind goes on it never occurs to the bank to refuse a satisfactory loan, lest money may be needed to move the fall crops. Then what good would come in the way of supplying crop-moving money from refusing one loan? This same process goes on, and finally the country is brought face to face with a financial stringency that now and then ends in a financial crash. Now, what remedy is proposed? More money at once is the universal answer. Certainly more money is required to assist the process of liquidation and to avert as far as possible the severity of the panic. But this course does not avert financial disturbances, however much it helps when they come.

While the clearing-house associations are able to do much to relieve the distress of a panic, they can not be expected to advise or compel their members to refuse loans and cut down profits that funds may be accumulated for future emergencies. Outside these clearing-house associations, there is and can be no concerted action among the banks, and if such action was possible it would not change the private character of the banking business.

Why not leave this national banking system practically undisturbed and establish a great central bank under some such provisions as these, to wit:

1. The capital to be provided by Congress, and not a single cent of that capital to be held by any bank or individual.

2. The central or Treasury bank to be confined in its operations to the Government of the United States and the incorporated banks—national and State.

3. Pay no interest on deposits, and maintain a reserve of 40 per cent against other than Government deposits.

4. No branches—only one bank located at Washington as the fiscal agent of the Government and as a Treasury bank, doing the banking business of the Government in accordance with bank methods.

5. Congress to direct the public moneys to be deposited in this Treasury bank. Also Congress to appropriate twenty millions a year for the next five years, by which time the capital will aggregate in cash \$100,000,000. Congress to authorize the Secretary of the Treasury to prepare and deliver to the Treasury bank United States 100-year 3 per cent bonds to the amount of \$400,000,000.

6. This Treasury bank may deal in foreign exchange and hold funds in foreign banks; may buy and sell United States bonds; may lend money to the United States and to the national and State banks and discount paper for the national and State banks, and may, subject to the provisions and limitations of this act, conduct the affairs of the bank to aid the general business interests of the United States by accumulating money when the demand is easy and hold the same to meet the demand when active.

7. The bank may fix the rate of interest or discount at which it will lend money or discount paper and change the same at its pleasure; and all transactions between the bank and any other banks, national or State, shall be exempted from the usury laws of any State.

8. After defraying the expense of the bank the profits arising from its operations, or so much thereof as may be necessary, shall be applied to the payment of the interest upon the United States bonds, issued in pursuance of this act, outstanding.

The residue of profits shall be held in gold coin or bullion, to be used to redeem any notes issued by the bank, and shall be so held except as paid out for the redemption of its notes until the amount of said fund shall reach \$100,000,000. After this fund has been thus accumulated the profits shall be applied to the maintenance of this fund, and any profits not required for the above purposes shall be applied to the payment of the principal of any United States bonds issued and sold under the provisions of this act.

9. The bank shall be controlled by a board of directors consisting of nine members, to be appointed by the President of the United States and confirmed by the Senate, and for a term

of years, as follows: Three shall be appointed for two years, three for four years, and three for six years, and as the terms expire the vacancies shall be filled by appointments for a full term of six years. The directors shall have the qualifications of the members of the United States Senate, except as to residence. The board shall elect one of its number president and shall elect two or more vice-presidents, who may or may not be members of the board of directors, and one or more cashiers, and make such other appointments as they may deem necessary to conduct the business of the bank.

10. All applicants to the Treasury bank shall be in writing, by mail or telegraph, and shall be filed and preserved in proper form for a period of not less than two years, and the applications from the banks of each State shall be kept separate, and the replies of the bank to each applicant shall be in writing and shall be filed and preserved in the same way.

The bank shall make public each day of the year, Sundays and legal holidays excepted, a condensed statement showing its condition, and the Secretary of the Treasury shall have the affairs of and the accounts of the bank examined when, in his judgment, it is desirable, and at least once in each six months.

11. All laws now in force for the management of the national banks shall apply to the directors and officers and employees of the Treasury bank, and the directors and officers and employees shall be subject to the same penalties for violation of said laws.

12. The central or Treasury bank may, under rules and regulations approved by the Secretary of the Treasury, have the use of the United States subtreasuries for the deposit therein of the funds of the bank, subject to the control of the bank, as if in its own vaults.

13. The directors shall make a fair and just distribution of loans and discounts between the various States, and shall not unduly discriminate in favor of any applicant or State to the prejudice of any other applicant or State.

This is intended to set out broad lines on which a strong central bank may be established for the regulation of the currency, with a view to giving steadiness to its circulation and use, and thus ward off, as far as possible, serious financial disturbances, and when such disturbances do occur, to aid in relieving them.

The rate of interest is the brake to be used to slow down the use of money, and to be effective, should be under control of an institution organized to promote the general good and not to make money for its stockholders as its chief and only purpose. Therefore, the power to raise and lower the rate should be left to the discretion of the directors of the bank and not fixed by statute.

The directors would act under the solemn responsibility of office as public servants of the people. They would be selected by the President for their fitness and would be confirmed by the Senate. This should be sufficient safeguard against incompetency.

Such an institution as the one referred to would not compete with the national and State banks for business. When the latter banks could supply the demand for money the funds of the central or Treasury bank would lie idle. As the supply in the local banks ran down, they would begin to apply to the Treasury bank for loans. The nature of these applications; the sections and cities from which they came; the amounts asked for; the rate of interest the applicants would pay; the kind of security or quality of business paper offered; the frequency and urgency of the applications—all this information centering in one bank—would enable the officers to regulate the loans and the rates with an accuracy and soundness of judgment which could not be reasonably expected in the ordinary banks. So long as the Treasury bank had no applications for loans the supply of money would be known to be ample at the time. No effort would be made by the Treasury bank to force its funds into use. It would not be driven into cutting rates or into doubtful investments to increase its earnings. It would hold its funds for future use. The percentage of the money in the country which such a bank should have to be able to exercise the necessary restraint upon the use of money and the necessary relief when emergencies arise is more or less a matter of judgment, if not experiment, in the beginning. Time and experience would determine the amount the bank should control, and until the amount is thus determined, or at least until the power of the bank has been exerted, it is the part of prudence and wisdom to err on the safe side and to limit the issue of currency to a sum that would not threaten inflation. In this, as in all human affairs, an ounce of prevention is worth a pound of cure. Seek to steady the use of money and to maintain a healthy growth of business should be the dominant thought in any effort at currency reform.

Some months ago—say the 1st of last December—money commanded from 10 to 25 per cent. To-day from 2 to 5 per cent. The expansion of trade and credit were allowed to go too far, and when the trouble came the remedy was applied too suddenly and too bountifully. As soon as the country has recovered from the nerve shock and has regained its equilibrium it will be enticed by cheap money into another round of overtrading, extravagance, and speculation. This central or Treasury bank could collect its loans at maturity and thus call in its emergency currency as soon as its issue had accomplished its purpose.

If Congress objected to an appropriation of twenty millions annually for five years to supply so much capital, the issue of United States bonds could be increased to \$500,000,000 and the bank authorized to sell \$300,000,000. The bank would have in its vaults the proceeds of the sale of bonds and the public moneys. If there was no demand for the bonds at or about par, the inference would be that there was no idle money or that more desirable investments were to be had. To avoid such contingency the safer and surer method of supplying capital in the beginning would be through appropriations by Congress. The point to work to would be to give the bank a large enough percentage of the money of the country to be used by the bank for conserving the use of money and for steadying the money market. The bonds could certainly be sold gradually and the proceeds, added to the capital supplied by appropriations by Congress, would put the bank in a position to aid in the steady and healthy expansion of trade, and yet to restrain the too free use of money that always results from very low rates of interest.

The bank could, in times of great ease in the money market, hold its funds.

It may be said the bank must do a certain amount of business to pay expenses. The expenses would not be very large, and if no use could be made of its funds it would be incontestable proof that at the time there was a surplus of money. It would be far cheaper to the people to pay the expenses than pave the way for financial trouble later on by the employment of these funds in overtrading and speculation. By intelligent observation the bank, once established, could soon be put in a position to make itself felt in the money market.

The objection to a great central bank heretofore has grown out of its transactions with individuals and with private business houses and corporations. This method required branches all over the country, which brought the bank in competition with local banks, and which could easily have been converted into a great political power under partisan management. But no such objection lies against a central or Treasury bank here suggested. This scheme lets the national-bank system entirely untouched and compels the central bank to do business through the national and State banks. The national banks may object to the deposit of the public moneys in a central or Treasury bank. But the public moneys are not a regular or even an essential part of a national bank's business. And while the public funds should not be beyond the reach of a healthy trade demand for money, there is no reason why they should not be loaned by a central bank for such rate of interest as would conserve public interests.

Under the Aldrich bill there is no power of restraint upon the too free or too easy use of money. In so far as it lodges the discretion to issue an emergency currency in the Secretary of the Treasury and the Comptroller of the Currency, it would seem safer against selfish action than could be expected from the banks or other interested parties. But it would be difficult to detach these officials from the administration of which they are a part. A board of directors of a great bank appointed by the President and confirmed by the Senate to execute the will of the people as expressed by statute would be responsible to Congress and much further removed from any political use or influence.

But the issue of currency when unavoidable is essentially a duty of the Government, which should be exercised by the Government without the aid or intervention of any security over which Congress has no control.

The amount of State, municipal, and railroad bonds outstanding and yet to be issued is practically unlimited. If the experiment proposed in the Aldrich bill works well in the beginning, it would be dangerously easy for Congress to increase the amount of emergency currency to be secured by such bonds. It may be said that the same is true of an issue by a central or Treasury bank secured by United States bonds. But Congress would be far less apt to issue United States bonds—that is, to create the security as well as currency—than to enlarge the issue to be secured by other bonds for the payment of which the people are not liable.

Apart from the fact that the Aldrich bill offers no feature of restraint, but really offers encouragement, the arbitrary tax of 6 per cent would delay the use of the currency by the stronger and sounder banks. The legal rate in many States is 6 per cent, and banks would be reluctant to apply for money to be used at a loss.

An emergency currency, based on the assets of banks, may be safe enough, but the discretion as to its issue can not be safely reposed in its direct beneficiaries. The seminal idea of a great national bank, under whatever name it is called, is found in our Constitution and in our framework of government. The executive power is lodged in the President, the legislative in Congress, the judicial in the Supreme Court. Thus we have a central authority in all these departments. The authority of each is fixed and limited by the Constitution. Why not a central authority in the department of currency as related to business and business life? If we can safely intrust the final and ultimate decision of all questions of interstate relations affecting life, liberty, as well as property, why can we not safely intrust a large degree of influence and power to a central bank as an adjunct and aid in the distribution, circulation, and use of a national currency? Confined absolutely in all of its transactions to the vast system of national and State banks, without a cent of private interest, such a bank could be safely intrusted to exercise sound and wise discretion for the benefit and welfare of the whole country.

Nothing short of pestilence or famine exerts a more injurious effect upon the people of a country than a period of feverish commercial and financial activity, with all of its attendant excitement and extravagance, to be followed by a period of dullness and depression, with all its disappointments and privations. One of the objects set out in the preamble of the Constitution of the United States for the formation of the Republic is to insure domestic tranquillity. The need of this tranquillity is apparent to-day to every casual observer, and this need is so imperative that it gives to the authors of the Constitution an almost prophetic wisdom. Every class of our people is involved in the disastrous consequences of these great and unhealthy periods of trade expansion and trade depression, which, on the one hand, encourage habits of indulgence and invite and stimulate enterprises which, on the other hand, must be suddenly abandoned. Whatever may be done in the way of currency legislation should be done with a view to averting these great trade and financial revulsions.

Domestic tranquillity can not be restored or maintained by any legislation that tends, in any degree, to encourage unhealthy trade conditions by holding out the promise of certain relief through the issue of paper money when relief can come only through the sufferings and losses and irritations and discontent which inevitably follow a sudden fall from great heights. Let us look rather to the hope of securing domestic tranquillity through a normal, steady, healthy growth. To this end a strong, truly national central bank, under a competent management and conducted for public good, would be a powerful aid and without any element of risk.

Catholic Church Claims in the Philippine Islands.

SPEECH

OF

HON. JOHN F. BOYD,

OF NEBRASKA,

IN THE HOUSE OF REPRESENTATIVES,

Friday, March 6, 1908.

On the bill (H. R. 16143) to provide for payment of the claims of the Roman Catholic Church in the Philippine Islands.

Mr. BOYD said:

Mr. CHAIRMAN: I have listened with pleasure to the instructive remarks made by the gentleman from Wisconsin [Mr. COOPER] and have taken some pains in looking into the merits of this bill and the claims made, and can say without qualification that the demands are just and the allowance fair, and I shall support the measure with all my heart. The statement made by some that we are making allowances in this case which were never made in similar cases before, is not to the point. It seems to me that we should not continue to be unjust if we have been unjust in refusing to make allowances on past claims, and the main question before the House seems to be, after all, whether this claim is a proper claim or not.

I have full confidence in the judgment of the majority of the committee that had charge of this bill, and their report has confirmed me in this opinion. The committee has fully investigated the ownership of these church properties, and has come to the conclusion that the title rests in the Roman Catholic Church. Even if I entertained the slightest doubt of the correctness of the conclusions reached by the majority, the words of Secretary Taft, uttered before a committee of the Senate on this question, would fully set my mind at rest. I give here the exact language he used:

I think that Congress might well vest in the Commission, with the supervision of the President and Secretary of War, power to make legal conveyances of the land which in equity belongs to the Catholic Church. When I say the churches and conventos stand upon public property, I ought to explain that under the Spanish rule the connection between the church and the state was so close that it was not thought important to take the title out of the state and put it into the church, before a church or convento was erected. My own judgment as a lawyer about the title is that the purpose in erecting these buildings was that they should be devoted to the uses of the church, and therefore whatever the title is in law, in equity they belong to the church for the benefit of the Catholic people of the parish. I think that such conveyances would show that the United States has no desire to deprive the church of properties that belong to it for its purposes. What we all wish to do, of course, is justice, and what the people of these islands have had the least of is impartial justice.

Now, there is no doubt in my mind regarding the correctness of the conclusion that all the church properties in the Philippines belong to the Roman Catholic Church—I mean those properties that were in its charge under the Spanish régime. The fear expressed that this money, if paid to the Archbishop of Manila, would be improperly diverted is born of a wrong conception, for in all cases where claims are voted to corporations they are made payable to the responsible head of that corporation, and in the case of the Roman Catholic Church the Archbishop of Manila is unquestionably the responsible head.

It seems to me that the proposition to divide this sum among the bishops is the result of a certain mental bias, and accuses the Archbishop of Manila, by inference at least, of partiality. General Edwards, chief of the Insular Bureau of the War Department, explains the situation quite fully and satisfactorily, as follows:

When I was in the Philippines the last time with the Secretary I found that the archbishop was not any too anxious to assume this responsibility, but it should be borne in mind that there is an American archbishop with four bishoprics under him. They are harmonious in any decision they might make, or, if the money be turned over to the archbishop, and he is not at all keen to have this done; in other words, just as Colonel Hull has said, he does not care about adjudicating these matters with the different churches, although it strikes me that that is the most practicable way. Any lump amount would be awarded to the archbishop, and he would reconcile the various amounts according to the dioceses under him.

In view of the self-evident justice of this claim, I shall support it with pleasure, and hope that the bill will pass.

Reasons of a Business Man Why the Vreeland Bill is Not Good Legislation.

SPEECH

OF

HON. GUSTAV KÜSTERMANN,

OF WISCONSIN,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, May 14, 1908.

On the bill (H. R. 21871) to amend the national banking laws.

Mr. KÜSTERMANN said:

Mr. SPEAKER: In looking over this latest edition of the Vreeland currency bill, I am pleased to see that my suggestion, made at our last conference, has been carried out, viz, to eliminate from it the words:

Such notes shall state upon their face that they will be redeemed by the United States in lawful money upon presentation at the Treasury.

While the striking out of this sentence, which was most dangerous to our entire monetary system, has greatly improved the bill, I am again deterred from voting for it because the amendment as now proposed of section 5172 of the Revised Statutes changes the security for even our present bank circulation from United States bonds to "either United States bonds or other securities."

The bank notes as we have them now, fully secured by United States bonds, are readily accepted by everyone, while confidence in this kind of money would naturally be lessened if the people receiving the proposed new issue of currency should find that all sorts of other securities were to be substituted for the good old United States bonds.

There is nothing worse than to have the people lose confidence in the stability of the money of the country; and if an emergency currency, to be made use of only in case of another great monetary stringency, is provided, we should not make any changes to affect our present system or, perhaps, to lower the value of our present national-bank notes.

The people know that every dollar of the national-bank notes is covered by United States bonds, and therefore they have no hesitancy in accepting them as readily as gold or any other kind of United States currency.

Instead of any hasty legislation along this line I would much prefer to have action delayed until a competent commission, after a most thorough investigation, can advise us what changes will be advisable in our monetary system.

Permit me to quote you from a letter just received from a banker in my district, who may well be classed among the most conservative in the country. He says:

If there is something fundamentally wrong in our currency and banking systems which bring about these periodic financial disturbances, then what we need is legislation to remedy the underlying defect, and not something that will be but pouring oil on the waters to quiet them after the storm has burst.

We have but scarcely recovered from the last upheaval, and the people, in their excitement, are demanding legislation of some sort, whether it fits the case or not.

But should not this be a matter for mature deliberation, for careful consideration, free from the frenzy of the passing hour? Would it not be better to postpone the present legislation and put the whole matter in the hands of a competent commission for their careful consideration and report?

There is no indication at present of another monetary stringency such as we passed through last fall.

But should it come, we will find our banks better prepared to meet it than before.

They hold larger reserves, they are more careful in the selection of their borrowers, they will not furnish money for purely speculative purposes, and the certificates of deposits run for a definite period. The people holding them know that the money is not to be paid back until the certificates fall due, and the banks, if possible, will see that these certificates do not fall due at a time when, from natural causes, the moving of crops and other conditions, a monetary stringency may be expected.

Besides appointing a commission, let the inspection of banks be made more rigid than at present.

Let it be made impossible for the cashier of a bank to become a defaulter for a million and over, as was the case in Pittsburg this past week.

To cover up his shortage this cashier again and again deposited fraudulent notes, whereas a rigid inspection and inquiry as to the maker or makers of the notes would have brought the defalcation to light at a much earlier date.

To become acquainted with the financial standing of the borrowers, the inspector should reside in the State or Territory in which the banks he is to inspect are located.

The inspector should at least be able to state whether the large borrowers are entitled to the credit they receive, and he should pay particular attention to the notes given by officers of the banks, whether tendered by the president, cashier, or a director.

He should also be able to ascertain approximately whether the reserves of a bank in other banking institutions are as stated, and whether the banking laws are strictly adhered to, especially that provision which prohibits the loaning to a single person or firm more than 10 per cent of the bank's capital and surplus.

We must have real live inspectors, not dummies who simply check up what is laid before them by officers of the banks.

Besides providing for a most rigid inspection, I would like to see that part of the Vreeland bill enacted into law which demands the charging of interest on all public moneys placed in regular depositories.

The statement of the United States Treasury on the 15th day of May, 1908, shows that \$188,000,000 have thus been deposited.

At 2 per cent interest this sum would bring \$3,760,000 per year, which, if placed in a separate fund and allowed to accumulate, might, in course of time, be made use of in the way of furnishing relief to depositors of defunct banks.

With a view to accomplishing this object, there are few bankers who would not gladly pay interest on national funds.

I wish that a chance were offered us to vote for section 12 and the succeeding sections of this bill which relate to interest on public money deposited in national banks and to the appointment of a currency commission.

Under the rule as adopted, however, no opportunity is given one to vote for these truly excellent provisions without taking the objectionable features into the bargain, and for this reason I regret that I am forced to cast my vote against the entire bill.

The Vreeland Currency Bill.

SPEECH

OF

HON. ANDREW J. VOLSTEAD,

OF MINNESOTA,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, May 14, 1908,

On the bill (H. R. 21871) to amend the national banking laws.

Mr. VOLSTEAD said:

Mr. SPEAKER: Without entering into any detailed discussion of the so-called "Vreeland currency bill," permit me to submit a few observations upon the subject. The history of the commercial nations shows quite clearly that in all periods of prosperity there is great expansion of credits, and that unless this expansion is limited in some way panic is inevitable. When the capital and surplus of a bank are only equal to, say, 10 per cent of its liabilities, any material shrinking of the bank's assets endangers the depositors. A panic usually means forced sales of assets at a great loss to obtain cash to pay depositors. This bill provides a way in which good assets can temporarily be converted into bank notes without such loss. This can not be done and should not be done except in case of stress. To prevent such notes from issuing when conditions are normal, the banks must first satisfy the Secretary of the Treasury that an emergency has arisen requiring such notes; then, after giving ample security from its assets, the bank must get not less than nine other banks to guarantee its notes and pay as a tax thereon 4 per cent for the first two months and 1 per cent additional for each month thereafter, until the rate reaches 10 per cent. In addition to this the bank must hold the same reserves against these notes as it is now required to hold against its deposits.

These requirements make it certain that none of these notes will go into circulation until they are absolutely needed and that they will promptly retire with the passing of a crisis. This legislation is not new in principle. England, Germany, and France have for many years permitted the issue of emergency currency, and such issues have proven of great value in preventing or lessening the disastrous effect of panics. In this country clearing-house certificates have at different times been forced into circulation for like purposes and with like effect. This bill, if it becomes a law, will substitute bank notes for such certificates and make such notes available for general use during a crisis. It is time that we have legislation along this line. The bill also provides for a commission to study our financial system with a view to a revision of currency legislation. It is contended on the part of many that our financial system is radically wrong, while on the other hand it is urged with equal earnestness that the system has worked well except for lack of elasticity in emergencies. This bill aims to give in a measure that elasticity. Both friends and foes of the present system should be placed upon this commission, so that both sides of this issue may be fully presented to Congress and the country. Every panic that we have had up to date has had its origin at New York and has been intimately connected with the stock market of that city.

The last panic followed an enormous shrinking in the values of the stocks and bonds of railways and other corporations. This lessened the value of bank assets and threatened the solvency of banks. Many of these securities had been issued as stock and bond dividends or bonuses on consolidation of properties and did not represent real investments. Their fictitious character had in some instances been concealed by the payment of unearned and fictitious dividends until they could be unloaded upon an unsuspecting public. When the crash finally came, as come it must, it materially affected the prosperity of the whole nation. Until something is done to prevent a repetition of this class of financiering, I do not believe that any currency legislation will ever prevent a panic. It may be contended that Congress has no power to control State corporations so as to prevent this evil. As to corporations not engaged in interstate commerce, the contention is no doubt correct, except so far as Congress may forbid a national bank from dealing in such securities, which is not an effective remedy. It is believed, however, that Congress may fix the limits within which a railway corporation engaged in interstate commerce may issue stocks and bonds, forbid such issue unless the par value is received therefor, limit dividends to net earnings, and prevent overcapitalization in the consolidation of carriers. If an act such as H. R. 21697 could be passed and made effective,

one of the chief causes of financial distrust and insecurity would be removed.

In support of the constitutionality of such an act allow me to call attention to the following facts:

Regulation of the issue of stocks and bonds and the payment of dividends is necessary upon economic grounds. A corporation that exercises a franchise as a carrier of interstate commerce owes to the public a duty to meet the requirements of commerce, and should submit to reasonable regulation to secure that end. It should not be permitted to issue fictitious stocks and bonds or any stocks and bonds at less than their fair value. According to the report of the Interstate Commerce Commission for the year ending June 1, 1906, the railways were then capitalized at about \$68,000 per mile, and they then owed more than \$73,000 per mile. The funded debt and capital stock outstanding aggregated \$14,997,674,980. It increased during that year \$720,055,966. On this capitalization there was paid \$595,357,908 for interest and dividends, which was then more than one-fourth of the total receipts from transportation. License to increase this capitalization without putting the proceeds into the property is license to rob the present and encumber the future.

It may be said that the value of the property of a carrier determines the amount of charges for transportation and not the outstanding stocks and bonds, but while this is true in theory it is not so in practice. Even if we secured a valuation on which to base our railway rates it would not do away with the necessity for a law like this. The limitations of transportation charges to reasonable returns on a fair valuation is not possible where the road is overcapitalized without impairing the efficiency of the service. The greater the capitalization the more of its earnings will be absorbed in fixed charges and less can be paid for maintaining the service. Overcapitalization compels exorbitant charges against the traffic so as to maintain efficient service. A right to issue such fictitious stocks and bonds can no more be defended than can the right to run a lottery. The parties who make the issue have an opportunity to manipulate and an interest in manipulating the affairs of the corporation so as to lead the public to believe that there is sufficient property and earning powers back of the stocks and bonds so issued to warrant a much higher valuation than they are honestly entitled to. It is a game of false pretense derisively called "high finance," and should be stopped.

To make any regulation of the issue of stocks and bonds effective and to prevent fraud on the public it is also necessary to control the payment of dividends. A corporation may readily be bankrupted by the payment of fictitious dividends. Judge Grosscup, speaking of the evil of fictitious issues of stocks and bonds, has this to say about the payment of dividends:

"But the restriction of capitalization to figures that are fair will accomplish little if the declaring and paying of unearned dividends be left to those who are in control of the corporations, for it is not on the par value of securities, but upon the size and regularity of dividend payments that the public makes up its judgment as to values, and it is not on mere capitalization that the schemer in corporate securities counts, but upon his ability to make the public believe that the capitalization has an earning power. Take the well-known case of some of the Chicago traction companies. Without dividends the securities issued would have remained near zero, and that, too, irrespective of how small the issue was; but with high dividends, paid year after year until they were no longer questioned, the securities rose in the stock market to par, and beyond that, irrespective of how large the issue was.

"It was not the capitalization, but the high dividends regularly paid for a long period that did the trick; not real dividends in any honest application of that word to earnings, but trick dividends—dividends that stripped the enterprise of its power to keep up with its public duty, that let the enterprise gradually but surely run down, and that borrowed millions for dividends on the top of the depletion. Indeed, the whole transaction was a moral crime—a crime that robbed honest men and women of the accumulations of a lifetime—a crime that is not fully expiated, either, by arraigning before the bar of public opinion the men who got away with the plunder. I arraign as accessory before the fact the people of the great State, who, scrupulously honest in their individual dealings, issued to the projectors of this crime the ready-made corporate weapons without which the crime could not have been committed.

"There should also be supervision over the consolidation of stock, property, and franchises of carriers, as such consolidations are usually attended with stock and bond inflations. Without such supervision and power to determine whether approximately fair values are exchanged, overcapitalization would continue.

"There was no power under the common law to deal in the stocks of another corporation. The obligation of a corporation to their stockholders and to the public is to use the funds devoted to their care to the prosecution of the business in which they are engaged. If a carrier can at will own or deal in the stock of other carriers, it can divert the funds which should be used for the service it owes the public and can destroy competition. (Green-Bryce's Ultra Vires, p. 95; Citizen's State Bank v. Hawkins, 71 Fed., 369; First National Bank v. National Exchange Bank, 92 U. S. 122; People v. Chicago Gas Trust Company, 130 Ill., 268; California Bank v. Kennedy, 167 U. S., 362; De La Vergne Company v. German Savings Institution, 175 U. S., 40; Railway Company v. Iron Company, 46 O. S., 44; Lanier Lumber Company v. Rees, 103 Ala., 622; Straus v. Eagle Insurance Company, 5 O. S., 59; Coplin v. Greenless & Ransom Company, 38 O. S., 275; Franklin Bank v. Commercial Bank, 36 O. S., 350; Railroad Company v. Hinsdale, 45 O. S., 556; Central Railway Company v. Collins, 40 Ga., 582; Hood v. Railway Company, 64 How. Pract., 20; Pierson v. Railroad, 62 N. H., 537; Hazelhurst v. Railroad, 43 Ga., 13; Nassau Company v. Jones, 95 N. Y., 115; Berry v. Yates, 24 Barb., 199; People v. Pullman Palace Car Company, 175 Ill., 125; 92 U. S., 122; Citizens' State Bank v. Hawkins, 71 Fed., 369; 130 Ill., 268; Central Railroad Company v. Collins, 40 Ga., 582; Berry v. Yates, 119; Millbank v. Railroad, 64 How. Pract., 20.)"

Several of these cases expressly decide that such stock ownership is unlawful because it promotes monopolies. (Marble Co. v. Harvey, 92 Tenn., 115, and cases cited.)

If it is really intended to prevent the consolidation of parallel and competing lines, some one besides the parties interested in the consolidation must determine whether the lines are in fact parallel or competing. The States have for all practical purposes repealed the Sherman antitrust law and the common law against conspiracies in restraint of trade by expressly authorizing all sorts of combinations in the form of corporations.

In *Trenton Potteries Company v. Olyphant* (58 N. J. Eq., 507) it is said that the laws of New Jersey permit a corporation to purchase the property of all competitors and create a monopoly, and that the courts can not prevent it. Under these State laws it is not even necessary that the corporations enter into a mutual agreement for a consolidation. One corporation can purchase a majority of the stocks of another corporation and thus effect a consolidation.

Unless Congress can place some limit upon State corporations that are engaged in interstate commerce it might as well concede that trusts and monopolies are beyond their reach and that the States have effectually repealed the commerce clause of the Constitution and substituted for regulations monopolies that absolutely own and control interstate commerce, stifling commerce, and dictating terms and prices at pleasure. It is under State laws of this kind that the trusts and combinations have been formed. Attorney-General Otis, of Ohio, speaking on this subject recently, said:

"Passing the matter of railroad combinations, as to which it may be said that through stock ownership the control of all American lines is now concentrated in seven groups of parent properties, we are chiefly concerned with the practical use that has been made of the new corporate power by the largest and strongest of our manufacturing and industrial enterprises.

"The United States Steel Corporation, organized under the laws of New Jersey, with a capital stock of \$1,100,000,000, owns a majority of the stock of eleven subsidiary companies, and controls industries scattered over the entire country under different styles and corporate names. The corporation owns and manages 213 manufacturing and transportation plants and 41 mines located in eighteen different States; it has more than 1,000 miles of railroad tracks to ore, coke, and manufacturing properties, and a lake fleet of 112 vessels. This stock ownership gives it control of hundreds of millions of capital that is not represented by its own billion dollars of stock.

"The Amalgamated Copper Company, incorporated in New Jersey, has no asset whatever except the stocks of other corporations. It owns all the stock of four operating companies and a controlling interest in seven others, and has taken them over by an issue of \$155,000,000.

"The American Smelting and Refining Company, organized under the laws of New Jersey, controls the business of thirteen corporations in which it either owns the entire stock or a majority interest. Associated with it are the American Linseed Company, the National Lead Company, and the United Lead Company, and they together control twenty-eight concerns and ninety-three affiliated corporations.

"The Standard Oil Company, incorporated in New Jersey, with a capital stock of \$110,000,000, controls, directs, and manages more than seventy corporations through its possessions of a majority of their stocks. Some of these companies own stock in still other corporations, and all together the combine operates more than 400 separate and distinct properties, thus monopolizing 90 per cent of the export oil trade and 84 per cent of the domestic trade. The market value of its capitalization is about \$650,000,000, and all this vast property was brought together under one head without the payment of stock in the companies that are held.

"The United Gas Improvement Company, incorporated in Pennsylvania, owns stock in thirty corporations doing the character of business for which it was organized, and in addition to this is interested in numerous street railway properties, including the New York City surface railways. With it is allied the Public Service Corporation of New Jersey and the Rhode Island Securities Company, which last named owns all the stock of the Rhode Island Company, which again has leased for nine hundred and ninety-nine years several of the important railroad companies doing business in that State. The power of this corporation, through this system of stock ownership, is scarcely calculable, and the value of properties controlled would equal hundreds of millions, although its own capital stock is but \$36,000,000.

"The American Tobacco Company, organized under the laws of New Jersey, with a capital stock of \$40,000,000, practically controls the whole market through its ownership of the stock of innumerable other corporations.

"The International Harvester Company, incorporated in New Jersey, with a capital stock of \$120,000,000, while probably not a holding company, maintains most, if not all, the corporations which it has bought out, and they are operated as if they were distinct and competing concerns.

"The American Sugar Refining Company, incorporated in New Jersey, with a common stock of \$40,000,000, controls fifty-three other corporations.

"The American Telegraph and Telephone Company, incorporated in New York, with a capital stock of \$250,000,000, control, through stock ownership, thirty-five subsidiary corporations.

"The Western Union Telegraph Company owns stock in twenty-four other corporations; the Distillers' Security Company owns 90 per cent of the stocks of the Distillers' Company of America, and has acquired ninety-three plants, representing 60 per cent of the industry; the Philadelphia Rapid Transit Company owns the stock of twelve elevated and street railway companies; the Brooklyn Rapid Transit Company owns the stock of seven others; the Metropolitan Securities Company of New York owns the stock of many traction companies and the controlling interest in others; the Inter-State Railway of New Jersey owns all the stock of the United Power and Transportation Company, which latter company controls the capital and franchises of about forty other projected companies in New Jersey and Pennsylvania, while the International Mercantile Marine Company of New Jersey owns a majority of the shares of many of the most important steamship companies whose vessels cross the Atlantic Ocean."

Every railway is largely engaged in interstate commerce, even though its rails do not cross State lines. Most of the railways now extend into a number of different States. Take as an illustration the Great Northern, incorporated under the laws of my State. Its lines of rails cross five States and extend into a number of others. The prosperity of these States depends in a large measure upon the wise management of this road. Such management affects not only State but also interstate commerce. If Minnesota unwisely limits the power of this corporation, that State is not alone affected, but every State that the road serves. If Minnesota permits this corporation to waste its resources so that it can not perform its duties to the public or permits it to engage in any conspiracy in restraint of trade, it may be more of an injury to other States than to Minnesota. If Minnesota has the power to control the management of this corporation in matters that affect service to the public, it follows that it may by its laws directly affect one of the largest industries in the State of Washington and materially lessen or enhance the prosperity of that State—in other words, legislate for the State of Washington.

When a State corporation engages as a carrier in interstate commerce it assumes a duty toward such commerce which it is under obligation to perform. The National Government must have the power to enforce this obligation or it must depend upon the State creating the corporation to guard its interests. Assuming that the State in guarding its own commerce has as an incident thereto power to guard interstate commerce in the management of corporations created by it, can this power be so extended that the State can manage a corporation engaged in interstate commerce that does not operate any railway in the State? It would seem evident that if the corporation does not operate any railway in the State where it is created, any attempt on the part of the State to interfere with its management would be an attempt to affect interstate commerce or commerce in some other State, and as such clearly beyond its jurisdiction.

Unless commerce in the State is affected the State has no interest in enforcing any law it may enact, and is not a proper party to enforce it. Its criminal statutes are usually ineffective, as the offense, if any, is not often committed within its jurisdiction. A State can not effectually control such a railway. The State of Minnesota tried to prevent the Great Northern, the Northern Pacific, and the Burlington railways from consolidating their stocks in the Northern Securities Company, but though such consolidation was contrary to the laws of the State, it failed for lack of territorial jurisdiction. The consolidation was not effected inside of the State, but in New York. The Great Northern Railway is a very important highway for all the States through which it passes. Its maintenance in an efficient condition is of the utmost interest to every State, as was clearly illustrated when recently it proved unable to care for the traffic. Shall these States for all time to come be compelled to depend upon the legislature of the State of Minnesota for laws to control this corporation in matters of vital concern to themselves? They can not be said to have consented to this condition, as they could not refuse to this corporation a right to enter the State to engage in interstate traffic. It might enter for that purpose against the wish of the State. (*Pembina v. Benn*, 113 U. S., 227, and *Pensacola Tel. Co. v. West U. Tel. Co.*, 96 U. S., 1.)

These corporations monopolize the public highways. If they do not perform their duties to interstate commerce they obstruct it. Is there any sense in contending that a charter issued by a State is so sacred that the National Government can not say to the corporation that it must so manage its affairs that it will be in condition to perform the duties which it has agreed to perform as a carrier of interstate commerce? The National Government can not be dependent on the will of the State or the pleasure of the corporation.

Nearly all the railways were at first mere local roads, beginning and ending in the same State, and were then only incidentally engaged in interstate commerce. They have outgrown that condition and have become national highways and national post-roads, chiefly engaged in interstate commerce. The State commerce is, in many States and upon many roads, incidental and almost negligible in quantity. This change in condition justifies and requires a change in the management of the corporations. These corporations have long since outgrown State control. Their traffic extends from sea to sea and reaches even beyond that to distant continents. To say that the management of such corporations, the chief instruments of interstate commerce, shall be left practically without control is not reasonable. Congress has a right to recognize this change in conditions and to say that these corporations are not local in character, but national; that they admit of and require uniform rules for their control.

I am not suggesting that Congress shall assume a power not vested in it by the Constitution. The Supreme Court has repeatedly held that any matter that affects interstate commerce which is not local, but national, in character, and that admits of a uniform rule for its control, is subject to the will of Congress. Pilots, harbors, wharves, roads, bridges, tolls, and freights, as is said in *Brown v. Houston* (114 U. S., 622), were for many years subject to State control, but under this rule have largely passed under national laws. State quarantine laws applied to interstate commerce until Congress passed a quarantine law. Safety appliances upon trains were a matter of State regulation, but Congress superseded such regulations by the national safety-appliance law.

In 96 United States, 9, it is said:

"The powers (over commerce) thus granted are not confined to the instrumentalities of commerce or the postal service known or in use when the Constitution was adopted, but they keep pace with the progress of the country and adapt themselves to new developments of time and circumstances. (See *Lottery Case*, 181 U. S., 321; 114 U. S., 196-623; 113 U. S., 205; 125 U. S., 465; 5 How., 504; 12 How., 298; 7 How., 282-423; 11 Pet., 102; Wheat., 122; 16 Pet., 539; 113 U. S., 205; 128 U. S., 96; 169 U. S., 133; 191 U. S., 477; 196 U. S., 1; 195 U. S., 332; 187 U. S., 137; 196 U. S., 1; 205 U. S., 1.)"

It is firmly established that a corporation created under the laws of one State can not claim the right to do business in another State. Corporate power can not extend beyond the jurisdiction of the sovereign granting it. There is an apparent exception to this rule as to corporations engaged in interstate commerce. (*Pensacola Tel. Co. v. Western Union Tel. Co.*, 96 U. S., 1-12.) A State can not exclude a foreign corporation from entering the State to carry on such commerce; but this is not in fact an exception, for the reason that the State has no jurisdiction over interstate commerce. It is as though such foreign corporation did not in fact enter the State, as it does not enter a field over which the State has jurisdiction. It enters the domain, or, so to speak, the territory in the State over which the National Government has exclusive control. As to interstate commerce, the National Government is a sovereign power.

The reason that permits a State to exclude from its borders a foreign corporation not engaged in interstate commerce would permit the National Government to exclude a State corporation from engaging in interstate commerce. Corporations are instrumentalities for the purpose of carrying on commerce; the powers they possess and the manner in which such powers are exercised directly affects commerce. Whoever controls these instrumentalities largely controls commerce. As States have no power over interstate commerce, they can not confer any power over this subject upon corporations created by them; hence State corporations can claim no right as against the National Government to engage in interstate commerce.

A State may not only exclude, but has power to control, a foreign corporation entering to do State business as fully as it can control its own corporations.

In *Orient Insurance Company v. Daggs* (172 U. S., 557) the court said:

"That which a State may do with corporations of its own creation it may do with foreign corporations. . . . The power of a State to impose conditions upon foreign corporations is certainly as extensive as the power over domestic corporations. (*New York Life Ins. Co. v.*

Cravens, 178 U. S., 389; *Waters Pierce Oil Co. v. Texas*, 177 U. S., 28; see also 155 U. S., 648, and 203 U. S., 151.)

Every argument that can be argued in favor of the doctrine that a State may control foreign corporations the same as it may its own corporations can be urged with equal force in favor of a like power in the National Government over State corporations seeking to do an interstate business, and the fact that State corporations have been permitted to engage in this business does not estop the National Government (203 U. S., 151); that is, the National Government has the same power to control State corporations engaged in interstate commerce as it has over its own corporations.

That Congress has the power to create and govern corporations engaged in interstate commerce is unquestionable. In 1829 it incorporated the Washington, Alexandria and Georgetown Steam Packet Company; in 1862, the Union Pacific Railway Company; in 1864, the Northern Pacific; in 1866, the Atlantic Pacific; in 1870, the Washington and Boston Steamship Company; in 1871, the Texas Pacific Railway Company, and in 1890, the North River Bridge Company. These acts do not create corporations to be governed by the State laws, but specify and define the corporate powers the same as State charters. These and other Federal corporations have run the gantlet of the courts and their powers have been held valid. In *Luxton v. North River Bridge Company* (153 U. S., 525) the court said:

"Whenever under the Constitution Congress can exercise a power, Congress can create a corporation to carry that power into execution."

"Congress has the power to create a corporation in the exercise of its power over interstate commerce." (See also *Wilson v. Shaw*, 204 U. S., 24.)

That Congress may control a State corporation engaged in interstate commerce the same as though the corporation was created by Congress is recognized in *Hale v. Henkel* (201 U. S., 43), where Justice Brown used this language:

"It is true that the corporation in this case was chartered under the laws of New Jersey and that it received its franchise from the legislature of that State; but such franchises, so far as they involve questions of interstate commerce, must also be exercised in subordination to the power of Congress to regulate commerce. Being subject to this dual sovereignty, the General Government possesses the same right to see that its own laws are respected as the State would have with respect to the special franchise vested in it by the laws of the State. The powers of the General Government in this particular are the same as if the corporation had been created by an act of Congress."

In the *Sugar Refining* case (156 U. S., 1) the court said:

"On the other hand, the power of Congress to regulate commerce among the States is also exclusive. The Constitution does not provide that interstate commerce shall be free, but by the grant of this exclusive power to regulate it it was left free except as Congress might impose restraint, [and where] the law passed by a State in the exercise of its acknowledged powers comes into conflict with that will (of Congress), the Congress and the State can not occupy the position of equal and opposing sovereignties, because the Constitution declares its supremacy and that of the laws passed in pursuance thereof; and that which is not supreme must yield to that which is supreme."

In the *Northern Securities Company Case v. U. S.* (193 U. S., 341) the court said:

"The power over commerce with foreign nations and among the several States is vested in Congress as absolutely as it would be in a single government having in its constitution the same restrictions on the exercise of power as are found in the Constitution of the United States. Is there, then, any escape from the conclusion that, subject only to such restrictions, the power of Congress over interstate and international commerce is as full and complete as is the power of any State over its domestic commerce?"

In *Sherlock v. Allen* (93 U. S., 99) the court said:

"It is true the commercial power conferred by the Constitution is one without limitation. It authorizes legislation with respect to all the subjects of foreign and interstate commerce, the persons engaged in it, and the instrumentalities by which it is carried on."

The Supreme Court has intimated that Congress has no power over the internal affairs of a State corporation, but no case has been found in which the court has defined what is meant by internal affairs. If it simply relates to such affairs as do not affect service to the public, such as the relationship of the stockholders and officers of the company to each other and to the corporation, it is perhaps immaterial upon this consideration.

In none of the cases that have been found has a court held a State statute void because it interfered with the internal management of a foreign corporation unless it was found to be an interference by the State with interstate commerce. Without a statute courts will not assume jurisdiction of the internal affairs of a foreign corporation, but if a State requires as a condition upon which a foreign corporation not engaged in interstate commerce may enter the State that it shall submit to control of its internal affairs the authorities are abundant that it would have to submit or stay out.

If the National Government has the same power over interstate that a State has over its domestic commerce, the National Government may impose a like condition upon State corporations doing an interstate business.

The reasons assigned why a State can not control the internal affairs of a foreign corporation are:

First. That the State courts can not secure jurisdiction over the necessary parties.

Second. That such control involves the enforcement of the laws of another State.

Third. That it is impractical to allow two or more States to prescribe laws for the same corporations, as such laws would be likely to conflict. (*Clark v. M. R. and L. A.*, 43 L. R. A., 390; *Condon v. Mutual Reserve Fund Assn.*, 44 L. R. A., 149; *Madden v. Penn. Electric L. Co.*, 181 Pa. S., 617.)

The first reason is not a valid objection to national control, as a Federal court may obtain the requisite jurisdiction.

The second reason would not apply to an act like this, as its enforcement would not involve the enforcement of a State but a national law. To the extent that any State statute might be in conflict with it the State statute would give way to that of Congress, which would be supreme. For this reason there could be no conflict between State and Congressional legislation; the latter would control.

This bill is in harmony with the legislative policy of many States.

There are limitations upon the issue of corporate stocks and bonds intended to prohibit fictitious issues in the constitutions of Alabama, California, Connecticut, Delaware, Idaho, Montana, North Dakota, Pennsylvania, South Carolina, and South Dakota, and there are statutes upon this subject in Kentucky, Minnesota, Missouri, New York, Wisconsin, Massachusetts, and other States.

The statutes of Massachusetts define the purposes for which railway stocks and bonds may issue and provide that railways may issue such stocks, bonds, and other evidences of indebtedness payable more than one year from date thereof as the board of railroad commissioners may determine to be reasonably necessary for the purposes for which such stocks and bonds may have been authorized, and all such stocks must be paid for in cash at the actual value as fixed by the railroad commission, but none can be sold for less than par. The statutes of New York make like provisions.

In *Mobile and Ohio Railway Company v. Tennessee* (153 U. S., 486) the Supreme Court held that dividends can only be rightfully declared out of net profits. The New Jersey corporation act provides that no corporation shall make dividends except from the surplus or net profits arising from its business, nor divide, withdraw, or in any way pay to the stockholders, or any of them, any part of its capital stock, or reduce its capital stock except according to the act. This in effect prohibits a stock dividend. United States statutes limit dividends on the Northern Pacific to actual net earnings and prohibit new stocks or mortgages or pledges of the property on future earnings. A State may enact a law prohibiting a corporation from issuing stocks to represent an increase in the value of its properties. *Fitzpatrick v. Dispatch Company* (83 Ala., 604).

The statutes of many States forbid consolidation of corporations. Massachusetts has a statute that forbids the increase of stock where a consolidation of gas or electric companies takes place. Under the common law it is not within the power of a corporation to purchase the stock of a rival corporation. (See *De La Vergne Co. v. German Savings Inst.*, 175 U. S., 40, and other cases cited herein.)

A State may make regulations for the transfer of the stock of a foreign corporation doing business in the State contrary to the provisions of the corporate charter. (*London, Paris, and Am. Bank v. Armstein*, 117 Fed. R., 601.)

Though authorized by its charter, a foreign corporation can not, in violation of the laws of the State, enter into a partnership with another corporation or lease the property of another corporation. (*Bishop v. American P. Co.*, 151 Ill., 284; *Van Stenleen v. Centr. R. R.*, 178-367.)

Foreign insurance corporations may be required to appoint an agent upon whom service of process may be made, submit to an examination of their books and funds to determine their solvency, give security, in the form of bonds or cash, to protect policy holders, and the form and effect of their policies and the power and responsibility of their agents may be prescribed. (89 Alabama, 483.)

In *Illinois Rwy. Co. v. Interstate Commerce Commission* (206 U. S., 441) it was held that permanent improvements can not be charged to operating expenses.

The power conferred by the Constitution upon the National Government over interstate commerce is affirmative in character and broad enough in terms to authorize Congress to prevent the States from exercising any control over such commerce, but in the absence of Congressional action State laws are permitted to apply and govern until superseded by Congressional enactment.

Lake Shore and Michigan Southern Railway v. Ohio, 173 U. S., 285:

"The right of the United States to control interstate commerce is not limited by any reserve police power in the State. The United States was granted the police power over interstate commerce and does not have to depend upon the action of any State to enforce any regulation. In the *Neagle* case (135 U. S., 69) the attorney-general of California admitted that the National Government has police powers. The court in that case said that there is a peace of the United States as distinguished from the peace of the State of California."

From the Supreme Court reports of the Debs, Logan, and Seibold cases, it would appear that it was argued that the United States has no police powers. I submit the court's answers to this contention:

In re Debs (158 U. S., 578) the court said:

"Within the limits of such enumerations (of power) it (the National Government) has all the authority of sovereignty, and in the exercise of the enumerated powers acts directly upon the citizen. No trace is to be found in the Constitution of an intention to create a dependence of the Government of the Union upon those of the States for the execution of the great powers assigned to it. Its means are adequate to its ends, and on these means alone was it expected to rely for the accomplishment of its ends. To impose on it the necessity of resorting to means which it can not control, and which another government may furnish or withhold, would render its course precarious, the result of its measures uncertain, and create a dependence on other governments which might disappoint its most important designs, and is incompatible with the language of the Constitution."

In *Logan v. United States* (144 U. S., 294) it said:

"It is argued that the preservation of peace and good order in society is not within the power of the Government of the United States, but belongs exclusively to the States. Here again we are met with the theory that the Government of the United States does not rest upon the soil and territory of the country. We think this theory is founded on an entire misconception of the nature and powers of the Government. We hold it to be an incontrovertible principle that the Government of the United States may, by means of physical force exercised through its official agents, execute on every foot of American soil the powers and functions that belong to it. This necessarily involves the powers to command obedience to its laws, and hence the power to keep the peace to that extent."

And in *Ex Parte Seibold* (100 U. S., 396) the court said:

"If we indulge in such impractical views as these and keep refining and refining, we shall drive the National Government out of the United States and relegate it to the District of Columbia, or perhaps to some foreign soil. We shall bring it back to a condition of greater helplessness than the old confederation. The argument is based on a strained and impractical view of the nature and powers of the National Government. It must execute its powers or it is no government. It must execute them on land as well as on the sea, on things as well as on persons. But to do this it must necessarily have power to command obedience, preserve order, and keep the peace; and no person or power in this land has a right to resist or question its authority so long as it keeps within the bounds of its jurisdiction. Freund says in his work on police power: 'It is impossible to deny that the Federal Government exercises a considerable police power of its own. This power rests chiefly upon the constitutional power to regulate commerce among the States and with foreign nations, but not exclusively so.'"

The national quarantine laws, the safety-appliance law, the Hepburn railway-rate law, the Sherman antitrust law, the employers' liability

law were all enacted under the police power of the National Government. They are so classed by Freund in his work on police powers.

He says that the United States does exercise a considerable police power under the commerce clause of the Constitution.

In *Gloster Ferry Co. v. Penn.* (114 U. S., 215) the court cites with approval from Cooley's Constitutional Limitations the following:

"It is not doubted that Congress has the power to go beyond the general regulations of commerce which it is accustomed to establish, and to descend to the most minute directions if it shall be deemed advisable, and that to whatever extent ground shall be covered by these directions, the exercise of the State power is excluded. Congress may establish police regulations as well as the States, confining their operations to the subjects over which it is given control by the Constitution; but as the general police power can better be executed under the proper supervision of local authority, and mischief is not likely to spring therefrom so long as the power to arrest collision resides in the National Congress. The regulations which are made by Congress do not often exclude the establishment of others by the States covering very many particulars."

The doctrine in the employers' liability case is the broadest kind of recognition of the power of the National Government over interstate commerce. It extends not only to the objects of commerce, but also to the instrumentalities of commerce, though such instrumentalities only indirectly affect commerce. (*Brown v. Houston*, 114 U. S., 622-630; *Butterfield v. Stranahan*, 192 U. S., 420.)

So long as there remains upon the market billions of dollars of securities that may be inflated at any time, as the interest of unrestricted avarice may dictate, there can be no financial stability. Such securities do not appeal to the investors, and as a consequence they accumulate in the large financial centers, where they are held by the money that should move the crops and do the other business of the country. If legislation could be adopted that would prevent manipulation of these securities, a long step could be taken to prevent panics in the future.

General Currency.

SPEECH

OF

HON. JOSEPH W. FORDNEY,
OF MICHIGAN,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, May 21, 1908.

On the bill (H. R. 21871) to amend the national banking laws.

Mr. FORDNEY said:

Mr. SPEAKER: The vital issue before the American people pending the Presidential election—

Shall we stand steadfastly for a continuance of the policies which have made the country prosperous?

Shall the American people vote to abandon the cardinal principles of protection to our industries and our labor under which prosperity has blessed the Republic with increased wages to workingmen, greater opportunities for capital, and marvelous strides in our export trade, notably in exports of manufactured products?

Shall the American people, considering the tremendous progress and development during the ten years from 1897 to 1907, agree to change our trade policy under which this progress and development has come and invite increased foreign competition?

Shall the American people join in the criticism made by tariff smashers and free traders against minor defects of the existing tariff law or the assaults upon the principle of protection and agree to revise the schedules of the tariff downward to a less protective basis?

The protective tariff has proved its efficiency at every point wherein it is adequately protective. If it has failed in any degree, it has been only where its rates of duty have not been sufficiently protective to secure the domestic markets to American producers who invest American money and pay American wages. Should these rates be made less protective or more certainly protective?

The answer to these questions may be found in the records of our progress during ten years, compared with the years when low tariffs and free trade worked injury to our industries and our labor. These records constitute a demonstration of the soundness of protection.

PROGRESS OF THE REPUBLIC.

The story of our national progress from the earliest days to the present time has been often shown to be replete with suggestive facts demonstrating that this progress, industrially and financially, is greatest during the periods of protection. Such were the facts under the first protective tariff in the days of Washington and Hamilton.

At various periods in the history of the country the policy of low tariffs, tending toward free trade and the removal of duties upon commodities competing with those produced by domestic industry, has proved disastrous to investments in the United States and to the wages and opportunities of American workingmen. The country's history is covered by Government reports and the statistics of industries, showing that under low tariffs and free trade in competing commodities American industries have languished, wages have fallen, and demoralization and ruin have existed throughout the country.

The progress of the nation, industrially and in wealth accumulation, under the protective system during and following the civil war is within the memory of many men now living. It is a recognized fact that all of the periods of financial depression since that time, except those which existed during the Democratic Administration of 1893-1897, were, in large part, produced by monetary disturbances, having no direct relation to the tariff. Such is the fact with respect to the monetary troubles of 1873, following the change from paper to coin for the national currency. As to the panic period of 1893-1897, which ended with the change of the tariff policy from the low tariff and free-trade policy of Mr. Cleveland's Administration to the protective policy embodied in the existing Dingley law, it is demonstrable that the industrial depression and low state of wages throughout the country then existing were directly attributable to the threat of a change in the tariff policy of protection which had obtained up to the establishment of the Democratic free-trade tariff act of 1894.

As the deplorable industrial and financial conditions which existed from 1893 to 1897 are directly attributable to the Democratic tariff policy of low duties or no duties, so the improved conditions in industries and in wages in the period from 1897 to 1907 are directly attributable to the protective rates of the Dingley law.

THE PANIC OF 1907.

But, it is now asked, has not industrial depression appeared in the last year of the life of the Dingley law, following a season of monetary stringency? It is shown by Government records and from the conditions that existed in the industrial and financial centers of the country and of the world that the monetary disturbance of 1907 and the attendant industrial depression were ameliorated by the existence of the protective tariff law. Whatever augmentation the industrial disturbance had from any sources, apart from the flurry over the locking up of money in the banks of the leading banking centers of the country, came from two causes:

First. The agitation in favor of changes in the tariff law.

Second. The destruction of protective duties through treaties made with foreign countries—namely Germany and France—encouraging imports of competing commodities from those countries under conditions which allow exporters in those countries to make their "export prices" upon which duties are levied in the custom-houses of the United States.

Two things are perfectly manifest in connection with present discussion of the tariff policy of the United States, namely:

First. The fact that the Dingley protective tariff law has justified its existence, from every consideration of revenues and protection to American industries, through increased industrial activity, more work for American workmen, and increased wages.

Second. No justification has been furnished by those who favor changes in the existing tariff law for entering upon a revision of the tariff schedules.

Proof is abundant, from the records of the operations of the tariff law, that it is successful; that it has continued in its effectiveness for promoting the public welfare, even in the face of violent opposition and the blows it has received at the hands of its supposed friends. Industrial activity and work for those who wanted work, at steadily rising wages, continued down through the violent agitation for tariff revision in the winter of 1906 and 1907, and up to the announcement of our "reciprocity" policy with Germany and France, and the extension of the "export price" provision of the German trade agreement to practically all of the competing industrial nations of Europe.

Those who urge changes in the tariff schedules should submit some evidence that the protective-tariff law has failed to meet the requirements of the Government or the expectations of its friends. They should at least try to prove from actual experience or by reasonable argument based upon recognized facts in industry and trade that a reduction of the tariff would produce greater revenues, encourage more investments in American industrial enterprises, and give more work to American workingmen at increased compensation than has been the case during the life of the Dingley tariff law since 1897, or they stand discredited before the American people.

ISSUES IN THE UNITED STATES AND IN GREAT BRITAIN.

At this time, the mid-year of 1908, the people of the United States and Great Britain are treated to an interesting situation in respect to their foreign and domestic trade policies. After more than fifty years of free trade Great Britain is breaking away from that policy and promises soon to be lined up with the protection nations of the world.

The United States, on the contrary, is confronting a demand for tariff revision downward, and such changes in our tariff policy as shall encourage imports from Great Britain, Germany, France, and other nations.

Some of our people, following in the mistaken footsteps of their fathers of 1846, decline to take advantage of the errors of the English economists and statesmen, and fail to see wisdom in the present trend of sentiment in Great Britain.

Free trade has been disastrous to the British Empire. The world has been flooded with comments by the most enlightened British statesmen showing the folly of free trade. It seems idle to dwell on that subject, or to repeat quotations from British statesmen showing the evils which have come upon that nation through adherence to free trade, in view of the fact that the recent elections in England point conclusively to the speedy downfall of the free-trade system and the establishment of protection in keeping with the policy pursued by the British colonies.

Protection Germany and protection United States have forced Great Britain to a realizing sense of the danger which lurks in the free-trade system. When Bismarck brought the German States together in a combined Empire and threw around it the shield of protection he builded wisely, and the fruits of that great policy are now being shown in the augmentation of German industries and the marvelous development of her commerce throughout the world. Her products are laid down in British markets at prices with which the British manufacturers can not compete. These facts have been brought out in official reports by Government officers of Great Britain. Lower prices and steadily rising wages, under the protective policy, coupled with encouragement of transportation of exports by subsidized steamship lines, are battering down the prices of British wares, and German goods are being dumped on British soil to the dismay of her manufacturers. There is now a demand throughout Great Britain for a return to protection. The elections in the spring of 1908 strongly indicate a move in that direction among the electors of England. The Manchester idea of free trade has been rejected.

CHEAPER WAGES, CHEAPER MEN.

Whatever may be said about the wisdom of the repeal of the corn laws in cheapening the loaf to the British workmen, in view of the then scant area of British agricultural fields, the plan has not worked out successfully. Wages were held down for a time under lower cost of living produced by the cheaper loaf, made possible by the repeal of the corn laws. This situation enabled Great Britain to manufacture cheaper than her competitors.

But cheap cost of living and cheap men never can be made the basis of economic progress.

Saving in cost of production by lowering wages cheapens men, but it is not a sound, economic way to cheapen prices.

The United States adopted another plan after competing in the wrong way with Great Britain from 1846 to 1860. Germany and other European states later adopted that plan. When the United States adopted protection, notice was given to the world that the new policy meant higher wages, lower prices of commodities, and better conditions of industry and of workmen. The lowering of prices was brought about not by cheapening men, but by cheapening the cost of production by steam, electricity, and machinery. Prices have fallen, wages have risen, the exports of our products have increased, the imports of manufacturers have fallen off, and prosperity has been the reward of the sound economic policy adopted by the United States. On the other hand, failure has been the part of Great Britain in the great battle for the supremacy in the world's commerce.

THE WISDOM OF ALEXANDER HAMILTON.

The most notable book that has come from the pen of an Englishman touching the United States since Bryce's American Commonwealth is the Essay on Alexander Hamilton, especially that part of it which shows that the development of the British Empire depends upon the adoption and application of the principles of Hamilton to the British Empire.

The principles which Hamilton established for the American nation, to develop the estate of the Republic, to build up manufactures, to strengthen the bonds of American union through wise foreign policies, to strengthen the industries of the nation by protection and by an established system of sound credit,

have, in this day and generation, come into an unexpected honor. They are indorsed by a noted British writer.

Nothing has occurred which marks the tendency of British thought away from free trade—no, not even the great addresses of Joseph Chamberlain—more than the appearance of this book by an Englishman praising the wisdom and statesmanship of Alexander Hamilton.

It is the most amazing thing in the records of recent events that while Great Britain's wisest statesmen find justification for abandoning free trade, some Americans are advocating the abandonment of protection and the adoption of the policy that has been rejected by every commercial nation in the world save England, and is now tottering in that country.

If there ever was a time when the American people should pause and reflect, scan the records of their experience, and profit thereby, the present is that time.

GREAT BRITAIN HAS SUFFERED FROM COBDENISM.

The mistake of Great Britain was in carrying free trade too far, to manufactures as well as foodstuffs. The mistake which the United States might make would be in advancing one step on the highway to free trade and to the ruin of domestic industry. We need not stop with the lesson of our own experience. Compare the experience of Great Britain with that of Germany, and the lesson we shall learn will profit the people of the United States.

Great Britain has suffered from competition with Germany and the United States—more from the former than the latter. While the people of the United States are maintaining wage scales from double to treble greater than those of Great Britain and Germany, it is not to be expected that we shall be able to produce commodities as cheaply, in all lines, as do the countries which employ cheap men and pay them cheaply. But in those lines of industry in which machinery is chiefly employed we are gaining markets in competition with Germany and Great Britain.

But, says the free trader, if you are able to compete with the foreign producer in these lines, why maintain the tariff against those countries? Simply for the purpose of protecting the domestic market against "dumping" by foreign traders—just the thing which Great Britain complains that Germany and other States on the Continent are doing.

If protective rates are necessary to save the wage standard and the industrial progress of this nation, as has been demonstrated they are, protection must be adequate, complete, and effective at all times.

Open the doors of the American markets to "cheap foreign goods" at any time, and the foreign trader is quick to enter that door with commodities at the very time when the domestic industry can least withstand encroachments. "Dumping" surplus products is the means employed these days by the foreigner to break down the industries of competing nations.

How have the United States been able to affect seriously the trade of Great Britain? Simply by reducing the cost of production in some industries below the British standard, by perfected machinery, more ingenious than is employed by the British manufacturer, and by the advantage of free raw materials for the export trade through the operations of the "drawback" clause of our tariff law, instituted by Mr. McKinley, under which the American manufacturer, when manufacturing for the export trade, is able to obtain materials on the same basis with the foreign competitors in the export markets.

It is of material importance in considering the tariff policy of the nation and comparing results in different years, under low tariffs and protective tariffs, to give attention to the public revenues obtained and to the relative imports and exports.

DINGLEY LAW AS A REVENUE PRODUCER.

In the matter of Government revenues the Democratic tariff act of 1894 was a conspicuous failure. That law cut the duties so low on imported commodities that, notwithstanding the great increase in imports of dutiable goods which occurred during 1895, 1896, and that part of 1897 before the Dingley law went into effect, the receipts from customs were far below the requirements of the Government. In the matter of internal-revenue taxes also, the laws passed by the Democratic Congress were ineffective, made doubly so by the fact that taxes on articles under the internal-revenue law fail to produce revenues in times of industrial stagnation and inability of labor to obtain remunerative employment. The combined revenue-producing features of internal revenue and customs duties were grossly inadequate to meet the needs of the Government.

It was the aim of the Republican Congress which went into special session in the spring of 1897, under the call of President McKinley, to revise the tariff not alone on protection lines, but so to shape the revenue laws as to bring needed funds into

the Treasury of the United States. It was the estimate, conservatively made by the members of the committee which framed the Dingley tariff, that it would produce customs revenues to the amount of at least \$200,000,000, against from \$150,000,000 to \$176,000,000 produced by the Democratic tariff act which was to be displaced. In the second year after the Dingley law went into effect it fully met the expectations of its friends. A steady rise in revenues from customs duties has resulted during the life of this protective tariff law.

A glance at the receipts from customs and the receipts from all sources during the periods of Democratic free trade and Republican protection shows that the protective-tariff law and the conditions which have obtained under it have produced revenues adequate to meet the needs of the Government. The Democratic tariff act of 1894 was a conspicuous failure in all these respects. In the dark days of Democratic disaster, from 1894 to 1897, all revenues of the Government fell short, and it was one of the striking facts which can not be blotted from the minds of those who recall the incidents connected with that Administration that the Government was obliged to sell bonds to meet necessary expenses. The receipts from customs and the receipts from all sources during the two periods served as a striking illustration of the results from the change of policy in Federal finances. Here is the Democratic low-tariff period:

Year ending June 30—	Customs receipts.	Total receipts.
1895.....	\$152,158,617	\$313,390,075
1896.....	160,021,732	326,976,200
1897.....	176,554,127	347,721,705
Average.....	162,911,499	329,362,660

In the first year following the passage of the Dingley law the receipts from customs were inadequate. This was due to small importations, because of the fact that under the Democratic act, which had been in force during the three previous years, the markets of the United States had been glutted with foreign importations and it was impossible for the foreign exporters to place any more goods in the markets of the United States. Thus it was that the receipts from customs during the fiscal year ending 1898 amounted to less even than they were under the Democratic tariff act of the previous year.

Straightway, however, under the operations of the Dingley law the customs receipts moved up, and amidst the acceleration which all business conditions showed under the operations of the Dingley law the receipts from all sources showed heavy increases.

CUSTOMS RECEIPTS INCREASED.

The changes by years in the receipts from customs and from all sources are as follows:

Year ending June 30—	Customs receipts.	Total receipts.
1898.....	\$149,577,062	\$405,321,335
1899.....	206,128,482	515,960,620
1900.....	233,164,871	567,240,852
1901.....	238,585,456	587,685,338
1902.....	254,444,708	662,478,233
1903.....	284,479,582	590,396,674
1904.....	261,274,565	540,631,749
1905.....	261,798,856	544,274,685
1906.....	300,251,878	594,454,122
1907.....	333,230,125	665,306,134
Average.....	252,293,549	554,374,974

The revenue-producing influences of the Dingley law are shown by comparing its results by general averages during the past three years with the results achieved under the three years of the Democratic tariff act of 1894.

The three-year period of the Democratic act showed customs receipts averaging annually \$162,911,499. The general average for the Dingley law for the three fiscal years ending June 30, 1907, was \$298,426,953. This is nearly double the receipts obtained under the Democratic law. The total receipts show almost as high an average, relatively. The total receipts during the Democratic tariff law period averaged \$329,362,660. Under the Dingley law the average for the last three years was \$601,344,980.

The protective tariff law justifies itself by meeting the revenue requirements of the Government and the expectations of its framers.

IMPORT AND EXPORT FIGURES.

The relative imports and exports of the country under low tariffs and protective tariffs are of vital importance. Aggregate figures are valuable as showing trade results, but an analysis

of the figures is most important as showing the actual workings of the scientific policy of protection, compared with an unscientific policy of admitting commodities either free of duty or at low duties, to the injury of American industry and labor.

It need only be shown from the detailed workings of the Dingley tariff, compared with the workings of the Democratic tariff act of 1894, to prove wherein the protective measure is effective in promoting the interests of the American people by checking importations of finished products and encouraging the importations of raw materials and partly finished materials which enter into the manufactures of this country.

The Democratic tariff law gave greater encouragement to importations of finished products, with the result that American mills and factories keenly felt the competition from other countries, and, being crippled in their business, were thus disabled from furnishing employment to labor.

In general imports and exports the facts are all on the side of the Dingley law. This may best be shown not from the first few years in the operations of that law, which may be charged with being a spasmodic response to a new policy and the recuperation of the country from the ill effects of industrial stagnation. Take the latest years of the Dingley law period.

The importations of finished products have been proportionately less and the exportation of finished products proportionately greater under the Dingley law than they were under the Democratic tariff act.

In the three-year period of Democratic tariff the results were as follows:

Year ending June 30—	Imports of merchandise.	Exports of manufactures.
1895.....	\$731,969,965	\$183,595,743
1896.....	779,724,674	228,571,178
1897.....	764,730,412	277,285,391

In the last three years of the Dingley tariff the imports of merchandise and the exports of manufactures were as follows:

Year ending June 30—	Imports of merchandise.	Exports of manufactures.
1905.....	\$1,117,512,071	\$402,064,030
1906.....	1,226,562,446	459,812,656
1907.....	1,434,421,425	479,700,679

INCREASE OF MANUFACTURED EXPORTS.

These figures, covering the two periods of operations under former Democratic free trade and the present Republican protective tariff, illustrate in a forceful way the effectiveness of the protective policy in enhancing the exportations of manufactures. It is by noting some details in the workings of the two policies and their effects upon imports and exports that one may see the effectiveness of the protective policy in encouraging home manufactures. Then it is that imports of finished articles are proportionately less and exports of finished products are proportionately greater.

The Commerce Department of the United States publishes an instructive table showing the imports of merchandise by the great groups which cover the foodstuffs in crude condition, foodstuffs partly prepared, crude materials for use in manufacturing, manufactures for further use in manufacturing, and manufactures ready for consumption. It is in the effect of the two policies of free trade and protection upon these great groups of imported products that the value of the protective system is well illustrated.

In the fiscal years 1895, 1896, and 1897 the percentage of imports of completed manufactures ready for consumption ranged from 27 to 29 per cent of the total imports. In the fiscal years 1905, 1906, and 1907 the imports of finished manufactures ready for consumption ranged from 22 to 25 per cent of the total imports. In other words, the protective policy had the effect to curtail the proportionate imports of manufactured products.

Now, note the percentage of imports of crude materials intended for use in manufactures: In the fiscal years 1895, 1896, and 1897, the percentage of crude materials imported ranged almost exactly at 25 per cent for each year. Under the Dingley tariff the percentage of imports of these crude materials had increased to 33 and 34 per cent, respectively, for each year, 1905, 1906, and 1907.

DECREASE OF AGRICULTURAL IMPORTS.

Turning to the imports of crude foodstuffs and food animals, in which the farmers of the country are directly interested, because these articles come in competition with the products of the American farm, these striking comparative facts are brought out: During the fiscal years 1895, 1896, and 1897, the percentage of imports of foodstuffs ranged from 17 to 19 per cent of the total imports. Under the Dingley law policy, during the past three years, the importations of these foodstuffs has averaged from 10 to 13 per cent of the total imports—a point for the farmer to reflect upon.

The percentages of imports under the two laws are even more striking as to all manufactures and all foodstuffs, whether completed or in partly finished state. The percentage of foodstuffs partly prepared brought into the country during the three years of Democratic tariff was from 15 to 16 per cent of the total imports. During the last three years of protection the percentage of these imports ranged from 11 to 13 per cent of the total imports.

The percentage of imports of partly completed manufactures under the Democratic law ranged from 11 to 13 per cent of the total imports. Under the protective-tariff law the percentages have been from 16 to 19 per cent of the total imports.

These facts as to the proportionate importations of raw materials and finished products afford an interesting study in the operations of the two tariff policies as showing their effects upon domestic industry, whether of the farm or the mill. They prove conclusively that under the Democratic law a greater proportion of the total imports were articles which compete with the products of the farm, and that a much less proportion of completed manufactures have come in under the protective law than found entry to American markets under the Democratic tariff act.

It is a notable fact also that the tendency of the Democratic tariff law, during the few years of its existence, was to increase the proportionate percentages of imports of these various kinds of commodities against the interests of the American farmer and the American manufacturer.

FALL IN PRICES UNDER PROTECTION.

Among the arguments employed to support the doctrine of free trade or low tariffs none is more illusory than this:

Protection should be abandoned. It is not the cause of our great progress; we are a nation of tremendous resources; mills and factories would have sprung up, and we should have had a great accumulation of wealth and lower prices of commodities if the barriers of protection had not been raised as obstructions to free commerce.

Natural resources may lie forever unused unless quickened into life by industry. If, starting with the days of the colonial fathers, the American people had elected to go on buying 75 per cent of their manufactured products from Great Britain, and that policy had been continued to the present day, is it reasonable to assume that industries would have been developed here to produce articles for which there would be no demand in a market supplied by Great Britain?

Natural resources do not build mills. Mills are built to utilize natural resources.

The timber in the American forests, the iron, the coal, and other minerals were in the ground and the water powers were there when the aborigines roamed over the land. They were all here in the colonial days. But there were no industries to utilize these natural resources.

There are still undeveloped natural resources in this broad country of ours. They will not be developed by buying abroad what can be fabricated in American mills and produced on American farms. American capital and labor will not find opportunities for developing our natural resources if we buy what we need from foreign countries.

We must buy from foreign countries unless industries are established here to supply the wants of the American people.

All articles purchased abroad which can be produced in the United States deprive and rob American labor of its right to produce that article at home.

EXPORTING MORE MANUFACTURES THAN WE IMPORT.

Now, as to the effect of American industries upon prices: There has been developed in this country the most marvelous manufacturing plants on earth. We are now exporting more manufactures than we import. Is it within reason that these great manufacturing plants have had no influence in reducing prices? Would prices in the world's market have been as low as they are to-day if there had not been brought to bear upon the great processes of cheapening production the natural resources, the brains and brawn, and the machinery produced by American ingenuity?

Let us see what the market quotations show during two periods of American history. The following is a schedule of

prices quoted during the days of free trade before the civil war, and in a period of nine years after the Dingley law went into effect. They show:

Prices in 1860 and 1906.

Articles.	1860.	1906.
Ax.	\$1.49	\$0.90
Blankets, pair.	6.83	3.70
Blue shirting, yard.	.18	.09
Boots.	4.76	2.50
Calico, yard.	.15	.06
Carpets, yard.	1.31	.50
Cotton gloves.	.35	.20
Cotton hosiery.	.47	.25
Cotton knit goods.	.58	.40
Cotton thread, spool.	.09	.05
Crowbar, pound.	.12	.06
Drawing chains, pair.	1.29	.58
File.	.42	.20
Fork, 3-tined.	.99	.46
Flannel, yard.	.70	.34
Fruit cans, dozen.	3.00	.60
Gingham, yard.	.23	.09
Handsaw.	2.44	1.39
Hoe.	.85	.37
Hemp rope, pound.	.21	.11
Linen, yard.	.83	.42
Mowing machine.	121.15	45.00
Nails, iron, pound.	.08	.03
Oilcloth, yard.	.84	.31
Overalls.	1.20	.71
Pearl buttons, dozen.	.22	.14
Pins, paper.	.12	.06
Plow.	20.00	12.00
Rake, horse.	41.25	19.41
Reaper and binder.	247.85	116.00
Rubber boots.	4.83	2.74
Salt, barrel.	2.30	1.38
Shoes.	5.84	3.50
Sheeting, yard.	.13	.06
Shovel.	1.47	.80
Spade.	1.44	.84
Starch, pound.	.14	.10
Straw hat, good.	1.75	1.10
Straw hat, common.	.44	.23
Sugar, granulated, pound.	.19	.05
Sugar, brown, pound.	.16	.04
Sugar bowl.	.61	.32
Scythe.	1.22	.68
Tin dipper.	.25	.10
Tin milk pail.	.75	.39
Tin milk pan.	.37	.15
Ticking, yard.	.36	.17
Wagon.	130.00	75.00
Washboard.	.41	.22
Washtub.	1.20	.65
Wheelbarrow.	2.23	1.40
Wooden pails.	.45	.20
Woolen clothing.	24.00	10.00

PHILOSOPHY FOR WAGE AND PRICE CHANGES.

No problem in the issue over the tariff troubles the free-trade Democrat more than the wages of workmen and the prices of commodities. If prices rise, the free traders attribute the increase to the protective tariff. If the prices fall, the charge is that "protection has closed markets, caused the destruction of values and a fall in prices." If wages rise, "it is not the tariff that caused the increases;" but if wages fall, the protective tariff is denounced by the free trader as "the cause of the trouble."

It is a poor apology for an economic policy or principle of Government that will not work under all conditions and prove its soundness at all times.

In 1896 the Democratic party denounced protection as "robbery" and demanded that it be abolished, "because it has closed markets and so forced down prices that there is no longer any profit in industry." At the same time it was charged by the free traders that if Mr. McKinley were elected President and adequate protection were restored to take the place of the free-trade tariff passed by a Democratic Congress in 1894, the country would be sentenced to disaster, prices would rise beyond the ability of the people to buy, and foreign markets would be closed to the products of the American mills and farms.

In 1907, ten years after the Dingley tariff was passed, our opponents are charging that protection is the cause of high prices, and they repeat that "we can not sell where we refuse to buy." This allegation, in the face of the fact that the export trade of the nation has constantly increased and is greater today than ever before in our history.

A REASON FOR PROTECTION FAITH.

The rise of manufacturing in the United States and the steady increase in exports of all commodities furnish a reason for the faith which protectionists entertain that their policy is best for the nation; that under it all industries thrive, and so great a domestic manufacturing industry has sprung up that from a nation of planters, buying their manufactured products abroad,

we have come to be a manufacturing nation, selling abroad a greater amount of finished manufactures than are imported, and at the same time the sales of farm products in the domestic and foreign markets continue to increase, keeping pace with the development of the nation and the increased earning power and improved standard of living of our people.

It is shown from the official records that money wages have steadily increased under protection; that actual wages, being the purchasing power of each day's labor, have steadily increased.

Considering what is claimed regarding the rise in prices during recent years, notably in the last two years, it is demonstrable, from the records of prices current, that the principal advances in prices have been on breadstuffs, provisions, and other products of the farm, whereas the rise in the prices of manufactured commodities have, in some degree at least, been caused by the increased cost of labor, incident to the rise in money wages, and by the added cost of materials to the producers of finished products.

A forceful illustration of this fact regarding relative prices of materials and finished products is shown in the cotton-goods industry. The quoted price of standard prints in the New York market in 1896 was 2.60 cents a yard; in 1906 it was 3.60 cents, an increase of 1 cent a yard. During the same period the rise in the price of raw cotton was nearly 4 cents a pound. Raw cotton was quoted at 7.93 cents a pound in 1896 and 11.50 cents in 1906.

The price of refined sugar in the New York market in 1896 was 4.53 cents a pound. In 1907 it was 4.52 cents, a decline, though slight, in the price of a product that was given increased protection by the Dingley tariff over the rates imposed by the Democratic act of 1894.

The price of tin plate in the foreign markets of export to the United States in 1890, before the passage of the McKinley tariff placing a duty on tin plate, and creating an American tin-plate industry, was 3 cents a pound. In 1906 the price was 2.8 cents a pound. It has been as low as 2 cents a pound since 1890.

The average yearly price of tin plate, 14 x 20, per box of 100 pounds, at the mills in Pennsylvania, for 1900 was \$4.47; for 1903, \$3.97; for 1906, \$3.54.

RECENT WAGES AND PRICE RECORDS.

The official statistical bureaus of the United States have made several reports covering wages and prices through the greater part of the period in the life of the Dingley tariff law. These reports are in substantial accord respecting the increases in wages and prices, and they prove conclusively that the rise in wages has more than kept pace with the increased cost of living.

The United States Census collected statistics regarding the manufactures of the United States in 1900 and again in 1905. The Bureau of Labor in the Department of Commerce and Labor made a compilation in 1907 covering the wages and retail price of foods for 1906.

In summarizing an extended statement regarding the wage conditions in the United States for the year 1905, after the Dingley tariff law had been in operation for eight years, the officials of the Census reported that the average man employed in the manufacturing industries of the United States received wages amounting to \$11.16 per week. The average wages of all employees in all industries was \$10.06 per week. In some industries where technical skill is required the average wages ran as high as from \$16 to \$21 a week.

These generalizations on the average wages of the average employees in the manufacturing industries of the United States are borne out by the census returns for 1900 and 1905. The census statistics covered the next preceding years and furnish conclusive proof of the continued development of industries, the increased employment to labor, and the increased compensation they received.

In 1900 all the employees in the manufacturing industries of the country numbered 4,715,023. To these employees the aggregate annual wages paid was \$2,009,735,799. By dividing the aggregate wage fund, from which the more than 4,000,000 employees drew their wages, by the total number, it is shown that there was an amount aggregating more than \$427 for each person. Five years later the average amount possible to be paid each employee in these industries had increased to \$522. In 1905 the total number of employees in the manufacturing plants of the country had increased to 5,470,321 and the total wages paid to them had increased to \$2,811,590,532.

INCREASE OF INDUSTRIAL EMPLOYMENT.

Fully bearing out the well-known fact that the average wages of men in the manufacturing industries, as in all lines of employment, range higher than the average wages of all, on account of the smaller wages paid to women and children, the

census report shows that in 1900 the average wages paid to men, as shown by the division of the total wage fund paid by the aggregate number of employees, was \$485. In 1905 this had increased to \$554. In 1900 the aggregate number of men employed in the manufacturing plants of the country was 3,635,236. The aggregate wages paid to them was \$1,736,347,184. In 1905 the total number of employees in the manufacturing plants had increased to 4,244,538 and the aggregate amount of wages paid to them had increased to \$2,266,273,317.

Thus do the figures collected by the census prove the steadily increasing number of men finding employment in the manufacturing industries during a period of five years under the Dingley tariff; that the aggregate amount of wages paid to them substantially increased, as did also the aggregate amount which each wage-earner might receive from the total of the wage fund distributed.

Statistics collected by the Bureau of Labor of the Commerce Department on wages and retail prices of foods in 1906 set forth in detail the average increases and decreases in the number of employees, their hours of labor per week, the amount of wages per hour, the full-time weekly earnings per employee, and also the retail prices of food and the purchasing power of wages, measured by the retail prices of food. Also were included the full-time weekly earnings per employee.

WAGES PER HOUR HIGHER.

An important fact brought out by these comparisons of increases in wages and prices is stated by the Labor Bureau as follows:

As compared with the average for the ten-year period—1890 to 1899—the average wages per hour in 1906 were 24.2 per cent higher, the number of employees in establishments investigated was 42.9 per cent greater, and the average hours per week were 4.6 per cent lower. The average earnings per employee per full week were 18.5 per cent higher than the average earnings per full week during the entire ten years—1890 to 1899.

The retail price of the principal articles of food, rated according to family consumption of the various articles, was 15.7 per cent higher in 1906 than the average price for the ten years 1890 to 1899. Compared with the average for the same ten-year period, the purchasing power of an hour's wages in 1906, as measured by food, was 7.3 per cent greater, and of a full week's wages 2.4 per cent greater, the increase of the purchasing power of the full week's wages being less than the increase in the purchasing power of hourly wages, because of a reduction in the hours of labor.

There is no element in the economics of industry which makes for the betterment of the conditions of workingmen that does not show an improvement, according to this report by the Labor Bureau, after nine years of continuous operation of the Dingley tariff law.

The facts brought out cover increases in wages and increases in the cost of food, which bear heavily upon the incomes of the working people. Not only are the advantages shown to be greater on the side of the workman in the purchasing power of his daily wages, but that feature in the betterment of the condition of the workman which is fully as important as the increase of wages, namely, reduction in the hours of labor, has been made possible in the prosperity which has accompanied the operations of the tariff law since 1897.

WAGES HERE AND IN EUROPE.

So much has been said, in the past forty years of discussion of the advantages of the protective system to the United States, regarding the wide differences in favor of the wage-earners in this country compared with those in competing industrial countries of Europe that it is unnecessary to dwell upon this subject more than to repeat what is substantiated by the statistics of labor conditions in this country and in Europe, that the general average of wages in the United States range from double to treble those of European countries. It is important, however, to bring attention at this time to the differences in wages in the textile industries of this country and European countries, especially in view of the encouragement which has been given by recent trade agreements entered into between the United States and European countries.

On this point, the Washington correspondent of the American Economist, the publication of the American Protective Tariff League, showed on April 17, 1908, by quotations from the report of a special agent of the United States Commerce Department, some striking facts regarding wage conditions abroad compared with those in the United States:

It has been brought out in these reports by special agents that the average wages in the foreign cotton mills range from one-half to two-thirds lower than the wages of operatives in like mills in the United States. This is the fact of supreme importance in the economics of our international trade. All the finespun theories of free traders and low tariff advocates can not stand for a moment in the face of the facts brought out in these plain trade reports. For be it remembered in this connection that the reports regarding conditions of production in the cotton mills of the European states are brought out, not through an investigation by tariff experts desirous of arguing up or arguing down a tariff policy. They are the reports of special agents and Government consuls dealing only with exact facts as they find them in

the cotton-manufacturing districts of Europe, and are sent to the Commerce Department for publication in order that the cotton goods manufacturers of this country may be advised regarding the kind of competition that must be met in the domestic and in the foreign markets. To the expert in the trade and to the student of the economics of the problem these facts are of great value. But none of the facts speaks to the wage-earners in the cotton mills of the United States in such trumpet tones as this brief quotation from one of the statements issued by the Department, to wit:

"Special Agent Clark reports that stitchers in St. Gall (Switzerland) make \$8 to \$12 a week. In the same employment in New Jersey stitchers get from \$18 to \$30 a week. Shuttle fillers and overseers receive about the same proportionate increase in the United States over those employed in Switzerland."

Does it require any argument to demonstrate why it is that raw cotton can be shipped from the United States, fabricated in Swiss mills, and reshipped, in the form of competing manufactured goods, back to the markets of the United States, in the face of these differences in wage payments?

One United States consul reports from Belgium that certain high grades of cotton goods are exported in great quantities to the United States. The Department quotes this consul as saying regarding wage conditions in Belgium mills:

"The majority of the workers earn from 10 to 17 cents a day, and the best workers get only 20 cents a day. He says there are only 10 or 12 out of 15,000 who earn as high as 38 cents a day."

In the face of these facts regarding wage conditions in the foreign mills, it is proposed by some American people to revise the United States tariff at once and downward. Not content with sending raw cotton to Europe and buying it back in the form of manufactured goods to the amount of \$60,000,000 worth annually, it is proposed further to open the door to this kind of unjust and unfair competition, which strikes directly at the wage-earners in the cotton mills of the United States.

SAVINGS-BANK DEPOSITS.

Among the valuable statistics showing the real progress of the people is the increase in volume of deposits in the savings banks. While many wage-earners have deposits in the commercial banks, such as the national and State banks, a large percentage of the individual deposits in the commercial banks are made by merchants, manufacturers, and others whose deposit accounts are subject to frequent checking to meet the demands of business. This is not true—to the same extent, at least—with respect to the deposits in savings banks. The wage-earners of the country constitute a large proportion of the individual depositors in the savings banks. The changes in savings-bank deposits, therefore, registers in a peculiarly convincing way the real progress in wealth accumulation among the wage-earners of the country. This is true in the United States and in the leading industrial countries of Europe.

The rise in deposits in the savings banks of the United States in recent years has been marvelous. The following table illustrates that fact. It is desirable to compare the record during the life of the tariff act of 1894 with that of the past ten years.

The changes in the aggregate volume of deposits in savings banks for the different years are shown as follows:

Democratic free-trade years.	
1894.....	\$1,747,961,280
1895.....	1,810,597,023
1896.....	1,907,156,277
Republican protection years.	
1905.....	\$3,093,077,357
1906.....	3,299,544,601
1907.....	3,495,410,687

During the three-year period from 1893 to the end of 1896, the greater part of which time the Democratic free-trade tariff was in operation, the net increase in savings-banks deposits was about \$150,000,000. In the three-year period of Dingley protection, from 1905 to 1907, the increase was about \$400,000,000.

These figures are instructive. They show a marvelous increase in the aggregate. But the average amount due each depositor is a more significant fact. In the free-trade period, the average amount due each depositor ranged from \$365 to \$376. The average per capita of the United States during that period was about \$25. In the last three years of the Dingley-protection period, the average due each depositor was from \$423 to \$429, and the average per capita deposits in the United States had risen to nearly \$43 in 1907.

The average deposits in the savings banks of Germany show \$163 for each depositor; for France, \$74; for the United Kingdom, \$84; Canada, \$293.

The average deposits per capita of the inhabitants of these countries are as follows: Germany, \$46; France, \$22; the United Kingdom, \$23, and Canada, \$11.

The average deposits of the individual depositors in savings banks in all the countries of Europe is about \$112, against an average of \$429 in the United States.

PROSPERITY AND THE RAILROADS.

The industrial prosperity of the United States is registered in the success of the great railway lines which traverse nearly all sections of the country. In times of industrial prosperity the railroads are prosperous, and they quickly show the influences of industrial stagnation.

The railroads of the United States have been marvelously prosperous during the past ten years, although during a part

of the time they were subjected to legislation by Congress seriously affecting their policies and their rates through the interstate-commerce act, as amended by Congress two years ago, adopting a new policy in dealing with complaints against carriers engaged in interstate commerce. Even in the face of these changes in the law, which were calculated to affect in some degree, at least, the earning power of the roads, the prosperity of American railroads has been in keeping with the general prosperity of the country. That is particularly true during the past few years, as is shown by the statistics of the number of roads placed under receiverships and sold under foreclosures. The records cover the periods of Democratic free trade and under the Dingley protective law.

In the four calendar years 1894, 1895, 1896, and 1897 more railroads were placed under receiverships than during ten years in the life of the Dingley tariff law. The statistics on this subject are instructive for the two periods, covering the years of Democratic control in the administration of the Government and the years of Republican control down to the end of 1906 for which figures are available. During the early period the results were as follows:

PLACED UNDER RECEIVERSHIPS.

Calendar year.	Number roads.	Miles.	Stocks and bonds.
1894.....	38	7,025	\$395,791,000
1895.....	31	4,089	369,075,000
1896.....	34	5,441	275,597,000
1897.....	18	1,537	92,909,000

SOLD UNDER FORECLOSURE.

1894.....	42	5,643	\$318,999,000
1895.....	52	12,831	761,791,000
1896.....	58	13,730	1,150,377,000
1897.....	42	6,675	517,680,000

PLACED UNDER RECEIVERSHIPS.

1903.....	9	229	\$18,823,000
1904.....	8	744	38,069,000
1905.....	10	3,593	176,321,000
1906.....	6	204	55,042,000

SOLD UNDER FORECLOSURE.

1903.....	13	555	\$15,885,000
1904.....	13	524	28,268,000
1905.....	6	679	20,307,000
1906.....	8	262	10,400,000

During four years of Democratic tariff policy more than treble the number of roads were placed under receiverships than during the period of protection. The same relative conditions existed with respect to sales of railroads under foreclosure.

BUILDING NEW INDUSTRIES UNDER PROTECTION.

A few comparatively new industries have received the special consideration of Congress in recent years. The development of these industries under the protective tariff affords a notable illustration of the effectiveness of the protective policy in aiding in the development of industries which furnish opportunities for capital and labor.

Probably no efforts of the Republican party have been more bitterly denounced by the free traders than those directed toward the development of the tin-plate, beet-sugar, and button industries and the manufacture of cordage and twine and linen goods in this country. Beginning with the treatment which these industries received in the McKinley tariff act of 1890, and again in the Dingley tariff of 1897, opportunity was afforded for demonstrating what can be accomplished through wise protective legislation to promote domestic industries.

It will not be forgotten how the free traders denounced the efforts to give encouragement to these industries. Some facts brought out by the census reports are for this reason of particular interest at this time. The census reports for the years 1899 and 1904 are serviceable because they cover a period midway in the life of the Dingley tariff and afford abundant evidence of the actual workings of the protective system in giving encouragement to these industries for which protective rates were specifically provided, in the face of free-trade protests.

TIN PLATE.

In 1899 there was invested in the tin-plate industry in the United States capital to the amount of \$6,650,047, furnishing employment to 3,671 employees, who were paid annual wages aggregating \$1,889,917. The aggregate value of the output in that year was \$31,892,011.

That was the showing by an industry which had had its inception ten years before in the duties imposed under the McKinley

tariff. It was an answer to the free-trade claim that tin plate could not be produced in this country, and that we should go on buying tin plate abroad.

Five years more of protection showed, for the year 1904, an aggregate of capital invested in the tin-plate industry of \$10,813,239; wage-earners employed to the number of 4,847, to whom aggregate annual wages of \$2,383,070 were paid. The value of the aggregate output for that year had increased to \$35,283,360.

These figures furnish a striking example of real industrial progress in the United States under protection. In 1890 no production of tin plate in the United States was recorded, and the imports of tin plate for that year aggregated 680,060,925 pounds. The production of tin plate in the country reached for the last six months of that year 2,236,743 pounds. In 1905 the domestic production aggregated 1,105,440,000 pounds, and the importations of tin plate that year had fallen to 161,066,820 pounds. Within fifteen years, under the protective system, the domestic production of tin plate exceeded the importations before the industry was established, and the imports had fallen more than sixfold. At the same time opportunity was afforded for the investment of more than \$10,000,000 of capital and the distribution of nearly \$2,500,000 in wages to American workmen.

BEEF SUGAR.

The beet-sugar industry in the United States has not had the advantages of adequate and continuous protection, even during the life of the Dingley tariff. The industry is constantly menaced by such acts of Congress as opened to Cuban sugar freer access to the markets of the United States and the threats of increased importations of free sugar from the Philippines. In the face of these untoward circumstances remarkable progress has been made in the industry even in the past few years. In 1899 there was invested in the beet-sugar industry in this country \$20,141,710. Employment was given to 1,970 workmen, who received annual wages aggregating \$1,092,207, and the value of the aggregate product was \$7,323,857. In 1904 the aggregate capital invested in the industry had nearly trebled, going up to \$55,923,489. The number of workmen had increased to 3,963 and the aggregate annual wage payments to \$2,486,702. The value of the aggregate products for that year was \$24,393,794, and for the year of 1907 over \$40,000,000.

The adoption of Cuban reciprocity, which treaty reduced the import duty upon sugar coming into the United States from Cuba 20 per cent below the rate fixed in the Dingley tariff law, caused the construction of beet-sugar factories in the United States to halt and the capital invested in those already built to tremble with fear of further disaster to that industry by the agitation of free trade with the Philippine Islands.

That the enactment of Cuban reciprocity has been most disastrous to the United States is proven by a review of our exports to and imports from Cuba for the past eight years, which covers a period four years prior and four years subsequent to the enactment of that treaty. As an illustration, our exports to Cuba for four years prior to December 27, 1903—which was the date of putting Cuban reciprocity into effect—averaged, in round numbers, \$25,000,000 per year, and for the four years succeeding the adoption of that law our exports averaged \$40,000,000 per year, while during the same period our imports from Cuba amounted to about \$40,000,000 annually, and for the succeeding four years more than \$86,000,000 annually, and the 20 per cent reduction of duty given to Cuba cost the United States Government in the past four years more than \$40,000,000. So that in order to secure a market in Cuba in the past four years for an increase of \$60,000,000 in our exports we were compelled to take more than \$183,000,000 increase of Cuban imports and make her a present of \$40,000,000 in cash.

My Republican friends, I caution you to be careful in any steps you may take toward a reduction of our present tariff schedules.

It is a matter of interesting speculation among those who have watched the struggle of the beet-sugar industry in this country what it would have accomplished if, instead of those harmful conditions, the industry had been accorded adequate and continuous protection.

BUTTONS.

In this industry is included the pearl-button manufacture which was ridiculed by the free traders during the framing of the McKinley tariff of 1890. The button industry has made remarkable strides since 1890. In that year the capital invested aggregated \$4,212,568; the number of wage-earners employed was 8,685, to whom were paid annual wages aggregating \$2,828,238. The value of the output of the factories in that year was \$7,695,910. In 1904 the capital invested had nearly doubled, reaching \$7,783,900. The number of workmen had

increased to 10,567, and their annual wage receipts had reached \$3,680,196. The annual output of the industry had risen to \$11,133,769.

CORDAGE AND TWINE.

This growing industry has made great strides since 1880 under the encouragement of protective duties. In that year less than \$12,000,000 was the value of the aggregate output and a million and a half dollars registered the payment in wages. In 1899 the capital invested in the industry amounted to \$29,375,470; the number of workmen was 13,114, to whom wages were paid annually aggregating \$4,113,112. The value of the product of that year was \$37,849,651. In 1904 the capital invested in the industry had risen to \$37,110,521; the number of workmen to 14,614, receiving annual wages aggregating \$5,338,178. The value of the output for that year had increased to \$48,017,139.

LINEN GOODS.

The linen industry in the United States has at no time received the encouragement to which it is entitled, considering what is believed could be accomplished with adequate protection. Our present trade policies have unjustly, it is believed, encouraged the importations of linen goods from foreign countries directly against the policy intended to be established by the terms of the Dingley law. In 1890 less than a million dollars were invested in the linen industry in this country, and the aggregate output of the mills was about a million and a half dollars' worth. In 1899 the aggregate capital invested was \$5,688,990, the number of wage-earners employed was 3,283, to whom was paid \$1,036,830. The annual output was valued at \$4,368,159. In 1904 the capital invested had increased to \$6,293,878, the number of wage-earners to 3,811, wages paid to \$1,324,621, and the aggregate annual output to \$5,856,388.

ARE THESE TARIFF RATES TOO HIGH?

Vigorous complaints are made by free traders and revisionists against certain schedules of the Dingley law as being "too high." The iron and steel, earthenware, glass, and lumber schedules, particularly, are denounced. Comparisons of the rates with those of the preceding Democratic tariff and the changes in importations from year to year show that these complaints are without warrant.

A tariff law to be adequately protective should have the effect to keep down importations to a minimum, in order that the domestic industries which produce like commodities and furnish opportunities for American capital and employment for American wage-earners be not too much encroached upon by foreign competing importations.

In respect to the iron and steel schedules, the average rates of duty are only 10 per cent higher than they were in the Democratic tariff of 1894. On many articles the rates were not increased by the Dingley law.

Whether the tariff law in its application to the metals is now adequately protective may best be shown by the importations of iron and steel during recent years. In the period from 1905 to 1907, fiscal years in each instance, the importations of iron and steel nearly doubled, rising from \$23,500,000 worth in 1905 to \$40,500,000 worth in 1907. The imports of iron and steel during 1895 and 1896, under the operations of the Democratic tariff, amounted to about \$24,000,000 worth for each year. The increases in importations under the Dingley law have been heaviest during the last few years in the life of that act.

The importations of earthenware, stone and china were increased from \$11,600,000 worth in 1905 to \$13,700,000 worth in 1907. The importations of this class of goods under the Democratic tariff act in 1895 were about \$9,000,000 worth and in 1896 nearly \$11,000,000 worth.

INCREASED IMPORTATIONS.

The importations of glass and glassware were \$6,000,000 worth in 1905, and in 1907 they had increased to \$7,500,000 worth. Under the Democratic tariff act in 1893 they were \$6,500,000 worth, and in 1896, \$7,400,000 worth. The increase in the average ad valorem rate of duty in the schedules covering earthen and glass ware amounted to about 20 per cent.

Among certain advocates of a change in the tariff on lumber, the "preservation of American forests" is the chief reason advanced. Others claim that the rates of duty are inordinately high. The importations of lumber in 1905 amounted to \$23,000,000 worth, and in 1907 they had risen to \$32,500,000 worth. Under the Democratic tariff, 1894, the importations of lumber were about \$7,000,000 worth, in 1896 they were \$8,500,000 worth. Under the Democratic law white pine lumber was admitted free of duty. An increase of about 7 per cent was made in the average ad valorem rates of duty in the schedules relating to all woods by the Dingley law over the Democratic act

of 1894, and lumber was transferred from the free list to the dutiable list.

Only one conclusion is logically to be drawn from these changes in importations, namely: Whether the increases in rates by the Dingley law over the Democratic act were great or small, clearly the rates of the Dingley law admit of steadily increasing importations of these goods, and to that extent displace domestic manufactures in their own markets.

Is it desirable that these rates shall be revised downward, and give greater opportunities for foreign commodities to enter American markets, displacing articles produced by American labor?

DEVELOPMENT OF THESE INDUSTRIES.

Whether the Dingley tariff law is adequately protective to these industries is to some extent shown by the imports of competing commodities. Undoubtedly there has been a great development, increased capital invested, and increased wages paid to a larger number of employees during the life of the law.

In respect to the iron and steel industry it is shown by the census reports that the aggregate capital invested increased from \$1,500,000,000 in 1900 to \$2,331,000,000 in 1905. The number of employees increased from 737,900 in 1900 to 857,292 in 1905. The wages increased from \$384,233,000 to \$482,357,000 in 1905. The aggregate increase in the value of the product was \$370,000,000.

In regard to lumber, the increase in capital invested was from \$730,000,000 in 1900 to \$1,013,000,000 in 1905. The number of employees from 672,000 to 736,000, and their aggregate annual wages increased from \$253,600,000 to \$336,058,000. The increase in the value of the products was about \$214,000,000.

The showing as to chemicals, glass, and stoneware, is somewhat in keeping with the inadequacy of the protective rates to secure to the industries in these lines the markets of the country.

The increase in capital invested in the earthenware and glass industries was from \$335,400,000 in 1900 to \$553,846,000 in 1905. The number of workmen increased from 231,700 to 285,360, and their aggregate wages increased from \$102,867,000 to \$148,471,000. The increase in the aggregate product was about \$120,000,000.

The increase in capital invested in the chemicals and allied products was from \$1,139,000,000 in 1900 to \$1,504,000,000 in 1905. The increase in average number of employees was from 182,237 to 210,165. The increase in their aggregate annual wages was from \$71,594,000 to \$93,965,000. The increase in the value of the product was a little less than \$300,000,000 worth.

MANY RATES BELOW PROTECTIVE LINE.

There are other schedules of the tariff law which will demand attention in any revision.

Cotton goods: The importations of cotton manufactures in 1905 aggregated \$49,000,000 worth, and in 1907 they had increased to \$73,700,000 worth. In 1895, under the Democratic tariff, the importations of cotton manufactures amounted to about \$33,000,000 worth, and in 1896 to \$32,400,000 worth.

Chemicals: In 1905 the value of imported chemicals was \$64,700,000 worth, and in 1907 these importations had increased to \$83,000,000 worth. In 1895 the importations of chemicals aggregated \$43,500,000 worth, and in 1896 about \$48,000,000 worth. The figures are more striking when one notes the changes in imports of dutiable chemicals only, thus showing whether the rates of duty are adequate to protect the domestic industry. In 1905 the value of dutiable chemicals imported was \$25,000,000 worth, and in 1907 the imports were \$32,000,000 worth. The dutiable imports of chemicals in 1895 were \$13,000,000 worth, and in 1896 \$13,700,000 worth.

The increase in the average ad valorem rate of duty in the chemical schedule by the Dingley law over the Democratic act was less than 2 per cent.

On the general question whether the Dingley law rates are high and are unduly excluding imports of merchandise, these facts should be noted:

DUTIABLE IMPORTATIONS.

In 1905 the total value of merchandise admitted free of duty was \$517,442,000 worth; in 1907 the value was \$644,000,000 worth. Of merchandise dutiable the imports in 1905 were \$600,000,000 worth, and in 1907 \$790,000,000 worth. The increase in three years under the Dingley law was \$127,000,000 worth of merchandise admitted free of duty and \$190,000,000 worth of merchandise subject to duty.

In 1895, under the Democratic tariff, the imports of merchandise free of duty were \$363,000,000 worth, and in 1896 \$370,000,000 worth. Of merchandise subject to duty the imports in 1895 were \$368,000,000 worth, and in 1896 they were \$410,000,000 worth. Under the Democratic tariff the importa-

tions of articles admitted free of duty increased during a single year only \$7,000,000 worth, while the importations of merchandise subject to duty increased \$42,000,000 worth.

THE MONETARY STRESS OF 1907.

Several causes are properly assignable for the monetary stress of 1907:

1. A universal financial disturbance pervaded the chief commercial centers of the world. Business depression prevailed throughout the commercial centers of England, Germany, France, Austria, and Italy.

2. The effects of monetary stress in the United States began to be felt in July, 1907, following violent agitation for "tariff revision" by the then coming Congress and the announcement of the adoption of the "trade agreement" with Germany, whereby German exporters and those of other European countries became participants in the concessions contained in that agreement with respect to "export prices." These concessions promised immediate advantages to foreign producers on their sales in the markets of the United States. Those advantages were speedily realized in increased importations of competing commodities, which had the effect to call a halt on orders to American mills.

3. Heavy crop movements in the West in the autumn of 1907 created unusual demands for currency.

4. The banks in the leading centers were pressed for funds. The failure of two or three trust companies in New York under conditions which indicated overspeculation and improper management of the banking and loan departments of these institutions caused "a run," which spread to many banks in New York and caused a tightening of money. In order to save even the most solvent banks from failure, the clearing-house associations issued certificates. This system extended throughout the commercial centers, because it was impossible for the interior banks to obtain their funds, which, in common with those of all depositors, were locked up in the central reserve and reserve centers.

5. The tightness of money had the effect further to curtail orders and to influence adversely activities in industrial operations already slackened by tariff agitation and threats of increased imports.

BANEFUL EFFECTS OF TARIFF AGITATION.

The real seat of the disaster to business in the United States was, as is seen, the adoption of some policies and the advocacy of others that would be unfavorable to American industry.

For many years the Dingley tariff accomplished the results for which it was enacted. Under its operations the United States became the foremost industrial nation of the world. At the zenith of its success, when, judging from constantly increasing importations of competing products and the vanishing of our favorable trade balances, many of its rates had become inadequate for the continued encouragement of the industries of the United States, there came from many of its friends, as well as from all its foes, from many professed protectionists, as well as from all free traders, from numerous manufacturers as well as from all importers, a clamor for tariff revision downward.

When it became apparent that such a revision could not be immediately effected by the consent and cooperation of Congress, a tariff agreement was entered into by which undervaluations of foreign competing products were made possible.

Simultaneously with the incubation of this scheme of indirect downward tariff revision further classifications were made upon competing imports by which many rates theretofore undisturbed were effectually destroyed.

One of the two great political parties, standing always for free trade, stands pledged to the overthrow of the Dingley tariff.

American producers who are able to sell the bulk of their goods at reasonable prices at home and their surplus products at the best obtainable prices abroad, and thus afford constant employment to American labor, are threatened with the transfer of their products to the free list.

Under these conditions is it strange that fear of impending disaster drove American capital into hiding? Every unfriendly revision of American tariffs has produced disaster for the American people. Could the Dingley tariff be revised and reversed downward without a similar result? High financiering might have produced a "little flurry in Wall street," and individual "plunging" might have wrecked a few financial institutions, but the universal fear of the destruction of the foundation of our national prosperity, protection, alone could bring about the conditions which have developed in connection with the monetary stress of 1907. A return to sound protective policies in the treatment of our industries and our foreign trade is the only remedy for our present unfortunate situation.

What is the lesson the American people must learn from experience with tariff tinkering and revision downward by trade agreements? Reflect upon what former Secretary Shaw of the Treasury Department said:

I should regret a tariff war (referring to alleged threats by Germany to impose maximum duties against American products), but there are some things preferable to humiliation by consent. If we are to make concessions to Germany, the same concessions should in all fairness be made to every other country, and then Germany would have the same cause to complain she has now. Her proposition is that she shall have better terms than any as a prerequisite to granting the United States as favorable terms as she grants several other nations.

The blunder made by the national Administration was the result of an effort to stretch "reciprocity" beyond the express limitations of the laws of Congress—to make concessions upon competing products, contrary to the policy of protection. The basis upon which concessions might be made was marked out plainly in the written law of the land and did not include changes in the customs policy of the nation.

REVISION DOWNWARD MEANS DISASTER.

It matters not whether protection be destroyed by a revision of the tariff downward through a law of Congress or by trade treaties.

Either plan spells disaster to the American people.

The protectionists of the country have fought off direct attacks upon the tariff, but an indirect and effective attack upon the integrity of the system was made through the trade agreement entered into by our trade treaties with the German Government. That agreement violates not only the principles but the specific provisions of the protective-tariff law and the customs-administration act, under which the tariff schedules of the United States are enforced at the ports of entry for foreign goods.

The marked falling off in all imports since the financial troubles which began in this country in the fall of 1907 has been accompanied by reduced aggregate importations from Germany. That fact is exhibited, however, in its strongest light, only in lines of goods upon which the opportunities for undervaluations by the German exporters are least favorable. On other lines the increase in imports of German commodities has been marked. It is sufficient to show what the general aggregate figures represent in respect to the imports and exports. That is made plain if one takes the Treasury reports of this country showing a decline in imports from Germany, as exhibited by the aggregate valuations, and then turns to the reports of declared exports from consular districts in Germany during the same period.

The latest consular report published by the Commerce Department from the consul-general at Berlin, Germany, gives a detailed account of the increases and decreases of declared exports from Germany by consular districts during 1907, compared with 1906. The increase in the aggregate of these declared exports amounted to \$6,315,796. Of the thirty consular districts reported upon, increases in declared exports are shown by more than twenty.

IT CHANGED INDUSTRIAL CONDITIONS.

The American Protective Tariff League, in its publication, *The American Economist*, brings out the facts regarding the influences of the German tariff agreement upon the trade and industry of the United States and makes it clear that changed industrial conditions followed the adoption of that trade agreement in July, 1907. The article published on May 1, 1908, tells the story of tariff revision downward by Executive order for the benefit of foreign producers, and the instantaneous effect of that action upon the business conditions in the United States:

When the German tariff agreement went into effect July 1, 1907, American labor was fully employed, American markets were crowding American mills, imports and exports were large and increasing, transportation facilities were inadequate for the demands of business, and additional facilities for increasing business were projected everywhere.

Four months later capital was in hiding, banks had suspended, fear had taken possession of the American people, and the United States was in the throes of a great panic. Four months later still two-thirds of the American factories and mines were either idle or on short time; 200,000 idle workers had returned to Europe; 300,000 empty freight cars were standing idle upon completed American railroads, and projected facilities for increasing business were abandoned.

The German tariff agreement had revised the American tariff downward by making the undervaluation of German products convenient. Referring to this subject, President Roosevelt in his message of December 3, 1907, said:

"Acting upon the invitation of the German Government, I sent to Berlin a commission.

"In this inquiry I became satisfied that certain vicious and unjustifiable practices had grown up in our customs administration. Under our practice, as I found it to exist in this case, the abuse had become gross and discreditable.

"Secret statements were obtained from informers and discharged employees and business rivals, and upon this kind of secret evidence the values of imported goods were frequently raised.

"I accordingly caused the regulations governing this branch of the customs service to be modified. Moreover, our Treasury agents are accredited to the Government of the country in which they seek information, and in Germany receive the assistance of the quasi-

official chambers of commerce in determining the actual market value of goods.

"These changes of regulations were adapted to the removal of such manifest abuses that I have not felt that they ought to be confined to our relations with Germany; and I have extended their operations to all other countries which have expressed a desire to enter into similar administrative relations."

It being self-evident that reductions in market values are equivalent to reductions of ad valorem tariff rates, the foregoing is both remarkable and startling.

It must be conceded that undervaluations are as old as ad valorem tariffs, and that customs officials when unhampered can seldom stop systematic undervaluations. But when restricted to the assistance of the foreign shipper's own chamber of commerce in ascertaining the market value of the shipper's own goods, a successful effort of the Treasury agent to stop undervaluation is impossible. Naturally this kind of assistance must be more "vicious and unjustifiable," "gross and discreditable," than are likely to be the "secret statements" "obtained from informers and discharged employees and business rivals" who know whereof they testify.

If Treasury agents are expected to assist in making undervaluations convenient, then by all means let them be accredited to the country in which they seek information, and let their arrival be heralded by a display of fireworks and the music of brass bands. But if they are to stop undervaluations, let them return to their former methods, which, in the opinion of McKinley, were neither "vicious," "gross," nor "discreditable."

Although the German tariff agreement, now operative as to all the competing countries of Europe, was consummated without the consent or approval of Congress, and although its effects have undoubtedly proved injurious to American labor and production, no step has yet been taken by Congress to challenge or in any manner test its legality. Possibly this neglect of a vital matter is explainable on the score of the exigencies of a political campaign near at hand. But it should not be forgotten that there are exigencies in the industrial situation which demand attention. In ignoring the latter out of consideration for the former it is more than possible that the political situation and outlook will not be improved.

It has been said, and we believe it is a fact in history, that no political party in this country has ever survived a panic. That being the case, it might prove to be the part of wisdom to remedy panic conditions as far as possible prior to the casting of the ballots which are to determine the result of this year's Presidential election. The German tariff agreement is one among the panic conditions, and a very potential one, as many people believe.

FROM DEEP CONVICTION.

Mr. Speaker, if it shall be thought that I have been unduly severe or inexpediently outspoken in censure of the foreign-trade policy which has actuated the Administration in the consummation of the so-called "German tariff trade agreement"—whose provisions have been extended to practically every producing country of Europe—my answer is that this criticism springs from a deep conviction that such a foreign-trade policy is utterly wrong—wrong economically, wrong commercially. The United States can not possibly gain advantage through reciprocity in competing products. It must invariably be the loser. No benefit to the people of our country can come through a policy which seeks to increase our export trade at the heavy cost of compelling us to accept increased quantities of competitive imports. Nothing but loss and injury will ever result from such a departure from the safe, sane lines of fair and equal protection to all labor and all industry. As bearing upon this question I quote the following pertinent interrogations from a recent issue of the *American Economist*:

How can reciprocity in competing products be made to harmonize with the policy of protection?

How can we enlarge our foreign trade by international trade agreements unless those agreements provide for an increased inflow of competitive merchandise?

How can we arrange reciprocity dickers with foreign countries unless we do discriminate in tariff duties in favor of the countries thus favored?

The answer is that none of these things can be done, because each proposition is self-contradictory.

With this conclusion, I am in entire accord. Our foreign trade stands in no need of artificial stimulants. Its growth, under eleven years of adequate protection, has been the wonder of the world. Alike in exports and in imports, we have practically doubled our foreign trade in these eleven years. When we surrender any part of protection's benefits in reaching out for "more foreign trade" we are chasing after a pot of gold at the foot of a rainbow; we are grabbing for the distant nickel and overlooking the dollar that is right under our noses. That is what we did when we entered into that foolish treaty with Cuba; that is what we did—grabbed the nickel and overlooked the dollar—when we became a party to that German tariff-trade agreement; that is what we shall do whenever we permit crafty foreign bargainers to persuade us that we can gain by a foreign-trade policy that robs American labor of its wages and robs American production of its profits.

THE "POOR FARMER" AND THE "INFANT INDUSTRY."

Two propositions are advanced by the opponents of protection as reasons for their objections to that policy. One is its alleged "injury to the farmers of the country," the other that "protection should not be allowed upon any basis, except for a brief time in the interests of infant industries."

The influence of protection in planting factories next to the farm is one of the most beneficent that has attended the policy during all its history. The rapid advancement of manufactur-

ing industries throughout the Middle West has come to be recognized as the greatest boon to that agricultural section. The diversification of industries has an admittedly helpful tendency in upholding the prices of breadstuffs and provisions, which find reader and better markets by reason of the development of manufactories in close proximity to the field of agricultural endeavor. It has long ceased to be a subject of reproach, even among the most virulent free-trade advocates, that "protection is only for the benefit of the few manufacturing plants in New England." The great industrial States of the Middle West are developing manufacturing plants so rapidly that the center of production in manufacturing is transferred next to the farms.

Regarding the effect of continued protection upon the agricultural sections, testimony is furnished by Secretary Wilson, of the Agricultural Department, that in the year 1907, closing a period of ten years of protection under the Dingley law, the American farmers had their greatest prosperity. In his last annual report, covering the year 1907, Secretary Wilson said:

Wealth production on farms in 1907, as expressed in value, transcended the high record of 1906, which was itself much above the highest amount before reached. In arriving at the total the farm products of the year are estimated in value for every detail presented by the census and at that point in production at which they acquire commercial value.

The grand total for 1907 is \$7,412,000,000. This is \$657,000,000 above the value of 1906, \$1,103,000,000 above that of 1905, and \$2,695,000,000 above the census amount for 1899.

The value of the farm products for 1907 was 10 per cent greater than 1906, 17 per cent over 1905, 20 per cent over 1904, 25 per cent over 1903, and 57 per cent over 1899.

A simple series of index numbers shows the progressive movement of wealth production by the farmers. The value of the products in 1899 being taken at 100, the value for 1903 stands at 125, for 1904 at 131, for 1905 at 134, for 1906 at 143, and for 1907 at 157.

During the last nine years wealth estimated as above explained was created on the farms to the fabulous amount of \$53,000,000,000.

That is the answer, made by the highest authority in this country, to the question as to the effect upon the progress of the great agricultural industry, and whether the policy of protection is a help or a hindrance to agriculture in the United States.

PROTECTION AND COTTON MANUFACTURE.

There is no better illustration of what might, at one time in the history of the protective policy, be termed an "infant industry," than is cotton manufacture. This industry has enjoyed almost sixty years of more or less adequate protection. The progress of cotton manufacturing furnishes conclusive proof that it is not a question of time in the application of protective duties nor the age of the industry, but simply a question of the relative conditions in competition and whether cotton manufacturing in foreign competing countries keeps pace in the matter of standard of wages paid and other elements in cost of production with cotton manufacturing in the United States. If it has not, there is necessity for the maintenance of protection to the American industry sufficient to equalize the difference in conditions of production.

In 1878 Great Britain consumed 3,073,000 bales of cotton annually, and in 1904 her consumption of raw cotton had decreased to 3,017,000. During the same period the consumption of raw cotton in manufacturing plants in the United States had increased from 2,024,000 to 3,909,000 bales.

In 1900 there were 1,055 plants manufacturing cotton goods in this country, with capital invested aggregating \$467,240,157. In 1905 the number of plants had increased to 1,154, and the capital invested had increased to \$613,110,655. There was an increase of 14,000 in the number of employees, and the value of the material utilized by them increased from \$176,251,527 to \$286,255,303. This marks the progress in five years only of the protection period.

Striking are the facts with regard to the imports of cotton goods during various periods covered by protective tariffs and low tariffs as applied to cotton goods.

In the period from 1891 to 1892, under the McKinley tariff, which was reasonably protective to cotton manufacturers, imports of cotton goods declined from \$29,712,624 to \$28,323,841.

In 1894, the year of the passage of the Democratic tariff act, as illustrating the tendency of foreign producers to withhold exports to the American markets pending prospects for lower duties, the imports of cotton goods declined to \$22,346,517 worth. In 1896, two years after the passage of the Democratic act, the imports of cotton manufactures had increased to \$32,437,504, or nearly \$3,000,000 greater than the record made under the higher protective rates of the McKinley Act in 1891.

As an answer to the question whether the existing rates of the tariff are adequately protective on cotton goods, and insure to the domestic industries that measure of protection which is embodied in the principle of "equalizing conditions of production in this country and abroad," it is observed that in 1905, after seven years of Dingley tariff protection, the imports of

cotton goods had risen to \$54,517,059 worth. In 1906 a further increase was recorded to \$68,911,375 worth. In 1907 the imports had reached the stupendous total of \$79,524,943 worth.

The question to be answered by those who denounce the cotton manufacturing as an "overgrown industry which no longer needs protection" is, whether it is adequately protected under existing rates, when the annual increases in imports of cotton goods aggregate, for the past few years, more than \$10,000,000 a year?

WOOL AND HIDE DUTIES.

The policy of imposing protective duties on materials that are the product of the American farm is vigorously denounced by opponents of protection. The advocates of dutiable raw materials have defended this policy upon the sound basis that raw wool produced on the farm is a finished product of the farmer's industry; that raw wool is as much entitled to recognition in a policy of universal protection to American industries as any other product, whether of the field or of the factory.

The Dingley tariff act restored to the dutiable list raw wool, which had been placed on the free list by the act of 1894.

The questions to be answered in a candid consideration of free wool or dutiable wool are whether the farmer has received a fair return for his product under the protective system, and what the influence of dutiable wool has been upon the industry of woolen manufacture. If the farmer has not obtained adequate return in increased price for his products, the wool duties, to that extent, have proved insufficient. If, under protective rates on raw wool, woolen manufacturing has failed to make reasonable progress, wool duties are at least open to criticism.

The facts in the wool industry and woolen manufacturing conclusively demonstrate that the protective policy has justified itself. It has been a steady influence in the maintenance of the price of raw wool in the American market.

The price of fine Ohio washed wool in 1891, under the McKinley tariff, which imposed protective rates on wool, was 31 cents a pound. In 1895 and 1896, under the Democratic tariff and free wool, the prices were 18 and 17 cents, respectively. Under the Dingley law, with wool restored to the dutiable list, the price in 1898 had risen to 28 cents a pound, in 1904 to 32 cents, and in 1906 to 33 cents.

During the protection period 1900-1905 a tremendous advance was recorded in the woolen and worsted goods industries in the United States. The capital invested increased from \$256,494,372 in 1900 to \$302,767,417 in 1905. There was an increase of 16,000 in the number of employees and an increase of \$11,000,000 in their aggregate annual wages. The value of the woolen and worsted goods produced in 1900 was \$238,744,502, and in 1905 it was \$307,941,710.

As to hides, a similar showing is made. Hides were transferred from the free list to the dutiable list by the Dingley law, and in 1905 the importations of dutiable hides amounted to 113,000,000 pounds and in 1907 to 135,000,000 pounds. The importations of hides, on the free list, in 1895, under the Democratic act, were 171,000,000 pounds, and in 1896 they were 164,000,000 pounds.

An important fact to be borne in mind in connection with the duties on materials is that under the law importers of foreign "cheap materials" who desire to compete with foreign manufacturers in foreign markets may import materials and, on competing articles therefrom for export, obtain a refund of duties paid on imported materials. This is under the "drawback" section of the tariff law. This policy, adopted by many American manufacturers, affords a plain reason for ability to compete in some lines with foreign manufacturers.

The increase in capital invested in the boot and shoe industry from 1900 to 1905 was from \$90,819,233 to \$122,526,093. There was an addition of about 9,000 in the number of employees during that period and an increase of \$11,000,000 in their aggregate annual wages. The cost of all materials used in the boot and shoe industry advanced from \$168,633,694 to \$197,363,495, while the increase in the value of the products of the industry was from \$253,969,580 in 1900 to \$320,107,458 in 1905.

In the leather goods industry, separately classified by the census, there was an increase during the period from 1900 to 1905 of \$3,000,000 in the capital invested, a million dollars in the wages paid to labor, and an increase of 1,500 in the average number of employees. The increase in the cost of materials was \$36,000,000, and the increase in the value of the product aggregated \$48,000,000.

These are the facts which free-trade opponents of duties on wool and hides must meet and overcome before they can prove that duties on these materials are "injurious to the industry of the farm and the factory."

THE PROOF OF THE PUDDING.

During five years of the period covered by the operations of the Dingley protective tariff law there has been witnessed the addition of more than \$4,000,000,000 to the capital invested in manufacturing industries in the United States; more than a million additional employees have found employment in those industries, and more than \$4,000,000,000 has been added to the value of their annual products.

The workingmen in these industries have obtained an increase of a billion dollars in their aggregate annual wages, and the average individual wage increased more than \$100 a year.

The increase in all exports was from \$1,050,997,000 worth in 1897 to \$1,923,395,000 worth in 1907—almost doubling in ten years.

The value of the products of the farm exported in 1907 was \$1,050,000,000, or almost precisely equal to the value of the total exports of the country in 1897.

The values of farms and farm property, quoted by the census returns of 1890 at \$12,180,501,538, reached the stupendous figure of \$20,514,001,838 in 1900.

Individual deposits of money in the savings banks of the country increased from \$1,893,413,564 in 1897 to \$3,299,544,601 in 1906. The individual deposits in national banks increased from \$5,094,735,370 in 1897 to \$12,215,767,666 in 1906.

No reason has been given—none can be given—why a policy in government under which these results have been achieved should be changed.

Petty attacks have been made upon minor defects of the tariff law, and these attacks have been reiterated by free-trade enemies of the protective system.

The duty of the hour for the American people is to accept the actual results accomplished under the protective tariff as conclusive proof of the wisdom of that law, rather than heed the noisy objections and complaints of its enemies, who furnish neither facts nor logic to support their demand that protection be destroyed and that the country shall adopt a low tariff or a free-trade tariff.

The American Navy.

I again exhort the Government and the country to realize promptly and practically that the maintenance of our Navy in an amplitude of power adequate to any emergency is intimately blended with our hope of lasting peace, with the augmentation of our vast commercial enterprise and prosperity, and, above all, with that grand and imposing naval renown which has come in our age to be manifestly the surest and the cheapest defense of a great nation. (Gideon Welles.)

SPEECH

OF

HON. GEORGE EDMUND FOSS,
OF ILLINOIS,

IN THE HOUSE OF REPRESENTATIVES,

Friday, April 10, 1908,

On the bill (H. R. 20471) making appropriations for the naval service for the fiscal year ending June 30, 1909, and for other purposes.

Mr. FOSS said:

Mr. CHAIRMAN: I rise to speak to the American Navy, that arm of our national defense which Lincoln once called "Uncle Sam's webfoot."

I would not snatch one laurel from the wreath which adorns the brow of the American soldier, but only seek to pay a tribute of deserved respect to the American sailor. The sailor on the sea has always supplemented the efforts of the soldier on the land, and the great results which have been achieved have been due to the combined strength of both.

The brilliant achievements of the American sailor in the war of our national independence, when our Navy first consisted of only a small fleet of eight vessels, in command of Commodore Essex Hopkins, early inspired a feeling of pride in our Navy. The names of Biddle and Barry and Nicholson and Whipple and of others I might mention recall the daring and bravery of that period.

What schoolboy has not read with admiration the story of John Paul Jones, as with the *Ranger* he ransacked the coasts of England and Scotland, or pictured him upon the deck of the *Bon Homme Richard* when, amid the storm and smoke of battle, the English captain of the *Serapis* inquired: "The *Richard* ahoy! Have you struck your colors?" And the doughty Jones replied: "No; I have not yet begun to fight!" That battle established the prowess of the American Navy upon the sea.

Who, sir, has not read with satisfaction of our naval achievements in the war with the Barbary powers:

How Truxtun fought, how Somers fell,
How gallant Preble's daring host
Triumphed along the Moorish coast,
Forced the proud infidel to treat,
And brought the Crescent to their feet.

The next great conflict was the war of 1812, which gave us the freedom of the seas. Search history through, and where will you find as gallant a band of sea captains as those who walked the decks of the American ships during that struggle?

There were Decatur and Bainbridge, and Lawrence, whose dying words, "Don't give up the ship," emblazoned on a canvas, became the oriflamme of victory to Perry and his fleet upon Lake Erie. There was Porter, who so gallantly defended the *Essex* in the fight with the *Phoebe* and the *Cherub*, where our Farragut, then a boy, is said to have first engaged in naval warfare. There was Hull, by whose skillful seamanship the old *Constitution*, which the English contemptuously called "a bundle of pine boards under a bit of bunting," outsailed the English fleet, and later overcame the *Guerriere*. There was Macdonough, whose brilliant victory on Lake Champlain made him one of the commanding figures of all naval history.

Says a recent historian:

The Republic of the United States owed a great deal to the excellent make and armament of its ships, but it owed still more to the men who were in them.

Then, again, in our war with Mexico the Navy played an important part, for it was under the fire of its guns that our Army was landed at Vera Cruz, and through the combined efforts of both sailor and soldier that the war terminated to the glory of our country.

Then, again, in the civil war the blockading of the Eastern and Southern ports; Dupont's terrible circle of fire off Port Royal; the silencing of the *Merrimac* by the *Monitor*, called "the cheese box of Ericsson;" the opening of the Mississippi by Foote and Porter; the capture of New Orleans; the terrible fight in Mobile Bay, where Farragut, lashed to the shrouds of the *Hartford*, directed the "grand, wild storm of battle;" the daring of Cushing, and the sinking of the *Alabama* by the *Kearsarge* tell their own story of the achievements of the American Navy in that war.

No historian can ever write a complete history of that great contest and leave out the daring of the American sailor any more than he could write it and leave out the bravery of the American soldier. The one cooperated with the other, and both together, inspired by the same devotion to a common cause, preserved the Union of the North and the South, which time is fast cementing into a peace, a perpetual peace, in the everlasting bonds of American brotherhood.

A union of lakes and a union of lands,
A union that time can not sever;
A union of hearts and a union of hands,
And the flag of our Union forever.

THE BUILDING OF OUR NEW NAVY.

At the close of the civil war we had 683 vessels on our Navy list, 579 being steamers and 104 sailing vessels, but there was a general clearing out and a reduction of the Navy down to a peace basis. The sailing craft was practically abandoned. Comparatively few new vessels were built. Our Navy was allowed to go to pieces, and decaying time reduced what was left of the most powerful Navy in the world to where it ranked only twentieth.

Such was its condition in 1881, when the Secretary of the Navy, at that time Mr. William H. Hunt, called the attention of the country to the importance of building up the new Navy. In his report of that year he said:

The condition of the Navy imperatively demands the prompt and earnest attention of Congress. Unless some action be had in its behalf it must dwindle into insignificance. From such a state it would be difficult to revive it into efficiency without dangerous delay and enormous expense. These things ought not to be. While the Navy should not be large, it should at all times form a nucleus for an emergency. Its power for prompt and extended expansion should be established. It should be sufficiently powerful to assure a navigator that in whatever sea he shall sail his ship he is protected by the Stars and Stripes of his country.

On the 29th of June, 1881, Secretary Hunt appointed a board of naval officers, with Rear-Admiral John Rodgers at its head, to report upon the Navy, and "to determine the requirements of a new Navy."

On November 7, 1881, this board reported, and recommended the building during the eight years following of enough vessels to make our Navy consist of twenty-one ironclads, seventy unarmored cruisers, twenty torpedo boats, and five rams. This really was the first definite step toward the beginning of a new Navy. Secretary Hunt, however, was soon succeeded by Mr. William E. Chandler as Secretary of the Navy, who, in his re-

port of November 29, 1882, called the attention of Congress and the country to the deplorable condition of our ships. He reported that the available armored vessels were only thirteen single-turreted monitors, and the available cruisers were thirty-seven. He also recommended at that time that we should not repair these old ships in cases where the estimated cost of repair would exceed 20 per cent of a new ship of the same size and the same material, and this provision was enacted into law.

This was an important step at that time, inasmuch as it shut off the needless repairs of old ships and emphasized the importance of building new ones.

But the first authorization for new ships came soon after in the appropriation act of March 3, 1883, when the new cruisers, *Atlanta*, *Boston*, *Chicago*, and dispatch boat *Dolphin*, sometimes called the A, B, C, and D of the new Navy, were authorized. The first two of these ships were cruisers of about 3,000 tons each, and had a speed of 15½ knots. The *Chicago* was a larger cruiser, with a displacement of 5,000 tons and a speed of 18 knots. The *Dolphin* had a displacement of a little less than 1,500 tons, and her speed not quite 16 knots. These ships were all built by John Roach & Sons, at Chester, Pa. The total cost of these four vessels aggregated \$4,268,801.

Two years later, in 1885, Congress authorized the construction of two more protected cruisers, the *Charleston* and *Newark*, and two gunboats, the *Petrel* and *Yorktown*. This added 10,000 tons more to the new Navy, and thus it was under the Administration of President Arthur we began the building up of our new Navy through the authorization of these eight war vessels above described.

Under the Administration of Cleveland Mr. William C. Whitney became Secretary of the Navy, and succeeded Mr. Chandler. Mr. Whitney was, like his predecessor, strongly in favor of the building of a new navy, and, accordingly, in his report of November 13, 1885, called special attention to the importance of the subject and recommended more and larger ships, and in 1886, during the first session of the Forty-ninth Congress, there was authorized a naval programme consisting of two second-class battle ships, the *Maine* and the *Texas*, of over 6,000 tons each; a protected cruiser, the *Baltimore*, of 4,400 tons; four monitors, the *Amphitrite*, *Montadnock*, and *Terror*, of 4,000 tons each, and the *Puritan*, of 6,000 tons; a dynamite-gun cruiser, the *Vesuvius*, and the torpedo boat *Cushing*. These added to the Navy approximately 36,000 tons.

Thus, under two Administrations, the one Republican and the other Democratic, was established the policy of the construction of the new Navy, and ever since then this policy has been regarded as it should be—a national and not a partisan one. Every year since then, with the exception of 1901, whether the country has been governed by a Republican or a Democratic Administration, new ships have been authorized by Congress and added to the Navy. Webster once said, "At the water's edge all politics cease," and it has been so with the building up of our Navy.

It was necessary at first to secure our steel forgings from abroad. Secretary Chandler in his annual report of November, 1882, stated—

That the country is not now capable of making the steel forgings necessary for heavy rifle cannon, and they must therefore be procured from abroad or inducements offered to steel manufacturers to engage in their production.

This was the problem which faced the Department in the early beginnings of our new Navy, and it was not until June, 1887, that the necessary inducements to manufacturers of this country were given, when Secretary Whitney made a large contract for armor and gun forgings with our steel manufacturers. To use his own words, this was accomplished in two ways:

The first step was the discontinuance of all purchases of armor and gun steel abroad, and the second step was to permit the wants of the Department for armor and gun steel to accumulate until contracts could be made of such magnitude as to induce competition of domestic manufacturers upon the condition of their erection of a plant in this country adequate to the manufacture of both iron and gun steel up to the standard of European requirements.

At this time the armor and armament already authorized by Congress involved the expenditure of \$9,000,000. The Navy Department therefore advertised for bids for all its requirements of armor and gun steel for ships of war, stipulating that it should be of domestic manufacture and allowing two and one-half years for the building of a plant. The result of this was a contract made with the Bethlehem Steel Company by which a plant was built at Bethlehem, Pa., for the manufacture of armor and gun steel, and later, in 1890, the Carnegie Company also secured from the Department a contract for armor, and from that time on it may be said of all of our ships that they are of domestic manufacture.

When we reflect that at the beginning of our Navy we had no great shipyards capable of building battle ships and that we were obliged to go abroad for our forgings, and when we consider that to-day we are not only building all of our own ships, but we have built ships for Japan and Russia, we can be justly proud of the splendid progress which we have made, and to quote the words of Secretary Tracy, who afterwards succeeded Secretary Whitney:

We have proved that at a time when war-ship construction seemed almost a lost art in this country American mechanics could create it anew and place the United States where it was seventy years ago, when the vessels of this Navy were the best of their class afloat. We have fostered and developed a branch of industry in America which may, if kept up, attract to itself no inconsiderable share of the profits that now go to shipbuilders abroad.

Thus we have demonstrated that our country can build a navy on American plans and of American manufacture—in short, under a policy distinctly American—that to-day inspires the just pride of every American citizen.

A distinguished American once said:

The cannon and the ball that defend your land should be native here. * * * The steel that edges the sword and points the bayonets of your defense should be of national metal.

And so, likewise, our American battle ship, the guardian of our national honor upon the sea, not only floats an American flag, but represents, from the top of her masthead to the keel beneath the wave, the strength of American material, the genius of American engineering, and the superiority of American workmanship.

Our largest ships up to this time were the two second-class battle ships the *Maine* and *Texas*, but in 1888 Congress authorized our first armored cruiser, the *New York*, a ship of 8,200 tons, with a speed of 21 knots, costing \$4,400,000. This was another type of a vessel which was to play an important part in our new construction. In 1890, under the Administration of President Harrison, Mr. Tracy, who succeeded Mr. Whitney as Secretary of the Navy, recommended a further increase of the Navy, and even larger ships for the Navy, and it was on June 30, 1890, that the first first-class battle ships were authorized. These were the *Indiana*, the *Massachusetts*, and the *Oregon*, each having a displacement of 10,288 tons, with a speed of approximately 16 knots, and costing \$6,000,000 each. At this time we had brought into our Navy substantially all the different types of ships which we have to-day—the first-class battle ship, the second-class battle ship, the armored cruiser, the protected cruiser, the unprotected cruiser, the monitor, the gunboat, and the torpedo boat.

On June 19, 1892, Congress authorized another first-class battle ship, the *Iowa*.

Under Cleveland's second Administration Mr. Herbert, who had previously been the chairman of the Committee on Naval Affairs of the House, became Secretary of the Navy and did much toward increasing it. He came into his position with a knowledge of naval affairs which made his administration an efficient one. Congress on March 2, 1895, authorized two battle ships, *Kearsarge* and *Kentucky*, and also a number of torpedo boats. On June 10, 1896, and I well remember the time, as this was during my first session as a Member of the House, Congress authorized the three battle ships, *Alabama*, *Illinois*, and *Wisconsin*, and ten torpedo boats. The naval programme of that year added 36,000 tons to the Navy and was one of the largest up to that time, but it was soon to be distanced by larger programmes which followed.

Under McKinley's Administration Mr. John D. Long, of Massachusetts, became Secretary of the Navy and strongly recommended the upbuilding of the Navy, which was further increased by the splendid programme of the second session of the Fifty-fifth Congress, when 59,000 tons were added to the Navy in the shape of battle ships, gunboats, torpedo-boat destroyers, torpedo boats, and monitors. In 1899, the third session of the Fifty-fifth Congress, our largest naval programme was authorized, consisting of three first-class battle ships, three armored cruisers, and six protected cruisers. This increased the tonnage of the Navy by 105,000 tons. In 1900 our naval programme amounted to 100,000 tons. In 1901 Congress failed to make any authorization, in view of the large authorizations which had been made in the two previous years, but in 1902 there were added 62,000 tons to the Navy. Under Secretary Long a greater tonnage was added to the American Navy than during all previous years since the beginning of its construction.

Mr. William H. Moody, formerly a Member of the House of Representatives, succeeded Secretary Long in 1902, and his incumbency in the office was signalized by the authorization of Congress in 1903 of five first-class battle ships, the largest number of battle ships ever authorized in a single year. This programme added 77,000 tons to the Navy. In 1904 Congress au-

thorized three battle ships and four scout cruisers, a tonnage of 56,000.

Congress in 1905, under Secretary Morton, authorized two first-class battle ships of 16,000 tons each, the *South Carolina* and the *Michigan*. In 1906 and 1907, under Secretary Bonaparte, Congress authorized two first-class battle ships of 20,000 tons each, the *Delaware* and *North Dakota*, and five torpedo-boat destroyers and some submarines. And this year, under Secretary Metcalf, we are authorizing two more first-class battle ships, which will be duplicates of the *Delaware* and *North Dakota*, and ten torpedo-boat destroyers and eight submarines.

When the present naval appropriation bill becomes a law, we will have built, building, and authorized 31 battle ships, a dozen armored cruisers, 11 coast-defense vessels, 49 cruisers of different types, 31 torpedo-boat destroyers, 32 torpedo boats, and 28 submarines.

This year we have authorized 42,000 men, increasing our quota by 6,000. We have now 3,164 officers on the active list in the Navy, 950 midshipmen under instruction and 2,500 apprentice seamen. In addition to this we have a Marine Corps consisting of nearly 9,521 men and 329 officers; a Navy thoroughly modern in every respect and of the highest standard of efficiency. Our Navy to-day ranks third among the navies of the world, but I believe that ship for ship and man for man we have the best Navy in the world.

There has been a wonderful evolution, and one might almost say a revolution, in the construction of ships and in the training of men since the days of the civil war, and this has all resulted from that memorable contest between the *Merrimac* and the *Monitor* nearly fifty years ago. We can recall conflicts in our history where there were more men engaged, more ships and more guns in action, and a greater sacrifice of human life, but no battle has ever been fought which has had more influence upon the evolution of navies than this. This one revolutionized the navies of the world.

The 9th of March, 1862. What a day that was! I can see the *Merrimac*, that old frigate of 3,500 tons which had been sunk by the Federals when they deserted the Norfolk Navy-Yard, but afterwards raised by the Confederates and roofed over with pitch pine and oak 2 feet thick, and then plated with 4-inch iron, with an iron-plated ram at her bow, and ten guns all ready for action, and 300 picked men on board under Commodore Franklin Buchanan. The day before she had rammed the *Cumberland*, with her thirty guns, and the *Congress*, with her fifty guns, off Newport News, and withdrew to Sewalls Point across the way, expecting on the following day to finish the *Minnesota* and the rest of the Federal fleet. The easy victory of the *Merrimac* over these ships startled the whole country. The Secretary of the Navy, Mr. Welles, relates what took place at a cabinet meeting called by Mr. Lincoln on the receipt of the news:

The *Merrimac*—

Said Stanton—

will change the whole character of the war; she will destroy, seriatim, every naval vessel; she will lay all the cities on the seaboard under contribution. I shall immediately recall Burnside; Port Royal must be abandoned. I will notify the governors and municipal authorities in the North to take instant measures to protect their harbors.

Such was the consternation of the officials at Washington.

But they had failed to count upon the little *Monitor*, which had just arrived upon the scene from New York and taken her position behind the *Minnesota*. When the *Merrimac* the next morning, started for the *Minnesota*, this little ironclad, called the "cheese box of Ericsson," with her one large turret and two guns, and a crew of fifty-seven under Lieutenant Worden, unexpectedly appeared and, without apology, made for the *Merrimac*.

The battle raged furiously for hours, when the *Monitor*, for some reason or other, drew off, but afterwards returned to the fight, but the *Merrimac* had left for the Norfolk Navy-Yard. Many writers have disputed on which side to place the palm of victory. It was celebrated on both sides, by the North and South, as a great naval victory for each. The fight with the *Congress* and *Cumberland* on March 8 was overwhelmingly on the side of the Confederates. The fight with the *Monitor* the following day was a drawn battle, but, at the same time, the *Merrimac* completely failed in her purpose to destroy the rest of the fleet. Neither vessel was able to inflict any serious damage on the other, although the boats, smokestack, and muzzles of two of the guns of the *Merrimac* were shot away. The *Merrimac* lost two killed and nineteen wounded, while on the *Monitor* only Lieutenant Worden was seriously injured.

This contest, however, between ironclads revolutionized naval architecture everywhere. The battle of the *Merrimac* with the *Cumberland* and *Congress* demonstrated that wooden ships could not stand up against ironclads, and the battle of the

Monitor with the *Merrimac* demonstrated that the ironclad was the only ship that could hold its own against the ironclad. The shipyards of the world which were then building vessels for navies stopped and took notice of the great lesson drawn from this encounter, and immediately started in to profit by it.

The effect of this fight was described by the London Times of that day, which said:

Whereas we had available for immediate purposes 149 first class war ships we have now two, these two being the *Warrior* and her sister *Ironside*. There is not now a ship in the English Navy apart from these two that it would not be madness to trust to an engagement with that little *Monitor*.

The lessons of that fight can be easily perceived in the construction of our ships of war at the present time. The little *Monitor* became the prototype of the great battle ship, and its turret has been duplicated and multiplied to such an extent that our new battle ships, authorized at the last session of Congress will contain five large turrets with two 12-inch guns each.

The wooden ship with its masts and sails is gone, and in its place has come the heavily armored cruiser and battle ship, made almost exclusively of iron and steel.

Another difference marks the transition from the old to the new in that our ships to-day no longer fight at close range, but at a distance of 2 and 3 and even 4 and 5 miles.

A wonderful evolution has gone on in the making of guns, so that practically now one 12-inch gun is equivalent to many of the old style. Rear-Admiral O'Neill (retired), who was Chief of the Bureau of Ordnance during the Spanish-American war, estimated that the muzzle energy developed by one round of the 12-inch gun was equal to that of fifty-four rounds of the old 9-inch smoothbore gun which was the popular one of the civil war. So that it is safe enough to say that a modern battle ship to-day could easily put out of action a whole fleet of ships of the civil war period. Such has been the advance in naval progress since the first battle between ironclads.

Admiral O'Neill, in an address before the New York Yacht Club, said:

My first service was on board the 22-gun sloop of war *Cumberland*, and it was my fortune to witness and participate in the naval engagement at Newport News and Hampton Roads, in March, 1862, when the Confederate ironclad *Merrimac* destroyed the *Congress* and *Cumberland* and then found her match in the little *Monitor*, the prototype of the present battle ship.

All the vessels of this period were built of wood and were armed with cast iron, smooth-bore guns, firing quick-burning black powder and cast iron, spherical shot and shell. There were no steam auxiliaries for steering, getting up anchor, or for other miscellaneous purposes now so common, and work of all kinds was performed by man power only. The use of electricity was hardly known outside the laboratory. The ships were dimly lighted with oil lamps and candles, and in cold weather we huddled around a so-called "hot shot," which had been feebly warmed in the galley fire, as no means were supplied for heating ships in those days. Distilling apparatus was not in use, and all fresh water for drinking, cooking, and washing purposes was brought from shore or caught from the awnings when it rained. Steam launches did not exist, and all boating was done under oars or sails, and naval vessels were simplicity itself in their construction, armament, and equipment. Gunnery as a science as now understood was practically unknown, though some attention was paid to gun drill and target practice.

All is changed since that day, and wooden ships, masts and sails, cast-iron guns, round shot, and quick-burning powder, and, in fact, almost everything that was peculiar to the ships of 1862, has nearly, if not entirely, disappeared, and the ponderous battle ship of to-day, clothed with heavy armor, bristling with more than half a hundred guns, crammed with the costly products of the steel mill and the machine shop, and representing an investment of nearly \$7,000,000, expresses our twentieth century idea of the most perfect fighting machine for naval warfare.

When I look back and consider the numberless and marvelous changes that have taken place during my official career, covering a period of forty-one years, in almost everything pertaining to ships of war, it seems to me as if I must have lived in some prehistoric age; and I am amazed that we, who began amid such simple surroundings, should have been able to acquire in later life even a rudimentary knowledge of so many difficult and complex subjects, many of which were absolutely unknown in our younger days.

Not only has the ship changed, and the guns, and the powder from black to smokeless, but also the training of men and officers in the Navy. The day of old Jack Tar, that picturesque character described by Cooper, is gone. No longer can we see Old Jack, rough and rugged in appearance, but warm and tender within, sitting on the quarter-deck, watching wind and sail, smoking his pipe and driving dull care away, but in his place has come the trained machinist, the trained engineer, and the trained gunner, familiar with machinery and engines, for after all the great battle ship is nothing more nor less than a mighty mechanical workshop in which every man has something to do.

The cost of all the ships of the new Navy which we have built or are building or have authorized, including those under the present naval appropriation bill, will be approximately \$350,000,000. We have appropriated for the building and maintenance of the Navy during the last twenty-five years, during which we have been building it, \$1,244,657,000, and to this we will add this year approximately \$120,000,000, making in all about \$1,364,657,000.

In this connection it is perhaps not immodest for me to say that of this \$1,364,000,000 which Congress has appropriated for the new Navy during the last twenty-five years, more than \$1,000,000,000 has been appropriated while I have had the honor to be a member of the Naval Committee. And I may say further that during this time Congress has authorized three-fourths of the present tonnage of ships; in all nearly 640,000 tons out of a total of 850,000 tons which will measure our naval strength when the present naval bill becomes a law. Up to 1895 we had authorized 211,285 tons; we had authorized only six battle ships—the *Indiana*, *Massachusetts*, *Oregon*, *Iowa*, *Kearsarge*, and *Kentucky*. So it will be seen from this that our American Navy has been built up practically within the last thirteen years.

Since I have been chairman of the Naval Committee Congress has authorized 16 battle ships, 7 armored cruisers, 3 protected cruisers, 3 scout cruisers, 2 gunboats, 15 destroyers, 22 submarines, 7 colliers, a tonnage of 453,876 tons out of a total tonnage of 850,432 tons for the new Navy. The above includes all the ships which will be authorized this year.

Appropriations for the naval establishment.

Year and Congress.	Annual.	Additional.	Total.
1883 (47-2)	\$14,819,976.80		\$14,819,976.80
1884 (48-1)	15,894,434.23	888,260.79	16,782,695.02
1885 (48-2)	14,980,472.59	1,272,447.42	16,252,920.01
1886 (49-1)	15,070,837.95	981,812.93	16,052,650.88
1887 (49-2)	16,489,907.20		16,489,907.20
1888 (50-1)	25,767,348.19	496,306.57	26,263,654.76
1889 (50-2)	19,942,835.35	2,208,152.08	22,150,987.38
1890 (51-1)	21,692,510.27	573,553.35	22,266,063.62
1891 (51-2)	24,136,035.53	1,193,886.47	25,329,922.00
1892 (52-1)	31,541,654.78	123,195.92	31,664,850.70
1893 (52-2)	23,543,385.00	67,872.99	23,611,257.99
1894 (53-2)	22,104,061.38	290,063.61	22,394,124.99
1895 (53-3)	25,327,126.72	148,235.85	25,475,362.57
1896 (54-1)	29,416,245.31	1,199,469.12	30,615,714.43
1897 (55-1)	30,562,660.95	658,233.62	31,220,894.57
1898 (55-2)	33,008,234.19	92,298,741.59	125,307,975.78
1899 (55-3)	56,098,783.68	6,449,009.38	62,547,793.06
1900 (56-1)	48,099,969.58	5,482,801.32	53,582,770.90
1901 (56-2)	65,140,916.67	4,375,858.78	69,516,775.45
1902 (57-1)	78,101,791.00	6,280,760.80	84,382,551.80
1903 (57-2)	81,876,791.43	2,795,257.30	84,672,048.73
1904 (58-2)	97,505,140.94	6,127,974.46	103,633,115.40
1905 (58-3)	100,336,679.94	15,084,317.81	115,420,997.75
1906 (59-1)	102,091,670.37	2,417,049.56	104,508,719.93
1907 (59-2)	98,958,507.50	784,790.82	99,743,298.32
Total	1,092,502,977.45	152,148,052.49	1,244,651,029.94

The "additional" appropriation for 1896 was appropriated in two sessions of Congress—(54-1) and (54-2).

The "additional" appropriation for 1898 includes \$50,000,000, which was appropriated for "national defense."

As will be seen from the table, in 1883 our annual appropriation act amounted to about \$15,000,000. In 1893 it was \$23,500,000. In 1903 it was \$81,876,000. In 1905 it was over \$100,000,000, and it has been that ever since, until this year, when it has reached its highest mark of over \$120,000,000. With our present number of ships it will cost \$100,000,000 every year to maintain our Navy. This is indeed a large sum, but it must never be forgotten that while a navy is a great luxury in time of peace, it is indispensable in time of war. One hundred million dollars a year means a little more than \$1 for every man, woman, and child in our country, about 3 per cent of our increasing foreign trade, about 14 per cent of our national wealth, the cheapest insurance in the world. While it has cost much to build up our new Navy and to maintain it, yet what American is not proud of the fact that to-day we have upon the Pacific coast the largest fleet of any nation?

A few months ago when the President of the United States gave the order that sent the fleet around the Horn out into the Pacific we heard a great deal of criticism from the public press, particularly in the vicinity of New York. The fleet has passed into the Pacific and we hear no criticism now. A fleet of sixteen battle ships, aggregating 223,000 tons, commanded and officered by 14,000 men, the greatest fleet of recent years, which could be duplicated only by England herself, has passed safely from the Atlantic around into the Pacific. We had criticism a few months ago; we have none now because everybody recognizes that it was a good order which the President made. What use is it to build up ships unless we have them in fleet formation? What use is it to build up a navy unless we send that navy out on long cruises where the men can be properly disciplined and trained? What do you think Rojestvensky would have given if he could have made the cruise from Cronstadt to Tsushima in time of peace before he was compelled to do so in time of war? Do you not think his fleet would have been in better condition to meet the enemy in the Sea of Japan if he had made the cruise at least once before in time of peace?

This cruise of the American fleet around the Horn has been very profitable to the American Navy, because it has disciplined and trained our officers and men. We have been able to find out the weaknesses in our personnel, if any exist, and not only that, but it has been of great benefit also to the matériel of the American Navy. We have learned whether our ships were good for anything or not, and the word just coming back to us from Magdalena Bay has been that our ships were even better than when they started on the cruise and the personnel more highly trained and better disciplined than when they first set sail from Hampton Roads.

Another thing which this cruise has called to the attention of the American people is that the American Navy is a national institution; that we are building up a navy for the protection of the Pacific as well as the Atlantic; that we are a two-oceans country; and necessarily, if the American Navy is to be the instrument of our national defense, we must have a two-oceans navy—a fleet upon the Pacific as well as a fleet upon the Atlantic.

This cruise of the Navy into the Pacific has called the attention of the country to another important thing. Wherever that fleet has gone it has been met in every port with the hospitality and the cordiality for which the people of the South American countries are famous. It has tended to cement in closer bonds the relations between our country and the South American Republics. It has given force and efficacy to the words of our able Secretary of State, who made a visit to the leading Republics of South America a few months ago, and it has bound those Republics to us by closer ties than any single thing which could have happened.

The people of South America recognize that we are bound together in one common destiny, and that the American Navy and the American people propose to maintain and uphold the Monroe doctrine and have the ability to do so. Not only has the cruise been beneficial in that respect, but, Mr. Chairman, it has called the attention of the country also to the fact that we are moving westward in our national development. All our history has been made along the shores of the Atlantic, all our wars have been along the shores of the Atlantic. Our war for national independence and our war for the freedom of the seas have been largely along the shores of the Atlantic. But we are passing now in our national development from the Atlantic westward to the Pacific. We are beginning to realize what William H. Seward said on the floor of the American Senate fifty years ago, that the Pacific Ocean, its islands and its shores and the great region beyond, would some day be the chief theater of events in the world's great hereafter.

Now, this passing of the fleet from the Atlantic to the Pacific has called to the attention of every American citizen the onward growth of American thought and American development. And let me say to you that no country to-day stands higher in its influence and power in the Pacific than our own nation, and it has come by a long and logical course of events. It was in 1852 that Perry sailed with his little fleet into the Bay of Yeddo and knocked at the gates of old Japan—that Japan which had been closed for hundreds of years to foreign treaty, to foreign commerce, or to foreign intercourse. But Perry lay there knocking, knocking, knocking at the gates of old Japan, until finally the gates flew open. Flew open to what? Flew open to commerce, flew open to treaty, flew open to the new and rising nation of Japan. It was an American fleet which opened the door. And a few years ago, when I had the pleasure of visiting Tokyo and was a guest in the Taft party of the Japanese secretary of state, he on that occasion alluded to the visit of Commodore Perry more than fifty years ago, and said that was the beginning of the development of the new and modern Japan.

It was only about ten years ago that the United States acquired the Hawaiian Islands, the key of the Pacific, and here the other day this House passed a bill establishing a naval station at Pearl Harbor in recognition of the fact.

Our influence in the development in the Pacific has been moving on. The next stepping-stone in the American development in the Pacific was when the fleet of Dewey left Hong-kong and sailed into the Bay of Manila on that bright May morning and destroyed Spanish sovereignty in those islands. The next stepping-stone in the development of American influence was when the Congress of the United States established a government over the Philippine Islands under an American flag, a flag that never waved over any people but to bless and to save. The next stepping-stone in the development of American influence in the Pacific was the splendid and matchless diplomacy of John Hay, late Secretary of State, in insisting upon the preservation of the integrity of China and opening up the ports to the commerce of the world. The next stepping-stone in the develop-

ment of American influence in the Pacific was when the Congress of the United States authorized the building of the great Panama Canal, which will bring these two great oceans, the Atlantic and the Pacific, into everlasting fellowship. The last stepping-stone in the development of American influence was when the President of the United States invited the representatives of Russia and Japan, who were then engaged in war, to come to our own shores and here, in a Government navy-yard, settle their dispute. And it was so successful that the name and influence of the American nation is greater to-day all over the Pacific than that of any other country in the world.

The American people are in favor of continuing the policy of building up the American Navy, because they recognize that we have interests which must be defended and protected.

I can well remember that when the Spanish-American war first began the whole popular mind at once turned to the condition of our Navy, which was then a very small one, and more or less anxiety was felt all over the country for fear it would not be able to cope with the Spanish fleets, and up and down the Atlantic coast from one end to the other ran a wave of consternation when the Spanish fleet sailed from the other side, its destination being unknown to our people. The cry was then, "My kingdom for a navy!"

One thing must always be borne in mind, and that is that it takes longer to obtain a good navy than a good army. With the army practically every thing is personnel; with the navy it is personnel plus material. That is to say, we must have not only men, but ships, and it takes years to build the ships, and longer to train the men in the Navy than it does in the Army, and when war is declared every man must be on his ship and at his post of duty. No time then for building up a navy.

In our past wars we have relied considerably upon the volunteer forces for an army. Men left the office and the farm and the workshop, enlisted, and after a few months of discipline and training made fairly good soldiers, and many, too, have had military training in their younger years; but with the Navy it is different, by reason of the evolution which has gone on in the construction of our ships. It does not follow that because a man can sail a vessel he can now make a good sailor, but, on the contrary, he must have months and even years of training in mechanics, so as to familiarize himself with all the different machines on board one of our ships, in order to become an efficient man in time of war.

There are many who think that we ought to spend more money upon internal improvements, deepening of harbors, and building of public buildings, and not so much upon the Navy, but the question is, Which is the more important, internal improvements or national defense? I think I voice the sentiment of the American people when I say that national defense, preparation for war against foes within and foes without, outweighs all consideration of internal improvements. National defense must stand first and always first.

Then there are many others who urge objection to the building up of the Navy under such pleas of sophistry as these: "Where is our foe? Are we not at peace with all the world? What is the necessity for building up a navy?" That sort of argument might have been used six months before the Spanish-American war broke out. Nobody thought there would be a war even three months before it was declared. Russia did not expect a war with Japan, but the first shot was fired by Japan before the Russian minister left Tokyo, or the Japanese minister left St. Petersburg.

While our people are a peaceful people and desirous above all other things of pursuing the arts of peace, yet who is able to tell how soon just provocation might arise for war with some foreign country? We do know that this country has had a number of wars in the last hundred years, and other countries too, and even during the last ten years England, as well as our own country, has been at war; likewise Japan and Russia, and it was only a few years before this that France and Germany were engaged in a contest of arms, so it would appear from this that nations have not reached that stage of moral perfection which Tennyson foresaw:

Till the war-drum throb'd no longer,
And the battle-flags were furled
In the Parliament of man,
The Federation of the world.

There are many, also, who believe that the peace conference will result in the establishment of a national court of arbitration, whereby all disputes between nations will be settled without an appeal to the sword; but while everyone is in hearty sympathy with the great purpose of the peace conference, yet few really believe that in the present stage of the progress of the world any real solution of the problem will be satisfactorily worked out, at least not for a generation or two, and this is plainly evident from what has already taken place.

The first peace conference was held in 1890, called by the Czar of Russia, one of the purposes being the discussion of the question of disarmament, and a resolution was passed recommending disarmament; but what has been the result since the last peace conference was held at The Hague, eight years ago?

All the leading nations of the world have built larger fleets than ever before, and all of them together have added more than 2,000,000 tons of ships to their navies, equivalent to 100 English *Dreadnoughts*, to say nothing of the fact that the Czar, who called the peace conference into existence, has been engaged in a great war, where more men were engaged in land battles on either side and a greater tonnage of ships with the greater weapons of warfare on the sea than ever known before. Is there anything in this to inspire us to the opinion that it would be safer for the country to do away with our Navy?

The second peace conference last summer was held at The Hague, but what inspiration have we received from that which would lead us to think that there is no necessity for any further building up of the Navy?

The President in his message says:

It was hoped The Hague Conference might deal with the question of the limitation of armaments. But even before it had assembled informal inquiries had developed that, as regards naval armaments, the only ones in which this country had any interest, it was hopeless to try to devise any plan for which there was the slightest possibility of securing the assent of the nations gathered at The Hague. No plan was even proposed which would have had the assent of more than one first-class power outside of the United States. The only plan that seemed at all feasible—that of limiting the size of battle ships—met with no favor at all. It is evident, therefore, that it is folly for this nation to base any hope of securing peace on any international agreement as to the limitation of armaments.

Would any American have been willing to submit the questions which have provoked war in our own country in the past to a tribunal, the majority of whose representatives must necessarily be composed of the representatives of monarchical institutions of the Old World? Is it reasonable to suppose that we would ever have existed as a nation if the questions which provoked the war of the American Revolution had been left to such a peace commission, dominated by the potentates of other countries? What would have been the result of the struggle between our own country and England in the war of 1812, or in the great civil war, where it is said that the English nation was on the side of the South? The result would probably have been the establishment of two republics, one in the South and the other in the North, if the controversy had been left to a peace conference.

What would have been the result, too, of the Spanish-American dispute which ended in war? These are questions which are not unreasonable to be considered in connection with a permanent tribunal for the settlement of all controversies between nations. There are questions or disputes pertaining to the honor and integrity of the country which can never be settled except by resort to arms.

While war is terrible, and ought never to be entered upon until all honorable means of averting it have been exhausted, yet, nevertheless, it is infinitely more to be desired than a peace the result of surrender upon first demand, as must necessarily be the case when a nation is not backed up by military power. It behooves a nation to always stand and insist upon an honorable peace, but that kind of a peace can seldom, if ever, be attained, unless backed up by preparation for war, and while we may dream of peace and preach it and pray for it, yet the only safe and sure course for a nation in the meantime to pursue is to prepare for war.

There are some who think that we need only a small navy, inasmuch as we are isolated from other nations upon this hemisphere, and therefore are not in danger of attack from foreign foes. That is an old argument, but one which grows weaker every year, for science and steam have annihilated space, and electricity has brought us in speaking distance with other countries.

If it were true that we did not need a navy years ago, when our possessions were confined to this hemisphere, how much more, on the contrary, do we need it now when we have Hawaii and the Philippines, with innumerable other possessions to defend and protect?

And then, too, we have the Monroe doctrine to maintain—a doctrine which was enunciated by James Monroe in 1823, and has from time to time been revived, as occasion might require, and given a newness of life, so that to-day it remains the great cardinal principle of our policy upon this hemisphere. Of what use this doctrine unless we have behind it the ability to maintain it whenever it may be assailed?

We will have the Panama Canal to defend. While it may be said that the Panama Canal will multiply the efficiency of our fleet by permitting us to reach the Western coast in a shorter space of time than it took the *Oregon* to come from there here,

yet, nevertheless, it must be conceded that this building of the Panama Canal will open up a waterway for all the ships of the world, and in so doing will make the Caribbean Sea practically a new Mediterranean, full of ships of commerce, which may occasion the necessity for a larger Navy.

We have a growing foreign commerce which needs protection. During the last few years that commerce has gone forward with rapid strides, and to-day we are sending products of the soil and of the factory into every known portion of the globe. We have sent locomotives and rails to Russia for the great Trans-Siberian Railroad. We have built bridges in Africa. We have sent trolley systems to Egypt, agricultural implements to China and Japan, and even the flag pole which floats the Japanese flag on the Mikado's palace in Tokyo was taken from the forests of Washington.

American enterprise and American genius are capturing the markets of the world, and our commercial interests are interwoven with those of every other civilized country. During the past year our foreign commerce has been greater than ever before known, exceeding more than \$3,000,000,000.

We need a navy also to protect the rights of American citizens wherever they are. You will recall that a few years ago an American by the name of Mr. Perdicaris, son of a former consul of the United States to Italy, was one evening sitting at dinner in his country place at Tangier, in Morocco, when he was suddenly surprised by a band of bandits, with Raisuli at their head, who took him and carried him up into the heights of Morocco and demanded a ransom for him. The friends of Mr. Perdicaris appealed to the United States Government for his protection, and what was the result? Our Government immediately took measures for his recapture. An American fleet was sent to the Bay of Tangier under the command of Admiral Chadwick, and in that fleet was the *Olympia*, famous in the battle of Manila, and the *Brooklyn*, famous in the Santiago fight, and about the time that little fleet dropped anchor in the bay a message went from the Secretary of State to the authorities in Morocco holding them responsible for law and order within their realm. It was a simple message, but how effective. "Perdicaris alive, or Raisuli dead," and Perdicaris came back alive.

What did that mean to you and to me? It meant that every American citizen, wherever he is, under whatever sky, on whatever shore, in whatever clime, is under the protection of the United States Government, and a government that can not protect the humblest of its citizens is unworthy of the name.

We need a navy to maintain and support our foreign policy with other countries. Unfortunately, the world has not reached that stage in civilization where the Golden Rule has become the first canon of international law. I hope we will reach it some day, but it will be in the far-off future. Nations to-day are moved in the consideration of international questions not entirely from a sense of justice, but in a large degree, I regret to say, by the strength of the military power that lies behind. And there is many a half-civilized people who recognize no virtue unless it comes backed up by physical force. Of what good, therefore, is a foreign policy unless supported by sufficient power to give it efficacy.

Then, too, we have more than 10,000,000 wards to guard in the far-off Pacific. We are engaged in the great work of civilizing this vast number of people and lifting them from the low estate of ignorance and superstition up into the clear, bright sky of enlightenment and liberty, and until that is accomplished and they are able to govern themselves we are bound by every sense of national duty to stand as a watch guard over them, while they are climbing the steep slopes of education in their endeavor to fit themselves for self-government.

Let us continue our policy of building up a strong and efficient Navy for the protection of all our interests, upon this hemisphere and on the other; a Navy that shall stand always for peace, that kind of peace that is honorable among men and justifiable of God; that peace that never makes surrender of national duty, of national honor, or national obligation. Let us write the inscription across every battle ship: "The American battle ship; let it ever be prepared for war, but may it never be called upon to fire a single shot."

Let us maintain such a Navy as will give to our country in every hour of international emergency that calmness and that poise which becometh a great people, slow to anger and plenteous in mercy, so that if we must fight—and pray God may we never fight—we may strike with all the energy that nerved the arm of Macdonough on Lake Champlain, of Perry on Lake Erie, of Farragut on Mobile Bay, and Dewey at Manila, for justice, righteousness, civilization, liberty, and the progress of mankind.

APPENDIX A.

STATEMENT REGARDING CRITICISMS OF NAVY—REAR-ADMIRAL G. A. CONVERSE, UNITED STATES NAVY (RETIRED).

NAVY DEPARTMENT,
Washington, D. C., February 6, 1908.

SIR: In compliance with your verbal instructions I have the honor to submit the following statement in regard to certain criticisms which have appeared from time to time in the public prints and elsewhere purporting to describe matters connected with the Navy and which, from their character, would seem to have been prepared by persons whose knowledge of the subjects discussed was limited and incorrect. These articles have undoubtedly caused wrong impressions, which a statement of the facts may in a measure correct.

In investigating this matter recourse has been had to the official records of the Department; to the reports made by officers of our Navy and of foreign services well qualified to pass upon the subjects handled; to professional and other publications of acknowledged authority and high standing, and to other sources also recognized as authoritative.

The records and correspondence bearing upon the designs of our earlier battle ships are voluminous and complete, and it is apparent that the subject was thoroughly considered and discussed during the preparation of the designs of these vessels, and although decided differences of opinion appear, there seems to have been ample justification for the designs which finally received the approval of the Department.

It is not claimed that mistakes have not been made or that our ships are without faults, but in view of the then state of the art of battleship building, this fact is not to be wondered at. It is remarkable that the mistakes were so few and that none were really serious. In this respect our record will compare most favorably with that of foreign services.

GENERAL NOTES.

Criticisms have been frequently made of the fact that a few of our large vessels are not fitted with automobile torpedoes, and at the present time it is recognized that the absence of these torpedoes is somewhat of a disadvantage. At the time of the design of the large vessels, which are not fitted with torpedoes, the question of the advisability of giving them a torpedo outfit received careful and thorough discussion and consideration, and the outfit was omitted for what were deemed very good and sufficient reasons. At the time these vessels were designed (from about 1900 to 1902) the torpedo had an effective range of about 1,000 to 1,200 yards, and it was not expected that hostile ships would engage in action within that distance, the torpedo became a weapon of secondary importance, and it was not thought that the installation of this comparatively secondary weapon in large vessels would longer justify the assignment of the necessary space, which could be used to so much more effective military purpose otherwise. As late as 1905 a most distinguished admiral of the British navy, writing of the use of the torpedo during the naval operations of the campaign of 1904, in the war between Japan and Russia, stated:

"It is not too much to say that the experience of the late campaign, confirming as it does the arguments of students of tactics in these days of long-range guns, justifies a demand that torpedoes should be withdrawn from the armament of cruisers and battle ships."

Since our large cruisers and battle ships not fitted with torpedoes were designed the effective range of the torpedo has undergone a great increase, and it is now claimed to be efficient up to 4,000 yards. This improvement has rendered them again, as in former days, a weapon to be reckoned with, and consequently we readopted them, and all our large vessels designed since this improvement carry torpedoes, as do also all of the other vessels originally so designed wherever it has been practicable to so rearrange their underwater space as to enable the tubes and accessories to be installed.

It may be stated that our policy of temporarily abandoning the torpedo for battle ships and armored cruisers when it failed to keep pace with what was considered battle range for guns, and again taking it up when improvements made it once more a useful and effective weapon within the battle ranges, was not different from the policy pursued by foreign navies.

Referring to some of the criticisms recently appearing in print, it may be stated in general terms that in our Navy sighting hoods were put on turrets, because no other practicable way of pointing the guns effectively existed. No criticism, however, seems to have been made by the critics to the fact that all other navies with turreted ships follow the same system, and for the same reason as ourselves.

The test of battle only will decide a suitable type of conning tower. As experience is gained the towers of our ships are modified, so far as possible, to meet the conditions required, and towers for ships building are designed in accordance with the latest reliable data. Changes of form, etc., have not been adopted simply because some foreign conners have evolved a novelty, but because it was not apparent that they were sufficiently superior to our own to justify such change until it had been demonstrated by actual test that they possessed merit. But we have never hesitated to adopt an idea that promised increased efficiency.

It is not advisable to adopt as fulfilling service requirements ideas evolved solely from the results of target practice, as such may be in many respects misleading. Ships fight in the open, rolling sea, at fast and varying speeds, constantly changing ranges, with always some pitching or rolling motion, and requiring for efficient sighting a large field of view for the gun pointer, much of whose light is shut off by reason of his protected position behind armor, and who fires at a target the speed and direction of which may be also constantly changing; whereas at target practice it is the invariable custom to choose a smooth sea and ideal weather conditions, the firing ship moves at a fixed speed and fires at a stationary target generally at a known range; only one ship fires at a time, and, be it remembered, with no shots striking or coming toward the firing ship to disconcert or excite the men pointing the guns. Battle conditions—that is, conditions under which we are likely to fight—should be the criterion and not the ideal conditions selected for target practice.

It is noted that in one of the criticisms recently made in a printed article the author refers, in condemning the heights of our broadside batteries, to the disadvantage these guns would work under in an engagement where the enemy is to windward, and states that the leeward position is to be sought inasmuch as the ship so situated is clear of her own smoke. The "weather gauge" was a primary advantage in the days of sailing ships, and its advantage over the lee is greater to-day than this critic seems to think. It is doubtful if any captain would select the leeward position, and particularly so if there was any sea running, as most probably would be the case. Modern gunpowder

gives out little or no smoke, and therefore the great advantage claimed by the critic above referred to fails; but instead, the leeward ship has the greater and more important disadvantage of the smoke from his antagonist's funnels and of flying spray and moisture obscuring the glass of the telescopes, which will seriously interfere with the aiming and firing of the guns. The question of the direction of the sun is also one of much importance, and if it is a case of choice of windward position with the sun at his back or leeward position with the sun in his face, there is little doubt but that the critic above referred to would change his views. Practical experience is the best of all teachers, and it requires this as well as study to discuss professional matters, otherwise in advocating a small and perhaps unimportant advantage sight may be lost of the several more weighty and overmatching disadvantages.

The question of the selection of an efficient or satisfactory range finder is one that we have been struggling with for years, and the fact of its not having been developed is due not to any lack of human effort or ingenuity. Other nations have experienced the same difficulty. Our ships are now supplied with the best range finder thus far known. The main difficulty lies in the physical impracticability, at the present stage of human knowledge, of being able to measure trigonometrically a distance of several miles from the necessarily short base line possible to be had on board the measuring ship. Many of the greatest minds of the world have been engaged on this problem for years, but unfortunately with no great success up to the present day.

To the claim that we have no means of handling a fleet in a fog, it may be said that at the present stage of human knowledge it will always be a difficult problem to properly handle a fleet in a fog, and in this respect our Navy does not differ from others. We are possibly neither behind nor ahead of other nations in this respect. When nature permits us to see through a fog, or science develops a means of penetrating its cloud, we can hope to overcome this difficulty, but until then we will, like all other human beings, be compelled to struggle with the problem.

The international regulations for preventing collisions at sea, which have been enacted by Congress into law, require that the steam whistle or siren shall be so placed that its sound will not be intercepted by any obstruction, and consequently our steam whistles and sirens, in compliance with this law, are placed forward of the smoke pipes. While it might be undoubtedly more convenient and less trying upon the hearing of the officer of the deck if the whistle were placed abaft the smokestack, yet so long as the law remains as at present we can not place the whistle where its sound will be obstructed.

In a recently published magazine article severe criticisms were made regarding accidents (the dates of which were specifically stated) which have happened in the turrets of three of our battle ships, and it was claimed that, notwithstanding these accidents, prior unfortunate experiences, and of the recommendations and reports of various officers thereon, nothing was done to remedy the defects complained of. It is inconceivable that a person would jeopardize his reputation for veracity by making such specific statements upon matters of the character referred to without verifying his data or satisfying himself as to the reliability and trustworthiness of the source from which his information was obtained.

The official records of the Department amply and clearly disprove the statements made as to nothing having been done to remedy the defects alleged to exist in our direct leading ammunition hoists, as prior to the unfortunate accident on board the *Missouri* in April, 1904, both the Bureaus of Ordnance and Construction and Repair had endeavored to obtain a satisfactory form of shutter doors designed to close the opening in the turret floors after the passage of the ammunition cars to the guns. A design developed at the Washington Navy-Yard in March and April of 1904 was authorized to be constructed, with a view to its application to the turrets of the *Virginia* class of battle ships then under construction, as well as to all other vessels as far as practicable. Before, however, this shutter, which was attached to the ammunition hoist rails, was completed, a satisfactory shutter attached to the turret itself was perfected and has since been applied in all turrets.

As early as January, 1904, the Bureau of Ordnance took up the matter of the design of a two-stage ammunition hoist with a company well known as manufacturers of ordnance and ordnance material, in connection with a model subsequently exhibited by them at the World's Fair, St. Louis. Every effort was made to put an ammunition hoist of this type in the U. S. S. *New Hampshire*, and contracts were actually made in August, 1905. It was found, however, that the design was too heavy, involving a total increase of structural weight of the turrets of more than 150 tons, and that it could not be installed without greatly exceeding the weights allowed for ordnance outfit.

Modifications of this type of hoist were subsequently made, by which its weight was greatly reduced, and the adoption of this hoist, or a hoist of similar nature, was determined upon by the board on construction prior to the accident on the *Georgia*. The report of the special turret board simply confirmed the action of the board on construction, but was not received until months after the type of turret above referred to had been decided upon, and did not therefore cause the adoption of the turret, as has been claimed by the incorrectly informed persons alluded to.

It is needless to add that all criticisms made from time to time concerning any detail of our ships which have reached the board on construction, have received its careful attention and consideration; whether the criticism was important and well based, or whether it was, as the majority have proved to be, lacking in merit, no difference was made in taking them up, for all have been carefully weighed. When the conditions and circumstances seemed to merit action by the board, such has been invariably taken.

To criticize is human nature, and men interested in a subject or its development are generally much given to making suggestions or criticisms regarding changes which in their opinions would be improvements. Particularly is this the case where little or no responsibility lies with the critic, and perhaps more so even when one has a professional interest in the subject under consideration. To the person, however, charged with the responsibility of the adoption of the changes suggested by the critics, and particularly so where such changes may seriously affect the public welfare and involve the expenditure of large sums of Government money, it is only natural that he, having this great responsibility, should require that the advantages claimed for the alterations be satisfactorily proved before the time, labor, and money necessary to carry out the suggested ideas are expended. This very proper requirement is in many cases resented by critics, some of whom are prone to publish their grievances because of the not immediate acceptance of their ideas and to claim that inventions and improvements are not

adopted as they should be, that those in authority are too conservative, and to make various other allegations.

If such critics were to investigate, they might find that in many cases their own ideas were not entirely original, that perhaps others had been working along the same or similar lines and had perhaps evolved a more completed project, or even, perhaps, that experiment had proved their schemes not suitable for naval purposes. It is this question of investigating and demonstrating the usefulness of an invention, suggested change, or alteration before adoption and before authorizing the expenditure of large sums of public money which protects the Government, but at the same time affords the critic, who has no responsibility toward the country, the opportunity so many avail themselves of, to criticize unfavorably and perhaps unjustly the person upon whom the direct responsibility for the protection of the interests of the Government really lies, and who, in so far as the Navy is concerned, and about whom I feel qualified to speak, are faithful to their trust.

In concluding this report, which has been made after a thorough consideration of the defects known as well as claimed to exist in the battle ships of our Navy, and using the most reliable and authentic data obtainable, the following facts may be regarded as established:

Battle drills.—In recent years our Navy has paid much attention to war drills and exercises, and the tendency has been to continue to increase and widen our experience in this respect. These drills have been, however, necessarily carried out with the limited number of ships available, which, unfortunately, did not make a homogeneous fleet, but now, with sixteen practically similar battle ships in commission, we hope to gain great advantages from the continuation of the battle-drill drills begun with those ships last year as soon as the fleet could be withdrawn from the Jamestown Exposition.

Freeboard of our ships.—Examination of the plans and other reliable data concerning our own and foreign ships of the same date of design shows clearly that in the matter of freeboard we compare, with the exception of the *Indiana* and *Kentucky* classes (the first built battle ships of the Navy), most favorably. With reference to the British and Japanese battle ships, which have given good results under service conditions, our vessels have in the main more freeboard, and in the instances where they exceed us it is only by such few inches as may be, for any practical advantages, ignored.

Height of gun positions.—Here again, excepting the *Indiana* and *Kentucky* classes, our ships carry their forward turret guns generally as high or even higher above water than similar ships of the British and Japanese navies, and in the heights above water of guns firing on the broadside we are noticeably in the lead. Everything considered, our gun heights are amply sufficient to meet the necessities of battle, second to those of no other nation in effectiveness, and can be used efficiently in any sea fighting in which naval actions are at all likely to take place.

Armor.—A comparison of the height of armor belts of our ships with those of foreign ships of same date of design shows that in general our armor belt is somewhat higher above water and furthermore that the armor of our ships is usually thicker and fully as well distributed both above as well as below the water line. In the matter of the main armor belt, about which much criticism has appeared, when our ships are brought into actual combat we have nothing to fear from any alleged superiority of foreign vessels of the same date of design.

Turret designs.—The turret designs of our ships are in the main very similar to those of the French and to the great majority of ships of the British and Japanese navies. The general arrangement of the magazines about a "handling room" into which the ammunition hoist leads is also similar in all navies. The dangers which we and others have principally to contend with are those of liability to flareback at the breech of the gun and the accidental ignition of grains of powder. The remedy is twofold—by preventing the escape of all gas from the breech of the gun into the turret; and second, by the interposition of partitions or screens fitted with doors and flaps along the route of the powder charges from the handling rooms to the gun, by which means the flame from the burning grains would be prevented from coming in contact with the powder in transit. Devices to accomplish both of these results have been installed in our ships. The advantages of the two-stage ammunition hoist in the matter of safety are not manifest, nor have they been fully established over the straight-lead hoist which we have heretofore used in our service. We are in our latest designed ships installing the two-stage hoist, primarily because it affords a more rapid supply of ammunition to the guns, but its adoption as our future standard has not yet been decided upon.

Supply of ammunition.—It may be stated with certainty that no navy has as yet ammunition hoists capable of supplying ammunition to the guns at the rate called for by our modern target practice conditions; nor will the guns, in all probability, in action require ammunition at those rates. Our hoists are not inferior to those of foreign ships, and with the changes to be made or already made in them will meet all the necessities of our ships.

In and out turning screws.—We built some vessels with in-turning screws, because of their supposed advantages and because, also, foreign navies with larger experience were doing the same. We ceased building such vessels when we had satisfied ourselves that the advantages were supposed rather than real.

The Kearsarge and Kentucky.—The exposed openings of the gun ports of these vessels are recognized as being larger than desirable. The two ships, however, are efficient and serviceable vessels and are in no sense of the word the failures some persons have alleged. The enlarged port area was a necessity due to improvement in the efficiency of the gun mounts and was but a small factor of disadvantage when compared with the several advantages which made the guns of those two ships superior as weapons of war to any which we had theretofore constructed. These two ships were, however, designed more than twelve years ago and do not, of course, embody all the improvements of up-to-date ships, and on this account it is the intention to give them a general overhauling as soon as the funds are available.

Torpedoes.—At the present time our supply of torpedoes is less than it should be. This fault, however, is due to the inability of our manufacturers to build them, and not to any lack of effort upon the part of the Navy to procure a sufficiency. It is hoped in the near future this present difficulty may be overcome. The output of torpedoes will be materially increased by the torpedo factory now building at the Naval Station, Newport, R. I., and which will soon be in full operation.

Gun sights and range finders.—In these respects our ships are in no manner second to those of other navies.

Finally.—Our ships are not inferior to those in foreign service. We have made compromises in our designs of battle ships, because it is impossible to construct a perfect battle ship; such compromises have, perhaps, detracted from the desired perfect ship in some respect, but at the same time have made it possible to improve upon some other

existing disadvantages, and, on the whole, the compromises, each and all, have tended toward a nearer approach to the desired perfect finality. Other nations have labored and will, like ourselves, continue to labor under this same difficulty in endeavoring to approach as near as possible to that impossibility—a perfect battle ship. In making compromises in the building of our ships, I am satisfied that in every instance all concerned in the work have acted honestly and patriotically, and only with the desire to produce the best ship possible. The result has been in each case, ship by ship and year by year, an improvement upon all that have preceded, and no ship has been built by us inferior to those of any nation designed at the same time.

The quality of the matériel of our Navy is inferior to none; in quantity of vessels alone we are lacking. With an increase in number of ships the American Navy will have been supplied the only feature necessary to make it second to none in all that tends toward fighting efficiency, and when the stress of actual combat, if such should ever unfortunately come, brings the only really practical test, our country need have no misgivings or fear but that our battle ships will give an excellent account of themselves and prove themselves all that we have designed them for and know them to be.

Very respectfully,
G. A. CONVERSE,
Rear-Admiral, United States Navy (Retired).

The SECRETARY OF THE NAVY.

UNITED STATES NAVY—ALLEGED STRUCTURAL DEFECTS IN BATTLE SHIPS—SUPPLEMENTARY STATEMENT OF CHIEF CONSTRUCTOR CAPPS, WITH LETTER OF THE SECRETARY OF THE NAVY TRANSMITTING.

NAVY DEPARTMENT,
Washington, April 15, 1908.

MY DEAR SENATOR HALE: There is forwarded herewith the supplementary statement of the Chief Constructor in relation to certain alleged defects in battle ships of the United States Navy. The Department's letter to you, under date of March 9, 1908, fully expressed its views concerning this subject, and subsequent reports received from the commander in chief of the Atlantic Fleet and the naval constructor attached to his staff have strengthened the conviction which I previously entertained with respect to the location of water-line armor, height of freeboard, height of gun axes, etc. Admiral Evans in his recent report makes allusion to the inability to fight the broadside guns under certain conditions of weather, and states that such guns are not high enough for efficiency under all conditions. This criticism is likewise applicable to the majority of broadside guns of battle ships of all navies wherever such guns are mounted below the main deck, as is the case with the British, Japanese, and German navies. It may be remarked, in passing, that such a location is the only available one for the majority of the guns of the intermediate battery on all battle ships built or building, and in the United States Navy the height of such secondary battery guns above the water is somewhat greater than the height of similarly located guns in the majority of battle ships of the British, German, and Japanese navies. In our battle ships of the *Delaware* and *South Carolina* classes, now in course of construction, this criticism concerning intermediate battery guns has little force, inasmuch as the main battery is concentrated in heavy guns mounted in turrets on the upper decks, the intermediate battery being required solely for defense against torpedo-boat destroyers and torpedo boats.

In view of the misunderstanding which seems to exist in some quarters as to the degree of responsibility of Admiral Converse and the Chief Constructor for alleged defects in battle ships now attached to the Atlantic Fleet, it seems proper for me to emphasize definitely the fact that neither Admiral Converse nor Admiral Capps had any responsibility whatever for the designs of battle ships now in active service, and therefore the exhaustive reports of those officers concerning alleged defects in naval matériel should be accepted without qualification as being the impartial reports of officers who have no personal responsibility for the designs of the ships of the fleet recently under criticism, but whose official position gives them unusual opportunity to know all the facts pertaining to the method of developing designs of those vessels and the good results which have so far been obtained in their subsequent construction.

There are also forwarded herewith, for the information of your committee, copies of the recent reports of Admiral Evans and Naval Constructor Robinson concerning the behavior of vessels of the Atlantic Fleet during the passage from Hampton Roads to Magdalena Bay, also their comment for the information of the Department in connection with future design work. Practically all of the criticism contained in these reports had already been discounted and disposed of in the designs of the *Delaware* and *North Dakota* class. Although detailed comment upon the above-noted reports is now in course of preparation by the board on construction, I have deemed it advisable to forward the reports at this time for the general information of the committee, although it is my opinion that they should not be published, and certainly not in advance of the preparation of the detailed comments thereon.

Very truly, yours,
Hon. EUGENE HALE,
Chairman Committee on Naval Affairs, United States Senate.

NAVY DEPARTMENT,
BUREAU OF CONSTRUCTION AND REPAIR,
Washington, D. C., April 13, 1908.

SIR: In conformity with the request of the committee, I have the honor to submit the following supplementary statement concerning certain matters relating to naval matériel. In order that this statement may be as brief as possible, no attempt will be made to cover ground which has already been fully covered, except where further comment may appear to be necessary for the complete and comprehensive disposition of such criticism as may not have been already disposed of. No attempt will be made to traverse, in detail, the evidence of critics who have appeared before the committee, since it is understood that this is not desired. Failure, therefore, to take note of such criticism should not be construed as indicating that such criticism is founded on fact.

It also appears to be desirable, at the very beginning of this supplementary statement, to emphasize the fact that practically all of the criticism to which our battle ships have recently been subjected is directed against completed vessels, and does not apply, to any material extent, to vessels which have been designed during the past four years. The only criticism directed at the vessels of the *Delaware* class, for instance, is that affecting the submergence of the lower edge

of the main water-line belt armor, and the original criticism with respect to the location of this armor has been so materially modified as to be negligible, and would appear to have been fully and completely disposed of by the letter of the Secretary of the Navy to the chairman of the Senate Naval Committee under date of March 9, 1908, and by subsequent specific comment of Admiral Evans, commander in chief of the Atlantic Fleet, in his letter of March 6, 1908.

The location of the water-line belt armor on the *South Carolina* and *Michigan* being practically identical with that of similar armor on the *Delaware* and *North Dakota*, the disposition of such criticism with respect to the *Delaware* necessarily includes the *South Carolina* and *Michigan*.

It is true that the freeboard forward on the *South Carolina* is lower than that on the *Delaware*, and the freeboard aft is one deck height less than the after freeboard on the *Delaware*. It should be specially noted, however, that the *South Carolina* and *Michigan* were designed to meet the specific provision of the act of Congress for the most powerful battle ship on a trial displacement of 16,000 tons. That the designers of the *South Carolina* and *Michigan* met these requirements of Congress in a most satisfactory manner would seem to be fully proved by the unusually commendatory comments concerning this design which have appeared in foreign publications, already quoted in the chief constructor's special report of February 14, 1908, and by specific and direct approval of seagoing officers of our own Navy. A recent evaluation (prepared by a foreign naval officer) of the fighting strength of battle ships of the principal navies of the world ascribes to the *South Carolina* the maximum fighting efficiency of any ship considered, the United States *South Carolina* being placed as No. 1, with the British *Dreadnought* as No. 2. This will doubtless be considered by certain critics as a too partial judgment of the good points of the *South Carolina* as compared with the *Dreadnought*. It is well to remember, however, that the broadside battery of the *South Carolina* is equal to that of the *Dreadnought*, the target area is less, and the armor protection unquestionably greater, the points of inferiority being those of speed and, in a heavy seaway, a freeboard which would place the *South Carolina* at a slight disadvantage as compared with the *Dreadnought*.

With respect to the freeboard of the *South Carolina*, it should be noted that the freeboard forward is practically identical with that of the latest Japanese battle ships, and also almost identical with that of battle ships of the highest freeboard now attached to the Atlantic Battle Ship Fleet. It is also equal, or superior, to that of all battle ships of the Japanese navy which participated in the battle of the Sea of Japan, and is approximately equal to the freeboard of the large majority of the battle ships of the British navy designed prior to 1905. The freeboard aft is in conformity with the design of battle ship most highly approved by the Walker board in 1896, also by the general board in 1903 and 1904, so that the general features of the *South Carolina* class, so far as concerns freeboard, both forward and aft, would appear to have met with the entire approval of some of the most distinguished seagoing officers of the United States Navy.

The battery arrangements of the *South Carolina* and *Delaware* classes are such as to give the maximum broadside fire for the heavy guns, and in this respect these vessels have a distinct advantage over foreign battle ships whose battery arrangement has been developed on different lines.

In view of the very complete data already submitted for the consideration of your committee, it does not appear to be necessary to devote further attention to the characteristics of the *South Carolina* and *Delaware* classes.

With respect to the general criticisms which have been made concerning the disposition of water-line belt armor, freeboard, height of gun axes, etc., on battle ships now attached to the fleet, it would seem that the committee had already been fully advised as to the facts. It appears, however, that there are those who lay special stress upon the insufficient height of the after heavy guns of vessels of the *Iowa*, *Alabama*, *Maine*, *Mississippi*, and *South Carolina* classes, and who claim that that feature of those vessels is gravely in error. In this connection, it seems only necessary to invite attention to the fact that the Walker board in 1896 specially commended the arrangement of freeboard on the *Iowa*, and for the battle ships then under consideration by that board recommended that—

"They should have high freeboard forward and low freeboard aft, substantially like the *Iowa*."

Also, the general board, in a communication dated December 15, 1903, in which it set forth the characteristics which should be embodied in battle ships of about 16,000 tons, stated specifically that they should—

"Have high freeboard forward. In this respect the *Iowa* type impresses favorably."

It is worthy of note that all the military and seagoing characteristics of each battle ship built for the United States Navy have been passed upon by a board of officers, a majority of whose members belong to the seagoing branch of the Navy, and that the designs of each battle ship are approved by the Secretary of the Navy before advertisement for their construction is made.

It may also be noted that officers who have commanded vessels of this type have reported that all the guns of the main battery could be fought in any weather in which battles are likely to be fought. Reports have also been recently received from the commander in chief of the Atlantic Battle Ship Fleet, and the naval constructor attached to his staff, which state that while a somewhat higher turret gun forward would be desirable to fight with full efficiency at 15 knots in a "trade-wind" sea, no weather was encountered on the recent voyage of the Atlantic Fleet where turret guns would be out of action, except so far as flying spray in a few cases might have affected the gun sights—this last condition, however, being one which a few additional feet freeboard forward would not remedy.

The report of the Chief Constructor, of February 14, 1908, and the appendix thereto, which are part of the testimony before your committee, give in considerable detail the principal characteristics of the battle ships of the United States Navy, as well as those of typical battle ships of foreign navies. The heights of freeboard, heights of gun axes, and location of water-line armor therein set forth, were determined with the greatest accuracy possible, and, subject to the correction of the minor errors—principally typographical—the data therein contained are believed to be as accurate as can be determined from the information accessible to the Navy Department and its Bureaus and Offices.

The tables above referred to show that the battle ships now in commission in the United States Navy are in no sense at a disadvantage as to freeboard, gun heights, and arrangement of armor as compared with vessels of the principal foreign navies.

As distinctly stated, the data given in the tables was for the "designed" displacement, inasmuch as the most accurate information available concerning foreign ships was based upon that displacement. The "deep-load" characteristics for battle ships of our own and foreign services would vary in approximately the same degree as those given for the "designed" displacement in the table.

It is believed that in certain foreign designs full allowance of ammunition and stores is provided instead of the two-thirds allowance provided for American vessels, but this would not ordinarily involve a difference in draft, freeboard, etc., of more than 4 inches. On the other hand, the coal carried at designed displacement in the very large majority of foreign battle ships is no greater than that carried by battle ships of the United States Navy, and is in many cases less, as is fully set forth in the table given in Appendix A.

It should also be noted that any attempt to determine the overdrafts of vessels by taking the recorded "log" drafts and making allowance for the difference between the actual coal reported on board and the coal provided to be carried on the designed displacement, is entirely misleading and inaccurate. Such a method, as ordinarily carried out, involves errors due to inaccuracies in the recorded log draft; errors due to differences in density of water; errors due to failure to take into consideration the actual stores, ammunition, etc., on board; errors due to inaccurate log reports as to coal actually on board; failure to take into account the excess water in trimming tanks, double bottoms, etc.—this last-named item alone, on certain battle ships of the Atlantic Fleet during the recent voyage to the Pacific coast, having involved as much as 500 to 800 tons additional weight. Any estimate of overdraft, therefore, based upon the draft of the ship and the amount of coal on board, as recorded in the log, would seem to be too obviously inaccurate to require further comment.

The actual overdrafts of vessels of the United States Navy, as compared with their designed drafts, are carefully and accurately determined immediately after delivery of the vessels to the Government, so that the errors noted in the preceding paragraph are entirely eliminated. Accurate data so obtained shows that, of the battle ships now attached to the Atlantic Fleet, the *Virginia* had the greatest overdraft as compared with her designed draft—the overdraft in the case of the *Virginia* being 11 inches. The maximum overdraft of the other vessels of the *Virginia* class was 9½ inches. The overdraft of the five vessels of the *Connecticut* class varied from 4½ to 6 inches. The overdraft of the other seven battle ships of the fleet was 3½ inches for the *Alabama*, 3½ inches for the *Missouri*, and 6 inches for the *Ohio*, 7½ inches for the *Kearsarge*, *Kentucky*, and *Illinois*, and 9½ inches for the *Maine*.

As noted in previous reports and testimony, the overdrafts of United States battle ships were largely due to changes and additions which were made after the approval of the designs, and, in many instances, after the actual construction of the vessels had been advanced to a considerable extent; and where there were differences in overdrafts on sister ships these differences were largely attributable to difference in type of boilers and details of machinery installation.

Before dismissing the subject of overdrafts of battle ships, it is worthy of special note that the last three battle ships completed, namely, the *New Hampshire*, *Idaho*, and *Mississippi*, have been constructed quite within the designed estimates of weight, so that those vessels will be slightly underdraft instead of overdraft. In explanation of this condition, it is merely necessary to state that the development of details and the changes authorized on those vessels subsequent to the approval of the designs were such as to not materially increase the displacement of the vessels.

The completion of battle ships, or any other class of ships, within the "designed" displacement is almost entirely a question of adhering to the original features of design. If radical changes are made in the design, involving large additional weight, overdraft for the completed vessel must inevitably be expected.

In view of the foregoing statements and the mass of evidence already offered concerning the location of water-line armor on battle ships, it would seem quite unnecessary to dwell further upon this phase of recent naval criticism, so that I will dismiss it by quoting the following extract from the latest communication on this subject, contained in a letter addressed to the Secretary of the Navy by the commander in chief of the Atlantic Fleet, under date of March 17, 1908:

"Even with smooth seas and practically no wind the swell at times caused such rolling and pitching as to expose the lower portion of the armor belt even at heavy load; hence the lower limit of armor should not be raised. (Italics not author's.)"

The above is too definite and conclusive to require any comment other than that those vessels were, in many instances, heavily overlaid, and the lower edge of the armor was therefore immersed in many cases more than 7 feet.

FREEBOARD AND GUN HEIGHTS.

The data already submitted to the committee with respect to freeboard, both on our own and foreign battle ships, would seem to be quite sufficient to preclude the necessity of making extensive allusion thereto in this supplementary statement. The present tendency in battle-ship design is to concentrate the heavy battery in turrets mounted upon the upper deck, and, for our latest vessels, those of the *Delaware* class, to have a freeboard forward one deck height higher than was formerly the case. The major part of the intermediate battery for torpedo defense must of necessity be mounted "between decks."

The tables already submitted give accurate data concerning the freeboard, gun heights, etc., of United States and typical foreign battle ships, and the most casual inspection of such tables indicates that the United States is at no disadvantage with respect to freeboard and gun heights as compared with battle ships of foreign navies. The low freeboard aft on certain United States battle ships has already been considered and disposed of, and requires no further attention.

It is worthy of note that an officer who has only recently returned from Japan, and who has had unusual opportunity to communicate with Japanese naval officers, confirms the statement previously made, that the most recent design of Japanese battle ships provides for a moderate freeboard, approximately equal to that of the *Connecticut* class, and that for designs in prospect, which contemplate a vessel even larger, the Japanese have no intention of increasing their height of freeboard. The latest design of battle ship in the United States Navy, it may be noted, has more than 5 feet greater freeboard forward than the latest designed Japanese battle ship.

TRIAL TRIPS OF NAVAL VESSELS.

Judging from questions asked by various members of the committee, and the replies thereto by witnesses, there would seem to be a very imperfect understanding in the minds of many as to the contract requirements for trial trips of naval vessels, and the rigor with which

such contract requirements are enforced. At the request of the committee there are hereto attached a copy of the contract for the *Delaware* and a copy of the contract for the *Louisiana*. (Appendices B and C.)

Allusion having been made during the progress of this investigation to the practice of the Navy Department of giving bonuses for speed in excess of the contract requirements, it should be noted that the contracts for naval vessels have contained no provision for the granting of a speed bonus since January, 1894, more than fourteen years ago. None of the battle ships now attached to the Atlantic Fleet were subject to bonuses for speed in excess of the contract requirements.

It would also appear that there are those who believe that naval vessels never attain in actual service the speed called for by the contracts for those vessels. As a matter of fact, not only is the contract speed of United States naval vessels attained during the official trial under the rigidly enforced conditions specifically provided in the contract, but with boilers and machinery in good condition and with clean bottoms, the "contract speed" has been attained in actual service by a large number of naval vessels when much more heavily loaded than they were during their contract trials. With hull and machinery in the condition just indicated, and engines developing the horsepower which was actually obtained on their trial trips, the majority of United States battle ships could attain their contract speed with all stores on board and bunkers full of coal. The *Minnesota*, a representative of the five most recently designed battle ships now attached to the Atlantic Fleet, has since delivery to the Government, and with a naval crew, exceeded by more than eight-tenths of a knot the speed required by the contract, and this with all stores and ammunition on board and bunkers nearly full of coal.

As a matter of fact, the contract trials of vessels built for the United States Navy are most carefully conducted, the vessels being loaded to such a draft that the mean displacement during the official trial will be that required by the contract. Judging by reports contained in scientific journals, many vessels of the British navy have been tried at a displacement considerably less than their designed displacement. Such a condition has never obtained in the contract trials of United States naval vessels; and should a United States naval vessel when subjected to trial be lacking in any portion of the armor, armament, outfit, fittings, ammunition, stores, etc., allowance therefor is made by the addition of an equivalent weight of water in the double bottoms or trimming tanks, or by placing an additional allowance of coal in the bunkers.

So far as the designer is concerned, there would be no difficulty whatever in having the contract trials conducted at the deep-load displacement, with all stores and ammunition on board and the bunkers full of coal, rather than at a less displacement with a certain proportion of stores and ammunition on board and an arbitrary amount of coal in the bunkers. If such a method should be adopted, however, the Navy Department would not derive any benefit therefrom, since allowance would necessarily be made for the anticipated decrease in speed which such an increase in displacement would involve. Moreover, the data so obtained would not be comparable with that obtained from similar vessels previously tried in the United States Navy, as well as in foreign navies, and in any comparison resulting therefrom the vessels of the United States Navy, when tried at their deep-load displacement, would appear at a disadvantage as compared with foreign vessels tried at a displacement considerably less than the deep-load displacement.

It is worthy of special note, however, that the difference in speed due to difference in displacement of the vessel at trial load and deep load would not be the "two or three knots" mentioned in the testimony before the committee. As a matter of fact, for battle ships now attached to the United States Atlantic Fleet, as well as those in course of construction, the speed at deep-load displacement, with all stores, ammunition, etc., on board and bunkers full of coal, would rarely be as much as one-third of a knot below that at the trial displacement when the engines were developing the same horsepower. This reduction of one-third of a knot in speed would be approximately the maximum and would only occur at high speeds. At low speeds the reduction due to increase in displacement would be proportionately less, the horsepower, of course, being assumed to remain the same at the trial and deep-load displacements.

In this supplementary statement I have merely attempted to bring out more clearly facts which would assist the committee in arriving at correct conclusions concerning the characteristics of battle ships of the United States Navy and the conditions under which their designs have been developed. The somewhat extensive allusion that has been made in previous reports and in the testimony to foreign practice, and especially to the case of the *Royal Sovereign*, was deemed necessary in order that the committee might fully understand foreign procedure in such matters. The case of the *Royal Sovereign* was given particular prominence on account of the very extensive technical criticism which the designs of that vessel received. The comments contained in the report of the Chief Constructor of February 14, 1908, and the diagrams and tables thereto attached, should leave no possible doubt in the mind of anyone as to the characteristics which it was desired to specially emphasize in connection with the considerations of the designs of the *Royal Sovereign* class. These were obviously "height of freeboard," "height of gun axes," and "location of the lower edge of the water-line belt armor." That the vessels of the *Alabama*, *Maine*, *Idaho*, and *South Carolina* classes had low freeboard aft had no particular bearing upon the case, especially since the fact that these vessels had a low freeboard aft was fully set forth in the tables. Nor was it a matter requiring special note that the upper belt armor of certain groups of battle ships in the British navy was of the same thickness as the lower belt armor, especially when twelve battle ships in the British navy, whose upper belt was of the same thickness as the lower belt, had main water-line armor whose maximum thickness was just equal to or less than the upper belt armor of the *Vermont* class. All the pertinent facts in the case were fully set forth in the text or the tabular statements, and unless the text of the report had been extended to quite unjustifiable length it has to be assumed that those who may desire to indulge in criticism will take the trouble to look over the tabular data and appendices as well as the body of any report whenever in doubt as to the exact meaning of the text.

In conclusion, I beg to repeat the brief summary statement contained on pages 70 and 71 of the Chief Constructor's hearing before the Senate Naval Committee on Senate bill No. 3335, as follows:

"To make a very brief summary of the salient points of this morning's hearing, I should like to state that the principal subjects of criticism, so far as they concern the Bureau of Construction and Repair, were the 'height of freeboard,' the 'height of gun axes,' and the 'distribution of water-line belt armor.'"

"I showed, I think, conclusively and made reference to reports and previous hearings that these three subjects have already been given the most serious consideration not only in our own but in foreign navies; that a very eminent board of admiralty, fortified by the unanimous opinion of some of the most distinguished officers of the British navy, had fully passed upon these subjects; that an equally conspicuous board in our own service, presided over by the late Admiral John G. Walker, had in 1896 given a most positive statement as to the essential characteristics of a battle ship, making specific comment concerning 'freeboard,' 'gun heights,' and location of water-line armor belt; that the general board of the Navy, as recently as 1903-4, had still further reinforced previous service opinion as to the freeboard requisite in a battle ship and had named the *Iowa* as a type which impressed favorably; the *Iowa* , be it noted, having less freeboard than any of the battle ships of the present Atlantic Fleet except the *Keokuk* and *Kentucky* ; also that the question of distribution of water-line armor had been given the most careful consideration in connection with each design of battle ship developed; that the designs of all United States battle ships were passed upon by the board on construction, the majority of whose members were seagoing officers; that at all times the Construction Bureau of the Navy Department has been in the closest touch with the seagoing element of the service; that the officers of the construction corps are selected from specially qualified officers of the line, are then given additional instruction in naval architecture, and ultimately transferred to the construction corps, full details as to the method of selection and subsequent training being given in the special reports heretofore alluded to; that all of the ships of the British navy and the Japanese navy, with the exception of the latest type, the *Dreadnought* , and possibly the *Majestic* , had approximately the same height of freeboard, height of gun axes, etc., as American vessels of approximately the same date; that the Japanese battle ships engaged in the battle of the Sea of Japan were designed and built in England and followed in their design the British school, having moderate freeboard; that the Japanese battle ships in the battle of the Sea of Japan appeared to have no difficulty whatever in fighting their batteries to great advantage in spite of the character of the weather, which was described by Mr. Reuterdaahl himself as being 'nearly a gale.'

"There seems, therefore, no possible escape from the conclusion that the 'freeboards,' 'heights of gun axes,' 'water-line distribution of armor,' etc., of battle ships of the United States Navy have been based upon the best possible judgment of representative officers of the seagoing branch of our own and foreign services, and that the battle ships of the United States Navy are in these respects fully equal to similar vessels in the British and Japanese navies."

The most recent information received from the commander in chief of the Atlantic Fleet, from the naval constructor attached to his staff, and from an officer who has recently returned from an inspection of certain foreign dockyards fully convinces me of the accuracy of statements heretofore made in my reports and the testimony before the committees of Congress concerning the general excellence of battle ships of the United States Navy, not only as regards vessels in course of construction, but those in commission and attached to the Atlantic Fleet, due allowance being made, of course, for those developments in naval matériel subsequent to the completion of certain battle ships now in active service.

There are attached hereto, as requested by the committee, copies of the contracts for the *Delaware* and *Louisiana* , a copy of the report of the board of which Admiral J. G. Walker, United States Navy, was president, submitted to the Navy Department under date of May 18, 1896, and a copy of the report of the special turret board; also tabular statement giving lengths and widths of side armor on United States battle ships.

Very respectfully,

W. L. CAPPS,
Chief Constructor, United States Navy, Chief of Bureau.

Hon. EUGENE HALE,
Chairman Committee on Naval Affairs,
United States Senate.
(Through Secretary of the Navy.)

APPENDIX D.

LETTER OF CAPT. R. R. INGERSOLL, UNITED STATES NAVY, CHIEF OF STAFF,
TO REAR-ADMIRAL EVANS, UNITED STATES NAVY, IN COMMAND OF THE
FLEET.

DEPARTMENT OF THE NAVY,
GENERAL BOARD,
Washington, April 16, 1908.

SIR: In accordance with the instructions contained in your letter of the 14th instant, No. 26000-6, to submit a brief communication embodying the substance of the statements with respect to the location of the water-line armor on our battle ships and the general excellence of our battle ships, as made to you in conversation, I have the honor to submit the following:

1. During the recent voyage of the Atlantic Fleet it was observed on many occasions in the moderate seas which were met with, particularly in the trade-wind sea from Trinidad to Rio de Janeiro, that the whole of the armor belts below the water line on the ships of the fleet was exposed. In discussion of this fact with other officers of the fleet it was the consensus of opinion, so far as I know it, that the position of the lower limit of the armor belts should not be raised, for the reason that if in a moderate trade-wind sea the lower edge of the armor belt is exposed, the damage possible by a shot under the armor belt would be enormously greater than a much heavier projectile could inflict striking above the water-line belt. That is to say that the protection afforded by the present width of armor belt in its present position is greater than if it were raised.

2. The exposure of the lower edge of the armor belt was noticeable even when the ships were deeply laden with coal and stores, as well as with double bottoms filled with fresh feed water for boilers.

3. In my opinion our ships, class for class and of corresponding date of construction, are the equals of the ships of any other nation and in many respects the superiors. They are as well protected by armor, have rather more offensive power, are as fast, and have as great a steaming radius as ships of the same date and class in other navies.

4. In conclusion, I beg to emphasize my belief that our ships are as efficient in design and construction as those of the same date in other navies.

Very respectfully,

The SECRETARY OF THE NAVY.

R. R. INGERSOLL,
Captain, United States Navy.

APPENDIX C.

[Scientific American, New York, Saturday, January 18, 1908.]

The Reuterdaahl attack on our Navy.

1.—WHO DESIGNED OUR NAVY?—WAS THE SEAGOING OFFICER IGNORED?

The present reply to the recent attack on the ships of our Navy and the men who design them is, it is needless to say, in no sense inspired. It is written purely in the interests of truth, being based upon facts with which we have long been familiar, and most of which have appeared in earlier issues of the *Scientific American*; and it is devoid of course of any personal feeling. When Mr. Reuterdaahl states that he is highly appreciative of the American Navy, we believe him—and this in spite of the fact that, if all he alleges be true, the ships of that Navy, under certain battle conditions, would be unable to fire their guns, and must promptly be sent to the bottom. Moreover, we are prepared to admit that some of the points in this article, and particularly those dealing with the bureau system and the scant encouragement shown to the American inventor, are well taken. But having made this reservation, we do not hesitate to say that, from first to last, the article is so full of technical errors regarding the ships themselves—errors which range from slight variations from the facts up to absolute misstatements—that, for anyone who has an intimate knowledge of the matériel and methods of the Navy, it carries its own direct refutation. But, unfortunately, of the thousands of American citizens who may have read this article not one in ten thousand probably has any such knowledge of the facts, and hence it follows that no end of people who have always taken a patriotic and very proper pride in our Navy must necessarily find their faith rudely shaken. Unfortunately there have not been wanting certain officers of the line who have lent themselves freely to the questioning of the newspaper reporter, and have so far indorsed the general trend of the article as to convey the impression that the whole of it is true; and this in spite of the fact that they must know perfectly well that much of it is a gross exaggeration.

In the first place, then, let it be clearly understood that the present controversy is as old as the Navy itself, and that many of the criticisms now made public have been urged over and over again, carefully debated, and action taken upon them in the secret—and very properly secret—deliberations of the Navy Department. It is the bold publication of the whole matter in an article whose inspiration seems to bear strong internal evidence of being semi-official that has brought the subject so prominently and suddenly to the wide attention of the public. It is not our intention to enter, in the present issue, into any detailed refutation of the many misstatements made by Mr. Reuterdaahl regarding the matériel—i. e., ships, guns, armor, etc.—of our Navy. This matter we shall take up in a succeeding article. What we wish to do here is to clear the ground and put our readers in a position for judging the question more intelligently, by showing how it has become possible that there should be such an apparently wide divergence of opinion between the men who design our ships and the men who command and fight them. And let it be noted here very carefully that we speak of an apparent divergence of opinion, for we shall show that, so far from the seagoing officers having nothing whatever to say about what kind of vessels shall be built, they have been in the actual majority on the many boards that have determined the characteristics of our ships, and on some questions have outvoted the constructors at the ratio of ten to one. The Navy Department has been scrupulously careful to give them every opportunity to express their views and, indeed, has been in the habit of sending out official letters inviting the most frank discussion and the freest offering of any suggestions.

The designing of battle ships and cruisers is without doubt one of the most complicated and difficult tasks in the world—so rapidly do new ideas become old, so swiftly do novel and revolutionary methods become popular. And the naval constructor would be more than human if, in the midst of these ever-changing standards and ideas, he should always succeed in building a ship that embodies only those elements which are bound to remain permanent in the years to come. At his best he is but human. He is no seer or prophet. At times he is bound to make mistakes; a fact which, as the official records show, he is perfectly willing to admit.

One serious fault and crying injustice in the whole of this discussion is the fact that the impression has been conveyed, and purposely conveyed, that the work of determining the characteristics of our war ships is exclusively confined to the Bureau of Construction and Repair; that this Bureau is a kind of "close corporation," extremely jealous of its prerogatives and slow to accept any suggestions from the outside, and that it is peculiarly marked by that narrow range of outlook which is supposed to distinguish the purely technical, the "office" man, from the "practical" outside man. Now, the merits of this question are necessarily of a nature which can be determined only by reference to the official records of the Navy Department, in which, fortunately for this discussion, is to be found a full history of the deliberations which preceded the final choice of plans for the ships of our modern Navy.

Who is it, then, that is responsible for the design of our war ships, and what share, if any, had the seagoing officers in determining the characteristics of the ships which a certain clique among them now so freely condemn? There is a provision of the Navy Regulations by which the "general supervision over the designing, constructing, and equipping of new vessels for the Navy" is delegated to what is known as the "Board on Construction," which is composed of the chiefs of the four Bureaus of Equipment, Ordnance, Construction and Repair, and Steam Engineering, with an additional officer of the seagoing branch. The chiefs of the first two named Bureaus are seagoing officers, and these two, with the additional officer above named, serve to place the seagoing element, as compared with the Construction Corps, in the proportion on this board of three to one. That does not look as though the constructive branch had any arbitrary control over the design of ships or that seagoing officers were without adequate representation. Moreover, on the 1st of July, 1907, there were thirty-four seagoing officers serving as assistants in the Bureau of Ordnance and Equipment, and on duty under the Bureau of Ordnance at the Washington Navy-Yard. These thirty-four officers are thoroughly representative of the seagoing branch of the naval service and are in close and constant touch with the chiefs of their respective Bureaus, and advantage is taken of their wide practical knowledge in matters affecting the preparation of new designs. By this arrangement the Board on Construction has the advantage of suggestions born of the practical knowledge of the seagoing officers upon such features as magazine arrangements, ammunition stowage, coaling arrangements, and the location and method of installation of all mechanisms coming under the cognizance of the Bureau concerned.

Clear proof of the important part played by the seagoing officer in determining the military features of our ships will now be given in connection with the battle ships which have been designed since the Spanish war; and just here it will be well to draw attention to the fact that at the close of the war and at the request of the Bureau of Construction and Repair a special order was issued by the Secretary of the Navy to commanding officers of vessels requesting that those who served during the war make reports as to the operation of their ships, specifying both the good points and the bad points and suggesting any improvements which might be desirable. An analysis of the numerous reports submitted indicates that, in the opinion of the seagoing officers of that period, such defects as existed were not of a serious character. The criticism was the result of the experience, under war conditions, of seventy-five officers; and they were so favorable as to lead the Chief of the Bureau of Construction to state in his next annual report that with regard to the strength, stability, seaworthiness, and maneuvering powers of the vessels of the various classes, the war experience tended to confirm the favorable opinions previously arrived at and to demonstrate the general success of the designs.

At the close of the war the three battle ships of the *Illinois* class were in course of construction, and, encouraged by the results of the war as endorsing the general system of construction, the plans of the new *Maine* class provided for vessels of the same general character as the *Illinois*, but with more speed and greater displacement. Thus it will be seen that as far as the military features of the six battle ships of the *Illinois* and *Maine* classes are concerned, they were substantially endorsed by the specific reports of seventy-five officers who saw active service during the war, and that they were worked out by a board the majority of whose members were seagoing officers.

The Scientific American holds no brief for the board on construction, and we bring these facts before the public simply to correct the absolutely false impression that the determination of the leading features of our war ships is restricted to a single bureau, and that it does not embody the rich and valuable experience of the seagoing officers of the line.

Following the *Maine* came the five ships of the *Virginia* class, whose otherwise admirable qualities are marred by the fact that they carry the double-deck turret, one of the most unfortunate mistakes ever committed in any navy. The double-deck turret was nothing new in our service. It was the design of a young ordnance officer which was enthusiastically taken up by the seagoing officers of the line and, because of its theoretical advantages, became extremely popular. It is on record in the files of the Navy Department that the naval constructors to a man bitterly opposed the introduction of this type of mounting, and it was installed upon the *Kentucky* and *Kearsarge* against their strong protest. They opposed the turret on several grounds, among which were the following: That there was a lack of independent action of the 8-inch guns; that four guns of two different calibers on one single mounting would deliver a less volume and a less accurate fire than if the two types were severally mounted; that the great concentration of weight at the ends of the vessel and the enormous weight on the roller path were objectionable; that the efficiency of four important guns was dependent upon one controlling apparatus, and that the error of one gun pointer enters into four guns.

Unfortunately, after a bitter fight to keep it out of these five splendid ships, the influence of the seagoing officers was successful in incorporating the double turret. In the first plan for the *Virginia* class the majority of the board on construction proposed an armament of four 12-inch guns in two turrets and eight 8-inch guns in four turrets, mounted amidships; but one seagoing member of the board dissented from the majority report and recommended that four of the 8-inch guns be superposed upon the 12-inch turrets. This opened up the old controversy of the *Kearsarge* period, and in order to have the subject well thrashed out, the Navy Department made an addition to the original board of construction of eight additional seagoing line officers, thus forming a special board for the purpose. This board approved by a majority report the use of the superposed turret. Later another special board was convened, consisting of the board on construction, with the addition of two rear-admirals and five captains, and, as a final result, ten out of the twelve members signed a majority report in favor of installing the superposed turret in the *Virginia* class. One rear-admiral and the naval constructor signed a minority report. In these two boards the ratio of seagoing officers to naval constructors was, respectively, ten to one and eleven to one, so that the superposed turret must ever be looked upon as the special protégé of the seagoing officer.

The superposed turret, moreover, came very near being emplaced upon the *Connecticut* and the *Louisiana*, a minority report of the board which decided on their plans advocating an armament of four 8-inch guns superposed on the 12-inch turrets, and four 8-inch guns in broadside turrets. The final designs for these ships, from which the superposed turret was excluded, were adopted only after an extended discussion, in which the question of the battery arrangement alone was made the subject of report or suggestion by upward of eighty naval officers.

The designs for the following three ships, *Vermont*, *Kansas*, and *Minnesota*, are practically identical with those of the *Connecticut*, some slight changes being made in the distribution of the armor.

The faults of the two battle ships, *Idaho* and *Mississippi*, are directly chargeable to the mischievous custom of Congress, by which it specifies the limits of displacement of the ships which it authorizes. This was put at the ridiculously low figure for a modern battle ship of 13,000 tons, and on this limited displacement the board was requested to design, forsooth, "two first-class battle ships carrying the heaviest armor and the most powerful ordnance of vessels of their class." Under the circumstances something had to be sacrificed. Four of the five members of the board on construction, including two of the three seagoing members, recommended a vessel with battery arrangement similar to that of the *Connecticut*, but carrying four less 7-inch guns, with a lower freeboard aft, and having 1 knot less speed, submerged torpedo tubes being also omitted. The Navy Department, before approving this report, invited an expression of opinion from nine officers of large experience in the Navy, which was duly offered. In submitting its final report, the board on construction stated that the designs of these 13,000-ton ships did not "represent its opinion of what first-class battle ships should be nor what the United States Navy should have."

The naval appropriation act of March 9, 1905, authorized the construction of two 16,000-ton battle ships, and the final plans of these vessels, which are now known as the *South Carolina* and *Michigan*, embodied the all-big-gun idea. These ships were the first to embody an arrangement of turrets which, although it was subjected to much criticism at the time of its first publication, seems now likely to become the standard practice throughout the navies of the world. We refer to the method of mounting the eight 12-inch guns in four center-

line turrets, so as to allow all of the guns to fire upon either broadside. This arrangement, like that of the emplacement of eight 8-inch guns in four turrets arranged quadrilaterally, as in the *Oregon*, originated in the Bureau of Construction, and it bids fair to be a permanent feature in future battle ships. The excellence of the design of these ships is beginning to meet with the approval which it merits, and we give the following quotation from a well-known foreign paper which is devoted exclusively to naval matters: "Few, if any, ships are likely to be built in the future which can not use all guns on either broadside. This may be taken as certain. America, in the *South Carolina*, led the way in this direction, and the ship of the future is bound to be some improved variation of her." * * * There is some good reason to believe that, taking all things into consideration, the *South Carolina* type is the best all-big-gun ship yet in hand."

The plans of the 20,000-ton battle ships *Delaware* and *North Dakota* were unanimously approved by the board on construction, the majority of whose members are, as we have seen, seagoing officers. They were subsequently referred to and approved by a special board, the majority of whose members were seagoing officers, and finally were indorsed by special act of Congress.

It will be evident from the foregoing review of the facts regarding the responsibility for the design of our warships, as recorded in the files of the Navy Department, that the ships of our Navy represent the accumulated experience and critical judgment, not merely of one bureau of the Department, but of the very pick and flower of the personnel of the Navy. Having fully established this fact, we shall, in our succeeding issue, take up seriatim the charges made by Mr. Reuterdahl against the matériel of the Navy, and we shall show that though, in one or two cases, the charges are to the point, they are, as a general rule, grossly in error.

[Scientific American, Saturday, January 25, 1908.]

The Reuterdahl attack on our Navy.

II. ARE OUR SHIPS INFERIOR TO THOSE OF THE LEADING FOREIGN NAVIES?

Replying in our last issue to the charge that the supposed faults in the war ships of the United States Navy are due to the fact that the designing of these ships is confined to a particular board and certain bureaus, and that the seagoing officer has little to say about the matter, we proved conclusively that, so far from his being ignored, the seagoing officer has been in the majority on the various boards which have determined the leading characteristics of our vessels. We showed that our ships, and particularly those built since the Spanish war, embody the ripe experience of the ablest men in the various branches of the naval service. Yet we are asked by Mr. Reuterdahl, in McClure's, to believe that "the ships of the battle fleet of the United States are in exactly the same condition as the Russian ships at Tsushima;" that the guns, mounted at low elevation, protrude from rawling gun ports, into which volumes of water will pour in a sea-way, and through which shells will enter and burst, killing the gun crews, cutting the ammunition hoists to pieces, and blowing up the magazines; that the whole of the thick armor belt is generally below the water line, and that shells would blow in the thinly armored sides above the submerged belts; that our ships are without torpedoes and torpedo tubes and without suitable guns to fight off the enemy's destroyers, and so forth and so on—the upshot of it all being that our Navy is in no condition to go to war, and therefore, we suppose, must be considered as of practically no consequence at all. In the present article we will take these charges seriatim, and show that, generally speaking, they are either gross exaggerations or have no basis whatever of fact.

It has long been recognized among naval experts that all criticisms and comparisons of ships, if they are to have any value, must be referred to some common standard, comparison being made only between ships of the same date and the same displacement, and all questions of draft, freeboard, height of guns, etc., being referred to some common water line. The broad underlying fallacy which vitiates not merely Mr. Reuterdahl's article, but the whole of the campaign of criticism of the past few months, is that this essential principle has been largely ignored.

1. Submerged armor belts.—Mr. Reuterdahl states that "of all our battle ships not one shows the main armor belt 6 inches above the water when fully equipped and ready for sea." As a matter of fact, our ships, if we include those now building, show from 18 inches to 11 feet 6 inches of thick armor above the water line when fully equipped. Because the water line of a ship must change with the amount of load she has on board, it is necessary to have some fixed datum to which her displacement, draft, freeboard, etc., may be referred. This datum in our own and the British navy is known as the mean or normal water line. It is the level at which our ships float when they have about two-thirds of their ammunition and stores and about 800 or 900 tons of coal aboard; and it is at this draft that the ship is required to make her specified speed during the Government trials. Thus in the case of the *Vermont*, whose designed normal or mean draft is 24 feet 6 inches, the top of the armor belt at this draft is 4 feet 3 inches above the water line, and in this condition she is carrying two-thirds of the full supply of ammunition and stores and displaces 16,000 tons. At the designed full-load displacement she displaces 1,650 tons more. It takes 63.14 tons to sink the *Vermont* 1 inch deeper in the water, and hence the addition of 1,650 tons will add 26 inches to her draft. Hence, at full-load draft, the top of the belt would be still 25 inches above the water. Similarly, the *Maine* increases her draft from normal to full-load displacement by 20 inches, leaving 22 inches of the main belt above the water at full load. In preparing for a cruise like that to the Pacific, however, a large amount of extra material is taken aboard, and the last pound of coal is crowded into the bunkers. One of the battle ships now on the Pacific cruise, in addition to spare propeller blades, anchors, etc., carries an extra crank shaft for her engine. But even with this added load the ship in question showed her belt above the water line.

There has been altogether too much wild talk about submerged armor belts, and its absurdity is evident when it is brought to the cold test of facts and figures. A naval officer recently assured the writer that the *Virginia* not long ago started from a navy-yard with the top of her belt 2 feet below the water. Now, in dissecting this statement we find that at normal load, when the *Virginia* displaces 15,000 tons, this mark is 3 feet above the water; so that, according to our informant, she must have sunk 5 feet, or 60 inches, below her normal draft. It takes 60.95 tons to sink the *Virginia* 1 inch below her normal draft. Therefore, to get her belt 2 feet below the water, she must have taken on board 2,657 tons dead weight, and her displacement must have been 18,657 tons, 700 tons greater than that of the huge British battle ship *Dreadnought*. This is a fair sample of much of the absurd talk

that has been indulged in during the past three months on this question of submerged armor belts.

Furthermore, even if the belts were submerged, which they are not, when our ships start out to fight and find the enemy, the consumption of coal, provisions, water, etc., would bring them up several inches a day, and by the time they met the enemy it is probable that they would be floating not much below their normal draft, with several feet of the belt above water.

2. *Low freeboard.*—Mr. Reuterdaahl has much to say about the "low-ness" of American ships, and he would have us believe that the forward decks are much lower than those of foreign ships. He says: "All" (the italics are ours) "modern battle ships in foreign navies have forward decks about 22 to 28 feet above water." We have no space to consider the various foreign navies in detail, and in this reply we will confine ourselves to the acknowledged leader of them all—the British navy. What are the facts? With one single exception—the *Dreadnought*—there is not a British battle ship in commission with a forward deck 28 feet above the water, all the other modern battle ships being, like our own, three-decker ships—that is, having a berth deck, gun deck, and main or upper deck above the protective deck; and the height between decks being about the same for all ships, viz, from 7 feet 6 inches to 8 feet, it follows that the height above normal water line is approximately the same. As a matter of fact, on several of our ships the height between decks is greater than on the British ships, and the freeboard is correspondingly greater. The two photographs herewith shown of the *King Edward* and the *Vermont*, selected because the ships are of about the same date of design, show the *Vermont* to have actually a foot more freeboard on the same normal flotation line. The "draft marks" (figures painted on the side) on the *King Edward* clearly indicate the position of the normal water line for her known normal draft of 26 feet 9 inches.

3. *Broadside guns useless in a seaway.*—The question of freeboard is intimately associated with that of the height of guns above water. Though we have not at hand the figures of freeboard of the British ships, the low elevation of broadside batteries on certain crack British ships as compared with our own proves conclusively that their freeboard must generally be considerably lower, and not, as Mr. Reuterdaahl states, considerably higher, than that of our ships of the same date. Therefore all his pictorial description of the trouble our turrets and broadsides would encounter when steaming in a seaway may be relegated to that land of fiction to which so much of this article belongs.

Not only would "one-third of our guns" not be "useless in a seaway," but the muzzles of the guns would be clear of the water when the eight battle ships of the *King Edward* class and the two battle ships *Swiftsure* and *Triumph* class, to say nothing of the four armored cruisers of the *Drake* class, would be rolling theirs under.

We have always been a great admirer of Mr. Reuterdaahl's marine pictures; and one of the chief elements of their charm, for the writer at least, is their freedom of treatment. The trouble with the present article is that the artist has carried this freedom of treatment into a field from which it should have been most rigidly excluded. The statement that "broadside guns of foreign battle ships and cruisers are, generally speaking, twice as high as ours, and many of them three times as high," would be startling, indeed, if it were true. As a matter of fact, our broadside guns are as high as the similar broadside guns in the German and Japanese navies, and, as we have seen, are from 2 to 4½ feet higher than those in some of the finest modern battle ships and cruisers of the British navy.

The question of giving ships a lofty freeboard is not as simple as Mr. Reuterdaahl seems to think. To add a forecastle deck, raising the freeboard from 20 to 28 feet, means the addition of an enormous weight, and, on a given displacement, involves heavy sacrifices, either in guns, armor, speed, or coal supply. Grave questions of stability are also encountered. We hear much in this controversy about the high freeboard of the French ships. As a matter of fact, there are two schools of designs: The French, favoring lofty freeboard, and the British, American, Japanese, and to a less extent the German, favoring a 20-foot freeboard. The British, of whom Mr. Reuterdaahl mistakenly gives the impression that they have several 28-foot freeboard ships, were content with 20 feet until the great length of the *Dreadnought* compelled the addition of a forecastle deck to give her good sea-riding qualities. All this talk about flooded turrets and broadside guns useless in a seaway is no more, and not as much, applicable to our own Navy as it is to the others of the same school. The battle of Tshushima was fought by Japanese ships of the same freeboard as our own and in weather that was described in Admiral Togo's report as "rough." But we have yet to hear that the Japanese broadside guns were "useless in a seaway;" and our broadside guns are as high, if not higher, than theirs.

4. *Poor protection for gun crews.*—Mr. Reuterdaahl's imagination never leads him so far away from the facts as when he comes to speak of the poor protection for gun crews due to overlarge gun ports and the poor subdivision of the broadside batteries. The story of the "enormous" turret ports of the *Kearsarge* and *Kentucky*, and the pathetic incident of the "painted wooden canvas screens" has been retailed to the public ad nauseum. As a matter of fact, these turret ports are large only in comparison with the naturally smaller ports which appear in turrets using an inclined face of the character shown on our front-page engraving. The *Kentucky* and *Kearsarge* are pretty old ships, as things go nowadays, for their designs were prepared some thirteen years ago. The turret ports were no larger than the necessities of the type of gun mount used at that period demanded. The fronts of the turrets of the *Alabama* class, which followed the *Kearsarge*, are inclined, and the ports are proportionately smaller. It is an abuse of the ethics of fair criticism to keep ringing the changes on the supposed poor design of this out-of-date ship, without making any reference to the fact that in all of our later ships the ports have closed in on the guns until the protection is ample. Mr. Reuterdaahl is so fascinated with these "yawning gun ports" that apparently he sees double, if not quadruple, for he tells us that "the openings above and below the guns in the turrets of these ships are 10 feet square." Were this indeed the case, there would be not 1 square foot of the port plate left, and the Empire State express could drive bodily into the turret without let or hindrance. Well might "the service journal, the Navy," say that "these ships are not fit for service in battle line against a really modern vessel." In his search for further proof of poor protection for our gun crews, Mr. Reuterdaahl goes back to ships that were authorized from twelve to seventeen years ago, and speaks of the broadside guns which "stand glowering from unprotected or badly protected openings as wide as double doors;" but he omits to state that most foreign ships of the same date used the same wide ports, and that many of them, notably in the British navy, mounted their guns in the open with nothing but shield protection. So also he states, by implication, that there is no attempt at isolation of the

separate broadside guns from shell fire on eleven of our battle ships, upon which, as a matter of fact, special screen protection has been carefully provided.

5. *The open shaft to the magazine.*—That Mr. Reuterdaahl's criticisms of the open shaft, or well, leading down from the turret guns to the handling room below is well made, is proved by the fact that what is known as the "interrupted hoist," with a floor cutting off the upper from the lower part of this shaft, is being installed on our latest ships. It is only fair, however, to bear in mind the considerations which led to the adoption of the present type of hoist. In the first place, at the period when it was designed, our ordnance officers were anxious to avoid a very serious defect which existed in many foreign ships, and noticeably the British, namely, that the loading could be done only in one position. That is to say, if a ship were firing on the broadside, her turret guns would have to be swung back to the axial position for loading to bring the breech in line with the loading tray and rammer, an arrangement which entailed a great loss of time and a slow rate of fire. Our officers designed a hoist which rotated with the gun and its carriage, and brought the ammunition direct from the handling room to the breech, no matter on what point of bearing the gun was laid. This, of course, necessitated an opening direct down to the handling room. In its later form the hoist was given a high speed of 600 or 700 feet a minute, and it is believed to give a more rapid service and enable a faster rate of fire to be obtained than is possible with the big guns of other navies. The hoist gave great satisfaction, and no complaints were heard until the introduction of smokeless powder developed the danger of "flarebacks." To meet this difficulty the Ordnance Bureau provided gas ejectors for blowing the combustible gases out of the gun before the breech was opened, and stringent regulations were laid down to prevent crowding of ammunition up to the gun in the effort to obtain rapidity of fire at target practice.

Later, an intersecting floor of steel was placed at the mid height of the turret shaft, with an automatic shutter, which lifted as the charge passed through and then fell by its own gravity, shutting off the handling room from the turret. With a view to shutting off the ammunition room from the handling room floor below the turret, the doors of the ammunition room are provided with circular hinged shutters, and the instructions are that these shutters shall be closed except when a charge is passed through them. Now, it is well known in the Navy that, in the zeal to secure good target records, these safety devices have, at times, been rendered inoperative; and it is a fact that much of the loss of life in the target-practice accidents of recent years would have been avoided had the safety devices been fully utilized, and the instructions for safeguarding the powder been strictly followed. There is one feature in which the hoisting gear of our turrets is subjected to unjust comparison with that of foreign battle ships. The impression may be gathered from Mr. Reuterdaahl's description that every foreign battle ship has an independent ammunition hoist, with track, ammunition cars, and cable complete in itself. This is not the case. There is but a single cable, and the auxiliary gear consists of a hand-operated crank-shaft geared to the motor shaft, which drives the one cable. Should the motor be short-circuited or otherwise injured, the driving shaft can be hand-operated, but, of course, at only a slow speed. If a shell fragment should cut this cable on a foreign ship, the whole hoist would be immediately put out of business and the turret would be just as completely disabled as our own.

6. *Lack of torpedoes and destroyers.*—We are entirely in agreement with Mr. Reuterdaahl in his belief that our weakness in torpedo-boat destroyers is a distinct menace to the efficiency of the Navy. Congress should make liberal appropriations for ships of this type, which should be of not less than 750 tons displacement and 30 to 32 knots speed. Such boats should be of sufficient strength and freeboard to enable them to cruise with the fleet in any weather. But Mr. Reuterdaahl is in error when he considers that the lack of submerged torpedoes in the ships of the Pacific Fleet is a serious matter. Expert opinion on this question has been "seesawing" for several years, according as the speed and range of the torpedo or the range and deadliness of armor-piercing gun fire have been in the ascendancy. In 1903 the General Board, speaking on this question, said: "The range, speed, and accuracy of torpedoes have so greatly increased within the last year or two that at the present time the torpedo may be considered a weapon of offense to be seriously reckoned with up to 3,000 yards, and even more. Since gun fire, in order to result in a decisive action, must be delivered at a range not greatly exceeding 3,000 yards, it follows that the tactics of fleet actions will hereafter be influenced by the presence or absence of torpedoes." Since that opinion was given the battle range has increased from 3,000 to 8,000 or even 10,000 yards, as witness the remarkable shooting up to 9,000 yards made by our own *Connecticut* during the past summer. At such ranges the torpedo becomes an incumbrance, and the space occupied by the submerged torpedo room may much better be given up to coal or stowage.

In concluding this answer to the criticisms of Mr. Reuterdaahl's article, and to the general campaign of criticism by which it was preceded, we wish to state that the Scientific American has based its statements upon facts which are either of its own knowledge or gathered from public Government documents. We believe that after a careful consideration of the facts as here presented the general American public will agree with us that our Navy stands second to none in the general efficiency of its ships.

There is one feature, however, in which our ships are superior, and often greatly superior, ton for ton, to the ships of other navies. We refer to the exceptionally heavy armament which they carry. Since the days of the Revolutionary war it has been our aim to mount upon our ships heavier batteries than were carried by foreign ships of corresponding size, and to this policy very largely have been due most brilliant victories, particularly where single ships were engaged. That policy has been steadily followed in the creation of our new Navy, whose birth may be dated from the year 1883. Although Congress has persisted in the most unreasonable practice of stating what the displacement of the ships shall be, the Department has succeeded in equaling the foreign ships in speed, protection, and coal supply, and at the same time has greatly outmatched them in the weight of the armament.

[Senate Document No. 427, Sixtieth Congress, first session.]

HEARINGS ON ALLEGED STRUCTURAL DEFECTS IN UNITED STATES BATTLE SHIPS.

Mr. HALE presented the following article from the Scientific American (April 4, 1908) on the hearings on alleged structural defects in United States battle ships.

THE SENATE HEARING ON THE ALLEGED DEFECTS OF OUR NAVY.

The Senate hearing on the alleged defects in the vessels of our Navy was held with a view of ascertaining the exact facts regarding the freeboard, position of water-line armor, height of guns, and other

features of our battle ships as compared with those of the leading foreign navies. The proceedings were very exhaustive, and resulted in the presentation of a vast amount of information, accompanied with detailed plans bearing upon these important points. The people of the United States will be gratified to learn that the evidence which has thus far transpired is not only a complete vindication of the excellence of the ships of our Navy, but it proves them to be, in some respects, decidedly superior to foreign ships of the same date and type.

It was evident from the testimony given by certain seagoing officers who have been active in criticism of our ships that they indorsed the allegations made in what is known as the Reuterdahl article. Now, the charge made in that article (and it is well to be perfectly clear on this point) was not so much that our ships could be made better than they are (a fact which everybody is prepared to admit), but that our ships are inferior, and greatly inferior, to the ships of foreign navies. It is with this last statement in particular that we have always taken decided issue. *The Scientific American* claims (and not a word of truth has been adduced to show the contrary) that our battle ships of any given type and date are as efficient as foreign battle ships of the same type and date, and in respect of their armament are greatly superior.

The official cross sections of a large number of typical foreign battle ships, which were presented in the recent Senate hearing, prove that this contention is absolutely correct. Compared with the British and Japanese ships, our armor belts are as thick, and sometimes thicker; they are in the same position with regard to the water line; our freeboard is as great, and in some cases greater; our broadside guns are carried as high, and generally higher; our rate of ammunition supply is as rapid, and in many ships more rapid; and (greatest surprise of all) the open ammunition hoist to the turrets is not peculiar to our own Navy, but is found in several of the crack battle ships and cruisers of other navies.

That the above comparison is a high testimony to the quality of our ships will be recognized when we mention that the cross sections cited are of such ships as the British *Royal Sovereign*, *Majestic*, *King Edward*, and *Dreadnought*, and the Japanese *Asahi*, *Mikasa*, *Kashima*, and *Aki*; and we may mention just here that even in the case of the two crack battle ships, *Mikasa* and *Asahi*, of the Japanese fleet, the broadside guns are only about 12 feet above the water line, as against from 14½ to 15½ feet on our own ships. So, also, in the comparison with contemporaneous French ships, it is found that the thickness and position of our armor belts is fully as satisfactory; that the armoring of the top sides is greatly superior, and that in respect of the freeboard only and the heights at which the guns are carried have the French ships any so-called "advantage." That lofty guns and towering top sides have been adopted at the expense of stability is shown by the fact that, with one exception, the French-type Russian battle ships which fought in the battle of the Sea of Japan proved their topheaviness by turning turtle and going to the bottom. Furthermore, the one French-type ship, the *Orel*, which was captured by the Japanese, was changed by them to the American type by cutting down her decks and lowering her gun positions, as is clearly shown in the illustrations on page 241 of this issue.

According to press dispatches, Rear-Admiral Evans has sent to the Department a report upon the behavior of our ships during the Pacific cruise, in which certain suggestions are made with reference to the questions of armor belts, turrets, freeboard, etc., which are now in debate. The report contains the opinion of a naval constructor detailed especially to watch the behavior of the vessels, and of various seagoing officers in charge of the ships. In due course, when this report becomes available, we hope to give a review of its salient features. According to press dispatches, Naval Constructor Robinson noted that although, in the main, the voyage was made in quiet weather the ships at times rolled sufficiently to expose the unarmored bottom below the belt, and hence the suggestion of some of the officers that the belt be made wider is accompanied with the stipulation that the bottom of the belt be left in its present low position. It is suggested that the additional weight due to wider belts be compensated for by the removal of what is termed "superfluous weight." We believe that no small reduction of weight can be made in this way, for it is a notorious fact that our ships carry, in the way of comforts and conveniences for officers and men, much weight that is not to be found in foreign battle ships. It is also stated that Rear-Admiral Evans "recommends taking off the after bridges;" though why he should do this, when it was at his earnest insistence, and in opposition to the strong wish of the construction department, that an extra flying bridge was built aft on the *Connecticut* for his special use, we are at a loss to understand. Commenting on the suggestion of some of the commanding officers that the belts might be raised from 6 inches to a foot higher (which, by the way, would bring them just where they were designed to be before extra weights were added during construction) Admiral Evans says:

"But even this is open to question, for it has been noted that even when heavily laden and in the smooth to moderate seas, which have thus far characterized this cruise, the ships frequently expose their entire belt and the bottom plating beneath.

"It must be remembered that even a 5 or 6 inch shell, of which there would be a great number, could inflict a severe and dangerous injury if it struck below the belt, while otherwise the water line, even with the belt entirely submerged, is, on account of the casemate armor and coal, immune to all except the heaviest projectiles.

"The fact is that under the sea conditions in which battles may be fought a belt 8 feet in width, if considered alone, is too narrow to afford the desired protection wherever it may be placed, and the question becomes an academic discussion, with certain arguments on each side.

"It is understood that on the latest ships this question is of little import, as the citadel armor is but 1 inch less in thickness than on the water line, and for those ships already built it is believed that when the bridges are removed and all weights which would be landed should war break out are taken into consideration, the ship will rise to the 6 to 12 inches, which is believed to be the maximum that it could be desired to raise them."

If, as is reported, the admiral states that the broadside guns "can only be used to advantage when the battle ships are not steaming more than 10 knots," we can only say that bad, indeed, must be the case of the battle ships of other navies, the majority of which carry these guns from 1 to 3 feet nearer the water than do our own ships.

The country is to be congratulated on the fact that the recent wild and baseless criticism of our ships should have been made just when the fleet was starting for the Pacific. In spite of the fact that most of it was either false or grossly exaggerated, it has done an incalculable amount of good; for, as a result of the discussion and investigation which has followed, a large amount of information has been made

public regarding our ships, which scarcely could have become known in any other way. Not only have they now a more intelligent knowledge of our Navy, but the confidence of the people of the United States in the excellence of our ships has been greatly strengthened. As a further indorsement, there has come the brilliant success achieved by Admiral Evans and his officers and men in bringing that fleet through its 14,000-mile trip in perfect order and two days ahead of the schedule time.

APPENDIX D.

APPENDIX ACCOMPANYING HEARING OF THE CHIEF OF THE BUREAU OF CONSTRUCTION AND REPAIR BEFORE THE COMMITTEE ON NAVAL AFFAIRS, HOUSE OF REPRESENTATIVES, IN RELATION TO ALLEGED DEFECTS IN DESIGN OF UNITED STATES BATTLE SHIPS.

N. B.—The following extracts from foreign publications are submitted without comment and merely as indicating European opinion with respect to some typical designs of United States naval vessels:

"Extracts from a paper contributed to the proceedings of the Institution of Naval Architects (London) in 1891, on 'Some recent war-ship designs for the American Navy,' by J. H. Biles, subsequently professor of naval architecture at the University of Glasgow, and extracts from the discussion of the above-noted paper.

"Extracts from the French annual 'Les Flottes de Combat,' 1907, and the English annual 'All the World's Fighting Ships,' edition of 1905-6 and edition of 1907.

"Also a few extracts from foreign periodicals commenting on various designs of vessels of the United States Navy, as follows:

"Engineering of March 26, 1907, in relation to the designs of the *Alabama* class.

"Engineer of June 14, 1901, in relation to casemates and the attitudes of the British, French, Japanese, and Italian services with respect thereto.

"Engineer of July 12, 1901, giving a comparison of the qualities of various foreign vessels and United States vessels of the *New Jersey-Virginia* class.

"Engineer of December 27, 1901, containing further comments concerning vessels of the *New Jersey*, *Virginia*, and *Connecticut* classes."

TRANSACTIONS OF THE INSTITUTION OF NAVAL ARCHITECTS, 1891

"Some recent war-ship designs for the American Navy,"

[By J. H. Biles.]

Referring to the earlier protected cruisers, Mr. Biles says:

"The American ship designers and builders have shown that they are capable of producing vessels quite equal to their promises, and at least equal to the best European practice." (Referring to the *New York*.)

Compared with the *Edgar* class, this vessel is much more powerfully armed and much better protected. Her sustained sea speed will probably be greater. She is, however, 800 tons more displacement, and should therefore be a superior vessel. * * * The coast-line battle ships (the *Indiana*, *Massachusetts*, and *Oregon*) are the most important vessels of this programme. * * * They have been designed 'to be able to fight vessels carrying the heaviest guns and armor,' and by inference comparison with our most recent battle ships can not fail to be courted. * * * The armament of these vessels seems to be more powerful than that of any European battle ships, there being four guns capable of piercing any armor afloat and eight 8-inch guns capable of penetrating almost any armor, and certainly of penetrating the armor at the ends of the belts and on the barbettes and redoubts of most of our battle ships at close quarters.

"Of course, in order to attain this result something has had to be sacrificed—or, rather, something is not existent in these ships which exists in the larger ones. The speed estimated, compared with our latest battle ships, is probably about 1½ knots less. The coal supply is 500 tons less.

"The breadth of the armor belt is 1 foot less, but it is as wide as that of the *Admiral* class, which has not the advantage of the 5-inch belt above.

"As these vessels will probably have to act very much nearer their base than European vessels, their bottoms will probably be in better condition, so that the real speed would not be much, if any, less. For the same reason their coal supply need not be so large, and therefore it would seem that their preponderance of armament would give them an advantage in a combat near their own coast line with any European vessel. They are distinctly superior in most respects to any European vessel of the same displacement, and for the purpose intended, of protecting the American coast line, they seem to be quite a match for any ships afloat. They can keep the sea as well as any battle ships, and must not be looked upon as coast-defense vessels in the ordinary restricted sense, though they are called coast-line battle ships. Compared with the *Admiral*, their freeboard at the ends is 15 inches higher, and compared with the turreted battle ship *Hood*, it is practically the same. It is, however, 8 feet less forward than the barbetted battle ship of the *Royal Sovereign* class. Judging by the amount of water which will come on board the Atlantic liner with a freeboard forward of 26 feet, the chance of fighting the 31-inch turret guns end on in a head sea is not very great, but the 8-inch guns could probably be fought in almost any weather. * * * In maneuvering power this ship will be superior at her normal load draft to the *Royal Sovereign* class on account of her less length and draft."

DISCUSSION ON THE ABOVE PAPER.

By Admiral, the Right Honorable Sir John Hay, K. C. B., D. C. L., F. R. S. (vice-president):

"I think, my lord, this paper is rather an eye opener. * * * In Mr. Biles's statement I think he indicates that the United States are now becoming a great naval power and that they are beating us in speed. Speed is of very great consequence, and that is exactly what the United States did some seventy years ago. While we were supposing ourselves to be the first naval power of the world, they built a certain number of very large ships and captured all the frigates which were supposed to be their equals, except in one or two famous actions. * * * I think the fact that the United States is coming back again into the range of great naval powers * * * makes it necessary that she should be considered in all the estimates of naval power which we have hitherto been conducting rather with reference to our possible European relations."

By Admiral A. F. R. De Horsey, K. C. B. (associate):

"* * * I am glad to see that our friends across the Atlantic, with their great cleverness, stick to water-line protection. * * * Any damage above the water line, however much the ship may roll, may probably be temporarily repaired, but there is a poor chance of dealing with injury below the water line."

By Mr. W. H. White, C. B., F. R. S. (vice-president):
 The facts show that in America the reconstruction of the Navy has been undertaken in a most businesslike manner. Our friends there at first did not produce rival designs, but obtained from this country designs and working drawings for ships and engines. The first result at which they aimed has been most satisfactorily achieved. Ships are now afloat built in the States from designs acquired here which compare favorably with ships of the same date built in this country. Having got through that stage of progress, the Americans are undertaking designs of their own. As regards the freeboard in the battle ships and the heights of the guns above the deck and above water, Sir Nathaniel Barnaby has well said that there is an essential difference between the *Admiral* class in the royal navy and the new American naval vessels. There are, however, ships like the *Nile*, *Trafalgar*, and *Victoria*, where the speed is practically the same and the freeboard is about the same as the Americans contemplate. The general feeling of naval officers is, however, in favor of our later practice in the *Royal Sovereign* class. The new vessels are, it is true, called 'coast-defense vessels' in the official programme, but we are also told that they have a coal supply, or rather a bunker capacity, that would give them the power to go almost anywhere that other battle ships could go. With bunkers filled the thick armor would be about on the level of the water line. That is a matter calculated upon and accepted by the designers as a feature to which they do not object when the bunkers behind the 5-inch armor are full of coal. We have ships which come into the same class. I do not myself see the least objection to filling up the bunkers—they exist—but I think that what needs to be clearly understood is that the nominal speeds of which we have heard are associated with a certain weight of coal in the ship, and not with the condition of full bunkers. So long as there is such a clear understanding no harm is done."

LES FLOTTES DE COMBAT, 1907.

This annual contains references to various United States vessels, as follows:

Iowa.—May be compared to the *Carnot*."

NOTE.—*Carnot* laid down, 1891; completed, 1896. *Iowa* laid down, 1893; completed, 1897.

Kearsarge and Kentucky.—The superimposed turrets offer certain advantages in simplicity of working and saving of weight, but if the turning axis is displaced (or the thinner upper turret disabled) one-half of the battery is out of action. The secondary battery is well protected and the speed is sufficient for a battle ship. Everything on this slightly modified *Iowa* has been installed in as simple and practical a manner as possible. The main battery has been reduced in favor of the secondary, which will perhaps be slightly restricted as to arcs of fire. On the other hand, the protection has been considerably improved and the armor belt extends to the stem."

Alabama.—If we compare this class with the preceding one, we see that much attention has been paid to the protection and that the gun positions will be habitable during action. Speed is not increased. In America this is considered as a secondary factor for battle ships. The *Alabama* type is preferable to the *Majestic* from every point of view. While it has as much freeboard, it is on less draft and displacement. It has more armor and armament and a speed approximately equivalent."

NOTE.—*Majestic* laid down February, 1894; *Alabama* laid down December, 1896.

Connecticut.—These battle ships, which are a reply to the British *King Edward VII*, are better protected than the latter for the same displacement, and, in particular, are more heavily armed."

New York.—This cruiser, which was a complete success, was in advance of all others built at the same time and still holds a good place among them."

Brooklyn.—Her sponsons are excellently arranged and the forecastle at a height of 10 meters makes her superior to most cruisers now afloat. She could fight in any weather. Her protection is more than adequate."

Tennessee.—These vessels, which much resemble the English *Drake* as to their general arrangement, speed, and displacement, have, however, the advantage of a complete belt. Their main battery is just double that of the *Drake* and they have two more 6-inch guns and eight 3-inch. They are inferior to the English *Duke of Edinburgh*."

Jane's Fighting Ships (ed. 1905-6, p. 380.)

To the United States belongs the credit of being the first nation to sanction that battle ship with a uniform armament of big guns, which has hovered on the horizon of the building programmes of most of naval powers. In large cruisers no departure is being made. The *Washington*, which is the most powerful armored cruiser afloat, is the standard model, so far as can be gathered. No cruisers of moderate dimensions are contemplated, the American ideal that every ship is to be the best possible of its class being faithfully adhered to.

Jane's Fighting Ships, 1907—Preface.

Few, if any, ships are likely to be built in the future which can not use all guns on either broadside. America in the *South Carolina* led the way in this direction, and the ship of the future is bound to be some improved variation of her.

Certain tables upon page 433 are a new feature. These tables omit all ships projected under 1907-8 programmes. Such figures would slightly increase United States superiority in long-range attack. The extraordinary high figures for United States ships afford food for considerable thought, for both in ships with high-powered guns or impervious to vital injury at long range the United States fleet is superior to any other navy in the world. Even by the inclusion of 40 caliber (12-inch) of types extinct so far as new ships are concerned the United States of America is an extremely good second and the corresponding lead in invulnerability outside 7,000 yards is considerably increased.

EXTRACTS FROM TABLES REFERRED TO.

(a) Ships with high-powered guns. Number of ships able to attack outside 7,000 yards:

	British.	United States.	French.	German.	Japanese.
6-inch Krupp armor.....	56	34	28	13	21
9-inch Krupp armor.....	30	23	17	3	14
11-inch Krupp armor.....	7	10	10	3	8

* Includes three protected cruisers.

(b) Ships impervious to injury at long range. Number of ships whose water-line belts are safe outside 7,000 yards against—

	British.	United States.	French.	German.	Japanese.
Modern 9.2 to 10 inch guns....	25	33	38	28	15
12-inch 40-caliber.....	8	24	23	12	5
11-inch 50-caliber.....					
12-inch 45 caliber.....		8	1		1

NEW WAR-SHIP CONSTRUCTION.

The *Dreadnought* herself was found to have certain minor defects. Her fighting power has, however, probably been overestimated. There is very little reason to believe that she is "equal to two *King Edwards*," despite her undoubted belt superiority. An extremely important point about a battle ship, recognized far more fully in the United States than anywhere else, is embodied in the following observations of Mr. Robinson, of the United States Constructional Board:

"The writer is of the opinion that at some periods in all services too much consideration has been given in design to the development of characteristics tending to efficiency in individual ship action to the detriment of a corresponding efficiency in squadron or fleet action. This has doubtless been due to lack of proper knowledge available as to squadron or fleet maneuvers, a knowledge recently much augmented by the naval maneuvers conducted by the different countries and by the experience gained in the Spanish-American and Russo-Japanese wars. The attainment of the desired results in the *South Carolina* and *Michigan* could only be reached from a most careful consideration of all questions and the elimination of such features as were considered least tending to fighting efficiency under the conditions in which they might naturally be called upon to act. These considerations led to the arrangement of battery shown in the belief that broadside fire through a considerable arc from bow to stern was of vastly more moment in fleet action than volume of fire ahead or astern. It seems to be generally conceded that this deduction is correct."

The merit or otherwise of the *Dreadnought* depends upon the sort of fleet unit that she makes. The United States 1906-7 programme embodied a development of the *South Carolina* and having ten of her 12-inch on the broadside should be considerably superior to the *Dreadnought*. The *South Carolina* and *Michigan* are characteristically American.

There is room for considerable doubt as to whether the upper big guns can fire over the lower turrets without putting the latter temporarily out of action, but the ships have probably been unduly criticised because of this. Any arrangement that permits of all guns being used on either broadside is open to some kind of criticism. For broadside fire the American ships seem very well adapted, and that, rather than the "four guns and on," was the chief thing aimed at by the designer. The alternative method of securing this result, as in the *Infleible* type of cruiser, while superior for end-on fire on paper, is inferior in the matter of actual broadside discharge, since one turret has to fire over the decks, a thing for one or two reasons open to criticism. Discussing the paper of Mr. Robinson already referred to, the Engineer (London) said:

"It is almost an axiom in Europe that in the United States they are not very particular what a war ship is so long as she 'whips creation' on paper. Those who hold this view will find their faith severely shaken by the singularly able paper of Naval Constructor Robinson already referred to. The opinions expressed are understood to be those of the Bureau of Naval Construction, to which Mr. Robinson belongs."

Mr. Robinson begins with the *Indiana* and tells us, what few of us have realized before, that that ship was designed as a "coast defender" pure and simple; hence, many of her obvious defects, when regarded as a battle ship of ordinary type. She is, as a matter of fact, merely a monitor of large size and large secondary armament. The *Iowa*, says Mr. Robinson, was an attempt to turn the *Indiana* into a seagoing ship. Then he traces the course of the modern American Navy, with many candid admissions as to the difficulty before naval architects. Quite a formidable one, he says with emphasis, is the modern demand for increased comfort aboard, bathrooms, etc. Without any beating about the bush, the author describes these as peacetime attributes and shows that on a given displacement every comfort means a corresponding loss of efficiency. These comforts are demanded and they must be supplied, but they have to be paid for somewhere in the total displacement. Of course this is a truism, but Mr. Robinson has been the first to tackle it boldly. The American board on construction apparently intend to oppose, so far as may be, the combined hotel and war ship ideal, which in some navies has made so much headway of late.

It is not necessary to follow Mr. Robinson through his review except to here note the constant call upon naval architects to provide for fresh necessities, such as improving coaling facilities, storage of high explosives, and so on. As we have already mentioned, the popular idea is that in America they do not bother much over these things. After reading Mr. Robinson's paper, we are driven to suspect that no other nation bothers so much. Thence he proceeds to the *South Carolina* and *Michigan*, in which both cost and displacement were fixed before the naval architect commenced his labors. The point is one that all critics of these ships ignore. Without these limitations it is easy to design something better than the *Dreadnought*, but to design a *Dreadnought* of 2,000 tons less displacement is quite another matter.

The aim has been to produce a ship suitable for fleet action, rather than a vessel for individual combat against something similar to herself. This has led to a strict elimination of features which may be described as "luxuries" rather than "necessaries." There is some good reason to believe that, taking all things into consideration, the *South Carolina* type is the best all-big-gun ship yet put in hand.

The extinction of the protected cruiser is in many ways remarkable. *Gazelles* and scouts all suffer from their small size and small endurance. There are few more curious views in modern naval programmes than this ignoring of war needs. The U. S. S. *Birmingham* class scouts, with a considerable endurance, represents the realization of sound perceptions in the direction of protected cruisers, as in them alone of all small cruisers is there a sufficiency of coal.

EXTRACTS FROM SOME FOREIGN PERIODICALS REGARDING DESIGNS OF UNITED STATES VESSELS.

[Engineering, March 26, 1897.]

Discussing Admiral Highborn's paper on the *Alabama*, the editor says:

"The design of the ship differs materially from that of recent vessels of a similar class in the British navy; indeed, it is marked throughout by originality and boldness of arrangement, both in general features and matters of detail. The armored protection is very complete. * * * It will be seen * * * that the central portion of the ship is completely inclosed by armor, extending from 4 feet below the load-water line to the level of the upper deck, or a height of about 23 feet, the minimum thickness being 5½ inches."

[The Engineer, June 14, 1901.]

"Some time ago the Engineer prophesied that casemates would be an exploded idea for new British battle ships. We hear that the new 18,000-ton battle ship will have continuous batteries like the *Mikasa*, *Benedetto Brin*, all modern American ships, and all save the latest French battle ships. Bearing in mind the progress of explosives, we can not but see that the Admiralty are wise in returning to the old broadside ironclad idea."

[The Engineer, July 12, 1901.]

"In conclusion we may give the broadsides of existing ships of the same type as the *King Edward*: *King Edward*, four 12-inch, two 9.2-inch, five 6-inch; *Mikasa*, four 12-inch, seven 6-inch; *Tavritchesky*, four 12-inch, eight 6-inch; *Brin*, four 12-inch, two 8-inch, six 6-inch; *Wittlesbach*, four 9.4-inch, nine 6-inch; American, four 12-inch, four 8-inch, four 6-inch. Reckoning an 8-inch as equal to one and one-half 6-inch shell power, we get the totals: British, *King Edward*, 31 in a minute; Japanese, *Mikasa*, 29 in a minute; Russian, *Kniaz P. Tavritchesky*, 32; Italian, *Benedetto Brin*, 31; German, *Wittlesbach*, 29; American, *New Jersey*, 44. All these ships, except the *Wittlesbach*, are identical in design. The *Wittlesbach* is perhaps a rather superior design in defense, the guns being more scattered, though it is not clear how she will use her offense to the full without interference. In general she is, however, of the same type. The Russian ship completing for sea is of low freeboard, but otherwise identical with the *King Edward* in the placing of her guns. She is less seaworthy and rather less likely to be hit. The *Brin* has recently been launched. The American ship is still in the clouds and may be made more powerful. As she is, however, it will be seen that she is far and away the leader. For each ship "the best in the world" claim has been put forward, but on paper the 16,500-ton American seems to carry off the prize. In speed and armor she is equal to the *King Edward*."

NOTE.—Instead of the figures given above, the *New Jersey* class on a displacement of 14,948, have six 8-inch and six 6-inch on the broadside, making a total of 49 points, instead of 44, as given above.

[The Engineer, December 27, 1905.]

"No war ships, perhaps, have had so many vicissitudes as the United States battle ships of the *New Jersey* class. Once again they have been definitely decided on, permanently, perhaps, now; but it need not be forgotten that earlier designs have been 'final' also. There is no getting away from the fact that each new finality has been better than the preceding designs. As with each the displacement has gone up, this is not to be wondered at; but the great and essential point is this increase in displacement. In the past American ideals have tended to 'whip creation' with the minimum displacement; now obviously nautical influences can be seen at work, with the result that we observe an honest striving after a real best, in place of what, rightly or wrongly, has hitherto been under suspicion of being rather a paper best. In fine, America is now definitely settling to building American war ships to American needs."

Further along in the same editorial comment appears the following reference to the designs of the *Connecticut* class, full report upon which had been submitted to Congress a short time before. After inviting attention to various alleged defects, the editor makes the following comment:

"We have drawn attention to these defects not in a carping spirit, but because in spite of them we still hold these 17,604-ton ships, so far as the meager details available allow, superior to any other battle-ship designs, not merely as ships, but per ton of displacement."

"A very important feature * * * is the abolition of triple screws, after which the Engineer in Chief is supposed to hanker. Executive officers seem to have formed the opposition, and they have carried the day on the grounds that however advantageous the triple system may be in coal economy it lacks the tactical advantage of the twin-screw system. Purely engineering disadvantages might also be alleged, but the primary question is one of fighting capacity. With two screws there is over 8,000 indicated horsepower available for assistance in a sudden turn; with triple screws considerably less power is available. This is the gist of the argument that has carried the day again with the United States Construction Board, and it argues a sound appreciation of a war ship as a fighting machine before all else. This is the dominant note all through the report, from the specific reasons against wood sheathing—of which we shall have more to say on another occasion—the situation of magazines, and facility of ammunition supply. Never before do we remember to have seen American designs thought out with so single an eye to the practical in all things."

NOTE.—In the foregoing extracts the italicizing is not the author's.

[Scientific American, New York, Saturday, May 2, 1908.]

SIR WILLIAM WHITE ON THE AMERICAN NAVY.

In the course of a recent conversation with Sir William White, the editor of the *Scientific American* asked the distinguished naval architect for his estimate of the relative value of the ships of the United States Navy compared with those of the leading navies of the world. He replied that if a comparison were made of ships of the same date and the same type, he considered that the United States vessels were the equals of any war ships afloat.

Now, the value of this approval lies in the fact that Sir William has had a more intimate and extended experience in the design of modern war ships than any living naval architect. For a period of about twenty years he was the chief constructor of the British navy. What Ericsson was to the low-freeboard, coast-defense monitor White is to the modern, high-freeboard seagoing battle ship; and in the *Royal Sovereign* he introduced a type which, for two decades, has formed, in most of its essential features, the standard battle ship for the leading navies of the world. In his active career he has designed a greater number of battle ships and cruisers probably than any three naval architects combined.

Sir William informed us that he had followed the Senate investigation of the supposed defects in our ships with much interest and that he disagreed with the charges as originally stated in the Reuterdahl article. Taking the case of the *Dreadnought*, which was cited as an instance of how our own ships should have been armored, but were not, he made the startling statement that whereas, at full load, the American ships are depressed on an average 27 inches below the nominal flotation line, the *Dreadnought*, when so loaded, was depressed from 4 to 4½ feet; and that whereas at full load the American ships show from 6 to 9 inches of the thick belt above the water, the English ship has the corresponding belt from a foot to a foot and a half below water! He further stated that whereas in the fully loaded condition the *Dreadnought* shows only ½ to ¾ feet of 8-inch side armor, the *Connecticut* and class show from 15 to 16 feet of 7-inch side armor above the water. Therefore he considered, as well he may, that the *Connecticut* is better protected than the *Dreadnought*.

Even more disastrous to the critics of our Navy were the comments of Sir William on the question of the direct versus the interrupted hoist. Mr. Reuterdahl and others have stated, time and again, that the direct hoist, giving direct communication from the handling-room floor to the breech of the gun, is a type of construction peculiar to our own Navy, which is full of danger; and they have urged that it should have been abandoned long ago in favor of the interrupted hoist, which according to them was introduced in foreign navies to avoid the dangers inherent in the direct hoist. Thus, Mr. Reuterdahl in his recent letter to the *New York Sun*, referred to in another column, states that there is not in any foreign turret a hoist of the type we use. Now, upon this point no one is so qualified to speak as Sir William; for he informs us that it was he himself who designed the interrupted hoist nearly twenty years ago—the critics have told us that this was a comparatively modern improvement, which our slow-moving Department has refused to adopt—and that he did not design it because the interrupted hoist was less dangerous, but because he believed it would secure a faster service of ammunition to the guns! He stated furthermore that the majority of the armored ships of the world make use of the direct hoist, and that it is in no sense peculiar to the United States Navy.

And thus once more are the fallacies and the absurd exaggerations of this ill-advised onslaught upon our Navy shown to be not only baseless, but positively absurd—this time by one who is at once the foremost naval architect of the day and an outside critic of unquestioned impartiality. Let us hope that with this final and truly comic pricking of the "open hoist" turret bubble, the American public will be granted a well-earned repose.

[From the Boston Transcript.]

SIR WILLIAM HENRY WHITE PAYS TRIBUTE.

Sir William Henry White, K. C. B., F. R. S., was in Boston yesterday, and last evening attended a dinner at the Tavern Club tendered him by Josiah B. Millet, at which prominent naval officers of Boston were present. Sir William was for nearly twenty years, or up to 1902, the responsible designer of all British warships, and in knowledge of naval construction he is not surpassed by any man in the world. He is also deeply interested in American naval affairs and naval officers. Rear-Admiral F. T. Bowles, former Chief Constructor, United States Navy, and now president of the Fore River Engine Company, and Rear-Admiral Capps, present Chief Constructor, were both his pupils in naval construction. It was this interest in our naval programme that induced Sir William to reply at length to a reporter's questions regarding the faults in our Navy as outlined by Henry Reuterdahl in McClure's Magazine. He plunged at once in medias res:

"Reuterdahl says in his article that the American ships are greatly inferior to foreign ships. He says that the thick armor in the water-line region, called the armor belt, is the life of the ship, and that, in the American ships, is only 6 to 9 inches above water when they are loaded up for sea, while in foreign ships the corresponding belt armor is better placed. And he speaks of the British *Dreadnought* as being in every way superior, as far as belt-armor defense is concerned, to the American ships."

"Now, I say he is all wrong as to his facts. The American ships, when they are floating at what is called their normal water line in still water, and upright, have their belt armor about 2½ to 3 feet above that water line. You see that is the hypothetical water line—when the ship has certain weights on board, not representing her full load. The American official reports show that when the ships of the American Navy are fully laden they are about 27 inches deeper than that. And then the thick armor belt in the region of that water line still is 6 to 9 inches above water. So far Reuterdahl is correct. But he is absolutely wrong in regard to the *Dreadnought's* thick armor belt. When the *Dreadnought* is fully laden she is drawing from 4 to 4½ feet more than at her normal water line, and her thick armor belt is then a foot to 18 inches below water, and she is left with a height of armor only 4 to 4½ feet above the surface in still water."

"The American ships when fully laden are about 27 inches deeper than at the normal line. The *Dreadnought* is 4 to 4½ feet deeper—about twice. The American ships fully laden have their armor belt 6 to 9 inches still above water. The English ship has her corresponding thick armor a foot to 18 inches below water. And the English ship's defense on the sides is then restricted to armor that rises 4 to 4½ feet above water and is only 8 inches thick. The American ships of the *Connecticut* class have on their sides, for a considerable portion of their length, a vertical armor corresponding to the 8-inch armor of the *Dreadnought*—it may be a little less than 8 inches—extending 16 feet above water. So that as far as the *Dreadnought* and the *Connecticut* are concerned, the *Connecticut* is better protected above the water line."

"Now, this belt armor, in my opinion, is only a fetch. If the ship is upright and at rest in still water, and you have that thick armor belt at the water line, that portion of the ship would be, of course, well protected. But that portion, as a matter of fact, is the most difficult to hit. If the shots fall ever so little short they will ricochet and turn up. If they are high in elevation, of course they will pass over the thick armor belt."

"The water line is never the real water line when the ship is at sea. If the ship is moving, the waves formed by her motion in still water will bury that thick armor—that water line. If there are waves passing the ship, they rise above that thick armor. If the ship heels over ever so little, this belt goes under water, no matter where it is placed."

"These considerations led me, twenty years ago, to recommend to the English Admiralty that they should abolish the thick armor. And my design, which was used exclusively for a period of sixteen years, made the armor a uniform thickness from the main deck down."

"My first designs which were accepted had the thick water-line belt, but in 1888 I recommended the other course. In the *Royal Sovereign*

class the armor rose about 9 to 10 feet above the normal water line and about 5½ feet below—that is to say, the side armor was 15 to 16 feet in width. Naval opinion of that day was exactly that which Reuterdahl now holds. And so we had armor at the water line 10 inches thick, and that went 3 feet above the water line. For the rest of the height it was 5 inches thick.

"Previously there was no armor above the belt. The armor was all at the water line. The Germans have built ships within the last twelve years like that—simply a belt and no side armor above."

"What I wanted to do was, instead of having a 10-inch armor belt at the water line and a 5-inch armor above that, to distribute that weight uniformly over the same areas, and in the *Majestic* class, which was the original of all modern battle ships and which I designed about 1893, I was allowed to make the armor on the hull uniformly 9 inches thick, and did so, so that there is a wall armor of the same depth as in the *Royal Sovereign* class and of the same weight, but it had a uniform thickness of 9 inches all the way up."

"We have followed that design in England until the *Dreadnought* was built, and of course with her I had nothing to do. In the *Dreadnought* they revert to the thick water-line belt, which, as I have said, at the normal line extends about 2½ to 3 feet above still water, and when the ship is deep laden 1 to 1½ feet under water—that is to say, they go back to the arrangement which was abandoned fifteen years ago."

"This argument about the water-line belt being the life of the ship is all humbug, because you do not know where the water line is. Directly she burns out coal or uses up stores or does anything to diminish her draft that water line changes, and directly you put in water or the ship heels over or moves through the water it changes."

"When you go to sea you may have the ship rolling, so that her armor comes wholly out of water. You never go to sea with the fleet without seeing large portions of the unarmored bottoms of the ships."

"The fundamental error is in making such a fetish of the water-line belt. What you want to do is to get all the vertical height of armor you can on the side above the belt or water line, and then, when you have fixed on your limit of weight, this must also be considered. All experience proves that the chance of damage to the hull of the ship increases with its height above water."

"In the battle of Tsushima it was not the armored sides of the Russian ships that suffered, but their superstructures. The ships were not sunk by perforation of their armor, but by the perforation of their thin sides above the armor and the entrance of water into the upper parts of the ships."

"If the armor of the Russian ships had been the same as the armor of the *Connecticut*, what would have been the result?"

"It would have been vastly better for the ships. This is the point: The Russian ships had a smaller armored area above the water than the *Connecticut*, therefore they could stand battering less, and the *Dreadnought* has less armored area above the water than the *Connecticut*, taking both ships at deep draft."

"When the people talk, as Reuterdahl does, about the *Dreadnought* being such a superior vessel to the *Connecticut* in the defense, they ignore the small vertical height of armor when the ships are at deep draft."

"Does not the *Connecticut* answer all Reuterdahl's requirements as expressed in his criticisms?"

"No. What he says is that the life of the ship depends upon the water-line belt. If you admit that premise, then his argument is all right. He says a 6-inch armor above the water-line belt might be of some value, but would be quite secondary. I say that all experience proves that the increase in the vertical expansion above water of the side armor is of fundamental importance in enabling the ship to stand battering."

"There are plenty of instances in the case of the Russian ships in the war with Japan where the armor, according to all formula, should have been penetrated and was not penetrated, and the Russians, who may be supposed to know what happened, have in their later designs extended the area of the armor enormously and reduced the thickness. That has been their answer to it."

"What reasons were given by the British Admiralty for reverting to an abandoned type of armor in the case of the *Dreadnought*?"

"They decided to have an armament of ten 12-inch guns. They had therefore to provide a great weight of armor for the redoubts in which these great guns and their turntables are placed. That was a necessity, you see, to protect the armament. Then they found that with a given size of ship, with a given total weight of armor available, they could not continue to protect so large an area on the side."

"With the *Connecticut* or the *King Edward* arrangement your armor serves two purposes—it protects the battery in which you place your smaller guns and also serves to maintain buoyancy and stability by being on the side of the ship."

"If you have to put in 12-inch guns, you must protect with armor the towers in which they are placed. In the *Connecticut* or *King Edward* there are four 12-inch guns; therefore you have two towers. But when you get ten 12-inch guns, as in the *Dreadnought* or the *North Dakota*, you are obliged to take armor from the sides and put it on the towers."

"The total depth of armor on the *Dreadnought* along the side is about 13½ to 14 feet, a little less than before. And, again, the reversion to the thicker water-line belt means you have to concentrate weight there—a thing to which I have always taken exception. I think that is going back to a fallacy; it is a mistake. And you know they have not continued to use the same thickness of belt line in the latter ships of the *Dreadnought* class. They have kept the 8 inches above, but have less than 11 inches below. In other words, the difference between the upper and belt armor is less in the later ships."

"There is another thing which Mr. Reuterdahl criticised, and that is the direct hoists from the magazines to the rear of the guns. Taking it as a matter of fact again, if you were to take all the armored ships of the world at the present time on the effective lists, you would find the very great majority of them with nothing but direct hoists. It is not peculiar to American ships at all."

"Now, I have been reading the testimony given at that investigation in Washington, and from that it appears perfectly clear that the accidents that have happened are only indirectly associated with the direct hoist. The primary cause of accident has nothing to do with the hoist."

"Having said that, I ought to say that I am the man who brought out the broken hoist—that is, lifting the ammunition up a certain height from the magazines into an ammunition room and there transferring it to another hoist not in a direct line. I did that nearly twenty years ago, but I did not do it because of the danger of the direct hoist. When you have a direct hoist from the magazine up to the rear of the guns, which may be 50 feet if the gun is placed high, it takes an appreciable amount of time to lift the charge from the magazine to the gun before

you can load. Now, I said if I could put in two stages—one that would bring the ammunition to within 6 or 7 feet of the gun, and then a second set of men, who had nothing to do with the first operation, to lift it the remaining distance to the gun—I could save considerable time. That is the reason I did that, and not because of any danger."

"The inexperience of the men and the conditions of target practice are to blame. As long as you give the prize to the men who fire the most ammunition in a given time, or hit the target most frequently in a given time, they will play that game. But you will remember that the Japanese admirals, Fushimi and Togo, gave orders that that practice was not to be followed."

"In the battle of the 10th of August, outside Port Arthur, the Japanese fired away nearly all their ammunition, and were only saved by the merest good fortune. And they were not able to follow up the Russians, because they did not have reserve ammunition."

"Now, as to the freeboard and height of guns above water, all I need say about that is that the facts are again not in Mr. Reuterdahl's favor."

"It is quite true that in the swifter cruisers of the British navy I introduced a high forecastle, because they were going to drive hard and fast against the sea; but in the battle ships I kept along at a steady height of freeboard and of guns above water, and that was practically maintained all the time I was there, because it was proved to be enough by experience at sea."

"There are two requirements. There is the maintenance of speed; that demands a high bow, whether it is an Atlantic liner or a battle ship. Then there is the fighting power in a seaway; and of course there you never want to place your guns higher than you are obliged to, because by raising them you raise your center of gravity and reduce your stability accordingly."

"Reuterdahl's contention is that the existing American ships are disadvantageously situated as compared with European vessels. I say that is not so. The cruisers in your Navy have not such a great height of freeboard forward as I have given to our cruisers, but in that respect it is not a question of power, but simply a question of the maintenance of speed at sea."

"There is one thing more that I should like to say, and I think it is vital. I have known the American Navy from the start. It is not generally known that the modern American Navy started with the purchase of two of my designs from Armstrong's. That was in 1885. From those designs the *Charleston* and the *Baltimore* were built."

"The first thing I want to say in this connection is that you have in those men naval architects as capable as any, in my judgment, in the world, because they have been properly trained, and besides they are picked men."

"The second thing I want to say is that your shipbuilding yards are quite equal to any we have in their equipment and management and all that. They have come later, and they have the advantage of all the accumulated experience we have had to go upon. And there is American ingenuity at the back of all that on the mechanical side."

"And the result is that, in my opinion, you have a fleet that, ship for ship, comparing the ships designed at a given date—and that is the only fair comparison—is equal to anything the world contains. And next to the British navy I think your Navy is the best in the world."

"These wholesale criticisms and severe condemnations are not justified. There is no shop that you can not criticise; but criticism to be of value must be the result of experience. No one would want to avoid that kind of criticism. But what I do say is that these are not subjects that can be properly discussed in the public press or in magazine articles. They must be dealt with dispassionately and quietly."

APPENDIX E.

[House Report No. 1398, Sixtieth Congress, first session.]

NAVAL APPROPRIATION BILL.

Mr. Foss, from the Committee on Naval Affairs, submitted the following report to accompany H. R. 20471:

The Committee on Naval Affairs, to whom was referred so much of the President's annual message as relates to the naval establishment, together with the annual estimates of the Navy Department, submit herewith H. R. 20471, making appropriations for the naval service for the fiscal year ending June 30, 1909, with the following statement:

The amount carried by this bill is \$103,967,518.43.

The estimates of the Department amounted to \$125,041,349.80.

The committee, after careful consideration of these estimates, made deductions to the amount of \$22,518,831.37, and under "Increase of the Navy" recommend an appropriation of \$1,000,000 toward the construction of submarine boats, and \$445,000, within the discretion of the Secretary of the Navy, for the construction of subsurface torpedo boats.

The following table gives a comparative statement of the appropriations for 1908 furnished by the Navy Department, the estimates for 1909, and the amounts recommended in this bill:

Naval establishment.	Appropriated, 1908.	Estimates, 1909.	Recom- mended by this bill.
Pay of the Navy	\$21,000,000.00	\$26,086,201.00	\$27,274,201.00
Pay, miscellaneous	675,000.00	723,000.00	723,000.00
Contingent, Navy	65,000.00	65,000.00	65,000.00
Naval station, Island of Guam:			
Maintenance and care of lepers and other special patients	16,000.00	15,000.00	15,000.00
Bureau of Navigation	1,990,063.00	2,586,257.85	2,438,276.00
Bureau of Ordnance	11,715,406.75	21,414,606.75	10,744,722.75
Bureau of Equipment	7,528,028.00	10,236,978.00	9,424,849.00
Bureau of Yards and Docks	1,129,632.90	1,731,438.70	1,429,632.90
Public works, Bureau of Yards and Docks	3,124,940.00	12,054,822.00	3,170,400.00
Public works, Secretary of the Navy:			
Naval Academy	380,000.00	247,000.00	47,000.00
Public works, Bureau of Navigation:			
Naval training station, Califor- nia	89,000.00	29,500.00	29,500.00
Naval training station, Rhode Island	58,912.00	140,890.00	139,890.00
Naval training station, Great Lakes	700,000.00	1,095,600.00	1,095,600.00
Public works, Bureau of Ordnance	370,280.00	571,460.00	152,800.00
Public works, Bureau of Equipment	10,000.00	10,000.00	10,000.00

Naval establishment.	Appropriated, 1908.	Estimates, 1909.	Recom- mended by this bill.
Public works, Bureau of Medicine and Surgery.....	\$285,000.00	\$450,000.00	\$360,000.00
Bureau of Medicine and Surgery.....	405,900.00	425,000.00	385,000.00
Bureau of Supplies and Accounts.....	7,365,845.21	7,337,320.30	7,321,882.09
Bureau of Construction and Repair.....	8,102,824.25	8,502,824.25	8,202,824.25
Bureau of Steam Engineering.....	6,729,420.00	7,120,240.00	6,309,420.00
Naval Academy.....	440,728.36	483,582.86	475,728.36
Marine Corps:			
Public works.....	210,000.00		
Paymaster.....	2,843,908.46	2,972,685.08	2,948,201.08
Quartermaster.....	2,417,089.00	3,508,971.00	2,316,999.00
Increase of the Navy:			
Construction and machinery.....	12,713,915.00	9,832,962.00	9,832,962.00
Armor and armament.....	10,000,000.00	7,000,000.00	7,000,000.00
Equipment.....	750,000.00	400,000.00	400,000.00
Subsurface or submarine boats.....	500,000.00		1,445,000.00
Total.....	100,303,602.93	125,041,349.80	108,967,518.43

The first paragraph of the bill relates to—
PAY OF THE NAVY.

Pay of the Navy.	Appropriated, 1908.	Estimates, 1909.	Recommended.
Pay of the Navy.....	\$21,000,000.00	\$26,086,201.09	\$27,274,201.09
Pay, miscellaneous.....	675,000.00	723,000.00	723,000.00
Contingent, Navy.....	65,000.00	65,000.00	65,000.00

The estimates as submitted in the Book of Estimates for the naval establishment called for an increase of 3,000 men, and later, at the hearings before the committee, it was demonstrated that an increase of 6,000 men in all would be necessary to man ships that are in commission and those about to be commissioned. The total estimate for pay for the 42,000 men and officers amounts to \$27,274,201. After careful consideration the committee judged it to be unwise to reduce this estimate, in view of the fact that at the time of the hearings the enlisted force was recruited within 600 men of the full allowance, and for the past three or four months over 2,000 men have been recruited monthly. It is therefore the belief of the committee that the additional 6,000 men herein provided for will be shortly recruited, and the amount herein recommended will be necessary for pay.

The additional 6,000 men are recommended, as it will be necessary to put the following ships in commission within the next few months: *California, Mississippi, Idaho, New Hampshire, South Dakota, North Carolina, Montana, Chester, Birmingham, and Salem*, and in addition 1,500 men are required to commission torpedo boats not now in commission.

The appropriation for "Pay, miscellaneous," has an apparent increase of \$48,000. This increase is due to a plan of consolidating all the charges pertaining to the Navy Department and its bureaus for ice, telephone rentals and tolls, telegrams, cablegrams, and postage, foreign and domestic, post-office box rentals, and express charges, so that they may be paid through one office instead of being paid through offices in the several bureaus, thereby preventing the multiplication of vouchers and duplication of work, which will result in economy. The various bureaus and appropriations from which these charges have been heretofore paid have been reduced in amounts equal to the amount necessary to pay these various charges. Therefore, while there is an apparent increase of \$48,000 in this appropriation, there has been a corresponding reduction of \$48,000 in the appropriations from which these charges have been heretofore paid. Otherwise the appropriation "Pay, miscellaneous," remains the same as last year, while that for "Contingent, Navy," likewise remains the same.

BUREAU OF NAVIGATION.

The following table is a comparative statement of the appropriations for 1908, estimates for 1909, and the amounts recommended in this bill:

Bureau of Navigation.	Appropriated, 1908.	Estimates, 1909.	Recom- mended.
Transportation.....	\$400,000.00	\$550,870.00	\$475,000.00
Recruiting.....	121,340.00	130,000.00	130,000.00
Contingent.....	15,000.00	20,000.00	12,462.00
Gunnery exercises.....	120,000.00	140,000.00	130,000.00
Outfits on first enlistment.....	600,000.00	900,000.00	900,000.00
Maintenance of naval auxiliaries.....	500,000.00	571,540.00	525,000.00
Naval training station, California.....	50,000.00	61,000.00	60,652.00
Naval training station, Rhode Island.....	71,000.00	80,000.00	79,511.00
Naval training station, Great Lakes:			
Maintenance.....	20,000.00	30,000.00	29,800.00
Salaries clerical force (1 clerk, in- crease of \$200 submitted).....	6,940.00	7,140.00	6,940.00
Naval War College.....	15,700.00	20,700.00	15,700.00
Naval Home, Philadelphia, Pa.....	73,688.00	75,017.86	70,151.00
Total.....	1,990,663.00	2,586,267.86	2,438,276.00

The appropriation for transportation has been increased \$75,000, because the Navy has enlisted more men this year than in any previous year, and a great many of the recruits came from the interior and had to be transported to the various stations along the coast, and transportation has increased in cost greatly. The Navy Department has been unable to make satisfactory contracts with the railroads, as has previously been the case, and a great many of the recruits have been transported to the Pacific coast, thereby necessarily increasing the amount of this appropriation.

The appropriation for "Outfits on first enlistment" is increased to \$900,000 by reason of the increased cost of materials which enter into the manufacture of the outfit and the increase in the number of enlistments, as heretofore stated. A deficiency of about \$300,000 is estimated under this appropriation for the present year.

The provision for the "Maintenance of naval auxiliaries" has been increased \$25,000; this increase is due to the fact that the wages of all the men on auxiliaries have been increased. There are eighteen vessels included in the Naval Auxiliary Service, each one having a crew of from twenty-five to forty men, and from seven to nine officers each.

The appropriation recommended for the naval training station in California has been increased from \$50,000 to \$60,652, an increase of \$10,652. The committee deemed this increase proper in view of the fact that a great many more men will be at this station on account of the fleet's being on the Pacific, and as recruits are enlisted from the interior they will be transported to this training station in California. The appropriation for the Rhode Island Naval Training Station has been increased by \$8,500 in order that many of the enlisted men who now do work not incident to the naval service about the station can be taken from this work and engaged in the work for which they enlisted, and their places to be taken by others not in the naval service. The appropriation for the naval training station, Great Lakes, has likewise been increased \$9,860, for protection of the water front. The appropriation for the Naval War College is the same as last year, and there is a decrease of about \$3,500 in the Naval Home, Philadelphia.

BUREAU OF ORDNANCE.

The following table gives a comparative statement of the appropriations for 1908, estimates for 1909, and the amounts recommended in this bill:

Bureau of Ordnance.	Appropriated, 1908.	Estimates, 1909.	Recom- mended.
Ordnance and ordnance stores:			
Procuring, producing, preserving, and handling ordnance material.....	\$4,000,000.00	\$4,500,000.00	\$4,500,000.00
Ammunition and other supplies for new ships.....	750,000.00	1,284,000.00	2,750,000.00
Smokeless powder, purchase and manufacture of.....	500,000.00	650,000.00	650,000.00
Machine tools for navy-yard, Bos- ton, Mass.....	39,000.00		
Machine tools for navy-yard, New York, and magazine, Dover, N. J.....		10,000.00	10,000.00
Machine tools for navy-yard, Mare Island, Cal.....		50,000.00	50,000.00
Auxiliary hoist, building No. 111, navy-yard, Mare Island, Cal.....		3,500.00	3,500.00
For Naval Gun Factory, Washington, D. C.:			
New and improved machinery for existing shops.....	150,000.00	150,000.00	150,000.00
Machinery, cupolas, furnaces, etc., for proposed new foundry.....		122,000.00	
Remodeling 110-ton crane in north gun shop.....		30,000.00	
Machinery for locomotive house.....		12,000.00	
Mines for issue (for mine ship).....		100,000.00	
Experimental work in the devel- opment of armor-piercing pro- jectiles, fuzes, powders, and high explosives, erosion tests, mounts, sights, etc.....		200,000.00	
Advance base outfits.....		780,000.00	
Modernizing battery of Iowa.....	36,000.00		
Modernizing batteries of Monterey and Monadnock.....	20,000.00		
New turret sights for 4 monitors of Arkansas class.....	16,000.00		
New battery for the Brooklyn.....	177,200.00		
Modifying mounts and providing new sights.....	100,000.00	135,000.00	60,000.00
Replacing 3-pounder and 6-pounder guns and mounts and sights on board battle ships and armored cruisers by 3-inch 50-caliber guns, mounts, and sights.....		830,000.00	415,000.00
Purchase or manufacture of new am- munition-hoisting arrangements for all turret ships to and including the South Carolina and Michigan.....		2,112,000.00	
Replacing 8-inch guns on Maryland and class (20 guns).....		502,000.00	250,000.00
Replacing 12-inch Mark III with Mark V guns on all battle ships (18 guns).....		1,108,000.00	
Lining eight 12-inch Mark III guns.....		93,000.00	350,000.00
Replacing firing locks on 5-inch and 6-inch guns.....		45,000.00	45,000.00
Replacing small arms and automatic guns.....		1,195,500.00	
Fire-control instruments for battle ships, monitors, and cruisers.....	300,000.00	300,000.00	300,000.00
Reserve stock of mines and mine ap- pliances.....	100,000.00	300,000.00	
Torpedoes and converting torpedo boats, etc.....	300,000.00	1,150,000.00	650,000.00
Reserve ammunition.....	4,000,000.00	4,000,000.00	
Reserve guns for ships of the Navy.....	750,000.00	453,000.00	
Repairing, modernizing, and fitting with sights 4-inch and 5-inch guns and mounts not needed for vessels in commission.....		500,000.00	
Reserve torpedoes and appliances.....	250,000.00	500,000.00	300,000.00
Torpedo station, Newport, R. I.....	70,000.00	75,000.00	70,000.00
Naval Militia.....	60,000.00	100,000.00	100,000.00
Repairs, ordnance.....	30,000.00	50,000.00	30,000.00
Contingent, ordnance.....	20,000.00	20,000.00	14,066.00
Civil establishment.....	47,206.75	54,606.75	47,206.75
Total.....	11,715,406.75	21,414,606.75	10,744,772.75

The appropriation for "Ordnance and ordnance stores" has been increased by \$500,000. This might be termed the working appropriation of the Bureau. A large part of this appropriation is for target

practice, and owing to the fact that there will be in full or partial commission during the fiscal year of 1908-9 24 battle ships, 12 first-class cruisers, 66 second and third rate vessels, 60 torpedo vessels, and 15 auxiliaries, making a total of 177 vessels, an increase for target practice must be provided for. This appropriation includes all work at navy-yards, magazines, and naval proving grounds; all material and labor necessary for the care and preservation of ordnance stores on shore and afloat; furniture in ordnance buildings at navy-yards and in magazines and stations; labor, watchmen, fuel, tools, and a great variety of miscellaneous items not otherwise provided for.

The appropriation for smokeless powder is increased \$150,000. The committee deemed it wise to allow this increase for the purpose of reworking deteriorated or useless powder at Indian Head powder factory. This process renders useless powder of great value at one-fourth the cost to manufacture the same quantity of new powder.

The appropriations "Ammunition and other supplies for new ships" and "Reserve ammunition" have been consolidated under the appropriation "Ammunition and other supplies for ships." Upon investigation the committee found that there had accumulated under the appropriation "Increase of the Navy, armor and armament" a large quantity of ammunition which was only available for use on new ships as they were placed in commission, and likewise a large quantity under the appropriation "Reserve ammunition" which could not be properly used on the ships in commission, but held as a reserve supply. As this resulted in a deterioration of this ammunition the committee deemed it wise that the ammunition accumulated under these two appropriations should be made available for issue and used before deterioration and replaced by new ammunition from time to time.

The appropriation for new and improved machinery at the Naval Gun Factory, Washington, D. C., is the same as last year.

The committee recommend the completion of the work of modifying the 4-inch 40-caliber mounts and the 5-inch 40-caliber mounts, but reduces the appropriation to \$60,000. The committee also recommend an appropriation of \$415,000 for replacing the 3-pounder and 6-pounder guns by 3-inch 50-caliber or larger guns, because of the increased effective range of the latest type of torpedo. These new guns give the ships protection from long-range torpedo discharge. The committee also recommend the replacing of 8-inch Mark V guns with 8-inch Mark VI guns on the *Maryland* and her class, and the relining and converting of 12-inch Mark III to Mark IV guns; also the replacing Mark IX two-firing locks with Mark X firing locks on 5 and 6 inch guns, in order that the batteries of the ships may be kept in the highest state of efficiency.

The appropriation for fire-control instruments for the ships is the same as last year.

The committee recommend an appropriation of \$650,000 for torpedoes and converting torpedo boats, in order that the torpedo boats may be brought up to the highest degree of efficiency for the discharge of the modern torpedo, and that the most modern torpedoes be either purchased or manufactured for the same. In addition thereto the committee recommends an appropriation of \$300,000 under the title "Torpedoes and appliances," the latter appropriation being intended mainly for the cost of manufacture of torpedoes and appliances at the Government's torpedo station at Newport, R. I. The appropriation for the maintenance of the torpedo station at Newport is the same as last year.

The committee recommend an increase of the appropriation "Arming and equipping Naval Militia" to \$100,000, in order that this branch of the Naval Reserve of the United States might be more efficiently conducted.

BUREAU OF EQUIPMENT.

The following table gives a comparative statement of the appropriations for 1908, estimates for 1909, and the amounts carried in this bill:

Bureau of Equipment.	Appropriated, 1908.	Estimates, 1909.	Recommended.
Equipment of vessels.....	\$3,250,000.00	\$4,250,000.00	\$3,750,000.00
Coal and transportation.....	4,150,000.00	5,000,000.00	5,000,000.00
Contingent equipment.....	15,000.00	15,000.00	11,821.00
Ocean and lake surveys.....	75,000.00	75,000.00	75,000.00
Depots for coal.....		600,000.00	450,000.00
Chain-making machine.....		100,000.00	
Equipment machinery plants.....		150,000.00	100,000.00
Civil establishment, Bureau of Equipment.....	38,028.00	46,978.00	38,028.00
Total.....	7,528,028.00	10,236,978.00	9,424,849.00

The appropriation "Equipment of vessels" is increased \$500,000 over the appropriation of last year. This increase is due to the increased number of ships put in commission and the necessity of fitting them with fire-control apparatus, as well as wireless telegraphy. The greater part of the increase is due to items for electrical work. The Department is asking an increase of \$690,000 alone for the electrical branch. There are 75 vessels of the Navy fitted, or about to be fitted, with wireless, and it is estimated that the maintenance of the stations on board ships amounts to \$50,000 annually. In this appropriation is included an item of \$35,000 to cover necessary work to be done on vessels loaned or to be loaned to the States for the use of Naval Militia. In view of the increased number of ships in commission and about to be commissioned, the committee recommend the increase above stated.

The appropriation "Coal and transportation" is increased \$850,000. The committee recommend this increase because of the greater number of ships in commission and the policy of the Department to have fleet maneuvers on such a scale as to test the battle efficiency of the fleets. The principal causes of the increase are as follows:

- Increase in the number of purposes for which the appropriation is applied.
- Increase of the number of ships in commission.
- Increase in size of ships and consequent coal consumption.
- Increase in the first cost of coal at tide water.
- Increase in freight rates due to transporting coal to greater distances than heretofore.

An appropriation of \$450,000 is recommended by the committee for "Depots for coal," which will enable the Secretary of the Navy to execute the provisions of section 1552 of the Revised Statutes, which amount is to be used for completing the coal depots at San Diego and California City Point, as there is a very pressing demand for coaling stations on that coast.

BUREAU OF YARDS AND DOCKS.

The following table gives a comparative statement of the appropriations for 1908, estimates for 1909, and the amounts carried in this bill:

Bureau of Yards and Docks.	Appropriated, 1908.	Estimates, 1909.	Recommended.
Maintenance, yards and docks.....	\$350,000.00	\$1,500,000.00	\$1,250,000.00
Contingent, Bureau of Yards and Docks.....	30,000.00	30,000.00	30,000.00
Civil establishment.....	149,652.90	201,438.70	149,652.90
Total.....	1,129,652.90	1,731,438.70	1,429,652.90

The committee recommend an increase of \$300,000 under the appropriation "Maintenance of Yards and Docks." This increase is due to the consolidation of the heat, light, and power plants in all the navy-yards, whereby it is believed a great reduction in cost will ultimately be realized. Another item in the increase is due to the fact that all the telephones installed in the various navy-yards are now placed under this Bureau instead of being under several, as heretofore. It is believed this will result in a great saving. Another item in the increase is due to a considerable increase in the cost of labor and material. There will likewise be an increase in cost on account of the change in the system of accounting, which will enable the Paymaster-General to give an exact account, and is an excellent system, whereby the value of stock on hand can be ascertained at any time.

PUBLIC WORKS, BUREAU OF YARDS AND DOCKS.

The following table gives a comparative statement of the appropriations for 1908, estimates for 1909, and the amounts carried in this bill:

Navy-yards and stations.	Appropriated, 1908.	Estimates, 1909.	Recommended.
Portsmouth, N. H.....	\$244,900.00	\$871,350.00	\$156,000.00
Boston, Mass.....	128,500.00	435,500.00	197,800.00
New York, N. Y.....	263,809.00	628,000.00	286,000.00
Philadelphia, Pa.....	125,500.00	993,225.00	150,000.00
Washington, D. C.....	85,000.00	985,047.00	48,000.00
Charleston, S. C.....	287,000.00	402,500.00	125,000.00
Norfolk, Va.....	365,500.00	1,950,500.00	505,000.00
Mare Island, Cal.....	248,500.00	786,800.00	211,000.00
Puget Sound, Wash.....	258,500.00	1,491,500.00	420,000.00
Pensacola, Fla.....	242,500.00	157,800.00	30,800.00
New Orleans, La.....	156,309.00	75,000.00	31,000.00
Tutula, Samoan Islands.....	6,000.00	15,000.00	15,000.00
Olongapo, P. I.....	90,900.00	555,500.00	100,000.00
Island of Guam.....	22,500.00	32,000.00	32,000.00
Cavite, P. I.....	13,000.00	59,700.00	59,700.00
Culebra.....	2,000.00	11,100.00	11,100.00
Newport, R. I.....	7,840.00		
Key West, Fla.....	44,500.00	23,000.00	
Guantanamo, Cuba.....		425,000.00	
Plans and specifications for public works.....	30,000.00	40,000.00	30,000.00
Repairs and preservation at navy-yard.....	500,000.00	750,000.00	600,000.00
Hawaii.....	3,100.00	6,000.00	6,000.00
Floating derrick.....		300,000.00	100,000.00
Total.....	3,124,940.00	12,054,822.00	3,170,400.00

It will be seen from the above table that the estimates amounted to \$12,054,822; but after careful consideration of these estimates and hearings thereon the committee recommend this year a total of \$3,170,400, which is a small increase over the appropriation of last year. The committee recommend the insertion of the following provision regarding the expenses of consolidation of power plants, etc.:

"The Secretary of the Navy shall report to Congress at the commencement of the next regular session the amount of money expended on consolidation of power plants since the authorization for such consolidation was given. In 1904, such statement to be in detail for each navy-yard and to indicate amount expended for building and machinery separately; also to include a statement of the value of building and power plants at each navy-yard at the date of the above-noted authorization; also the total amounts appropriated for power houses and power-plant extensions which had not been utilized on April 27, 1904, the date of the authorization of the consolidations."

It will be noted that the committee recommend the expenditure of money in the navy-yards and stations principally toward the completion of the consolidation of the heat, light, and power plants, work which has already been begun and is well advanced.

PUBLIC WORKS UNDER THE SECRETARY OF THE NAVY.

The committee recommend an appropriation of \$62,000 under this appropriation, in which is included \$15,000 for maintenance and care of lepers at the naval station, Island of Guam. The remaining \$47,000 is for the enlargement of the water plant at the Naval Academy and other smaller items. The enlargement of this water plant at the Naval Academy will result in a total saving of from \$18,000 to \$20,000 a year in water bills.

PUBLIC WORKS, BUREAUS OF NAVIGATION, ORDNANCE, EQUIPMENT, MEDICINE AND SURGERY.

The following table gives a comparative statement of the appropriations for 1908, estimates for 1909, and the amounts recommended in this bill for public works under the Bureaus of Navigation, Ordnance, Equipment, and Medicine and Surgery:

Public works.	Appropriated, 1908.	Estimates, 1909.	Recommended.
Bureau of Navigation:			
Naval training station, California.....	\$39,000.00	\$29,500.00	\$29,500.00
Naval training station, Rhode Island.....	58,012.00	140,890.00	139,890.00
Naval training station, Great Lakes.....	700,000.00	1,095,600.00	1,095,600.00
Total.....	797,012.00	1,265,990.00	1,264,990.00

Public works.	Appropriated, 1908.	Estimates, 1909.	Recommended.
Bureau of Ordnance:			
Naval magazine, Dover, N. J.	\$22,000.00		
Naval magazine, St. Juliens Creek, Md.	14,000.00	\$12,450.00	
Naval proving grounds Indianhead, Md.	34,130.00	314,760.00	\$14,760.00
Naval magazine, Fort Mifflin, Pa.	8,200.00	22,100.00	14,000.00
Naval magazine, Mare Island, Cal.	50,000.00	33,000.00	11,500.00
Torpedo station, Rhode Island.	12,500.00	124,300.00	54,150.00
Magazine, Iona Island, N. Y.	23,950.00	17,500.00	10,000.00
Magazine, Puget Sound, Wash.	75,000.00	34,350.00	34,350.00
Pensacola, Fla.		5,000.00	5,000.00
Olongapo, P. I.		8,000.00	8,000.00
Total	369,780.00	571,460.00	152,360.00
Bureau of Equipment:			
Naval Observatory, grounds and roads.	10,000.00	10,000.00	10,000.00
Bureau of Medicine and Surgery:			
Naval hospital, Pensacola, Fla.	25,000.00	50,000.00	
Naval hospital, Puget Sound, Wash.	75,000.00	75,000.00	75,000.00
Naval hospital, Washington, D. C.	60,000.00		
Naval medical supply depot, Canacao.	25,000.00		
Naval hospital, Norfolk, Va. (act of June 29, 1906)	100,000.00	100,000.00	100,000.00
Naval hospital, Annapolis, Md.		125,000.00	85,000.00
Naval hospital, Great Lakes.		100,000.00	100,000.00
Total	285,000.00	450,000.00	360,000.00

PUBLIC WORKS, BUREAU OF NAVIGATION.

The committee recommend improvements to the amount of \$29,500 for the naval training station in California, \$139,890 for the naval training station in Rhode Island, and \$1,095,600 for the naval training station, Great Lakes. This appropriation for the Great Lakes naval training station completes the buildings in accordance with the provisions of the act of Congress approved June 29, 1906, and will complete the electrical mains and conduits and pay the cost of inspection, architect's fee, and other necessary improvements to the station.

PUBLIC WORKS, BUREAU OF ORDNANCE.

The committee recommend minor improvements to the extent of \$14,760 at the naval proving ground, Indianhead, Md.; \$14,600, naval magazine, Fort Mifflin, Pa.; \$11,500, naval magazine, Mare Island, Cal.; \$54,150 at torpedo station, Newport, R. I.; \$10,000, naval magazine, New York Harbor; \$34,550, naval magazine, Puget Sound, Washington; \$5,000, navy-yard, Pensacola, Fla., and \$8,000 for naval magazine, Olongapo, P. I., making a total of \$152,360, a reduction of over \$217,000 in the appropriation for last year.

PUBLIC WORKS, BUREAU OF EQUIPMENT.

An appropriation of \$10,000 is recommended, the same as last year, for the Naval Observatory.

PUBLIC WORKS, BUREAU OF MEDICINE AND SURGERY.

The committee recommend an appropriation of \$75,000 to complete the naval hospital at Puget Sound, as authorized by the naval act of March 2, 1907; also \$85,000 for the erection of new wards at the naval hospital, Annapolis, Md. The need of the contagious wards contemplated to be built by this appropriation has been demonstrated by an epidemic of diphtheria among the midshipmen at Annapolis in the past four months, when the patients had to be quartered in tents. One hundred thousand dollars is recommended to complete the appropriation for the naval hospital at Norfolk, Va., as authorized by the act of Congress approved June 29, 1906. A like appropriation is recommended for a naval hospital at Great Lakes, as at present there is no provision made for the sick at that station.

PUBLIC WORKS, MARINE CORPS.

The committee recommend an appropriation of \$210,000 for public works for the Marine Corps, a reduction of \$137,000 in last year's appropriation. Of this amount, \$70,000 is for the purchase of ground adjoining quartermaster's depot and building an addition to same, which is urgently requested. The remaining appropriation is divided among the navy-yards, Philadelphia, Pa., Norfolk, Va., Charleston, S. C., Boston, Mass., New York, N. Y., Olongapo, P. I., and Sitka, Alaska.

BUREAU OF MEDICINE AND SURGERY.

The following table gives a comparative statement of the appropriations for 1908, estimates for 1909, and the amounts carried in this bill:

Bureau of Medicine and Surgery.	Appropriated, 1908.	Estimates, 1909.	Recommended.
Medical department.	\$255,000.00	\$270,000.00	\$270,000.00
Naval hospital fund.	40,000.00	40,000.00	
Contingent, medicine and surgery.	55,000.00	60,000.00	60,000.00
Transportation of remains.	10,000.00	10,000.00	10,000.00
Repairs, medicine and surgery.	45,000.00	45,000.00	45,000.00
Equipment, naval hospital, Guantanamo.	900.00		
Total	405,900.00	425,000.00	385,000.00

The appropriations, as will be seen from the above table, are practically the same as last year, there being an increase of \$20,000 due to the enlistment of additional men under the provision of the naval act of March 2, 1907.

BUREAU OF SUPPLIES AND ACCOUNTS.

The following table gives a comparative statement of the appropriations for 1908, estimates for 1909, and the amounts carried in this bill:

Bureau of Supplies and Accounts.	Appropriated, 1908.	Estimates, 1909.	Recommended.
Provisions, Navy.	\$6,526,866.87	\$6,547,903.75	\$6,547,903.75
Contingent, supplies and accounts.	175,000.00	170,000.00	170,000.00
Freight, supplies and accounts.	500,000.00	500,000.00	500,000.00
Civil establishment, supplies and accounts.	103,978.34	119,416.55	103,978.34
Total	7,305,845.21	7,337,320.30	7,321,882.09

The appropriation "Provisions, Navy" is practically the same as last year. The other appropriations of this Bureau remain the same as last year.

BUREAU OF CONSTRUCTION AND REPAIR.

The following table gives a comparative statement of the appropriations for 1908, estimates for 1909, and the amounts carried in this bill:

Bureau of Construction and Repair.	Appropriated, 1908.	Estimates, 1909.	Recommended.
Construction and repair of vessels.	\$7,900,000.00	\$8,750,000.00	\$8,000,000.00
Improvement of construction plants:			
Navy-yard, Portsmouth, N. H.	15,000.00	15,000.00	15,000.00
Navy-yard, Boston, Mass.	20,000.00	20,000.00	20,000.00
Navy-yard, New York, N. Y.	20,000.00	20,000.00	20,000.00
Navy-yard, League Island, Pa.	15,000.00	15,000.00	15,000.00
Navy-yard, Norfolk, Va.	12,000.00	12,000.00	12,000.00
Navy-yard, Charleston, S. C.	20,000.00	20,000.00	20,000.00
Navy-yard, Pensacola, Fla.	15,000.00	15,000.00	15,000.00
Navy-yard, Mare Island, Cal.	15,000.00	15,000.00	15,000.00
Navy-yard, Puget Sound, Wash.	20,000.00	20,000.00	20,000.00
Naval station, New Orleans, La.	10,000.00	10,000.00	10,000.00
2 seagoing tugs.		300,000.00	
Civil establishment.	40,824.25	40,824.25	40,824.25
Total	8,102,824.25	9,252,824.25	8,202,824.25

The appropriations for this Bureau are substantially the same as last year, an increase of \$100,000 being recommended under the appropriation "Construction and repair of vessels," to be used for vessels loaned to the Naval Militia of the various States.

BUREAU OF STEAM ENGINEERING.

The following table gives a comparative statement of the appropriations for 1908, estimates for 1909, and the amounts carried in this bill:

Bureau of Steam Engineering.	Appropriated, 1908.	Estimates, 1909.	Recommended.
Steam machinery:			
For completion, repairing, and preservation of machinery, boilers, etc.	\$3,500,000.00	\$4,065,000.00	\$3,750,000.00
For purchase, handling, and preservation of material stores, etc.	2,000,000.00	2,500,000.00	2,250,000.00
For incidental expenses for naval vessels and yards.	6,000.00	6,000.00	6,000.00
Improvement of steam engineering plant:			
Portsmouth, N. H., Navy-Yard.	30,000.00	75,000.00	30,000.00
Boston, Mass., Navy-Yard.		25,000.00	25,000.00
New York, N. Y., Navy-Yard.	40,000.00	40,000.00	40,000.00
Philadelphia, Pa., Navy-Yard.	25,000.00	25,000.00	25,000.00
Norfolk, Va., Navy-Yard.	25,000.00	40,000.00	25,000.00
Pensacola, Fla., Navy-Yard.	10,000.00	30,000.00	10,000.00
Mare Island, Cal., Navy-Yard.		75,000.00	25,000.00
Puget Sound, Wash., Navy-Yard.		50,000.00	25,000.00
New Orleans, La., naval station.		10,000.00	10,000.00
Guantanamo, Cuba, naval station.		10,000.00	
Cavite, P. I., naval station.	25,000.00	15,000.00	15,000.00
Olongapo, P. I., naval station.	20,000.00	25,000.00	25,000.00
Engineering experimental station, United States Naval Academy, Annapolis, Md.:			
Salaries.	5,520.00	12,240.00	5,520.00
For civilian assistant to director.			
For 1 chemist.			
For 1 skilled mechanic.			
For 1 electrical mechanic.			
Contingent.		1,000.00	
Experimental work at engineering laboratory.	25,000.00	30,000.00	25,000.00
Buildings.			
1 house for quarters for engineering director (officer).			
1 house for quarters for assistant to director (officer).			
1 house for quarters for assistant to director (civilian).			
Civil establishment:			
At all navy-yards and stations.	17,900.00	36,000.00	17,900.00
Total	5,729,420.00	7,120,240.00	6,309,420.00

The appropriations for this Bureau are practically the same as last year with the exception of an increase of \$250,000 under "Steam machinery" and \$250,000 for the preservation of machinery tools in navy-yards and stations and the handling and preservation of all machinery stores and running the yard engines. This increase is due to the fact that the Navy is larger and more ships are in commission.

Also \$65,000 is recommended for the care of the machinery of the vessels loaned to the Naval Militia of the various States.

NAVAL ACADEMY, CIVIL ESTABLISHMENT.

The following table gives a comparative statement of the appropriations for 1908, estimates for 1909, and the amounts carried in this bill:

Naval Academy.	Appropriated, 1908.	Estimates, 1909.	Recommended.
Pay of professors and others.....	\$133,408.26	\$142,462.76	\$134,608.26
Pay of watchmen, mechanics, and others.....	100,000.00	125,000.00	125,000.00
Pay of steam employees.....	20,343.06	20,343.06	20,343.06
Special course athletics.....	3,000.00	5,000.00	5,000.00
Repairs.....	30,000.00	30,000.00	30,000.00
Heating and lighting.....	50,000.00	60,000.00	60,000.00
Contingent.....	108,977.04	100,777.04	100,777.04
Total.....	440,728.36	483,582.86	475,728.36

It will be seen from the above table that the appropriations are practically the same as last year. An increase of \$25,000 under "Pay of watchmen, mechanics, and others" is recommended first, for increased labor in the power house, and second, increased labor to the care of buildings. This increase is due to the number of laborers and not to the increase of pay for same.

MARINE CORPS.

The Marine Corps is a military branch of the naval service and consists to-day of 278 officers and 8,771 men, and is fully recruited.

The following table shows the appropriations for 1908, estimates for 1909, and the amounts carried in this bill:

Marine Corps.	Appropriated, 1908.	Estimates, 1909.	Recommended.
Pay, officers' active list.....	\$598,140.00	\$609,713.00	\$609,713.00
Pay, officers' retired list.....	115,000.00	115,000.00	115,000.00
Pay, enlisted men active list.....	1,883,555.20	1,954,084.00	1,955,000.00
Pay, enlisted men retired list.....	67,422.00	84,469.00	84,469.00
Undrawn clothing.....	85,569.98	98,707.80	98,707.80
Mileage.....	40,000.00	45,000.00	45,000.00
Hire and commutation of quarters.....	20,000.00	30,000.00	30,000.00
Civil force.....	30,311.28	35,711.28	30,311.28
Total "Pay, Marine Corps".....	30,311.28	35,711.28	30,311.28
Quartermaster's department:			
Provisions.....	548,503.00	648,543.00	648,543.00
Clothing.....	600,092.00	650,920.00	650,920.00
Fuel.....	80,000.00	110,000.00	100,000.00
Military stores.....	225,782.00	250,782.00	230,000.00
Transportation and recruiting.....	186,000.00	236,000.00	236,000.00
Repairs of barracks.....	78,836.00	88,836.00	88,836.00
Forage.....	17,700.00	17,700.00	17,700.00
Hire or commutation of quarters.....	51,548.00	60,000.00	60,000.00
Contingent.....	280,800.00	330,800.00	285,000.00
Total quartermaster's department.....	2,070,089.00	2,814,971.00	2,316,999.00
Total Marine Corps, exclusive of public works.....	4,914,087.46	5,787,656.08	5,265,200.08

The small increases under "Pay, Marine Corps," are because a greater proportion of officers are serving abroad and a great proportion of officers became entitled to longevity pay during the past year. The increase of \$13,000 in "Undrawn clothing," is due to the expected discharge of 3,000 men upon the expiration of their enlistment, and they are entitled to be paid the money value of the clothing they have saved. The increase of \$100,000 in the appropriation "Provisions, Marine Corps," is due to the increased cost of 16 per cent in the cost of rations. An increase of \$50,000 is recommended under "Clothing, Marine Corps," because of the fact that about 1,000 men are serving in Cuba, in the field, at such work as is particularly destructive to their uniforms. An increase of \$20,000 under "Fuel, Marine Corps," is necessitated by the increase due to the Army act which increased the number of rooms to which officers are entitled, and, therefore, the amount of fuel that they consume. The increase in "Transportation and recruiting, Marine Corps," is due to the fact that the cost of transportation of the military has increased considerably, as the Department is unable to make competitive contracts with the railroads. The increase under "Repairs of barracks," is due to the repairs to the barracks on the Isthmus of Panama being paid from this appropriation, where the Isthmian Canal Commission has formerly paid for same. The other appropriations for the Marine Corps remain practically the same as last year.

INCREASE OF THE NAVY.

The following table shows the amounts appropriated for 1908, estimates for 1909, and the amounts carried in this bill:

Increase of the Navy.	Appropriated, 1908.	Estimates, 1909.	Recommended.
Bureaus of Construction and Repair and Steam Engineering:			
Increase of the Navy, construction and machinery.....	\$12,713,915.00	\$9,832,962.00	\$9,832,962.00
Increase of the Navy, armor and armament.....	10,000,000.00	7,000,000.00	7,000,000.00
Increase of the Navy, equipment.....	750,000.00	400,000.00	400,000.00
Increase of the Navy, subsurface or submarine boats.....	500,000.00	-----	1,445,000.00
Total.....	23,963,915.00	17,232,962.00	18,677,962.00

The following table shows the degree of completion of our ships now under construction.

Vessels building for the increase of the Navy are listed in the following tables, which include all those authorized by law, with the

exception of one gunboat for the Great Lakes, authorized in 1898, and submarine boats appropriated for by the last Congress:

Vessels building under contract.

Name.	By whom building.	Estimate of—		Contract time.	Expiration of contract time.
		Degree of completion July 1, 1907.	Probable date of completion.

NAVAL PROGRAMME.

The committee recommend this year the following:
 "That, for the purpose of further increasing the naval establishment of the United States, the President is hereby authorized to have constructed, by contract or in navy yards, as hereinafter provided, two first-class battle ships, to cost, exclusive of armor and armament, not exceeding \$6,000,000 each, similar in all essential characteristics to the battle ship authorized by the act making appropriations for the naval service for the fiscal year ending June 30, 1908; ten torpedo-boat destroyers, to have the highest practicable speed, and to cost, exclusive of armament, not to exceed \$800,000 each."

The committee further recommend the following provision:
 "That the Secretary of the Navy is hereby authorized and directed to contract for eight submarine torpedo boats, in an amount not exceeding in the aggregate \$3,500,000, and the sum of \$1,000,000 is hereby appropriated toward said purpose, and to remain available until expended: *Provided*, That all such boats shall be of the same type heretofore determined to be superior as the result of the competitive tests held under the provisions of the naval appropriation acts approved June 29, 1906, and March 2, 1907, unless on or before October 1, 1908, a submarine torpedo boat of a different type and of full size for naval warfare shall have been constructed and submitted to the Navy Department for like trial, and by such like trial by said Department demonstrated to be not inferior to the best submarine torpedo boat in the competition above referred to."

The committee further recommend the following provision:
 "That the Secretary of the Navy is hereby authorized, in his discretion, to contract for or purchase one destroyer or torpedo boat of the type known as subsurface, semisubmerged (or the like), the essential feature of which is to have during its operation some portion of the hull or superstructure always on or above the surface, such vessel to cost not to exceed \$400,000 and to have a speed of not less than 22 knots; also two small vessels of like type, having a speed of not less than 16 knots, and to cost not to exceed \$22,500 each: *Provided*, That before any vessel of the type provided for in this paragraph shall be purchased or contracted for a vessel of such type shall have been constructed complete and of full size for naval warfare and submitted to the Navy Department for such trial and tests as the Secretary of the Navy may in his discretion prescribe, and as the result of such tests be demonstrated to have fulfilled all the reasonable requirement of naval warfare for a vessel of its class; and for these vessels the sum of \$445,000 is hereby appropriated, to be available until expended."

FOREIGN NAVAL PROGRAMMES.

NAVY DEPARTMENT,
 Washington, February 4, 1908.

SIR: I have the honor to submit herewith information compiled at your request by the Office of Naval Intelligence concerning building programmes of the principal naval powers.

Very respectfully,

TRUMAN H. NEWBERRY,
 Acting Secretary.

HON. GEORGE EDMUND FOSS,
 Chairman of Committee on Naval Affairs,
 House of Representatives.

OFFICE OF NAVAL INTELLIGENCE,
 February 1, 1908.

NAVAL BUILDING PROGRAMMES.

The building programmes of the principal foreign powers for the year 1907 are described in the Annual Report of the Secretary of the Navy for the fiscal year 1907, page 3, et seq:

"FOREIGN SHIPBUILDING PROGRAMMES.

"In foreign shipbuilding programmes of the current year the characteristic feature of all is the presence of battle ships of heavy displacement, destroyers, and submarines, and, with the German excepted, the omission of armored cruisers. The speed and displacement of battle ships are increasing in all countries, and there is a marked tendency toward a reduction in the number of calibers of guns composing the armament. The armament of the latest type of battle ships is composed

of heavy turret guns and of smaller guns intended for defense or against torpedo craft. The latter, however, are increasing in caliber to such a degree that in some ships of recent design they are of the same calibers that were used but a few years ago for the intermediate battery.

"The absence of armored cruisers from the new programmes is worthy of note and may be ascribed to the tendency toward the merging of the battle-ship and armored-cruiser types. With the increase in size and power of the armored cruiser the distinction between that type and the battle ship has become less and less clearly marked, until in the English *Invincible* class it has almost disappeared. Having reached a limit in armored-cruiser construction in the *Invincible* class, England is about to return to a smaller type of cruisers for commerce protection and police duties, and it has been announced in Parliament that 'the further construction of large armored cruisers is not, in the judgment of the Admiralty, immediately required. Attention will, however, be directed in the immediate future to the development of the 'scout' class and to the evolution of a new type of cruiser to take the place of the obsolescent *Edgar* class.' [It should be noted, however, that England already possesses a large number (thirty-two) of armored cruisers.] The development of the scout is also a subject that is engaging the attention of other foreign admiralties. Torpedo boats of less than 200 tons no longer find place in recent programmes. Several nations are building torpedo boats of 200 to 300 tons, and nearly all are building destroyers, the displacements of which vary from 400 to 800 or 900 tons, and show a steady tendency to increase.

"Submarines, also, are increasing in size as well as in numbers, the largest being 577 tons, now building in France. Germany and Austria have recently been added to the list of nations engaged in building submarines. The number and types of vessels building in the several countries are indicated below:

"ENGLAND.

"The naval estimates have been submitted to Parliament and provide for the following new construction: One battle ship (improved *Dreadnought*), one large armored cruiser (*Invincible* type), six fast protected cruisers (scouts), sixteen torpedo boat destroyers (*Tribal* class), and a number of submarines estimated to cost £500,000 (\$2,433,250).

"The new vessels of the *Dreadnought* type, Nos. 5, 6, and 7, of which one has been named *St. Vincent*, are to be known as the '*St. Vincent*' class. Their armament is stated to be similar to that of the *Dreadnought*, but the displacement has been increased to 19,300 tons. The fast unarmored cruiser scout, known as the '*Boadicea*,' is to have a speed of 25 knots. The total sum of money to be expended for ship-building during the coming fiscal year is \$39,418,650.

"FRANCE.

"In view of the large number of vessels building under former programmes, which include six battle ships of the *Danton* class just laid down, four battle ships of the *Justice* class near completion, four large armored cruisers and a large number of destroyers and submarines, the programme for 1907 provides for the beginning of five destroyers and ten submarines. The sum authorized for new construction is \$18,696,346.

"GERMANY.

"According to the 'fleet law,' which authorizes a continuous building policy and specifies the building programme for each year up to and including 1917, there was authorized this year two battle ships, one armored cruiser, two protected (small) cruisers (scouts), twelve torpedo-boat destroyers, and \$714,000 to be expended for submarines.

"The amount to be expended for new construction is \$30,575,800. The characteristics of the battle ships are not announced, but it is believed that they are to be of more than 18,000 tons displacement and are to carry a very large number of heavy-caliber guns. The armored cruiser is believed to be of about 19,000 tons displacement,

to carry a number of heavy-caliber guns, and to have turbine engines. The small cruisers are to serve as scouts and possess high speed.

"JAPAN.

"The naval budget, as passed by the Diet and approved by the Emperor, carries appropriations amounting to \$17,965,793 for the construction and repairs of ships. This includes the cost of repairs to ships in commission as well as the restoration of the Russian prizes and the building of new ships. About \$12,500,000 of the whole amount will be devoted to increasing the navy, the restoration of Russian prizes, and new construction.

"The numbers and types of ships to be laid down are not yet officially announced. It is generally understood, however, that according to the programme Japan will, in the near future, lay down two battle ships of the most powerful type and displacement and several torpedo-boat destroyers and submarines. Two submarines are now building for Japan in England. A third battle ship is also included in the Japanese shipbuilding scheme, and it has been recently reported that a large battle ship has been contracted for in Great Britain for the Japanese Government, but this report appears not to be made with authority if true.

"RUSSIA.

"No definite programme has been announced. The minister has been authorized to include in his budget of 1908 an annual appropriation of \$15,000,000 for construction and armament of war ships in excess of the unexpended balance from 1906. Two battle ships of the largest type have been begun in St. Petersburg.

"ITALY.

"The naval budget for 1907-8 includes a provision for the beginning of one battle ship of 16,000 tons, a considerable increase in displacement over recent Italian battle ships.

"AUSTRIA.

"The programme for 1907 provides three battle ships of 14,500 tons, a very marked increase over previous Austrian displacements. It also includes a provision for six submarines, which are under construction or contracted for.

"BRAZIL.

"The Brazilian programme, which has been under consideration for some years and finally adopted, includes three battle ships, about 19,000 tons each; two scout cruisers; eighteen torpedo boats and destroyers; three submarines; one mining vessel.

"The cost of these is to be spread over a period of years. Of the above, three battle ships, two scout cruisers, and ten destroyers are actually under construction or contracted for in British yards.

"A tabular statement indicating the number of vessels building or already authorized under the shipbuilding programmes of different nations follows:

"Foreign vessels building or authorized.

	Battle ships.	Armored cruisers.	Cruisers or scouts.	Destroyers.	Torpedo boats.	Submarines.

^a Battle ships, first class, are those of (about) 10,000 or more tons displacement.

^b Omitting the *Léna*.

^c Includes smaller battle ships and monitors.

^d All unarmored war ships of more than 1,000 tons are in this table classed according to displacement as cruisers. Scouts are considered as cruisers in which battery and protection have been sacrificed to secure extreme speed. The word "protected" has been omitted because all cruisers except the smallest and oldest now have protective decks.

N. B.—The following vessels are not included in the tables:

Those over 20 years old, unless they have been reconstructed and rearmed since 1900.

Those not actually begun, although authorized.

Transports, colliers, repair ships, torpedo depot ships, converted merchant vessels, or yachts.

Vessels of less than 1,000 tons, except torpedo craft.

Torpedo craft of less than 50 tons.

Relative order of war-ship tonnage.

At present.		As would be the case were vessels building now completed.

^a England has no continuing shipbuilding policy, but usually lays down each year about four armored ships, with a proportional number of smaller vessels.

^b Two of these, the *Mississippi* and *Idaho*, are very nearly completed. ^c Germany has a continuing shipbuilding policy, authorized by the Reichstag, and extending to the year 1917. This authorization provides for the building between 1907 and 1917 of 16 battle ships, 12 armored cruisers, 22 smaller cruisers, and 132 torpedo vessels.

NOTE.—The following vessels are not included in the tables:

Those over 20 years old unless they have been reconstructed and rearmed since 1900.

Transports, colliers, repair ships, converted merchant vessels, and any other auxiliaries.

"Vessels of less than 1,000 tons, except torpedo craft. Torpedo craft of less than 50 tons.

"In making comparisons of naval strength, and particularly of naval increase, the fact should be taken into consideration that the rapidity of construction varies materially in different countries.

"In England, Germany, and Japan battle ships and armored cruisers are completed in two to three years; in the United States from three to four years; and in France, Italy, and Russia not less than four years are required.

"Table II includes vessels authorized but not yet laid down, as well as those actually under construction.

TABLE III.—Personnel.

Rank.	England.	France.	Germany.	Japan.	United States.

Marine officers.....	490		86		277
Enlisted men (marines).....	17,526		1,230		8,147

^a The United States now has, in addition, temporarily, as extra numbers, due to promotion for war service, 4 flag officers, 13 captains, and 14 commanders.

^b Does not include midshipmen.

^c Includes chief gunners, chief boatswains, chief signal boatswains, chief carpenters, chief artificer engineers, chief schoolmasters.

^d Includes 1,250 men of the naval infantry. The German naval infantry forms an expeditionary corps. Its duty in war is to defend, and in peace to garrison, the home fortified ports. One battalion forms the garrison of Kiauchau, China.

PROGRAMMES FOR 1908-9.

The programmes for 1908, as far as they have been determined or published, are as follows:

ENGLAND.

The programme for 1908 has not yet been published. Unofficial statements indicate that it will probably include the following:

- Two battle ships (*Dreadnought* type).
- Four medium-sized armored cruisers (improved *Edgar* type, foreshadowed last year).
- One large ocean-going destroyer ("special" or *Swift* type).
- Some ocean-going destroyers ("tribal" type).
- Or—
- Two battle ships (improved *Dreadnought* type).
- One armored cruiser (*Infexible* type).
- Two medium-sized armored (or protected) cruisers (improved *Edgar* type, as foreshadowed last year).
- Six unprotected cruisers (or scouts, *Boadicea* type).
- Twelve ocean-going destroyers.
- A number of torpedo boats and submarines.

FRANCE.

The programme for 1908 is now being discussed in Parliament. The construction of six battle ships of 21,000 tons displacement and 20 knots speed is proposed, and appears to meet with general approval. Tentative designs for these ships are now being discussed.

GERMANY.

The programme of shipbuilding for the German navy is at present governed by the fleet law of 1900, amended in 1906.

This law establishes the total number of ships of each class which the navy is to contain when the authorized building programme shall have been carried out, and fixes the period within which each class of vessel shall be replaced, as follows:

	Authorized strength.	Age limit (years).
Battle ships.....	38	25
Large (armored) cruisers.....	20	20
Small (protected) cruisers.....	38	20
Torpedo craft.....	144	12

A shipbuilding programme was accordingly established which contemplated the attainment of the authorized strength by the year 1920, as well as the building of substitutes for such existing ships as should reach the age limit during the period covered by the programme; the ships to be laid down were distributed over the years 1906-1917.

It is now proposed to amend this by reducing the age limit of battle ships from 25 to 20 years. This proposal has been approved by the federal council.

The reduction in the life of battle ships will necessitate the replacement of three more battle ships between 1908 and 1917 than is contemplated by the present system, i. e., a total of sixteen ships. This brings about a rearrangement of the building programme, as shown by the following table.

It is to be noted, however (as shown in the table), that sixteen ships having been provided for between 1908 and 1916, an additional ship is set down for 1917.

Number of substitute battle ships to be laid down.

Year.	Present law.	Proposed law.
1908.....	2	3
1909.....	2	3
1910.....	1	3
1911.....	1	2
1912.....	1	1
1913.....	1	1
1914.....	1	1
1915.....	1	1
1916.....	1	1
1917.....	2	1
Total.....	13	17

The immediate effect of the change is apparent from a glance at the table. During the four years beginning 1908 there will be laid down eleven battle ships instead of six. Add to these the two ships of the 1907 programme, and it is seen that by 1914 (allowing three years to build a battle ship) Germany will possess thirteen battle ships of upward of 19,000 tons displacement each.

The entire programme, as amended by the proposed law, would be as follows:

Year.	Battle ships.	Armored cruisers.	Protected cruisers.	Torpedo craft.
1907.....	2 substitute.....	1 additional.....	2 substitute.....	6 additional, 6 substitute.
1908.....	3 substitute.....	do.....	do.....	Do.
1909.....	do.....	do.....	do.....	Do.
1910.....	3 substitute, 1 additional.	do.....	do.....	Do.
1911.....	2 substitute.....	1 additional, 1 substitute.	do.....	Do.
1912.....	1 substitute.....	1 substitute.....	do.....	Do.
1913.....	do.....	do.....	do.....	Do.
1914.....	do.....	do.....	do.....	12 substitute.
1915.....	do.....	do.....	do.....	Do.
1916.....	do.....	do.....	do.....	Do.
1917.....	do.....	do.....	1 substitute.....	Do.

The estimates for the coming year contemplate a total expenditure of over \$82,000,000, of which one-half is for new ships and armaments. This is a large increase over the current estimates, as shown below:

	For ship construction and armament.	Total.
Current estimates (1908) (required to carry out present law).....	\$32,346,580	\$68,272,680
Proposed amendment (1908) (required to carry out proposed law).....	41,613,208	82,565,944

This programme is now being considered by the Reichstag.

JAPAN.

The programme for 1908 has not been officially announced. Two battle ships of over 19,000 tons displacement are to be laid down in the near future, and the proposed building of two large armored cruisers (of more than 18,000 tons), together with very fast scouts, has been reported, but not yet substantiated. It is also reported that other battle ships and armored cruisers, in addition to those mentioned above, are proposed for construction in 1908.

RUSSIA.

The new programme has not yet been announced. It is reported to include a number of the largest type of battle ships.

ITALY.

The estimates of the ministry of marine for the fiscal year 1908-9 provide for continuing or completing work on all ships now under construction, including the 16,000-ton battle ship authorized in 1907. It is proposed to build altogether four of the new type battle ship, together with six 28-knot scouts and a further addition to the torpedo flotilla.

AUSTRIA.

The new programme has not yet been announced.

Vessels completed during 1907.

Agricultural Appropriation Bill.

SPEECH

OF

HON. MARCUS A. SMITH,

OF ARIZONA,

IN THE HOUSE OF REPRESENTATIVES,

Monday, March 30, 1908.

The House being in Committee of the Whole House on the state of the Union, and having under consideration the bill (H. R. 19158) making appropriations for the Department of Agriculture for the fiscal year ending June 30, 1909—

Mr. SMITH of Arizona said:

Mr. SPEAKER: If the amendment I have just offered is adopted it will relieve the situation at the Grand Canyon of Colorado and prevent the further doubling up of separate kinds of executive reservations on the same ground. Take, for instance, one of the military reservations in Arizona which was abandoned and a forest reserve was spread over it. Under such conditions the land became subject to all laws governing forest reserves, among which was the right to locate mining claims, and develop and patent the same. But the President of the United States, by proclamation or Executive order, or what not, held said abandoned military reservation within the forest reservation still under military supervision, so as to prevent any possible settlement on or development of the same. What are alleged to be fine mining grounds within this old military reservation are thus withheld from development by this ridiculous, absurd, and unnecessary "order."

But let me cite you a still more glaring instance of the President's peculiar sense of the powers invested in him by the laws of the land. Under the act passed last year or a year or two ago, volume 24, of the public land laws, it was enacted—

That the President of the United States is hereby authorized in his discretion to declare by public proclamation historic land marks, historic and prehistoric structures, and other objects of historic or scientific interest that are situated upon the public lands, owned or controlled by the Government of the United States, to be national monuments.

And the penalty for taking or injuring or touching them is a fine of \$500, I believe, or three months' imprisonment. Under that provision the President of the United States by proclamation, dated Washington, the 11th day of January, in the year of our Lord 1908, declared as a national monument, subject to the penalty described, the grand canyon of the Colorado River. The law was designed for the pure purpose of preserving the prehistoric land marks of the country, the cliff dwellers, the Casa Grande ruins, and things of that sort erected by human

hands, as the bill showed on its face, and yet under the provisions of this law, the President—probably advised thereto by somebody who must have known nothing about the construction of the statute—takes a vast territory of country here, as I measure it about 56 miles long by 26 miles wide, and declares it a national monument and makes it so absolutely sacred that a man would be afraid to cut a switch from that land to encourage the speed of his horse.

You can not make a road in it, you can not take a rock out of it, you can not move a thing in it. Now, there is in contemplation a railroad to be built along the rim of that canyon to let the people see it. Under present conditions you go to one place and look down into that mighty gorge. You ride at a heavy expense behind teams kept by the railroad company 5 or 10 miles and then look down in the same gorge and at the very same objects. The purpose is to build a railroad along that gorge, so that the greatest wonder of God's hand, except the universe itself, may be revealed to the astonished wonder of the beholder. But under this Executive order, made without any authority whatever, the public must be shut off from the enjoyment of the most uplifting, awe-inspiring sight that ever spread itself before the human eye since God said "Let there be light," up to and including the time when the President said "Thou shalt not see."

Every industry west of the Rocky Mountains could be in full blast within that mighty chasm and would never be noticed from its rim.

Mr. MONDELL. May I ask the gentleman, does not the gentleman think there is danger of that Grand Canyon washing away or being carried away unless it is protected in this manner?

Mr. SMITH of Arizona. I observe the humor of the gentleman's question, and thank him for thus calling the attention of the House to the absurdity of this Presidential proclamation. The object of the law under which he presumed to act was to preserve from destruction or defacement destructible objects, or monuments, and certainly could not be tortured into applying to a vast region of country simply because it was wonderful or interesting. No; you can not carry it away, you can not destroy it, and a thousand men working a hundred years could not even deface it. It will not wash away, as the gentleman from Wyoming facetiously observes, for a mighty river for a million years has been hurling its angry torrents against its rock-ribbed sides, and the canyon is still there. All that water can ever do will only increase the wonder of its depth.

This Executive order could have had no purpose behind it except to prevent an independent railroad from being built along the rim. It should by all means be built, and before this session closes I shall introduce a bill for that purpose.

The people of the West have now very few rights or liberties that are not at some point invaded by Executive orders or Bureau edicts or impudent special officers, whose business seems to be to give all the trouble possible to every settler on the public domain. Between the enormously large military reservations, Indian reservations, and forest reservations, there is very little room to move about without a challenge to "halt."

Forest reservations are very proper when the reserve has timber on it, but when it is spread all over creation regardless of trees it becomes a nuisance, if not a crime. If, instead of preserving trees and conserving the water supply, it shall include grazing lands, and by renting such to the favored for grazing purposes only, it is an outrage that should be at once stopped. I believe every State and Territory is of right entitled to utilize the resources within its boundaries.

The public lands do not of right belong to the people of the whole United States, but they are or should be held by the Government in trust for the present and future residents of the State or Territory in which such lands lie. I am a little afraid that we are going a little fast in the hysterical ardor to conserve all our resources for the benefit of posterity. Was it not Josh Billings of blessed memory who wanted to know "what posterity had ever done for us?" If we save our coal and iron and lumber for the use of posterity, then posterity, actuated by the lofty example of their fathers, must likewise preserve these resources for their posterity, and time will show at last a nation of fools sitting among the resources essential to its growth and happiness still preserving things for posterity—still "conserving their resources." Old man Arch Edger's caution will have become a national characteristic. When that most conservative gentleman was kicked down stairs and out of the front door of a hotel by an irate Kentuckian, his friends, amazed, knowing that he was armed, asked him why he did not defend himself. He replied that he only had one load in his pistol and he was saving that till he got in a tight place. I call that conserving his resources. I think he was conserving it for posterity.

Mr. Speaker, I observe with a feeling of profound apprehension the rapid strides being taken toward centralization in our Government. The Executive is encroaching on the powers reserved by the Constitution to the other two coordinate branches. Everything now is being done by commissions and bureaus and special functionaries appointed by the President. It is time to call a halt and take some observations of the road over which we have come and make some provident arrangements for a safer journey ahead of us. I see my time has expired. At the next session I hope to be able to give to the House a full history of the various bureaus as they touch and affect the interest, prosperity, and development of the Territories.

A Proper Currency System.

SPEECH

OF

HON. THEODORE E. BURTON,

OF OHIO,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, May 14, 1908.

The House having under consideration the bill (H. R. 21871) to amend the national banking laws—

Mr. BURTON of Ohio said:

Mr. SPEAKER: In order to understand pending currency legislation it is necessary to describe the different kinds of money now in use. The monetary system of the United States has several marked distinctive features:

1. The motley character of our money—metallic and paper.

The present circulation, May 1, 1908, including that in the Treasury and bank reserves, may be classified under four principal varieties:

(a) United States notes (greenbacks) resting directly upon the credit of the Government.....	\$346, 681, 016
(b) National-bank notes secured by United States bonds and resting indirectly upon the credit of the Government.....	697, 645, 698
(c) Gold having intrinsic value.....	1, 639, 267, 384
(d) Silver having partial intrinsic value and resting for the difference between actual and face value upon the credit of the Government.....	563, 007, 982
Total.....	3, 246, 692, 080

To these four may be added a fifth variety, which assumed great prominence after the silver-purchase act of July, 1890, namely, Treasury notes issued against silver bullion. This bullion, however, has nearly all been coined into silver dollars, and there now remains only \$5,152,000 of these notes. In order to obtain the absolute total, subsidiary coins less than \$1 must be added, amounting to \$144,809,002.

The total stock of money in the United States on the 1st of May, 1908, including the above varieties, subsidiary silver, and Treasury notes, was \$3,396,653,082.

Against gold and silver in the Treasury certificates are issued for convenience merely. The amount of gold certificates is approximately \$850,000,000 and of silver certificates \$463,000,000.

2. A second feature is the very large circulation per capita, which on May 1, 1908, was \$35.37, greater by nearly \$15 than in the period of maximum inflation in the civil war, and by almost an equal amount than in the very prosperous years of 1880 and 1881; greater also by approximately \$10 than ten years ago, and this notwithstanding the increased use of checks and other substitutes for currency. With the single exception of France, the per capita circulation is larger than in any other of the great commercial countries. There can be no complaint of scarcity in the aggregate amount of money in the country.

3. A third distinctive feature as compared with other advanced nations is the absence of paper money issued by banking institutions, save that secured by Government bonds. Additional emphasis is given to this fact by the manifest preference in this country, barring, perhaps, only the Pacific coast, for paper money as against metallic money for daily use. The amount of paper money is very large, exceeding \$1,000,000,000, but all of it rests directly or indirectly upon the credit of the Government. The issuance of notes by the Government has been discarded in practically every other progressive nation.

It has been very generally agreed that material changes are required in our monetary system, at least so far as relates to the issuance of paper money. In saying this it is not necessary to find fault with the legislative policies of past years. Our existing forms of money have a merit unsurpassed anywhere in their security and the absolute confidence which they command.

The United States notes or greenbacks served an excellent purpose in the civil war. The national-bank notes are part of a policy which furnished stability and uniformity to a banking system, and conferred almost incalculable benefit in the way of creating a market for Government bonds. The depreciated silver currency is the most objectionable, but in view of the very large demand for circulation of coins of small denominations, the outstanding silver and silver certificates are absorbed by the people without serious embarrassment.

Our monetary system, nevertheless, is not abreast with those of other countries, and is fatally lacking because of its rigidity. Issues of currency should be so adjusted as to secure in the greatest possible degree adjustment in volume to the demands of trade. The demand for money, metallic or paper, is, of course, greater in the autumn than in the spring. It increases with the expansion of enterprise or a rise of prices. When, also, by reason of panic, money is withheld from circulation or hoarded, the need for additional currency is very pressing. This elasticity or provision for necessary expansion and contraction in quantity is wanting here, though at the same time it must be conceded that the natural fluctuations are at a maximum; that is, the contrast between the maximum and minimum amounts required is more noticeable in the United States than anywhere else. To secure elasticity, therefore, is a primary object which should always be kept in mind.

It will, I think, be agreed that the following principles and facts should be borne in mind in any proposition for a reform of the currency:

1. Contraction, or decrease in volume, alike with necessary expansion, should be secured. An inflated currency is always a source of danger. In any growing country where opportunities for investment are numerous and profits are gained from a rise of prices there is a constant tendency to absorb the existing supply of money. The surplus may be utilized for speculation or for doubtful enterprises. As a consequence when an additional supply is required, as inevitably will be at certain seasons and in prosperous years, it is difficult to obtain the requisite amount. To prevent redundancy it will be helpful to furnish motives for the withdrawal of unnecessary bank notes by the removal of restrictions upon their cancellation. The present laws have in mind the maintenance of the value of Government bonds. They also carefully safeguard against any considerable decrease in the volume of paper money. The requirement that not more than \$9,000,000 of national bank-note currency can be withdrawn in any one month is based

upon these objects. Such a requirement is not in accord with a perfect currency system.

2. No system should be accepted which does not afford absolutely undoubted security for every bank note in circulation. The people will not and should not tolerate the issuance of bank notes which would be rendered of doubtful value by the failure of any banking institution. Not only is safety essential, but confidence as well. Bank notes must not only be safe, but they must be above suspicion.

3. It should always be borne in mind that paper currency is simply another form of credit, like a promissory note, and its volume should always be made to conform as nearly as possible to the normal demands of trade. No measure contributes more to a proper determination of the amount which should be in circulation than a requirement for the prompt and convenient redemption of notes in gold. It is a practically universal rule in all countries having a sound monetary system that the bank, treasury, or other agency which issues paper money must provide for its redemption.

4. No corporation or individual should be able to derive undue or unfair profit from the issuance of bills. On the other hand, no prejudice should be tolerated against such institution or agency as is best fitted to exercise the privilege. With but very few exceptions the most progressive countries have abandoned the issuance of paper money by the Government, so that this function is exercised by banks, either national or private, but all under careful governmental regulation.

5. The natural conservatism which arises from the customs and habits of the people, and from established methods of transacting business, renders difficult, if not impossible, the immediate acceptance of revolutionary changes in existing forms and issues of money. The people are slow to accept innovations. Business, which should always be cautious and conservative, looks with disfavor upon sudden transitions. Thus it is desirable that new methods should depart from the existing order slowly and that we should bear in mind the impossibility of adopting radical changes, even though theoretically correct. An entire readjustment of the system of currency issues can be safely accomplished only by successive steps.

Two general plans have been advocated for a permanent solution of the currency question:

1. Allowing the issuance of paper money by banks against their credit or assets. This proposition involves a fundamental change in the security for note issues, but furnishes a method which would afford the most natural response to the varying demands of business. The circulating notes which a bank can issue should bear proportion to its financial strength and the amount of its resources. Yet oftentimes when the assets of banks are largest the quantity of their outstanding currency is smallest. To meet such a situation it is maintained that the right should be granted to issue currency to meet the demands of depositors and borrowers.

It is objected that this would grant a dangerous privilege to a multitude of banking institutions managed with an infinite variety of intelligence and even of honesty, and that any such plan would entirely lack that element of cooperation which is so essential in any sound money system.

To meet the objection of the want of proper security, it is proposed that the note issues of banks should be protected by a guaranty fund, say, of 5 per cent of the total note issues of all banks, to be collected in the form of a tax; also by the maintenance of reserves and by a requirement for redemption.

The discussion of this subject in recent years has shown a very decided disposition to increase the severity of the requirements advocated.

In the year 1894, the American Bankers' Association, in one of their yearly meetings, unanimously indorsed what is known as the "Baltimore plan." This allowed the withdrawal of the deposit of bonds as security, the issuance of circulating notes to the amount of 50 per cent of the capital, with a tax of only one-half of 1 per cent per annum. Provision was made for an additional circulation of 25 per cent, with a larger tax. Banks issuing circulation were asked to deposit a redemption fund of 5 per cent as under the existing law. A guaranty fund was to be created through a deposit of 2 per cent of the amount of circulation received the first year; thereafter a tax of one-half of 1 per cent upon the average amount of the outstanding circulation until this fund should equal 5 per cent of the entire circulation outstanding. Notes of insolvent banks were to be redeemed out of the guaranty fund, and in case the latter became exhausted the Government, of course, was given a prior lien upon the assets of the failed banks and could enforce the liability of shareholders.

It will be noticed that this plan provided an annual tax upon circulation of only one-half of 1 per cent, required no reserve,

relieved the banks from any liability for redemption in gold, made each individual bank liable only for its own failure, except, of course, as it shared in the guaranty fund of 5 per cent. The whole burden of redemption was thrown upon the Treasury. This, too, was at a time when the quantity of gold in the country was less than half what it now is, and when the Treasury Department had been compelled to resort to the issuance of bonds and various other shifts to maintain the gold reserve.

Notwithstanding the palpably insufficient requirements under this proposed plan, some who strenuously advocated it in 1894 now criticize the Vreeland bill, although it provides a minimum tax of 4 per cent per annum, the maintenance of reserves, a deposit of securities in excess of issues, and the joint and several liability of associated banks, on the ground that the latter measure does not afford sufficient security and would lead to inflation.

Progress has been shown by the bill which, it is understood, is now favored by the bankers of the country, and known as H. R. 15262, introduced by the gentleman from Illinois [Mr. McKINNEY]. This bill provides for what is to be called "national-bank guaranteed credit notes." Under its provisions a bank with outstanding notes secured by Government bonds to the amount of 50 per cent of its capital stock might in the first instance issue in the form of credit notes an amount equal to 40 per cent of the notes secured by United States bonds, but not exceeding 25 per cent of its capital. Upon these it is proposed there shall be a tax of 2½ per cent per annum, or 1½ per cent in January and July. A further issue, limited to half as much, is authorized under a tax of 5 per centum per annum, but the total of all notes of every kind must not exceed the amount of the paid-up capital. Reserves are provided of the same amounts and under the same regulations as in the case of deposits. Five per cent of guaranteed credit notes must be deposited in lawful money with the Treasurer whenever credit circulation is issued, which, with the taxes mentioned, is to constitute a guaranty fund to redeem the notes of the failed banks. Cities conveniently located are to be designated for current daily redemption of these notes. This measure, which marks so great an advance upon the so-called "Baltimore plan," yet falls short of the absolute requirement of redemption in gold, and does not provide for any community of liability among the banks taking advantage of its privileges.

It is not believed, or it is certainly very doubtful, whether the people would or should, without ample trial, accept any plan which leaves the all-important obligation of the ultimate redemption of bank notes to single banks, even though they be reinforced by a guaranty fund. Deporable as the prospect may be, it is not beyond the possibilities that disastrous failures might occur in such numbers as to render inadequate the security provided by such a plan, at least in the days of its early operation.

It has been repeatedly alleged that the guaranty fund provided in this and similar bills would be sufficient beyond peradventure, but the question very naturally arises, if such is the case, Why should not all banks, or at least associations of banks, enjoying the privilege of note issue, join in a guaranty of the notes?

Another bill of a very radical nature is that introduced by the gentleman from New Jersey [Mr. FOWLER], which has many commendable features and makes elaborate preparations for the changed conditions which would be brought about by its adoption. It carries to the extreme the individual action and privileges of the separate banks. It imposes upon the banks the obligation of redeeming their notes in gold. It looks to the virtual abolition of the present independent or subtreasury system and to the retirement of the greenbacks. It directs the retention of a larger share of the reserves of the banks in their own vaults. But the changes advocated are too radical to be seriously considered at this time. As originally introduced it contained many features which have met with very strong opposition, such as the joint guaranty of deposits of all failed banks.

2. Another general plan is the establishment of a central national bank, dealing largely if not exclusively with national banks and with the Government. It is urged that the experience of other countries has shown that such an institution is best able to provide for the general benefit. By raising the rate of discount in times of unnatural expansion such a bank could check improvident enterprises. It would be potent in controlling the export and import of gold and in the intelligent direction of the necessary increase and decrease of paper currency. To the argument that it would involve the formation of a great bank under the domination of the Federal Government it can be answered that the National Treasury, especially through its subtreasuries, is now performing the func-

tions of a bank without the advantages which would belong to a duly incorporated institution.

In the discussion of this question from the standpoint of theory it must be conceded that the great preponderance of arguments favor such a solution. Yet two banks of the United States have been established and abandoned. Both became the subject of political controversies and were very much hampered in their usefulness by contending theories pertaining to their management and to their relations with the people. It should be said, however, that this is a day of enhanced intercourse and greater realization of the community of interest and the desirability of conducting operations on a large scale. Also there is an increasing disposition to acquiesce in the assumption of larger powers by the Federal Government; so that popular objections which formerly existed against such a plan might not assert themselves.

However reluctantly we may reach the conclusion, it is evident that at this session no permanent solution of the great problems involved can be reached. Popular opinion has not crystallized upon any one plan. There is a very wide divergence of opinion among those regarded as most expert in their understanding of currency questions. It is highly desirable, however, that something should be done at this session. That man would be very bold who would say there was no possibility of a demand for additional currency before another session of Congress. A great crop or any unforeseen contingency might create a necessity for a material increase in volume. We must bear in mind, also, as another factor, the increased caution of financial institutions in lending, as a result of the crisis of last autumn. The overwhelming probability is that with the diminished extent of industrial operations, resulting in decreased employment, and in view of the natural timidity after a panic and during a Presidential year in engaging in new enterprises, there will be no serious currency scarcity next autumn. But it is our duty to provide, if we may, for probable or possible exigencies.

There is another reason why the pending bill or some other should be adopted, namely, the desirability of trying some of the plans for a changed currency with a view to determining what is workable and what the people will accept. As I have already said, no revolutionary change can be accomplished in a day. This second object I regard as quite as strong a reason for currency legislation as the usual argument that we should provide for a stringency similar to that of last autumn.

It is important to give the essential provisions of the two most prominent bills now pending before Congress.

1. The so-called "Aldrich bill" (S. 3023), which passed the Senate March 27 last. The distinctive feature of this measure is the right to issue circulating notes upon bonds other than those of the United States. It gives to any national banking association having circulating notes secured by the deposit of United States bonds to an amount not less than 50 per cent of its capital stock, and which has a surplus of not less than 20 per cent, leave to make application to the Comptroller of the Currency to issue additional circulating notes to be secured by the deposit of bonds issued by any State, city, county, or other political division, which has been in existence for a period of ten years and has not defaulted in the payment of principal and interest of any funded debt; also whose funded indebtedness does not exceed 10 per cent of the valuation of its taxable property. The bonds of the insular government of Porto Rico, of the Philippine Islands, and of the city of Manila are also available.

Circulation may be taken out to the extent of 90 per cent of the market value, though not in excess of the par value of the bonds; but not to an amount so that the notes secured by the Government, as well as by the various bonds named in the bill, shall exceed the amount of unimpaired capital and surplus of the issuing bank, nor shall the total amount of such circulating notes at any time exceed \$500,000,000.

These latter notes are to be taxed at the rate of one-half of 1 per cent per month for the first four months, and afterwards three-fourths of 1 per cent per month, the proceeds of the taxes to be paid into the Division of Redemption of the Treasury and credited to the reserve fund held for the redemption of United States notes. Unlike the notes secured by Government bonds, there is no limit on the amount that can be withdrawn, but money deposited for the withdrawal of notes shall be retained in the Treasury as a special deposit. There are other provisions, but those just given refer especially to currency.

The arguments for this bill are that since 1863, the date of the passage of the national banking act, bank notes have only been issued upon the security of Government bonds, and it is alleged that this arrangement has given satisfaction. With the decrease of the national debt the larger share of the bonds have been paid off, yet the wealth and population of the country have

increased, and, consequently, requirements for currency. Thus under existing regulations there is no means of furnishing an adequate basis for the circulating medium, at least in times of stress. State, county, and municipal bonds come nearest to Government bonds in their essential qualities; hence the available security for circulating notes should be enlarged by including the former in the list of bonds which banks may offer for currency.

The supporters of the Aldrich bill look with disfavor upon any plan for issuing notes upon the credit of banks or against their assets. They regard it as desirable, at least for the time, that the least possible change be made from present methods.

There are valid objections to this proposed measure. The national bank is, or should be, essentially a commercial bank, investing its funds in the discounting of paper and supplying the demands of its customers. There are few banks which, under present conditions, could avail themselves of the provisions of this bill. The total amount of the prescribed securities held by all the national banks is estimated at less than \$60,000,000. If it should be adopted, any bank in order to issue currency must either carry a certain share of its capital in municipal or other bonds or else procure them by purchase at a time when presumably its cash would be at a minimum and the demands upon its resources at a maximum. The price of the bonds described would, no doubt, be materially increased in value when needed, yet when the emergency had passed and the bank should desire to withdraw its notes the bonds purchased would no doubt have to be sold at a loss.

There is another objection which has some force. In providing a standard for the securities to be accepted, whether under the bill or otherwise, it would be necessary that the bonds of very many municipalities and other political divisions would have to be rejected. This rejection would have a marked effect upon their sale, and might prevent or seriously impair the credit of cities or other political divisions and hinder them in the accomplishment of necessary improvements. Again, it must be said that, in whatever way the issuance of currency may be managed, whether by a central bank or otherwise, the recent tendency has been almost universal to place less reliance upon bonds and long-time securities and more upon commercial paper. Indeed, it is questionable whether the latter class of assets do not have greater stability of value than the former. In any event there can be a readier realization upon them, and in providing for the redemption of circulation, and its necessary increase or decrease, the most liquid assets are the best.

2. The most sanguine can not expect any permanent solution of the currency question at this session, yet among all the bills introduced that which is best suited to bridge over the present situation is the Vreeland bill. It is not claimed that it is a model measure. Possibly some slight changes in phraseology or in minor details would improve it, but for the purpose of assuring a safeguard against panics, avoiding inflation, providing safety, and blazing the way for future legislation, it is the best obtainable.

Any temporary measure should be entirely safe, acceptable to the people, and workable. Does the Vreeland bill meet these essential requirements?

(a) Safety is secured by the requirement that not less than ten banks, having an unimpaired capital and surplus of five millions or more, shall associate themselves together and be jointly and severally liable for the circulating notes issued by all of them. Moreover, no currency can be issued by any bank unless it shall have deposited with the association securities, including commercial paper, to an amount not less than one-third in excess of the notes issued. These securities are to be approved by the officers of the association and by the Secretary of the Treasury, as already stated. In view of their common guaranty the interest of all the banks is obtained for the careful selection of securities. The notes are a paramount lien on the assets of every member of the association. A reserve in gold or lawful money of 25 per cent in reserve cities and 15 per cent in nonreserve cities must be maintained in accordance with the regulations providing for deposits against all notes issued.

A portion of this reserve, 5 per cent of the notes, must be maintained at the Treasury for a redemption fund. To avoid inflation, a tax at the rate of 4 per cent per annum is imposed for the first two months and an additional 1 per cent monthly thereafter. When the reserve requirements are taken into account, it will appear that for the first two months the tax is 5.33 per cent in central reserve cities and a somewhat less amount in other localities.

This tax belongs to the national revenue. It is to be noted that the Government is the ultimate guarantor of these notes, but it is not believed that circumstances could arise under which

it would become responsible. In any event, the tax would more than recompense it for any loss.

(b) As regards the acceptability to the people of this bill, due regard should be had for popular sentiment, but this does not mean that a measure must conform to the selfish interests of some or to the prejudices of others. The notes would, however, command the confidence of the people, because they are amply secured, not only by the banks but by the ultimate guaranty of the Government. They would in no essential particular vary from a form of money already in use.

(c) Is it workable? It is clear that the tax is so high that notes would be issued only in times of stringency. There is a requirement that in order to issue them banks must already have outstanding security by Government bonds of 40 per cent of their capital, but this would not prove a serious obstacle. The apportionment among the States has been tried in former acts relating to national banks and has not been found to be helpful. Nevertheless, the demand for such a provision is so widespread that I do not believe a measure could be passed which omits it.

Clearing-house associations have already shown that associations of banks, as contemplated in this plan, will issue substitutes for currency under circumstances less promising and without legal warrant. If such a law had been upon the statute books last autumn, the dire distress of the panic would have been greatly mitigated, ruinous sacrifices in values would have been avoided, and confidence would not have suffered so serious a shock.

There are other provisions in the bill, including one for interest on Government deposits; but its main object is to provide a temporary currency. There is a section authorizing a commission of eighteen members, whose duty it shall be "to investigate carefully the causes of the recent financial crisis and the relation of the banking and currency system thereto, and make recommendations to Congress for such changes in the existing banking and currency system as may, in their opinion, be desirable." The people have been considering monetary problems since the late crisis with more eagerness than for years. It may be confidently anticipated that the general interest in a reformed currency system will render the duties of such a body more easy and will contribute to the framing of laws which will confer universal benefit by relieving the country from the destructive influences of panics and promoting the prosperity of the people.

Emergency Currency.

SPEECH

OF

HON. EDMUND H. HINSHAW,

OF NEBRASKA,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, May 26, 1908.

On the bill (H. R. 21871) to amend the national banking laws.

Mr. HINSHAW said:

Mr. SPEAKER: President Roosevelt, in his message of December, 1907, said:

Provision should be made for an emergency currency. The emergency issue should of course be made with an effective guaranty and upon conditions carefully prescribed by the Government. Such emergency issue must be based on adequate securities approved by the Government and must be issued under a heavy tax. This would permit currency being issued when the demand for it was urgent, while securing its retirement as the demand fell off.

In a previous message to Congress the President referred to this subject in the following terms:

It must never be forgotten that this question concerns business men generally quite as much as bankers; especially is this true of stockmen, farmers, and business men in the West; for at present at certain seasons of the year the difference in interest rates between the East and the West is from 6 to 10 per cent, whereas in Canada the corresponding difference is but 2 per cent. Any plan must, of course, guard the interests of Western and Southern bankers as carefully as it guards the interests of New York or Chicago bankers, and must be drawn from the standpoints of the farmer and the merchant, no less than from the standpoints of the city banker and the country banker.

Mr. Speaker, since the panic of last October the people generally have been of the opinion that some national legislation should be enacted to prevent, if possible, a repetition of similar conditions and results. It is generally believed that the real cause was the inflation of values and the overextension of credit, especially in the great cities like New York. In the farming communities no such condition existed, and there was not the slightest excuse for a stringency of money. This was especially true of Nebraska, where the people were very pros-

perous, had paid most of their debts, and had money in the banks. The great demand for money for investment and speculation overtaxed the resources of the metropolitan banks, distrust and loss of confidence ensued, and depositors began to withdraw their money and hoard it. When the country banks sought to withdraw their reserves and deposits the great central banks found themselves unable to meet these demands and were threatened with suspension. Their securities were usually ample and good, but could not be hastily converted into currency or liquid assets. Hence they resorted to the expedient of issuing "clearing-house certificates," a temporary and unlawful proceeding, but which probably saved countless banks from suspension and their creditors from great loss. All these certificates were paid, and no one lost a dollar on account of their issuance. Such a situation, however, is far from desirable.

To be sure, it would not often occur, and the panic itself has long since disappeared, but the conditions then existing have left in the country a feeling of uncertainty and a timidity of capital, which otherwise would seek investment, employ labor, and build up the country.

Wide conflict of opinion developed, and no two agreed on a remedy. Some thought that nothing should be done. The Republican majority of the Congress, charged with the responsibility of legislation, believed that a failure to enact some legislation to prevent a recurrence of financial crisis and depression might itself engender panic.

After frequent conferences and free and general suggestions from the Members of Congress and from the whole country, the House passed H. R. 21871, known as the "Vreeland bill." It is not the result of any one man's investigation or suggestion, but embraces the criticisms and amendments of many men. No legislation is ever perfect, and can not by any possibility meet the full views of all. What does this bill as amended in conference provide?

1. That not less than ten national banks may combine into a "clearing-house association," having a capital and surplus of at least \$5,000,000; and upon the approval of the Secretary of the Treasury may become a body corporate; that not more than one such association shall be formed in any city, and that the banks forming any such association shall be located in a territory composed of a State or part of a State or contiguous parts of one or more States.

These provisions prevent the concentration of such associations in large money centers, and make it possible, if found desirable, to establish "clearing-house associations" in any State of the Union. The amount of \$5,000,000 aggregate capital and surplus is believed to be small enough to insure the formation of these organizations in any part of the country. In the original bill the amount was placed at \$10,000,000, but was amended to \$5,000,000, and a provision was incorporated to make it necessary to localize the associations in States, and I believe this amendment will be of great assistance to the country banker if occasion should ever arise for him to take advantage of this law, and, of course, his depositors would be thereby better enabled to ward off the evil consequences of a money panic, which last fall compelled the virtual suspension of specie payments for a short time throughout the land. Any national bank, having the required qualifications under this law, can not be excluded from joining an association if it applies.

2. The essential provision of the bill provides that any bank in such an association, having circulating notes outstanding secured by the deposit of United States bonds to an amount not less than 40 per cent of its capital stock, may deposit its securities, including commercial paper, and if, in the judgment of the Secretary of the Treasury, business conditions in the locality demand additional circulation, and the securities are amply sufficient, shall have issued to it additional circulating notes to an amount not exceeding 75 per cent of the cash value of the securities so deposited.

If municipal, State, or national bonds are deposited for currency, there shall be issued 90 per cent of the value of said bonds. Not more than 30 per cent of the amount represented by the capital and surplus can be issued on securities other than bonds and commercial paper so used must be first class and running not more than four months.

3. That the assets of the particular bank and the assets of all banks belonging to such association shall be liable to the United States for the redemption of such additional circulation. Additional security can be demanded at any time. The total amount of notes, however, which a bank may issue shall not at any time exceed its unimpaired capital and surplus. The maximum issue for the whole country shall never exceed \$500,000,000. In addition to all this security, the bank shall deposit with the Treasury 10 per cent of all notes issued as "a redemption fund," which practically amounts to a reserve.

4. It is expressly provided that an equitable distribution between the various sections of the country shall be maintained, so that it will be impossible for Wall street or any great financial center to monopolize or control the issuance or withdrawal of this currency.

5. This emergency currency is taxed. If secured by 2 per cent United States bonds, it is taxed one-half per cent a year; if secured by United States bonds bearing a rate higher than 2 per cent, it is taxed 1 per cent per annum. The circulating notes to be issued under this act, secured by the assets of the bank, including commercial paper, shall be taxed for the first month 5 per cent per annum, and thereafter an additional tax of 1 per cent per annum for each month until 10 per cent is reached. This additional currency can be retired from circulation by a deposit with the United States Treasurer of lawful money or national-bank notes and a proportionate share of the securities may be withdrawn.

The notes state upon their face that they are secured by United States bonds or other securities according to law, and that the banking association promises to pay them on demand. These notes are redeemable in lawful money on presentation by the United States Treasury.

5. Another important section provides that all public moneys deposited in depositories shall pay interest as fixed by the Secretary of the Treasury, but not less than 1 per cent, and shall be equal and uniform throughout the United States.

6. A national currency commission of eighteen members is created to investigate carefully the causes of the recent financial crisis and to recommend to Congress further legislation, as this law operates only till 1914.

Briefly stated, these are the main provisions of this act. It is strongly recommended and approved by President Roosevelt, who has recommended repeatedly "emergency currency." He believes that a safety valve should be created for just such a crisis as we had last year. He, as well as the remainder of us, does not believe that this currency will often be needed, but the fact that it can be made available at any time on short notice by any part of the country will maintain confidence and make it unlikely that it will ever be called for at all. The disposition to hoard money or withdraw it from the bank will be averted. A depositor usually does not care for his money if he is sure the bank has it on hand.

While it is not likely that the necessity will arise for resort to this form of currency, it is generally believed that the fact that such a law is on the statute books will itself inspire confidence and prevent the hoarding of money.

I am sure that all of us are only anxious to do the wise and patriotic thing—to restrain the raids of the great commercial centers on our prosperity and put no weapon in their hands with which they may work havoc at unexpected seasons on the industries of the country. If it were not for the unrelenting opposition of the Members of Congress from the eastern part of the country and many from the South, with whom I have talked, a much better solution of this question could be put into law. I mean that there should be a system of guaranteeing and insuring bank deposits. I believe this can be safely and inexpensively done. A small tax on deposits to be paid by the banks will create a sufficient fund, and the increased confidence thereby established in the banks will amply reimburse them by bringing from hiding large sums of money into the banks and into circulation. Runs on banks would then be a thing of the past, all men would implicitly believe in the security of their savings, and I confidently believe that panics would be unknown.

Many of us have urged this proposition on Congress, but on both sides of the Chamber much hostility exists. The large and strong banks would be benefited, as well as the smaller ones. All usually are affected by lack of confidence, and it is many times for the security of the well managed and solvent banks that no unexpected raids be made on smaller and less solid institutions. We have just now by far the largest aggregate and per capita circulation in our history. More than \$35 per person is certainly adequate for all our needs. Whatever legislation we have should be directed to the prevention of its absorption in great speculative ventures and to secure its equitable distribution. More rigid State and national laws should be enacted to prevent the reckless speculation on margins, which entices and misleads thousands in cities and in country and threatens the very stability of our financial system and is an unmixt evil. Happy is that land where economy prevails, wild speculation does not exist, and men are content with moderate and honest gains. Otherwise the prosperity which has been so unbounded would be imperiled. This law may supply that elasticity in our circulating medium which will afford defense against panic and disaster and make sure a continuance of industrial activity.

Revision and Codification of the Penal Laws.

SPEECH

OF

HON. CHARLES L. BARTLETT,
OF GEORGIA,
IN THE HOUSE OF REPRESENTATIVES,

Saturday, January 11, 1908.

The House being in Committee of the Whole House on the state of the Union, and having under consideration H. R. 11701, a bill to codify and amend the penal laws of the United States—

Mr. BARTLETT of Georgia said:

Mr. CHAIRMAN: Section 23 reads as follows:

SEC. 23. No citizen possessing all other qualifications which are or may be prescribed by law shall be disqualified for service as grand or petit juror in any court of the United States, or of any State, on account of race, color, or previous condition of servitude; and any officer or other person charged with any duty in the selection or summoning of jurors who shall exclude or fail to summon any citizen for the cause aforesaid shall be fined not more than \$5,000.

A motion has been made to strike out that part of the section which refers to the qualifications of jurors in the State courts and which declares a penalty against the State officers who may be charged with the selection or summoning of jurors in the State courts for obeying the laws of the State.

Mr. Chairman, I desire, as I made the motion to strike out this entire section, to call the attention of the committee for a minute to the position I take upon it. I am in favor of the amendment offered by the gentleman from New Jersey [Mr. HUGHES], but this is a section which was put in the law in 1871 to enforce the fourteenth amendment, growing out of the peculiar conditions then existing in the South. It has served its purpose, and, in my judgment as a lawyer, no part of this section 19 now proposed to be reenacted into law can stand the test of constitutionality except that part which deals with the franchise, because the Supreme Court of the United States has in a number of cases, which I have here before me, but which I have not, of course, time to read, declared that the fourteenth amendment simply dealt not with individuals, but with States, when it declared that it could not deprive a citizen of his rights guaranteed to him by the Constitution of the United States.

I have the compilation here of these decisions, and the statutes, and I have the decisions themselves, which I will undertake to put into the Record. But independent of all that, Mr. Chairman, we ought not longer to permit this section to remain upon the statute books, because it is never now used except for the purpose of undertaking to charge people with conspiracies and thereby drag them into the courts of the United States for a violation of the laws of some State or for a pretended violation of the laws of the United States. It has been used as a cloak and a cover beneath which there has been exercised the power of the Federal courts to oppress and wrong the citizens of the States. There are a few cases, it is true, that have reached the Supreme Court of the United States. There are a few cases that have reached the court of appeals, because in nine cases out of ten they are so frivolous and so evidently not authorized by the law that, outside of the arrest and the annoyance of carrying the citizen to the United States commissioner or binding him over to the United States circuit court, there is nothing left of it.

Among the reserved rights of the States not granted to the General Government is the establishing of the court of justice; the appointment of judges and the making of regulations for the administration of justice within each State according to its laws on all subjects not intrusted to the Federal Government is the peculiar province and duty of the State legislatures. The several States retain all the powers of legislation delegated to them by the Constitution which are not expressly taken away by the Constitution of the United States. (See *Calder v. Bull*, 3 Dallas, 388.) The right to prescribe who shall be qualified to serve as jurors in the State courts is the exercise of one of the sovereign rights, the reserved rights of the States; to prescribe that an officer of the State shall be punished by a Federal court for obeying the laws of his State in the selection of jurors for a State court is to annihilate and destroy the power of the State to make regulations for the administration of justice as its legislature may determine, and this, in effect, will destroy the reserved rights of the State. To such a doctrine I am opposed, and this statute, which was passed in the time of heated political and sectional animosity, should no longer cumber and disgrace the statute books.

It rests with each State to prescribe such qualifications as it deems proper for jurymen, taking care only that no discrimina-

tion in respect to such service be made against any class of citizens solely because of their race. This was decided by the Supreme Court of the United States in the case of *Jugiro* (140 U. S., 297). In that case the court says:

No person charged with crime involving life or liberty is entitled by virtue of the Constitution of the United States to have his race represented upon the grand jury that may indict him or upon the petit jury that may try him. And so far as the Constitution of the United States is concerned, service upon grand and petit juries in the courts of the several States may be restricted to citizens of the United States. It rests with each State to prescribe such qualifications as it deems proper for jurors, taking care only that no discrimination in respect to such service be made against any class of citizens solely because of their race. (See also *Spies v. United States*, 123 U. S., p. 168; *Baldwin v. Franks*, 120 U. S., pp. 685-688 and 689.)

This case, when read carefully, fully sustains this proposition. To the same effect is *Logan v. United States*, 144 U. S., 289; 46 Fed. Rep., 383, and 51 American Decisions, 94, note.

This and kindred sections ought not longer to remain on the statute books. Until the Supreme Court of the United States decided these cases great wrongs and outrages had been perpetrated upon citizens of certain parts of this Union. That time has passed away, and with this era of good feeling between the sections it ought to pass away forever. [Applause on the Democratic side.]

William James Bryan.

REMARKS

OF

HON. JOHN M. NELSON,

OF WISCONSIN,

IN THE HOUSE OF REPRESENTATIVES,

Sunday, May 3, 1908.

On the following resolutions:

"Resolved, That in accordance with the order of the day an opportunity be now given for tributes to the memory of Hon. WILLIAM JAMES BRYAN, late a United States Senator from the State of Florida.

"Resolved, That, as a particular mark of respect to the memory of the deceased and in recognition of his distinguished public career, the House, at the conclusion of these exercises, shall stand adjourned.

"Resolved, That the Clerk communicate these resolutions to the Senate.

"Resolved, That the Clerk send a copy of these resolutions to the family of the deceased."

Mr. NELSON said:

Mr. SPEAKER: Upon the request of a colleague I offer this humble tribute to one whom I never knew in mortal flesh, but to whose spirit I feel a kinship—a spirit richly endowed with all the attributes of a common humanity.

Like a luminous comet out of the Southern sky, unexpected, resplendent, startling—quickly passing as it came—pleasing to the eye as mysterious to the mind, such was the brief, too brief, legislative career of WILLIAM JAMES BRYAN, late United States Senator from the State of Florida.

Life. What is life? The world's mystery, to which the Author of life alone holds the silvery key. Death. What is death? The heaven's mystery, to which the Lord of heaven alone holds the golden key. Life and death, twin mysteries of mysteries, portals invisible to mortal eye, set at either end of earth's existence, through which enter eternal spirits that for a few fitful moments of time assume form and feature, pass through God's inscrutable processes of purification in some fiery furnace of affliction, and then disappear from mortal sight for evermore.

Whence? Why? Whither? How? These are the troubled questionings of time, but the hopeful, aye, the certain, revelations of eternity.

Every human life has a strange fascination for every other human life, and each is more or less a magnetic center from which and to which flow currents of thought and affection that move this world of men. And that soul center is the more influential force which is nearer to the Ultimate Source of all that is true, good, and beautiful in time and in eternity.

Hence it is not how long life lasts, but how wisely and how well one lives, that tells for true greatness. Thus this youthful, brilliant public servant, whose star burst upon us so suddenly from the balmy Southland, attracted at once and to an unusual degree the attention of his colleagues in the Congress, because of a pleasing personality, a successful past, and a refulgent promise of a long and useful service in high place for his country.

In private and in public comment was made on his youthful years, so unusual in the high place to which he had attained,

which attainment was itself to young America an inspiration and a hope. His very name provoked discussion so similar to that of another distinguished statesman, a name known as a household word from the Gulf to the Great Lakes and from sea to sea; and lastly, his real abilities, his approved devotion to public duty, and his unswerving fidelity to high patriotic ideals led his friends to predict for him a great and glorious destiny.

It was not to be. The broken promise of a long and splendid career for this strangely favored man but reechoes the old and everlasting truth that "Man proposes, but God disposes."

It is for us to believe that God knoweth best what is best for us all. What are years—a decade, a score, a century—in the eyes of the Everlasting One? In His eternal purpose a thousand epochs are like a day.

After all, what is the glory of place and power and pomp? The poet, Gray, in contemplation of the tombs of those of the old world once counted rich, noble, and great, uttered this sentiment, the pathos of which reechoes in the heart of every man:

The boast of heraldry, the pomp of power,
And all that beauty, all that wealth e'er gave
Awaits alike th' inevitable hour.
The paths of glory lead but to the grave.

From the tributes paid to WILLIAM JAMES BRYAN by those who knew him best and loved him well, we believe that he was truly one of nature's noblemen, endowed with a soul that turned on the poles of truth, set in the purpose and the will to do right as he saw the right, and imbued with the spirit of service to his fellow-men, which is brotherly love. Hence departing, to his dear ones he left behind him a great sorrow, it is true, but also the glorious legacy of a stainless name. Great, doubtless, seemed their loss. To a friend Mr. BRYAN's brother wrote these pathetic words:

The State has lost a public servant, others have lost a personal friend, and it seems to those of us who were of his family that we have lost everything.

But gracious years will soften their sorrow; and there will remain to them the loving memory of one of whom it may be said:

He is not dead
Who in his record still earth shall tread
With God's clear aureole shining round his head.

And in their hearts his friends may say:

As a star that leaves its place
Fills the heavens with passing grace,
Did he set our hearts aglow,
Where he was a shadow rests,
Veiling void in aching breasts,
He but heeds the immortal rule,
Lifted to the Beautiful.

The Vreeland Bill Is a Makeshift—The Killing of It Would Be No Murder.

SPEECH

OF

HON. J. DAVIS BRODHEAD,

OF PENNSYLVANIA,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, May 14, 1908.

On the bill (H. R. 21871) to amend the national banking laws.

Mr. BRODHEAD said:

Mr. SPEAKER: There is something the matter with our currency laws. The recent panic showed that fact. The country has been looking to this Congress for some logical, philosophical, remedial legislation. The Republican party, with its majority in this House, has the responsibility resting on it to provide the legislation demanded by the people and by the conditions of the country. Now, after months of alleged deliberation, we are given this makeshift.

I do not pretend to understand our currency system, nor am I, individually, able to write a bill which would cure the financial ills under which we are suffering; but if I did make that pretense and did assume the responsibility and failed to produce anything better than this Vreeland bill, I ought to give way to some one else.

This much is certain, the "Grand Old Party" has failed to give us good legislation on our currency.

Mr. Speaker, I have received this morning a letter from a banker who has given careful study to our banking laws, a former United States bank examiner and at present president of the Easton Trust Company, in the city of Easton, in my district,

and I now ask that it be read and printed as part of my remarks:

EASTON, PA., May 15, 1908.

HON. J. DAVIS BRODHEAD,
House of Representatives, Washington, D. C.

MY DEAR BRODHEAD: I have been anxiously awaiting the appearance of the Vreeland bill, and thank you very much for your prompt copy. The Vreeland bill is merely an expedient. It is nothing more than the legalizing of a method which the recent crash evolved as a necessity. It is crude and perhaps insufficient, but it probably is the only thing this Congress will produce. It assumes that the business of the country is performed by the national banks, and points out no way by which State institutions can be supplied with currency in panic conditions to supply the vast volume of business which is done through them.

It is a premium on banking transactions with national banks and a discrimination against all State institutions. The Government makes it impossible to use any currency save such as is issued by them, and in this bill determines that currency relief can and shall only come through the national banks, and as the terms of the bill restrict the amount of their currency output, State institutions can not be aided through the kind agency of their sister national institutions.

I am afraid it is a delusion and a snare and will prevent prompt and reasonable legislation upon this question, notwithstanding the magnificent array of a commission which the bill proposes to create—a commission large in number, thereby inviting much confusion of wisdom, and most important in salaries, thereby inviting modern graft expedients in the obtaining of membership.

The bill is neither fish, flesh, nor good salt herring. It is a sop to Cerberus, a tub to the whale, and its originator doubtless thinks there is sufficient dust in it to blind the eyes of a gullible public. We have hoped for much from this Congress to make impossible such disasters as occurred last autumn, but, with all respect to our masters, nothing has arisen from the much wisdom in financial directions which promises anything of good, and the avoidance of Congress leaves the commercial world in the same ditch that patchwork legislation and lack of legislation and stupid legislation have placed us in for many years.

I observe the Democrats will probably vote against this bill. If they should succeed in killing it there will be no murder on their conscience, as there is no observable object in putting life into such a measure. It is the most transparent effort at avoidance of legislation, most gravely demanded, that has yet been placed upon the records of the House.

I am not criticising this bill. I am merely groaning in utter hopelessness. There seems to be neither the will, nor the power, nor the intellectual ability in Congressional circles to make a reasonable guess at the cause of our frequent financial troubles, nor to apply a logical, philosophical remedy to that evil.

Yours, very truly,

R. E. JAMES.

Catholic Church Claims in the Philippine Islands.

SPEECH

OF

HON. THOMAS F. MARSHALL,

OF NORTH DAKOTA,

IN THE HOUSE OF REPRESENTATIVES,

Friday, March 6, 1908.

On the bill (H. R. 16143) to provide for payment of the claims of the Roman Catholic Church in the Philippine Islands.

Mr. MARSHALL said:

Mr. CHAIRMAN: This bill provides for the payment to the Archbishop of Manila, as trustee of the Catholic Church of the Philippine Islands, of claims for the use, occupancy, and damages to church property in those islands.

Not being a lawyer, I am not competent to discuss the matter from a legal standpoint, and am therefore very glad that the legality and justice of the claim has not been attacked—in fact, all practically agree that this is a just claim and that it ought to be paid.

As far back as 1906, President Roosevelt sent the following message to Congress:

To the Senate and House of Representatives:

I herewith submit to the Congress the report of the Secretary of War and of the Judge-Advocate-General in reference to the claims presented by the representatives of the Roman Catholic Church for amounts due from the United States to the various Roman Catholic churches in the islands for use and occupation by troops of the United States, and for damages during such occupation. I cordially indorse all that is said in these reports, and earnestly hope that the amount recommended by the board will be immediately appropriated, in order to do what is really an act of substantial justice to the Roman Catholic churches of the Philippines, in accordance with the suggestion of the Secretary of War. It is not only a matter of equity that we should pay this sum, but for the reasons set forth by the Secretary of War it is very greatly to the interest of the people of the Philippine Islands that it should be paid. I have accordingly approved the action of the Secretary of War in directing that the same board be reconvened, or another convened, to report on the advisability of paying additional sums to the Roman Catholic churches in the islands in view of the damages inflicted upon them by reason of the war and by the insurgents. I feel that this is peculiarly a case where in the interest of the Philippine people themselves it would be wise for the Congress to exercise a large liberality.

THEODORE ROOSEVELT.

THE WHITE HOUSE, December 5, 1906.

At the hearings Secretary Taft made the following statement:

I think that \$363,000 is much too low for rent and damages in occupation by our troops. It is much too low, because of the difficulty of

bringing in evidence so long after the event. I think the board went through the matter with great care. But there are a great many claims filed in excess of the \$363,000 that, nearer to the event, might have been proven. The burden of course was on the claimants; but with the immense loss that the church suffered from war, and other causes, I am quite sure that the increase of \$363,000 to a half a million or more would be no injustice.

All will agree that no one has a better knowledge of the facts, and none will question his judgment.

Likewise, I have great confidence in the Committee on Insular Affairs, and in the chairman of that committee, the gentleman from Wisconsin [Mr. COOPER], who brings in this report.

The action of the committee was based on the report of the commission, which made a very exhaustive investigation.

The claims of the minority as to the number and rights of the so-called "Independent Catholic Church," are not well founded. The letter of Bishop Hendrick, of the Philippine Islands, to Hon. SERENO E. PAYNE, of recent date, shows very clearly that the membership of the Independent church is grossly overestimated in the minority report, and be that membership large or small, their claim of any interest in this money should not be considered, for it is made very clear in the testimony, particularly that of Colonel Hull, that there was no organized Independent Catholic Church at the time for which the claim is made by the commission, and furthermore, there is a statement to the effect that no claim was contemplated.

In the face of all the facts I feel that the committee has made a clear and strong case, and that the amount is very reasonable and just, being but a small percentage of the total amount claimed, and it is the duty of Congress to provide for its payment as provided in the bill.

Catholic Church Claims in the Philippine Islands.

SPEECH

OF

HON. JOHN W. LANGLEY,

OF KENTUCKY,

IN THE HOUSE OF REPRESENTATIVES,

Friday, March 6, 1908.

On the bill (H. R. 16143) to provide for payment of the claims of the Roman Catholic Church in the Philippine Islands.

Mr. LANGLEY said:

Mr. CHAIRMAN: It seems to me that there is too much unnecessary mystery made of this claim of the Catholic Church. Every official authority of which I am advised is in favor of the payment of this claim. President Roosevelt urged it in a special message to the Senate. Secretary Taft urged it before the Committee on Insular Affairs and, in fact, recommended the allowance of a larger sum. The board of church claims, composed of three competent Army officers, have pronounced the award fair and just. Under the circumstances the logic of the report of the minority is difficult to comprehend. For instance, it avers that of the "five judges subscribing to the majority opinion four are members of the Roman Catholic Church, and not one of the court is a member of the Independent Philippine Catholic Church, although three are Filipinos." If the purpose of the report is to argue that these judges were not capable of arriving at a correct decision because they were Roman Catholics, then it would naturally follow that in the case of a claim of a Protestant church in this country our Supreme Court could not arrive at a correct decision if the majority of the members favoring that claim were Protestants. The minority report clearly leads to such an inference.

But one of the most startling statements in the minority report refers to the numerical strength of the Independent Philippine Catholic Church. On this point the report says:

The Independent Catholic Church, of which Archbishop Gregario Aglipay, who prior to the insurrection was a native priest, is the acknowledged head, observes all of the rites, ceremonies, and festivals of the Roman Catholic Church, and differs with that organization only in the fact that it does not acknowledge the control of the Vatican. It is claimed for the Independent Catholic Church that it has more than 250 priests and 20 bishops, that it has a number of seminaries located at various points in the islands, and that it has a membership of 4,000,000 souls. Its opponents do not concede that its membership is so large, and sometimes place it at 3,000,000 or even less; but Bishop Brent, of the Episcopal Church, who has resided at Manila for a number of years, and than whom there can probably be found no higher authority, has, it is reported, but recently estimated the membership of this branch of the church at 4,000,000. It can be most conservatively and safely said that it outnumbers the membership of the Roman Catholic Church two to one, and that in many of the parishes the priests, and all those who hold the Catholic faith, have identified themselves with the Independent Catholic Church.

Now, if this church is the owner of these properties, how is it that it lost nothing during the war and the insurrection and has no claims to present to this Congress? The fact is that the official figures, furnished to the gentleman from New York [Mr. PAYNE] by Bishop Hendrick, of the Roman Catholic Church, entirely disprove the statements in the minority report as to the numerical strength of the Independent Filipino Church.

I shall quote from the Bishop's letter just enough to show the great disparity in the two claims, and I will add that the figures given by the Roman Catholic bishop have the official indorsement of the Philippine government. The Bishop gives the following figures, which I quote in part from his letter:

GONZAGA COLLEGE,
Washington, D. C., March 5, 1908.

To the Hon. SERENO E. PAYNE.

DEAR SIR: Replying to your inquiry as to the number of Aglipayanos in the Philippines, permit me to say that the diocese of Cebu contains 2,000,000 of Christians. I have been to all the dioceses, and say that the proportion is as follows:

Cebu—700,000, Aglipayanos 1,000; Leyte—500,000, Aglipayanos 100; Bohol—250,000, Aglipayanos 75; Northern Mindanao—150,000, Aglipayanos 10,000; Siquijor—35,000, Aglipayanos none; Samar—400,000, Aglipayanos none; total—2,035,000, Aglipayanos 11,175.
The diocese of Nueva Caceres, about 850,000, Aglipayanos 8,000.
Diocese of Jaro, about 1,200,000, Aglipayanos 50,000.
Allowing 70,000 Aglipayanos in Manila and 35,000 Aglipayanos in Nueva Segovia, there appears a total of 174,175.

It is very plain to my mind that, with these facts before us, reenforced by the indorsement of President Roosevelt and Secretary Taft, we can not err in allowing the full amount of this claim, and I shall therefore take pleasure in voting for it.

The "Do-Nothing" Congress.

SPEECH

OF

HON. JOSEPH J. RUSSELL,

OF MISSOURI,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, May 26, 1908.

Mr. RUSSELL of Missouri said:

Mr. SPEAKER: The first session of the Sixtieth Congress will soon adjourn, and its work will become a matter of history. It has already won the deserved appellation of "The do-nothing Congress," and the merited condemnation of the American people.

Mr. Speaker, from the beginning of this session it was evident that the policy of the leaders of the party in power was to pass the appropriation bills and to do but little else. It was soon made manifest by the comments of the press of the country, and the petitions and appeals of the people, that some remedial legislation was expected and demanded by our constituents. President Roosevelt, with his ear to the ground, heard the distant but distinct rumblings of the public discontent, and he foresaw the people's emphatic disapproval of the indisposition of Congress to heed their demands.

The President was so impressed with the importance of certain measures that he was not content with the transmission of his usual message at the opening of Congress, in which he earnestly urged their consideration, but on the 31st day of January he sent to Congress a second, and on the 25th day of March a third message, calling the attention of Congress to the great importance of a number of proposed laws, and of the necessity of their enactment. Some of his proposed measures met with Democratic favor and among those recommended by him in these several messages that were indorsed by the Democrats were the following:

- To put wood pulp on the free list.
- An amendment to the Sherman antitrust law.
- An eight-hour law for Government employees.
- To prevent the abuse of injunctions.
- To prevent corporations from contributing to Presidential campaign funds, and to provide for publicity of such contributions.

No one of these bills has been enacted, for the good and sufficient reason that Speaker CANNON did not so desire.

The disposition of this Congress to do nothing for the relief of the people was early discovered by the Democratic leaders of the House, and after such insinuations had been expressed upon the floor of Congress and in the press of the country Hon. W. P. HEPBURN, of Iowa, one of the old "war horses" of the dominant party, and for more than twenty years a Member of Congress, sought both to denounce such insinuations among his

party enemies and to dispel such apprehensions among his party friends, and in his speech, delivered on the 3d day of February, when discussing the President's message, said:

In every recommendation of his message the American people stand by him, ready to uphold his hands, ready to demand that the legislation that he asks shall be given in order that those recommendations may be made effective through the courts. There may be gentlemen who say there will be nothing done by this Congress. I do not believe it. I assert that the American people are earnest in the purpose of so clothing the Executive with power that he may be able to accomplish the reforms that are advocated in this measure, and if men stand in the way, Mr. Chairman, they will be run over and may be disfigured badly in the contact.

Still, with that threat hurled in the faces of the Republican Members of Congress, no one of these laws above mentioned has been passed, and no one of the "big five" who have "stood in the way" and made their enactment impossible has as yet been "run over" or "disfigured," but the vehicle of the righteous indignation of the people should and will justify the prophecy of Colonel HEPBURN in the November election.

Speaker CANNON is not only the presiding officer of the lower House, but he is under the present rules the absolute supreme dictator of this body, and with the assistance of his four trusted lieutenants, who with him constitute the "big five," control absolutely not only all legislation enacted by the House, but determine what measures shall have consideration. Any bill offered in the House can be considered and voted upon with the Speaker's consent, but without his consent such consideration and vote is absolutely impossible.

If three-fourths of the membership of the House desire the enactment of a certain law, still it can not be even considered if the Speaker is against such consideration. The Chicago Evening Post, a Republican paper, in a recent editorial, in forceful language has denounced this modern usurpation of power in the following words:

To what depths of degradation the House of Representatives in the Congress of the United States has sunk, JOHN SHARP WILLIAMS effectively showed his 80,000,000 countrymen yesterday.

For Mr. WILLIAMS forced upon the Republic the almost incredible spectacle of 164 duly elected Representatives of the people pleading in vain for the mere opportunity to present to their fellow-legislators in any shape or form a legislative proposal which they unitedly favored.

One hundred and sixty-four servants of the people demanded a right which the Constitution gives them and which their oaths of office oblige them to use. One insolently self-made master of the people ignored that demand and rendered it futile. Could travesty of democratic government go further?

The very fact that so vital a protest as that made by the minority was presented with the clownish trappings of a mock revival meeting gives startling evidence of the vicious thoroughness with which the regime of JOSEPH G. CANNON, SERENO E. PAYNE, and JOHN DALZELL has stamped out in the lower Chamber of Congress the sense of political morality, the habit of common decency, and the ideals of representative government. It is to-day astoundingly clear that the things which America holds most high have become in the House of Representatives merely the objects of a cynical and contemptuous pity.

With solemn humbug, with party buncombe, with ancient political cant Speaker CANNON has completed the wretched work of turning the free legislative assembly of a democracy into a shameless autocracy. He himself, singly and unaided, now dares to speak, think, and act for 386 men whom the people have laboriously chosen to make their laws for them. The rule of the majority, a fundamental principle of the nation, he disregards with a cool impudence that would not be tolerated in the Russian Duma.

About thirty Republicans offered bills to put wood pulp and print paper on the free list, and many more of them favored these and other bills recommended by the President and urged by the Democrats, but they, too, were as helpless as infant children and as powerless as moonshine upon a frozen fountain.

I have been here as the Representative of over a quarter of a million of people, who have been taught by the frequent boasts of the leaders of all political parties that this is a free Government and representative in form. I have had many petitions and innumerable letters from my district asking me to vote for a number of measures favored by my constituents, but in almost every case the Speaker has persistently refused to allow these bills to be considered.

The minority leader, Hon. JOHN SHARP WILLIAMS, observing the "do-nothing" policy of the Republican leaders, determined to and did inaugurate a so-called "filibuster," but which, in fact, was misnamed. It was not a filibuster in its usual sense, as it was not intended to, and did not in fact, obstruct legislation, but was intended to focus public attention upon the questions of the hour, and to emphasize the importance of enacting some of the remedial legislation demanded by a Republican President, and to so arouse public opinion as to drive their public servants to heed the demands of the people, or to fasten the responsibilities upon those who are to blame for their failure to do so.

Mr. WILLIAMS did not inaugurate this policy until it was evident that the leaders intended not to pass these bills. He announced this programme on the 24th day of March, and after

the House had been in session nearly four months with nothing done but a useless waste of time.

Congress convened on the 2d day of December, and a careful examination of the record shows that the House was only in session eleven hours and nine minutes in the first five weeks of its existence. Occasionally an ill-advised or overzealous member of the majority party will claim that the Democratic minority has obstructed the legislation desired by the people, but such a claim is absolutely untrue, as Mr. WILLIAMS on divers occasions publically announced in the House that he and every member of his party was ready and willing at all times not only to facilitate the consideration of such measures, but to assist in their passage.

The leaders of the Republican party in the House have not pretended to claim that the Democrats have in any way obstructed their plans, and among a number of other similar statements made upon the floor Hon. SERENO E. PAYNE, the Republican floor leader, on the 6th day of April in one of his speeches, said:

We will go on with the legislation of this country, and the majority will decide in their own good time, and despite any let or hindrance from the gentleman from Mississippi and his voting trust, which it is reported he had organized on that side last Saturday, to stand by him in every obstructive method to stop legislation; notwithstanding that, we will go on and write on the statute book just what we on this side of the House desire.

In the face of this and many similar declarations by the Republican leaders, it must be assumed, as we know it to be true, that all of the remedial legislation desired by the people and demanded by the President that has not been passed was purposely defeated as a matter of choice by the party in power.

The Republican leaders have been unwilling to pass a publicity campaign contribution bill, but have attempted to deceive the people of the country, who demanded such legislation, by coupling with this measure some of the features of the old force bill, giving Federal control over State elections, and preparing the way for the cutting down of the Southern representation in Congress and in Presidential elections.

It was perfectly understood by every man in Congress that there was no possibility of this hybrid offspring of Republican desperation and cowardice ever becoming a law, nor was it ever so intended by the Republican leaders.

The Democrats in the House in good faith desired the enactment of a campaign publicity bill, and many of the Republicans also favored it and introduced such bills, but the Speaker and the leaders of his party were against it for the reason that they desire to collect corporate money, with which they hope to perpetuate their party in power, and the Speaker of the House has persistently refused to permit this bill to be considered upon its merits. They ingrafted upon this bill the odious features of the force bill to accomplish its defeat, knowing that no self-respecting Democrat would vote for it, but by this subterfuge hoping to blindly lead the people into believing that they had favored and voted for a campaign contribution bill.

This legislative pretense has lived its short life of twenty-four hours, served its purpose in showing the utter insincerity of its pretended supporters, died in the Senate, and now silently sleeps in its grave in the Senate committee room, without any friend in any party to hope for its resurrection. The only thing that this Congress has been able to do with facility and dispatch has been to loot the Treasury.

Mr. TAWNEY, the chairman of the Committee on Appropriations, has warned the House that the unprecedented extravagance of this session of Congress will necessarily lead to a deficit in the revenues of the current year of \$150,000,000.

It has been the most extravagant Congress that ever convened, having appropriated more than \$1,000,000,000 in one single session, and of this enormous expenditure of the people's money over four hundred millions was appropriated for the support of the military arm of the Government, while less than \$12,000,000 has been appropriated for the benefit and encouragement of the all-important vocation of agriculture. In spite of the urgent appeals of the President in behalf of the waterways, no bill for river improvements has been passed at this session, and even a small appropriation to pay the expenses of the Waterways Commission has been postponed until next session.

If anything was needed to insure the triumphant election of William J. Bryan, the requirements have certainly been furnished by the record of this Congress in its "do-nothing" policy, its duplicity, its insincerity, its vigilant care for the welfare of the corporate interests and the protected industries of the country, and the utter disregard of the rights and welfare of the common people.

I ask to insert in the RECORD, as a part of my speech, the following address of William J. Bryan, entitled "Individualism

versus Socialism," published in the Century Magazine, April, 1906:

The words "individualism" and "socialism" define tendencies rather than concrete systems; for, as extreme individualism is not to be found under any form of government, so there is no example of socialism in full operation. All government being more or less socialistic, the contention, so far as this subject is concerned, is between those who regard individualism as ideal, to be approached as nearly as circumstances will permit, and those who regard a socialistic state as ideal, to be established as far and as fast as public opinion will allow.

The individualist believes that competition is not only a helpful but a necessary force in society, to be guarded and protected; the socialist regards competition as a hurtful force, to be entirely exterminated. It is not necessary to consider those who consciously take either side for reasons purely selfish; it is sufficient to know that on both sides there are those who with great earnestness and sincerity present their theories, convinced of their correctness and sure of the necessity for their application to human society.

As socialism is the newer doctrine, the socialist is often greeted with epithet and denunciation rather than with argument; but, as usual, it does not deter him. Martyrdom never kills a cause, as all history, political as well as religious, demonstrates.

No one can read socialistic literature without recognizing the "moral passion" that pervades it. The Ruskin Club, of Oakland, Cal., quotes, with approval, an editorial comment, which asserts that the socialistic creed inspires a religious zeal and makes its followers enthusiasts in its propagation. It also quotes Professor Nitto, of the University of Naples, as asserting that "the morality, that socialism teaches is by far superior to that of its adversaries;" and it quotes Thomas Kirkup as declaring, in the Encyclopedia Britannica, "that the ethics of socialism are identical with those of Christianity."

It will be seen, therefore, that the socialists not only claim superiority in ethics, but attempt to appropriate Christ's teachings as a foundation for their creed. As the maintenance of either position would insure them ultimate victory, it is clear that the first battle between the individualist and the socialist must be in the field of ethics. No one who has faith in the triumph of the right (and can he contend with vigor without such a faith?) can doubt that that which is ethically best will finally prevail in every department of human activity.

Assuming that the highest aim of society is the harmonious development of the human race physically, mentally, and morally, the first question to decide is whether individualism or socialism furnishes the best means of securing that harmonious development. For the purpose of this discussion individualism will be defined as the private ownership of the means of production and distribution where competition is possible, leaving to public ownership those means of production and distribution in which competition is practically impossible, and socialism will be defined as the collective ownership, through the state, of all the means of production and distribution.

One advocate of socialism defines it as "common ownership of natural resources and public utilities and the common operation of all industries for the public good." It will be seen that the definitions of socialism commonly in use includes some things which can not fairly be described as socialistic, and some of the definitions (like the last one, for instance) beg the question by assuming that the public operation of all industries will necessarily be for the general good. As the socialists agree in hostility to competition as a controlling force, and as individualists agree that competition is necessary for the well-being of society, the fairest and most accurate line between the two schools can be drawn at the point where competition begins to be possible, both schools favoring public ownership where competition is impossible, but differing as to the wisdom of public ownership where competition can have free play.

Much of the strength developed by socialism is due to the fact that socialists advocate certain reforms which individualists also advocate. Take, for illustration, the public ownership of waterworks. It is safe to say that a large majority of the people living in cities of any considerable size favor their public ownership—individualists because it is practically impossible to have more than one water system in a city, and socialists on the general ground that the Government should own all the means of production and distribution. The sentiment in favor of municipal lighting plants is not yet so strong, and the sentiment in favor of public telephones and public street car lines is still less pronounced; but the same general principles apply to them, and individualists, without accepting the creed of socialism, can advocate the extension of municipal ownership to these utilities.

Then, too, some of the strength of socialism is due to its condemnation of abuses which, while existing under individualism, are not at all necessary to individualism—abuses which the individualists are as anxious as the socialists to remedy. It is not only consistent with individualism, but is a necessary implication of it, that the competing parties should be placed upon substantially equal footing; for competition is not worthy of that name if one party is able arbitrarily to fix the terms of the agreement, leaving the other with no choice but to submit to the terms prescribed. Individualists, for instance, can consistently advocate usury laws which fix the rate of interest to be charged, these laws being justified on the ground that the borrower and the lender do not stand upon an equal footing. Where the borrower is left free to take advantage of the necessities of the borrower, the so-called freedom of contract is really freedom to extort. Upon the same ground, society can justify legislation against child labor and legislation limiting the hours of adult labor. One can believe in competition and still favor such limitations and restrictions as will make the competition real and effective. To advocate individualism it is no more necessary to excuse the abuses to which competition may lead than it is to defend the burning of a city because fire is essential to human comfort, or to praise a tempest because air is necessary to human life.

In comparing individualism with socialism it is only fair to consider individualism when made as good as human wisdom can make it and then to measure it with socialism at its best. It is a common fault of the advocate to present his system, idealized, in contrast with his opponent's system at its worst, and it must be confessed that neither individualist nor socialist has been entirely free from this fault. In dealing with any subject we must consider man as he is, or as he may reasonably be expected to become under the operation of the system proposed, and it is much safer to consider him as he is than to expect a radical change in his nature. Taking man as we find him, he needs, as individualists believe, the spur of competition. Even the socialists admit the advantage of rivalry within certain limits, but they would substitute altruistic for selfish motives. Just here the individualist

and the socialist find themselves in antagonism. The former believes that altruism is a spiritual quality which defies governmental definition, while the socialist believes that altruism will take the place of selfishness under an enforced collectivism.

Ruskin's statement that "government and cooperation are in all things and eternally the laws of life; anarchy and competition, eternally and in all things, the laws of death," is often quoted by socialists, but, as generalizations are apt to be, it is more comprehensive than clear. There is a marked distinction between voluntary cooperation upon terms mutually satisfactory and compulsory cooperation upon terms agreeable to a majority. Many of the attempts to establish voluntary cooperation have failed because of disagreement as to the distribution of the common property or income, and those which have succeeded best have usually rested upon a religious rather than upon an economic basis.

In any attempt to apply the teachings of Christ to an economic state it must be remembered that His religion begins with a regeneration of the human heart and with an ideal of life which makes service the measure of greatness. Tolstoi, who repudiates socialism as a substantial reform, contends that the bringing of the individual into harmony with God is the all-important thing, and that, this accomplished, all injustice will disappear.

It is much easier to conceive of a voluntary association between persons desiring to work together according to the Christian ideal than to conceive of the successful operation of a system, enforced by law, wherein altruism is the controlling principle. The attempt to unite church and state has never been helpful to either government or religion, and it is not at all certain that human nature can yet be trusted to use the instrumentalities of government to enforce religious ideas. The persecutions which have made civilization blush have been attempts to compel conformity to religious beliefs sincerely held and zealously promulgated.

The government, whether it leans toward individualism or toward socialism, must be administered by human beings, and its administration will reflect the weakness and imperfections of those who control it. Bancroft declares that the expression of the universal conscience in history is the nearest approach to the voice of God, and he is right in paying this tribute to the wisdom of the masses; and yet we can not overlook the fact that this universal conscience must find governmental expression through frail human beings who yield to the temptation to serve their own interests at the expense of their fellows. Will socialism purge the individual of selfishness or bring a nearer approach to justice?

Justice requires that each individual shall receive from society a reward proportionate to his contribution to society. Can the state, acting through officials, make this apportionment better than it can be made by competition? At present official favors are not distributed strictly according to merit, either in republics or in monarchies; is it certain that socialism would insure a fairer division of rewards? If the government operates all the factories, all the farms, and all the stores, there must be superintendents as well as workmen; there must be different kinds of employment, some more pleasant, some less pleasant. Is it likely that any set of men can distribute the work or fix the compensation to the satisfaction of all, or even to the satisfaction of a majority of the people? When the Government employs comparatively few of the people, it must make terms and conditions inviting enough to draw the persons needed from private employment; and if those employed in the public service become dissatisfied, they can return to outside occupation. But what will be the result if there is no private employment? What outlet will there be for discontent if the Government owns and operates all the means of production and distribution?

Under individualism a man's reward is determined in the open market, and where competition is free he can hope to sell his services for what they are worth. Will his chance for reward be as good when he must do the work prescribed for him on the terms fixed by those who are in control of the Government?

As there is no example of such a socialistic state as is now advocated, all reasoning upon the subject must be confined to the theory, and theory needs to be corrected by experience. As in mathematics no one can calculate the direction of the resultant without a knowledge of all the forces that act upon the moving body, so in estimating the effect of a proposed system one must take into consideration all the influences that operate upon the human mind and heart; and who is wise enough to predict with certainty the result of any system before it has been thoroughly tried? Individualism has been tested by centuries of experience. Under it there have been progress and development. That it has not been free from evil is not a sufficient condemnation. The same rain that furnishes the necessary moisture for the growing crop sometimes floods the land and destroys the harvest; the same sun that coaxes the tiny shoot from Mother Earth sometimes scorches the blade and blasts the maturing stalk. The good things given us by our heavenly Father often, if not always, have an admixture of evil, to the lessening of which the intelligence of man must be constantly directed. Just now there are signs of an ethical awakening which is likely to result in reforming some of the evils which have sprung from individualism, but which can be corrected without any impairment of the principle.

The individualist, while contending that the largest and broadest development of the individual, and hence of the entire population, is best secured by full and free competition, made fair by law, believes in a spiritual force which acts beyond the sphere of the state. After the government has secured to the individual, through competition, a reward proportionate to his effort, religion admonishes him of his stewardship and of his obligation to use his greater strength, his larger ability, and his richer reward in the spirit of brotherhood. Under individualism we have seen a constant increase in altruism. The fact that the individual can select the objects of his benevolence and devote his means to the causes that appeal to him has given an added stimulus to his endeavors. Would this stimulus be as great under socialism?

Probably the nearest approach that we have to the socialistic state to-day is to be found in the civil service. If the civil service develops more unselfishness and more altruistic devotion to the general welfare than private employment does, the fact is yet to be discovered. This is not offered as a criticism of civil service in so far as civil service may require examinations to ascertain fitness for office, but it is simply a reference to a well-known fact, viz, that a life position in the Government service, which separates one from the lot of the average producer of wealth, has given no extraordinary stimulus to higher development.

It is not necessary to excuse or defend a competition carried to a point where it creates a submerged fifth, or even a submerged tenth,

to recognize the beneficial effect of struggle and discipline upon the men and women who have earned the highest places in industry, society, and government.

There should be no unfriendliness between the honest individualist and the honest socialist; both seek that which they believe to be best for society. The socialist, by pointing out the abuses of individualism, will assist in their correction. At present private monopoly is putting upon individualism an undeserved odium, and it behooves the individualist to address himself energetically to this problem in order that the advantages of competition may be restored to industry. And the duty of immediate action is made more imperative by the fact that the socialist is inclined to support the monopoly, in the belief that it will be easier to induce the Government to take over an industry after it has passed into the hands of a few men. The trust magnates and the socialists unite in declaring monopoly to be an economic development, the former hoping to retain the fruits of monopoly in private hands, the latter expecting the ultimate appropriation of the benefits of monopoly by the Government. The individualist, on the contrary, contends that the consolidation of industries ceases to be an economic advantage when competition is eliminated; and he believes, further, that no economic advantage which could come from the monopolization of all the industries in the hands of the Government could compensate for the stifling of individual initiative and independence. And the individualists who thus believe stand for a morality and for a system of ethics which they are willing to measure against the ethics and morality of socialism.

Catholic Church Claims in the Philippine Islands.

SPEECH

OF

HON. HARRY M. COUDREY,

OF MISSOURI,

IN THE HOUSE OF REPRESENTATIVES,

Friday, March 6, 1908.

On the bill (H. R. 16143) to provide for payment of the claims of the Roman Catholic Church in the Philippine Islands.

Mr. COUDREY said:

Mr. CHAIRMAN: The claims involved in this bill are so eminently fair and just that I am surprised that so much time is taken up in discussion. The objections urged by the minority seem to me to be almost frivolous, and several statements in the minority report are so extraordinary that I am inclined to review at least some of them.

The first statement refers to a comparison between the numerical strength of the Independent Filipino and the Roman Catholic churches. On this subject the minority report says:

The Independent Catholic Church, of which Archbishop Gregorio Aglipay, who prior to the insurrection was a native priest, is the acknowledged head, observes all the rites, ceremonies, and festivals of the Roman Catholic Church and differs with that organization only in the fact that it does not acknowledge the control of the Vatican. It is claimed for the Independent Catholic Church that it has more than 250 priests and 20 bishops; that it has a number of seminaries located at various points of the islands, and that it has a membership of 4,000,000 souls. Its opponents do not concede that its membership is so large, and sometimes place it at 3,000,000, or even less. * * * It can be most conservatively and safely said that it outnumbers the membership of the Roman Catholic Church two to one, and that in many of the parishes the priests and all those who hold the Catholic faith have identified themselves with the Independent Catholic Church.

In striking contrast with these figures are the official statistics of the religious population, given in a letter to the gentleman from New York [Mr. PAYNE] by Bishop T. A. Hendrick, of the Roman Catholic Church. The Bishop does not deal in grand generalities, but comes down to the exact numbers, given in detail. I give the first part of his letter as a sample:

GONZAGA COLLEGE,
Washington, D. C., March 5, 1908.

To the Hon. SERENO E. PAYNE.

DEAR SIR: Replying to your inquiry as to the number of Aglipayanos in the Philippines, permit me to say that the diocese of Cebu contains 2,000,000 Christians. I have been to all the dioceses, and say that the proportion is as follows:

Cebu, 700,000; Aglipayanos, 1,000. Leyte, 500,000; Aglipayanos, 100. Bohol, 250,000; Aglipayanos, 75. Northern Mindanao, 150,000; Aglipayanos, 10,000. Siquilhor, 35,000; Aglipayanos, none. Samar, 400,000; Aglipayanos, none. Total, 2,035,000; Aglipayanos, 11,175. * * *

T. A. HENDRICK.

There is more of the same kind in the letter, and the proportions hold out about the same. The bishop figures out that of the 6,800,000 Christians 174,135 are Aglipayanos—that is, members of the Independent Filipino Church—and the rest are Roman Catholics.

It is plain that the figures of the minority are all wrong, and the deductions which they base on these figures are equally wrong. There is throughout the minority report a distrustfulness of the Archbishop of Manila, as is evidenced by the fear that the moneys paid to him may be diverted to improper purposes. This fear is repeatedly expressed in the questions asked at the hearings, and again in the report. The Archbishop of

Manila comes from my home city of St. Louis, where he is so well and so favorably known and so highly regarded that any attempt on my part to defend him must appear ridiculous. The people of St. Louis, regardless of denominational affiliations, feel proud of the fact that one of their priests had been selected for the difficult task of reorganizing the Catholic Church in the Philippines, a task which the archbishop has carried out with signal ability and which will reflect honor and glory on the first American archbishop of the Philippine Islands.

I am heartily in favor of this bill and shall vote for it with pleasure. I have examined into its merits and feel that it is a just bill. In closing I wish to quote the strong language of President Roosevelt, used in a message to the Senate, on the subject of this claim.

The President said in part:

I cordially indorse all that is said in these reports and earnestly hope that the amount recommended by the board will be immediately appropriated, in order to do what is really an act of substantial justice to the Roman Catholic churches of the Philippines, in accordance with the suggestions of the Secretary of War, Mr. Taft. It is not only a matter of equity that we should pay this sum, but for the reasons set forth by the Secretary of War it is very greatly to the interest of the people of the Philippine Islands that it should be paid. I have accordingly approved the action of the Secretary of War in directing that the same board be reconvened, or another convened, to report on the advisability of paying additional sums to the Roman Catholic churches in the islands in view of the damages inflicted upon them by reason of the war and by the insurgents. I feel that this is peculiarly a case where in the interest of the Philippine people themselves it would be wise for the Congress to exercise a large liberality.

With these words of the President I fully agree, and hope that this bill will pass.

Executive Usurpation.

SPEECH

OF

HON. HENRY T. RAINEY,
OF ILLINOIS,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, May 26, 1908.

On the bill (H. R. 21871) to amend the national banking laws.

Mr. RAINEY said:

Mr. SPEAKER: I think we may venture this year to talk again about the Constitution and to call attention to some of the things it contains. There was considerable discussion about the Constitution in this country one hundred and twenty years ago, and in those times we really knew something about that instrument. It is not popular to talk about it now. We attempted to talk about it seriously in 1900 and in 1904. In those years we called attention to the fact that far away in the islands of the sea we were becoming an empire. They charged us with being disloyal and wanted to know whether we proposed to haul down the flag or not. They appealed to the patriotism of the country to vindicate our right to establish a government beyond the sea, with or without the consent of the governed. We insisted in the campaigns of those years that we could not maintain our institutions if we were half republic and half empire; we insisted that we were embarking on that career which would mean in the end the destruction of our constitutional form of government as the people understood it one hundred and twenty years ago. But the martial spirit ran high, people eagerly read the story of American achievements and military successes in far-away lands among alien peoples, and the warning contained in the Democratic platforms of those years was unheeded.

DANGERS OF IMPERIALISM.

In the light of a condition which prevails to-day I want to call attention again to the dangers of imperialism and of a disregard for the Constitution of the country. If I had made a speech in the campaign of 1900, and if in that speech I had predicted that in less than six years from that time the President of the United States would be exercising in a portion of the Western World, without any authority of law, rights greater than those exercised by any king or potentate, the newspapers the next day would have proclaimed that I was an alarmist of the most violent type. If I had predicted at that time that in less than six years laws for the government of a portion of the territory of the United States would be made by Executive order—by the President of the United States—without any authority from the Congress, conservative Republican papers the next day would have ridiculed the statement; and yet to-day

in an important part of the territory belonging to the United States that condition of affairs prevails.

NO JURY TRIAL.

If I had been rash enough to make the statement eight years ago that in less than a decade from that time, in a territory belonging to the United States, over which the Constitution was supposed to extend, men charged with criminal offenses would be refused a trial by jury and, in spite of their protests, would be tried by a judge alone, such a statement would not have been seriously considered. If I had said that in less than eight years from that date, in United States territory, a man charged with a capital offense would be tried before a judge, denied the right of trial by jury, and condemned to death, many would have laughed at the prediction. As a matter of fact, although we pointed out the dangers of imperialism, no man believed or assumed to predict that these things would be possible in five or six years.

Four years ago, by treaty with the Republic of Panama, we acquired title to a strip of land 10 miles wide extending across the Isthmus of Panama, and we also acquired possession of certain islands in the bay of Panama, and of certain lands, on either side of the isthmus, extending under the sea for a distance of 3 miles from the land. By Article II of the treaty the Republic of Panama granted to the United States in perpetuity the "use, occupation, and control" of this territory and of certain islands near the shore. By Article III of the treaty the Republic of Panama granted to the United States:

All the rights, power, and authority within the zone mentioned * * * which the United States would possess and exercise if it were the sovereign of the territory within which said land and waters are located to the entire exclusion of the exercise by the Republic of Panama of any sovereign rights, power, and authority.

By this treaty the Canal Zone became as much a part of the United States as any portion of the State of Illinois. The flag went there of course and the Constitution, as a matter of law, goes there if it goes anywhere.

On the 28th day of April, 1904, at the second session of the Fifty-eighth Congress, a measure was enacted for the temporary government of the Canal Zone which provides that:

Until the expiration of the Fifty-eighth Congress, unless provision is sooner made for the temporary government of the Canal Zone, the power to make rules and regulations for the Canal Zone shall be vested in such persons and exercised in such manner as the President shall direct.

At that time we had not acquired possession of the Canal Zone; we had not settled with the French company, nor had we paid the Republic of Panama the \$10,000,000 we agreed to pay her; we had sent no men there, and we were not yet materially interested in that part of the world. A few days after the passage of the act, however, we completed our contracts, paid over the money, sent several companies of troops to the Isthmus, and took possession of the property of the French company and of the Canal Zone according to the terms of our agreement with Panama and with the canal company. A few rules were adopted for the temporary military government of the Zone and for better sanitation under military direction, but not much was done in the matter of enacting rules and regulations for the Canal Zone prior to the adjournment of the Fifty-eighth Congress. This Congress adjourned on the 4th day of March, 1905, and on the same day there expired the right of the President to make laws for the Canal Zone.

HIS GREAT CARE.

After the act of April 28, 1904, and prior to the termination of the Fifty-eighth Congress, the President sent to Congress forty-two messages, some of them related to the Canal Zone, but in none of them did he call attention to the fact that his authority to issue rules for the government of the Zone would terminate on the 4th day of March, 1905. Since that time and without any authority, the President has enacted enough laws for the government of the Canal Zone to fill a large volume.

Prior to the 4th day of March, 1905, he delegated to the Isthmian Canal Commission the right to enact laws for the Canal Zone, and during that period twenty-four acts were adopted. They fill a volume of 241 pages. Each one of these laws commences "By authority of the President of the United States be it enacted by the Isthmian Canal Commission." There was some authority, whether lawfully exercised or not, for this most unusual method of enacting laws. That authority, however, ceased on the 4th day of March, 1905. The President continued his official messages to Congress; at times they came almost every day. From the 28th day of April, 1904, when the act to which I have called attention went into force, until the present time the President has sent to Congress 203 messages, on every imaginable subject—the size of a man's family, simplified spelling, how to support country churches, the servant-girl prob-

lem, etc. No other President has ever sent to Congress in the same length of time one-third as many messages. The President, however, called attention in none of them to the necessity for providing for the government of the Canal Zone.

He always carefully avoided any suggestion which might take away from him the authority he was and is illegally exercising. Of these messages, nine related to the Canal Zone. But in none of them did he request the enactment of legislation which would curtail in any way the power he was illegally exercising. On the contrary, on the 21st day of January, 1907, when Congress was in session, the President wrote a letter to the Attorney-General of the United States asking him how he could continue to exercise the power of an emperor in the Canal Zone in spite of the fact that the life of the Fifty-eighth Congress had ended. It would have been just as easy to send a message to Congress asking Congress to resume its functions, but the President did not select this republican method of doing things. He wanted to go down to posterity as the author of a "code" of laws; he was anxious to become the Justinian of the twentieth century.

Nearly fourteen hundred years ago the Emperor Justinian issued his "code" of laws. Through all the centuries the "code," "pandects," "constitutions," and "institutes" of the great Roman Emperor have exercised a powerful influence upon the jurisprudence of the nations. The President of the United States wanted the opportunity, whether the Constitution permitted it or not, of accomplishing for succeeding centuries what Justinian I was able to accomplish for the centuries that followed him. Historians agree that the great Roman Emperor was a man of ability and industry, and they agree that he was "unscrupulous, vain, and easily influenced." In the future historians writing of the present period of American history will not accord to the President of the United States any great amount of ability or industry, but they will have no difficulty in agreeing upon the proposition that he was "unscrupulous, vain, and easily influenced." In these particulars only does the President of the United States resemble the great Roman Emperor.

OPINIONS TO ORDER.

The present Attorney-General is a skilled courtier. He prepares opinions to order. He first finds out what kind of an opinion the President wants and then prepares that kind of an opinion. In answer to the letter of the President written on the 21st day of January, 1907, nine days later, while Congress was still in session, and Congress remained in session for over a month thereafter, the Attorney-General sent his opinion to the President holding that the President, without the intervention of the Isthmian Canal Commission, and without further authority of Congress, had the right to govern the Canal Zone "ex necessitate rei." Immediately thereafter the President of the United States in puny imitation of the Emperor of Rome, on the 22d day of March, 1907, after the adjournment of Congress, launched upon an unsuspecting world "The Code of Civil Procedure of the Canal Zone"—a book containing 197 pages, which, together with the laws previously enacted to which I have called attention, make the most remarkable "code" of laws in existence to-day in any civilized country of the world.

I have somewhat carefully examined this "code" of laws. The title page of the Roosevelt "Code" contains the following Executive order:

Under authority vested in me by law it is ordered that the within code of civil procedure shall be in force within the Canal Zone on and after May 1, 1907.

THEODORE ROOSEVELT.

THE WHITE HOUSE, March 22, 1907.

And then follows the Roosevelt "Code," covering 197 closely printed pages. If we had insisted in the campaign of 1904 that laws would, in such a short time, be issued in this country in this arbitrary, imperial, unconstitutional, unauthorized manner, the statement would not have received serious consideration.

In order to determine whether the President will receive favorable consideration in future generations on account of the Roosevelt "Code" of laws I want to call attention briefly to some of the provisions of these remarkable statutes. A man charged with murder is not indicted by a grand jury; they simply proceed against him by the information filed by the prosecuting attorney. In obtaining the facts upon which the information is based witnesses are examined by the prosecuting attorney, but the examination must be private. It is not necessary to arrest the defendant by a warrant, fair on its face, in accordance with the custom developed by hundreds of years of civilization in English-speaking countries. The judge may simply telegraph the warrant to any portion or to all portions of this small strip of territory.

After the defendant is arrested he is tried before the judge of the district court. Under no circumstance can he have, under these laws, a trial by jury. The law provides that he must be confronted by the witnesses against him, except where depositions of witnesses have been taken in the presence of the defendant or of his counsel and where he may have had an opportunity to cross-examine the witnesses. These wonderful statutes also provide that the deposition of an insane witness may be taken and may be used against the defendant whether the defendant has had an opportunity to cross-examine the witness or not; and the deposition of any witness, who can not after the exercise of due diligence be found in the Canal Zone, can be used against the defendant whether the defendant ever had an opportunity to cross-examine the witness or not. In English-speaking countries for centuries a man charged with a crime has had the right to meet the witnesses against him face to face in open court. Depositions of absent witnesses or insane witnesses can be used against a man charged with a crime in no other part of the world. We have gone into this code only in a limited way as yet, but we have examined it to a sufficient extent to indicate that the Roosevelt "Code" is hardly adapted to present-day civilization.

MUST SHOW INNOCENCE.

On the trial of a defendant charged with the crime of murder, the law of the Canal Zone provides that when the homicide is proven the burden shifts and is on the defendant to show that the act complained of was "justifiable or excusable." In other words, under the Roosevelt statutes, it is not necessary to prove the guilt of the person charged and all the elements that go to make up the crime "beyond a reasonable doubt," but, on the contrary, the defendant must prove "beyond a reasonable doubt" that he is innocent of the crime charged.

This remarkable code provides for a change of venue on the application of the defendant upon the ground that "a fair trial can not be had in the district." Inasmuch as there is to be no jury and he is to be tried simply before the judge, the reason, therefore, for the change of venue, of course, is that the judge is prejudiced. The law goes on, in a subsequent section, to state that the application for a change of venue "will be granted if the judge is satisfied that the representations are true." In other words, the question of fact presented is, Can the trial judge give the defendant a fair trial? Upon this question of fact the judge himself passes; and I undertake to say that a judge can not be often persuaded to find this question of fact against himself.

The law provides that where the penalty is death or imprisonment for life the judge may summon "two municipal judges to sit with him"—or "two mayors"—or "two well-qualified residents." These assistants, however, pass only on the questions of fact in the case. The defendant is not allowed a single challenge, he can not object to the persons summoned by the judge to sit with him, or to either of them. Concurrence of two of the three so constituting the trial court is required for a verdict; it is therefore impossible for this court to fail to reach a verdict. The law provides that in the event of the death penalty being awarded, death shall be inflicted by hanging.

REFUSED JURY TRIAL.

It may astonish many to hear that under this infamous code in the Canal Zone, where the flag has gone, and the Constitution, a man charged with a capital offense demanded a trial by jury and was refused that right. This man has been tried and has been sentenced to death. For over a year he has been confined in one of our prisons there, awaiting the infliction of the death penalty by hanging. His execution, however, has been postponed by the governor from time to time. Like the revision of the tariff, the execution of this man has probably been postponed until after the election. At that time, if the President should succeed himself, or if the gentleman who is pledged to carry out the "Roosevelt policies" is elected, we may expect to see the Roosevelt "code" of laws in full swing once more on the Isthmus of Panama, and there will be no further postponement of this execution.

THE APPEAL.

The defendant may appeal his case; in that event the case goes to the supreme court of the Isthmus. The supreme court of the Isthmus is composed of the three district judges of the Isthmus, including the judge who imposed the sentence. The defendant therefore appeals from the judge who sentenced him, sitting as a district judge, to the same judge sitting as a supreme judge. I undertake to say that for a thousand years no code of laws so infamous as this has ever been enacted in any civilized country.

I have called attention at length to this situation; the statements I have made, startling and improbable as they may seem,

can easily be substantiated. I am prepared to furnish the authority for everything I have said about the usurpation of authority on the Canal Zone by the President of the United States. Are we approaching a crisis in our history as a nation or not? Have our fears some considerable foundation in fact?

ITS GREAT IMPORTANCE.

The Canal Zone is at the present time one of the most important sections of the world; no part of this country outside of our cities is so thickly populated; we have expended there already nearly \$150,000,000; we will be called upon to expend in that section of the world within the next four or five years two hundred and fifty or three hundred million dollars more. We have induced to go there 5,000 of our own brightest young men; many of them are there with their wives and families—this infamous code of laws is made to apply to them. We have brought 3,000 laborers from Spain and almost as many from Italy, intelligent, hard-working men, coming from civilized countries—this code of laws is provided for their government. We brought from the island of Jamaica seventeen or eighteen thousand negroes, all of them intelligent and a large portion of them able to read and write; they come all of them from a well-governed island controlled by England—we have provided this infamous code of laws for them also. In addition to this population the Canal Zone teems with a large native population. It is full of native villages. The characteristic that first commands attention in the natives of Panama is the profound respect these people have for law and the unquestioned obedience they yield to those in authority. I have been there recently, and this native characteristic attracted my attention early in my visit to the Isthmus of Panama. There is absolutely no excuse for promulgating this code of laws in that part of the world. The fact that a President of the United States can be developed, in our short imperialistic career, who has become so intoxicated with power that he is willing to usurp such authority as this and to assume the responsibility for this indefensible code of laws shows the rapidity with which we are drifting upon the rocks under the management of the Republican party.

HIS NEW ORDER.

After having proceeded without a jury trial on the Isthmus of Panama for nearly three years, without explanation, on the 6th day of February of this year the President of the United States issued Executive Order No. 750, granting a jury trial in the Canal Zone "in all criminal prosecutions wherein the penalty of death or imprisonment for life may be inflicted." This Executive order provides that in these cases the accused "shall enjoy the right of trial by jury in the district where the crime is committed," and prescribes the method of selecting the same. The order was posted and went into effect on the Canal Zone on the 25th day of February. The reason for it is apparent—an election is approaching. The Roosevelt policies will not stand close inspection. It was absolutely necessary to modify the Roosevelt "Code" in this particular, and the order was made. It will make a campaign document, and can be easily revoked after the campaign is over if the President succeeds himself or if some one is elected who will "carry out the Roosevelt policies."

The Republican party controls both Houses of the National Congress, and they have the Executive. The responsibility for this infamous code and for these dangerous tendencies rests absolutely upon the party in power.

NOT FOR THE PEOPLE.

The tendency of the Republican party is away from government by the people. The importance of the lower House of Congress is lessening every day. The tendency is to take away from the Congress the power it ought, under the Constitution, to exercise and to confer it upon commissions and upon the President. The Dingley tariff act authorized the President without consulting Congress to fix higher tariffs. Is it necessary to submit to any Congress the question of tariff revision under the present law if the tariff is to be revised upward? The Dingley Act provides in effect that if a country is imposing a tariff against us higher than the President thinks it ought to be he can raise the tariff to suit himself on that particular schedule against that particular country. When the proposition was made, at the time the Dingley bill was under consideration, by the Democrats that the President have the right also to lower tariffs, the Republican Members solidly voted against the proposition and on the Democratic side they solidly voted for it.

TREATY HIGHEST LAW.

There is a Republican theory that the tariff ought to be adjusted by measures of reciprocity; that the President ought to have the right to enter into tariff treaties with other na-

tions, based upon theories of reciprocity. A treaty becomes the highest law of the land. We have found out recently in the Japanese school question in California that California under the law could not conduct her schools as her citizens might want to conduct them if the United States entered into a treaty with Japan to the contrary. In other words, treaties are the supreme law of the land; they can not be altered by Congress; they can not even be construed by our courts. The lower House of the Congress—the popular body—the Representatives who come direct from the people and are elected by a direct vote of the people and are directly responsible to the people—can have no voice in the making of a treaty. Every treaty robs the people of something. The fewer reciprocity treaties we have the better, if government of the people and by the people is to be preserved in this country.

IN OFFICE FOR LIFE.

A century and a quarter ago Hamilton contended that the President ought to be elected for life, and intimated that Senators ought to be elected for a like period. Upon such theories as this one of the great parties in this country was established. To-day a considerable portion of this party in opposition to all the precedents—in opposition to the position taken by Washington, Jefferson, and Jackson—is seriously advocating three successive terms for the present occupant of the White House, who seems at the present time about to be compelled to accept another term. The Annanias club is getting larger every day, but it remains a significant fact that he who says the President will accept another term is not being added to this constantly growing organization.

The Republican party has not only failed in its duty to provide a proper government for the Canal Zone, but it has in almost every particular since its organization failed to properly discharge the obligations of government.

PROBLEMS THE SAME.

The same problems which confronted us at the end of the civil war confront us now. It has been the policy of the Republican party for forty years to push farther and farther into the future the solution of these great economic questions, and to-day, without any plans for the future, they simply propose to stand pat. At some indefinite time in the future they promise to settle the questions which press upon us now.

The war left the country burdened with a national debt of tremendous size; Government credit during the war and at the close of the war was in a precarious condition; the temptation to use banks and banking to sustain the credit of the Government proved to the Republican party to be irresistible. A system of taxation was devised to meet the expenditures of the war, and a system of banking was based upon our tremendous national indebtedness. To-day we find ourselves maintaining the old war taxes and we still find ourselves with a currency based upon a debt.

NO CHANGE.

During all the decades that have passed since the surrender at Appomattox these two questions have been presenting themselves for solution—how to get rid of war taxes and how to change our absolutely absurd and irrational banking system. No other great commercial nation in the world maintains a currency based upon a debt. No other great commercial nation in the world has ever clung for almost half a century after a war to a system of war taxation. The Republican party has shown itself absolutely incapable of handling either of these great questions, and during all the period of its supremacy since the war no other economic questions than these have demanded solution.

During all these decades the struggle in the Republican party has been to maintain itself in power; it has been a fight on its part for the offices and the spoils that go with them. In order to maintain itself in control of the offices it has represented always the classes. The struggle on the part of the bankers has been to maintain our present currency system. The bankers in this struggle have been able to carry with them the managers of our great industries who depend upon the banks for credits, and the effect of the fight has been to perpetuate a successful struggle of the classes to maintain our productive system and our financial system intact. A man who had the courage to challenge the correctness of our currency system prior to the present year was considered unsafe and unsound, and was pronounced to be a man absolutely unreliable politically and unworthy of confidence.

DEBT STILL HANGS.

No attempt has been made to pay off our national debt—to pay it off would destroy our currency system. Our tariff system has been maintained upon the theory, first, that we wanted

it to protect our infant industries, and now it is insisted we are maintaining it for the purpose of protecting labor. The Democratic party during all the years that have elapsed since the war has been engaged in an assault upon our illogical currency system and upon our equally illogical tariff system, and has been demanding changes that until now have never been conceded by any considerable portion of the conservative party in this country to be desirable or reasonable.

We made a fight for more money in 1896 and they charged us with championing a dishonest dollar—a 50-cent dollar. Not long ago the bankers who criticised the Democratic leaders in 1896 were circulating millions and millions of dollars' worth of certificates which had nothing back of them except the fiat of a bank. Bankers now everywhere throughout the length and breadth of the land are agreeing with us and are declaring our currency system to be both absurd and irrational.

PROTECTION NOT NEEDED.

Our factories have grown so strong that from our Atlantic ports there flows across the sea into the capitals of the Old World a stream of American-made goods. Our industries no longer need protection, and yet the Republican party is entering upon another national campaign without proposing or even promising to remedy our defective banking system or to change our unfair system of tariff taxation. They propose, in the Aldrich bill, to still further patch up a currency system which they admit to be absurd; and from sea to sea they are demanding not a measure of permanent character, but simply a measure which will afford some temporary relief. The Senator from Rhode Island, who had charge of the bill advocated by the bankers, frankly admitted in debate upon the floor of the Senate that his measure, if enacted into law, would only furnish temporary relief.

CRISIS IS HERE.

The crisis precipitated by our absurd currency system and by our irrational method of levying tariff taxes is here—it can no longer be postponed. This cancerous growth demands the application of the surgeon's knife, but the Republican party has not the courage to adopt that method. It proposes to cover up and hide from view these questions until it succeeds in obtaining another four years' lease of power and the Federal offices that go with it. In the present crisis you can expect nothing from the party which for forty years has had always present the opportunity to deal with these questions from a standpoint of statesmanship and which has absolutely failed to discharge its duty. For nearly that entire period of time the effort of the party now in power was to keep alive the fires of sectional hate in order to keep these questions in the background.

A new generation is here now—men are beginning to understand, both in the North and in the South, that the war is over. The solution of these great economic questions can no longer be postponed by calling attention to the issues of half a century ago. It is easier to cross party lines now than it ever has been, although the fundamental principles which divide the great parties are more strongly defined than ever.

NOT PROPER REMEDY.

The bills proposed by the party responsible for currency legislation simply extend into the coming years the system against which the people are protesting in no uncertain terms. They would prove of immense benefit to the railroads against whose bonds it was proposed to issue currency. They would prove of tremendous advantage to the holders of certain securities whose value has been uncertain on account of the injection of water in unlimited quantities into the stock of great corporations. All the legislation you have proposed is in line with the Republican policy of legislating for the classes. There is one solution of the currency question—adopt in this country the system which makes panics in other commercial nations impossible; abolish here the system to which we alone of all the great commercial nations cling; adopt here a rational banking system.

To coin and issue money is an attribute of sovereignty which ought never to be abandoned. We have surrendered this privilege to the banks, and both the Vreeland bill and the Aldrich bill propose to make this surrender more complete than it has ever been. This surrender, however, is in absolute harmony with the principles and tendencies of the Republican party.

THE TWO RIGHTS.

There are two rights which ought always to be exercised by the State, the right to levy taxes and the right to issue money. The policy of the Republican party is to surrender to the banks the right to issue money and to the protected industries the right to levy taxes. Those rights, however, which ought to belong to the state and to the individual are constantly being

turned over to the General Government under the present methods of the party in power.

Does anyone deny now that the tariff is a tax and that the consumer pays it? Does anyone deny that back of the tariff our protected industries fix a selling price equal to the cost of production plus the profit they ought to have on their investment and the amount of protection they receive from the tariff? Does anyone deny now that back of the tariff wall they make one charge to consumers at home and a lower charge to consumers abroad? In many instances the tariff tax is so large as to prohibit importation. But whether it prohibits or not, who collects the greater portion of the tax paid by the consumer, the Government or the protected industry? There can be but one answer.

We believe the time has come to restore to the Government the functions that rightfully belong to it and to protect the individual and the States in the rights that ought under the Constitution never to be taken away.

The Lovering Life-Saving Service Bill.

SPEECH

OF

HON. WILLIAM C. LOVERING,

OF MASSACHUSETTS,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, March 17, 1908.

On the bill (H. R. 17710) to increase the efficiency of the personnel of the Life-Saving Service of the United States.

Mr. LOVERING said:

Mr. SPEAKER: While I might consume an hour or more in telling the House of the great work that has been performed by the Life-Saving Service, a few minutes only will suffice to state the importance and merit of the Service, and the demand for this measure of relief. That the work of the Life-Saving Service is an exceedingly perilous, arduous, and exacting occupation is easily shown.

The Service is not to-day up to the standard that it once was when the pay of the men was more nearly commensurate with the cost of living. Other callings have drawn some of the best men off from this Service, and it is to-day in a crippled condition. It can only be brought up to and maintained at the proper standard by a greater inducement to the men to enlist and remain in the Service.

There are about 2,000 men, including officers and surfmen, in the Service. Five hundred of these are inexperienced men, such as they have been obliged to accept in an emergency, but who, with experience in the Service, will become, after a while, as good as any. Many have fallen out, seeing nothing in it for them in the future. The employment is for less than twelve months per annum, the average being nine and one-fourth months. On the Pacific coast it is twelve months, on the Atlantic coast it is ten months, and on the Lakes and the Gulf it is eight months.

With the exception of the No. 1 surfmen, who are practically Lieutenants to the keepers, and under this bill receive \$70 per month, these men receive \$65 per month. Out of this amount the men are obliged to furnish their own mess and living, their own uniforms and clothing, and as 80 per cent of the men are married and have other homes they are obliged to maintain these in addition.

The total cost of the Life-Saving Service in 1906 was \$1,404,972. Under this bill the cost will be \$1,635,062, making an additional cost of \$230,000.

Since the organization of the Life-Saving Service thirty-seven years ago the entire cost to the Government has been \$35,209,699.03, or an average cost per annum of \$951,613.48. Whether this has been warranted or not is shown by examining the other side of the ledger. During that period property imperiled has been involved to the amount of \$251,516,284. Property has been saved, ships and cargoes, to the amount of \$199,457,597, or an amount large enough to have built all the battle ships and all of the protected cruisers in our Navy, together with their complete armor, armament, and equipments. Few of us realize what it costs to build a battle ship, but it takes more money to build an ordinary battle ship of the class of the *Connecticut* or *Kansas* than it did to build the new Congressional Office Building or to build the Library of Congress.

But better than the record of all the property it has saved, is the record of the lives it has saved. One hundred and twenty-

one thousand six hundred and twenty-seven lives have been imperiled and have received aid from the Life-Saving Service. Exactly how many of these lives that were saved might otherwise have been lost it is impossible to say, but it is many, many thousands, a number equal to more than the whole United States Army and Navy.

Now, as to the character of the work that these men do. By some it is thought they lead an idle life. This is by no means the case. During the time they are in service they are obliged to maintain the strictest drill and exercise daily. They are obliged to patrol the seacoast, which is one of the most trying occupations that a man is called upon to endure. They are obliged to rescue the drowning and resuscitate them. They are obliged to know how to handle a boat and all the appliances for rescue; how to fire a line over a wreck with accuracy; how to bring men ashore either in boats or by the breeches buoy.

As a matter of fact, their most trying and hazardous service is when the weather is the worst, the winds are the strongest, and the seas are the highest. Then it is that these men are called upon to show the best that is in them, and they almost never fail. They hurriedly button on their oilskins. Taking off their watches and other valuables, they hand them to their wives, if they be present, saying, "Give this to John, or Mary, if I do not come back," and, bidding them a hasty good-by, they start out on their perilous voyage, from which they realize they may not return.

Furthermore, in time of war the surfmen are drafted into the United States service to do military duty. The records of their services in this capacity are notable. During the Spanish war they were on duty and under military and naval orders all of the time, watching the coast, preparing to stand off any enemy that might approach. During all the military and naval maneuvers on the coast they were ordered to cooperate with the Army and Navy.

Mr. Speaker, it will be difficult to find a class of men in our Government who are subjected to more hazardous service or who daily live nearer to death's door than do these men of the Life-Saving Service, for whom this bill provides relief.

A British View of Our Financial and Industrial Status and Outlook.

SPEECH

OF

HON. JAMES S. SHERMAN,

OF NEW YORK,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, May 26, 1908.

Mr. SHERMAN said:

Mr. SPEAKER: The view of Great Britain on the financial and industrial status of the United States is not uninteresting. It is also instructive, and for that reason, under the leave to print, I ask that the following be inserted in the RECORD:

The cloud of uncertainty which has been hanging over the business element of the United States is, in the opinion of the British commercial agent in this country, passing away. In a recent report to Parliament on this subject, Mr. Seymour Bell, the British commercial agent in the United States, says:

"The year 1907 was one of sharp contrasts in the United States. It was a year of great activity and deep depression. During the earlier months all industries were exceedingly busy and mills were working at their utmost capacity. Many unfilled orders had been carried over from the previous year and buyers were experiencing great difficulty in getting delivery of their goods. The railway lines were congested, wages were at their highest, and the high price of commodities raised the price of living to an extreme point. It was recognized by all those in a position to form an independent opinion that this tremendous industrial activity could not last, that it was merely a question of time before a reaction would set in. It became quite evident that the country was living beyond its means.

"Money was becoming scarce and the railways and other corporations were encountering great difficulties in obtaining the capital necessary to carry on the improvements and extensions which were in process of being carried out. Speculation in mining and real estate had been rife and personal extravagance was at its height. This all tended to place additional burdens on the money supplies which were hardly adequate to carry on the industries of the country. The railways were among the earliest and greatest sufferers from the financial stringency. They found it almost impossible to dispose of securities at a reasonable price and were forced to issue short-time notes at a comparatively high rate of interest to enable them to continue their developments. As wages were high, owing to the scarcity of labor, and high prices were being paid for materials, the net earnings of the railways were considerably reduced, although the gross earnings showed an increase. This brought about lower quotations for railway shares, and the industries followed the downward path.

"The situation was peculiar. On the one hand, there were the manufacturers with more orders than they could fill and busy enlarging their plants, merchants selling large quantities of goods at satisfactory prices, labor in such demand that even with the addition of the 1,200,000 immigrants it was necessary to employ inefficient workers at

good wages. On the other hand, there was dear money, owing to scarcity.

"When, owing to a failure in New York, light was thrown on the management of some of the large financial concerns in the city, public confidence, which had previously been undermined by certain investigations, gave way completely, resulting in an acute money panic. Careful students of the situation had foreseen a collapse before the end of the year, but did not anticipate that it would come with such suddenness.

"The panic was entirely financial. It has, it is true, brought about a widespread suspension of trade and industry throughout the country, but as it occurred at a time when there was no accumulation of surplus gold, there has been no throwing on the market of merchandise at ruinous prices, the usual accompaniment of industrial panics. The manufacturers, on the contrary, faced the inevitable, and without delay proceeded to curtail the supply and thus reduce such chances as there might have been of glutting the market with unsaleable articles. Fortunately for the country, warning of the trouble was given early, and it was possible to take steps in time to prepare for it.

"As to the length of time the present depression will last, it is difficult to form an opinion. It must not be forgotten that the farmers, who form the backbone of American prosperity, have not been affected by the financial situation. Though the crops in 1907 fell short in quantity as compared with 1906, higher prices were obtained, and the farmers received considerably more money for their crops than in the previous year. A country that produces crops valued at nearly \$1,500,000,000 is unlikely to suffer long from industrial stagnation. It represents too large an amount to be held long uninvested. Farmers have had nine years of almost uninterrupted prosperity, their buying power is high, and the towns dependent upon them will remain prosperous.

"The farmers, who a few years ago owed money, now own money and have an assured outlet for their products, as there is no over-supply.

"The cloud of uncertainty, which has been hanging over the country for so long and gradually growing more threatening, is now passing away, and it may be said that the worst of the storm has now passed. There will in all probability be mercantile disturbances for some months to come, but readjustment and recuperation are well under way, and unless labor troubles should retard the improvement or monopolies of capital interfere to keep up prices at too high a level, it is expected that before many months have passed business will be on a safer and more normal basis."

And in this connection let me draw your attention to a comparative statement of the condition of this country under Democratic and under Republican administrations:

COMPARISON OF DEMOCRATIC AND REPUBLICAN AVERAGES.

Table of annual averages of national financial and industrial conditions during the administrations of Presidents Cleveland, McKinley, and Roosevelt.

[Annual average for periods named.]

[Compiled from the Statistical Abstract of the United States.]

Tariff Taxation is the Mother of Trusts, the Robber of Consumers, and the Deceiver of the Laboring Man.

SPEECH

OF

HON. WYATT AIKEN,

OF SOUTH CAROLINA,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, May 26, 1908,

On the bill (H. R. 21871) to amend the national banking laws.

Mr. AIKEN said:

MR. SPEAKER: There has been so much misrepresentation of the effects of revising the tariff, at different times, that it is hard to winnow the real truth. While the tariff is to-day too high, its greatest evil lies not in the fact that it is excessive, but that it makes unjust and unreasonable discriminations.

It may as well be stated at the outset that free trade is not and has never been the policy of the Democratic party. Indirect taxation is recognized by all as being the most suitable method of raising revenue; and the extravagant policy of the Republican party has made a pretty stiff tariff necessary, even for raising revenue. That this is the paramount issue to-day there can be no doubt.

The Republican party has been so merciless in its oppressions, through this instrumentality, that it has at last stirred up formidable rebellion in its own ranks; and the day has come when outraged Republicans, as well as Democrats, demand a measure of relief. Undoubtedly, those who have deceived the innocent voter heretofore, by shifting the issue to alleged evil consequences of Democratic administration, must find a more substantial and plausible reason for not revising the tariff. It is true that the effort is again being made to postpone the real issue, but this is mainly by those whose confidence in the gullibility of the people has grown into a mania.

Just prior to the Congressional elections in 1906 the distinguished Republican leader in the House, on being importuned by some of his brethren from Massachusetts to give some little crumb of hope for tariff revision with which to soothe their clamoring constituents, said:

Congress is not prepared to revise the tariff schedules in that calm judicious frame of mind so necessary to the proper preparation of the tariff act at a time so near the coming Congressional elections.

But the Congressional elections have passed, and on the hope held out that there would be revision after the elections a very much reduced Republican majority was returned to power. Of course those who know the real disposition of this party to dare the vengeance of the people to the limit in the interest of the trusts did not expect revision. And for those Republicans knowing this, who for no better reason than party loyalty have been hopelessly hanging on, this must indeed be bitter. But what does this same distinguished leader say at this time? He says nothing can be done now, because we are "at the heels of a financial panic and on the eve of a Presidential election." Away with right; it is the party that must prevail. He dare not openly dispute the necessity; but like the hopeless sinner of Holy Writ, he exclaims: "Go thy way for this time; when I have found a more convenient season" and so forth.

Well does he know that there are sufficient tariff revisionists in the Republican ranks, who, if allowed to deflect in a popular election, would insure an overwhelming Democratic victory. They must be held in line on promises as vague as they are willing to swallow, but held they must be. Once the party has again triumphed at the polls, it is easy enough with the party lash to coerce its own minority in Congress. A majority of the Republicans would continue an excessive, discriminating tariff until the people, despoiled of their all, become mere vassals of the trusts.

It is interesting to witness some of the plans devised for deferring revision. The latest is the suggestion that a tariff commission be appointed (and even this goes too far for some of the brethren) to go over the tariff lists. The reason is apparent. This commission would, of course, be named by "stand-pat" brotherhood. It would not report until after the Presidential election, and the nature of its report might well be predicted.

Pressed by its own creatures, the trusts, whom it has sworn to protect in their rapacious greed; badgered by the people, who have stood the limit of corporate oppression, the Republican party has made itself ridiculous by its timid and inactive course in this Congress.

But there are prominent Republicans who realize that the time has come when the issue must be met. Witness the protest of the Republicans of Massachusetts, who are on the eve of revolt. Witness the statement of Governor Cummins, of Iowa, thrice governor of the State on the Republican ticket. He said:

All the robberies and thefts committed by all the insurance companies' officers since the business of life insurance originated do not amount to the extortion due to the Dingley bill for one year.

The very men who are enjoying the fruits of excessive protection, seeing the advancing storm of outraged public opinion, have thought to avert it by confessions and concessions. Mr. Mills, president of the National Association of Implement and Vehicle Manufacturers, made the following startling confession:

When Congress gave us 45 per cent, we needed only 20 per cent, they gave us a Congressional permit, if not an invitation, to consolidate, form one great trust, and advance our prices 25 per cent, being the difference between the 20 per cent needed and the 45 per cent given. This difference would give a net annual profit to my company only of from five hundred thousand to six hundred thousand dollars, and to the industry at large a net increase in profit of sixty or seventy-five million dollars.

It will be noted also that Mr. Mills frankly admits that the act of Congress, in practically shutting out foreign competition by excessive tariff rates, was taken as an invitation to consolidate and so shut off home competition. There is no more doubt that trusts are the immediate offspring of protective tariff than there is doubt that the sun shines. The physical facts proclaim it. Why, during the little more than ten years of the operation of the Dingley law 655 independent corporations have been merged into 33, forming giant trusts in almost every conceivable line of business. In these are not included the steel trust—greatest of them all—incorporated at \$1,404,000,000, nor the Standard Oil trust, that octopus that draws its blood from every man who burns a lamp.

If these physical facts are doubted, surely none will doubt the testimony of the witnesses for the defense. I have quoted Mr. Mills. I now quote Mr. Havemeyer, than whom no one is better authorized to speak. He said:

The mother of all trusts is the customs tariff bill. The existing bill and preceding ones have been the occasion of the formation of all the large trusts, with few exceptions, inasmuch as they provide for inordinate protection to all of the industries of the country, sugar alone excepted. There is probably not an industry that requires protection of more than 10 per cent ad valorem. It is the Government through its tariff laws which plunders the people, and the trusts are merely the machinery for doing it.

It gives one that tired feeling to hear the President and the leaders of the Republican party talk of throttling, exposing, and otherwise curbing the encroachments of trusts, when with

blandness they feed these creatures, overfat from the tariff table. One might as well expect to destroy a field of nut grass by mowing the surface and leaving the nuts in the ground unharmed as expect to curb the trusts while they are fed on excessive tariff rates.

By the way, it may be remarked that Mr. Havemeyer complained that his trust alone was not receiving adequate protection. The last annual report of the American Sugar Refining Company shows net earnings of \$9,000,000 and a surplus of \$2,500,000, after paying a 7 per cent dividend. Mark you, however, the refining process is only the difference of 13 cents per hundred between the tariff on the crude article and the tariff on the finished product. While that going to the refiner may be comparatively small from a trust standpoint, the 1½ cents per pound protection granted the Southern sugar planters, yielding a benefit of something like \$10,000,000, cost the people of the United States \$76,000,000 excess for their raw sugar.

We are not kicking against the little mite that comes to the South, so long as the policy of plundering is in vogue, but it only serves to demonstrate how the people pay for the protection of the few. There is some excuse for a tariff on sugar, when the thousands of producers are benefited. There is some excuse for a high tariff on beef when the thousands of cattle raisers are benefited. There is some excuse for high tariff on cotton products, when the hundreds of thousands of producers of raw material are indirectly benefited. But for the Standard Oil trust and the steel trust, who themselves take the crude product from mother earth and from their own claims, thereby benefiting none but a few operatives, there can now be no just claim for excessive protection. Cotton-seed oil bears a tariff of only 4 cents per gallon. A tax of 15 cents per gallon is laid on kerosene oil that in its crude state gushes spontaneously from the ground. Why the difference? This high tariff, of course, shut out the foreign product and induced the consolidation of all domestic companies, thereby shutting out competition at home. It is no poetic fancy that we so often hear, that the Oil King has raised oil a cent or two to reimburse after some display of philanthropy. There is absolutely no reason for the rise or fall of oil except as it is willed by the master. The Standard Oil Company during the years 1904 and 1905 made a profit of 60 per cent per annum on its watered millions of stock.

The great steel trust earned during the year ending January 30, 1907, \$164,490,945, and of this amount \$80,000,000 was contributed by excessive tariff. Where have all these profits gone? Two men, born in obscurity and comparative poverty, in the short space of a lifetime have amassed fortunes running far up into the hundreds of millions and far in excess of the private possessions of any potentate on earth. Is there any legitimate business at which a man can amass such wealth in the short space of a lifetime? We have no quarrel with these men personally, but with their methods and with a Government permitting such methods we are forced to take issue. The capital stock of the great steel trust alone is one seventy-seventh of all the property of the United States. Should not this trend toward the centralization of wealth awake the sleeping people, who are even now owned by less than 200 money barons? Centralized wealth means an aristocracy of wealth and the broadening and deepening of caste lines; it means arrogance and effeminacy of the rich and the hostile vassalage of the poor. It marks the decadence of government as surely as history repeats itself.

There is no hope of checking this evil through the Republican party. It is senior partner in the business. It has not scrupled to take its toll from the trust pile for campaign purposes. It has promised "to love, obey, and protect," and this it will do, though all the people beg. The trusts and insurance companies contributed in one year to the Republican party for campaign purposes over \$16,000,000. Does this not carry with it some obligation?

An amusing feature of Republican campaign thunder is its great solicitude for the poor laboring man. Poor laboring man, "how many crimes have been committed in thy name!" Do not care anything about the poor trust magnate. He can shift for himself on the eve of elections, and the poor laboring man can shift for himself the day after. Who are these poor laboring men referred to? Are they the corn or wheat growers of the West and Middle West? No; these men produce more corn and wheat than any other country in the world, and corn and wheat can not be shipped here free of duty to compete with our products. Are they the cotton growers of the South? No; the South has a practical monopoly of cotton and the producer receives no benefits of the tariff except the crumb that comes indirectly from the tariff on the manufactured article. Are they the cattle raisers of the West and Southwest? No; there is

no country that raises sufficient beef to compete with the cattle men of our own country, at home. Then who are these laboring men? The Republican campaigner means for the term to apply to every man who eats bread by the sweat of his face. In reality, the only laboring man who may claim direct benefit from the tariff is that man who is engaged in the manufacture of a protected article; constituting a very small per cent of the labor of the United States. I would not cut one cent from his wages, and the facts show that he would lose nothing under a revised tariff.

With all our high tariff rates, has the laborer really been benefited? Has he received his part of the spoils? If so, what mean these frequent strikes that are so disastrous to both labor and capital? The price of necessities, the cost of living, as stated by Byron W. Holt before the National Civic Federation, has advanced 55 per cent in the United States in the last ten years. Everybody knows how nearly the average laborers' wages are adjusted to his absolute necessities, and that 55 per cent advance in his expense of living is scarcely met by his advance in wages. And then, too, there are great hosts of laborers, clerks, officers, and professional men, who receive not one cent from the tariff, but who are forced to pay tariff-made prices for their necessities.

But is not excessive tariff, in some respects, a positive hindrance to trade? The law of barter and exchange is as old as the human family; and nations, like individuals, trade most where they find their own commodities have the readiest and easiest market. In the year 1902 the foreign exports of English manufactured goods, a free-trade country, amounted to \$1,200,000,000, while that of the United States amounted to \$400,000,000. In the year closing August 31 last, Great Britain, taking most of her raw material from us, exported 20 yards of cotton cloth for every yard exported by us, besides 255,000,000 pounds of yarn. Our exports of cotton goods have not grown an iota in five years.

Last year our total exports of manufactured articles to China amounted to less than \$6,000,000. Almost every day we hear that there is no market for coarse cotton goods, and yet the price of cotton goods is not low. What is the explanation? It is largely this: China is buying her coarse goods in a market where her own commodities find easy access. She is simply governed by the law of barter and exchange. As a consequence our mills are running on short time, and the laborer is left to do the best he can on his reduced earnings. Is there not just the suggestion of a lesson in these statements?

Let us go even a step further. Existing tariff rates are so high on some articles as to exclude the foreign competing product altogether. Of course the whole list might be raised so as to exclude all imports. Then there is no doubt about high tariffs reducing our imports. The figures and facts quoted above show that foreigners do not trade largely with us except for food products, for which latter fact we may thank the Bountiful Giver and not the protective tariff. Now, then, if our exclusive policy limits the purchase of our manufactures largely to our own people, is the nation really the gainer thereby? Individuals may grow richer or poorer, but is the common Treasury benefited? Does not the only addition to national wealth come from its sales to foreign countries?

If high tariff fleeced the stranger along with ourselves, we could bear the burden with less irritation. But the fact is every manufactured article we send abroad is sold to the foreigner for much less than it can be bought at home. Necessarily so, for abroad it comes in competition with unprotected manufactures of the same kind, and it must seek the same level. One or two notable illustrations will suffice to demonstrate the principle.

There is a provision of the tariff law that an article made in this country and sent out of the country can be brought back free of duty if it has not been improved upon or advanced in value. A certain broker in England bought a lot of American watches at foreign prices, about 30 per cent less than the American price, wholesale. He reshipped these same watches to the United States, free of duty, and sold them far below the trust prices. When this began to leak out the trust was, of course, up in arms, and refused to fulfill the balance of the contract. The broker entered suit, and the trust paid a heavy fine rather than furnish more watches. Now, to obviate a recurrence, every foreign dealer who buys American-made watches is drawn up in the most binding agreement that he will not sell the goods in the United States unless they are improved or changed, in which case they are dutiable. A common fraud is practiced upon our people by the trust sending their movements and cases abroad, putting on Swiss dials, and selling the same here as Swiss goods. All kinds of damaging testimony have been

lodged with the Department of Justice touching the conduct of the watch trust, but the Department has complacently received it as information.

We will cite another case in point going to show the discrimination against the home market. A certain firm in Portland, Oreg., wishing to buy a carload of tin plate and sheet steel, secured the cooperation of a firm in Vancouver, British Columbia, who bought the goods in their own firm name, paying eight to ten dollars per ton less than the Portland firm would have been forced to pay if buying direct. When the goods were shipped, the draft, with bill of lading attached, was sent to the Vancouver firm, who immediately paid it and forwarded it to the firm in Portland. The goods in transit had to pass through Portland, but on arrival there the real owners armed with the waybill claimed delivery of their goods, and the road could do nothing but comply. And so, by a little international conspiracy, the trust was outwitted for once.

An American engaged in a small railroad enterprise in Georgia, and another in Honduras, asked for prices of rails and was informed that the rails for the Georgia road would cost him \$28 per ton and the rails for the Honduras road would cost him \$20 per ton.

In the name of outraged justice, in whose interest have the manufacturers of this country been fondled, fed, and fattened? Are our home people alone to be fed to this hydra-headed industrial cannibal? May the day soon come, and I think it will, when the little independence that is left in us will assert itself!

And now we come to the old campaign chorus of the Republican party, that high tariff and prosperity go hand in hand. No greater fallacy was ever flaunted in the faces of an overcredulous people. In the first place, this country has not had an inadequate tariff in forty years. The rates under the so-called "Democrat tariff," better known as the "Wilson Act," averaged 42 per cent against 50 per cent, the average under the McKinley Act. The Republicans have time and again asserted with bold effrontery that the Wilson revision act was responsible for the panic of 1893. The fact is the Wilson bill did not become law until 1894, and the panic was raging for fourteen months before its passage.

The Republicans lowered the tariff lists an average of 6 per cent in 1872 and there was a panic in 1873. Tariff rates were soaring along at the top notch when the panic, the effects of which are still felt, came on, causing a loss of property and a shrinkage in values of more than thirty-five hundred millions of dollars. How will the gentlemen on the other side of the Chamber classify these two Republican panics? One was under a lowered tariff; the other was under the highest of all tariffs.

The one occurred after some slight revisions; the other on the crest of twelve years of standpatism. The fact is, the tariff does not bear materially on the financial system, except in so far as it makes possible the paying of dividends on inflated stocks, thereby taking from the proper channels of trade the currency of the country. And if there is some indefinable connection between tariff revision and panics there is no fear that the Republicans will undertake to ferret it out just at this time, owing to their press of business in adjusting their present dilemma. When, without foundation, they were charging former panics to Democratic tariffs it would have been well to have remembered that little quotation: "Past follies have present obligations and old sins have long shadows."

Bureau of Mines.

REMARKS

OF

HON. GEORGE F. HUFF,

OF PENNSYLVANIA,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, May 21, 1908.

On the bill (H. R. 20883) to establish in the Department of the Interior a Bureau of Mines.

Mr. HUFF said:

Mr. SPEAKER: Representatives from the United Mine Workers of America and men engaged in mining of every kind, also operators generally, appeared at different times before the committee, and the unanimous request was for this bill. President Roosevelt in a message to the present Congress said:

A Bureau of Mines should be created under the control and direction of the Secretary of the Interior, the Bureau to have power to collect statistics and make investigations in all matters pertaining to mining, and particularly to the accidents and dangers of the industry.

Eulogy on Hon. George W. Smith.

REMARKS

OF

HON. MARTIN B. MADDEN,

OF ILLINOIS,

IN THE HOUSE OF REPRESENTATIVES,

Sunday, April 19, 1908.

The House having under consideration the following resolution:
Resolved, That in pursuance of the special order heretofore adopted the House now proceed to pay tribute to the memory of Hon. GEORGE W. SMITH, late a Member of this House from the State of Illinois.
Resolved, That as a special mark of respect to the memory of the deceased and in recognition of his distinguished public career the House at the conclusion of the exercises to-day shall stand adjourned.
Resolved, That the Clerk communicate these resolutions to the Senate.
Resolved, That the Clerk send a copy of these resolutions to the family of the deceased."

Mr. MADDEN said:

Mr. SPEAKER: Of the public characteristics of our lamented colleague and of his legislative achievements other Members have spoken in high praise. It was not my privilege to serve long with him in this honored body, and I had therefore no personal opportunity to study from close range his public undertakings. I did enjoy, though, a very close personal acquaintance with him, and it is a sincere satisfaction to me to be able to say in paying tribute to his memory, that he was one of the most lovable gentlemen that I have ever known. I can bear testimony to his high personal character and to his warm-hearted manliness. He never failed when opportunity offered to do for a friend some needed kindness, and he was always ready to fight with all his might for any cause in which he enlisted.

Of his many virtues honesty and truthfulness were the most pronounced, and it was these sterling qualities which won for him the respect and the esteem of his friends and acquaintances.

It was not necessary for him to set up proof in substantiation of his positive assertions. His word was as good as his bond, and when he declared to one who knew him as I did that he would do thus or so, it was all but done.

Like most other men, he had some minor faults, but they were not grievous ones.

Best men are born of faults and are better it is said for having been a little bad.

So spoke the great Shakespeare, and in those words I believe he told a great truth. I have never known a so-called "faultless man" to do for himself, his friends, or his country any real good, but the faults of our lamented friend were, when compared with his many virtues and graces, rendered nugatory if not entirely undiscernible.

GEORGE W. SMITH, like most men who come to Congress, and who amount to anything after they come here, learned early in life that the pathway to success is not strewn with roses. His struggle for an education was severe. He made many sacrifices that he might attain success, but he did succeed. I am told that his clear understanding of the principles of jurisprudence, his ready wit, and his forceful, though generous and magnanimous, character, made him a formidable competitor of the most distinguished members of the bar in his section of the State from which so many illustrious men have come.

For eighteen years Mr. SMITH was an honored and useful Member of this body. He was not a great orator, nor did he grapple with the weightier matters of state. He was, however, an indefatigable worker, and by hard study and close application he acquired a fund of information which enabled him intelligently to examine into and understand the many complicated questions which a Member of Congress is required to pass upon in order that by his action and his aid the interests of his constituents and his country may best be conserved.

By the death of our beloved colleague the old soldiers of his district sustain a loss that can only be expressed in tears. To their cause he was more devoted than he was to his own interests.

There never was a time in his public career when he would not have sacrificed his last dollar or exerted his greatest efforts to do for some needy soldier an act of kindness, but while he was partial to the old soldier, and while it always seemed easier for him to come to their assistance than to do aught else, his great, good heart would not permit him to refuse aid to any worthy person who, coming with honest purpose, applied to him for help.

It is easy to understand how a man endowed with great goodness of heart, as was our friend to whose memory we now

pay tribute, could find such delight in promoting and elevating the happiness of his fellow-man. He could not by selfishness seek to promote his own interests at the expense of the welfare or the happiness of others, for of selfishness he had none.

It is still easier to understand how men will love, admire, and give themselves to one thus great and good. Men always have and always will lavish their affection and give their earnest support to leaders possessing lofty ideals, warm sentiments, and noble hearts, and the success of our friend in all of his political contests shows conclusively that he possessed all of these attributes.

The service he rendered to his constituents made every one of them his debtor, and here in this Chamber, the scene of most of his public labors, it is peculiarly becoming that we, his colleagues, should pay tribute to his memory.

General Deficiency Appropriation Bill.

"The attitude assumed by the majority in Congress during this session has demonstrated to tariff reformers, to organized labor, and to the consumers of the country the utter hopelessness of any relief from the ills they complain of except by driving the Republican party from power."

SPEECH

OF

HON. WILLIAM PRESTON KIMBALL,
OF KENTUCKY,

IN THE HOUSE OF REPRESENTATIVES,

Monday, May 18, 1908.

On the bill H. R. 21946, the general deficiency appropriation bill.

Mr. KIMBALL said:

Mr. SPEAKER: I desire to submit a few observations upon the general subject of the present tariff laws, suggested by the very general discussion that has been carried on for some time, both in and out of Congress, upon the subject of the modification of the Dingley bill by placing wood pulp and white print paper on the free list. The gentleman from Massachusetts [Mr. TIRRELL], in a speech delivered on this floor on the 13th of February last, in discussing this subject, said:

Yet, strange as it may appear, although the matter has, in my judgment, excited more interest and comment during the past year than any other article upon the tariff schedule, we have up to this failed, as far as I can learn by reading the comments in the newspapers, or by the addresses on this floor, to ascertain one single reason why it should be done. No facts, no data have been given.

At the risk of being regarded as a trespasser upon the preserves of the select committee of the House now engaged in having hearings and endeavoring to ascertain whether or not there is a paper trust, and as a modicum of information for the gentleman from Massachusetts [Mr. TIRRELL], I will now read an extract from the Lexington Leader, a daily Republican paper published in the city of Lexington, Ky., where I reside. This article appeared as an editorial in that paper under date of December 26, 1907:

NEWSPAPERS AND THE PAPER TRUST.

Kentucky is just now torn up over the iniquities of the tobacco trust, which is powerful enough to practically fix the price at which farmers shall sell their crops and retail dealers shall sell manufactured tobacco. The Leader is not familiar with all the ins and outs of the tobacco monopoly, but if it is one-half as grasping and as remorseless as the white paper trust, we don't blame the farmers for resisting to the utmost limit within the law, although we can not approve of violence and destruction of property.

The newspapers are popularly supposed to be all powerful in avenging the wrongs of others, but they are at this time practically at the mercy of a monopoly that controls the supply of their principal "raw material" and are powerless to secure relief or redress.

The newspaper publishers of America are, indeed, facing a serious, even desperate, situation in the advancing cost of white printing paper. Natural conditions have contributed to some extent to the increased price of paper, but the formation of an ironclad and far-reaching combination of practically all the paper mills of the country is responsible for the greater part of the enormous tax placed upon newspapers of the country by this advance.

The International Paper Company, a gigantic corporation, generally known as the "paper trust," owns a majority of the paper mills and ground-wood plants and largely controls the available spruce forests of the country, from which printing paper is manufactured, and the smaller paper-making concerns from which competition might be expected have by some remarkable coincidence increased their prices exactly as the big trust has done and offer identically the same quotations in every instance.

White paper, which in 1906 cost \$1.80 to \$2 a hundred pounds, jumped to \$2.25 early in 1907, then to \$2.50 and even \$2.75, and publishers have been warned to contract for their 1908 supplies early or take chances on \$3 a hundred pounds.

The Leader made some weeks ago what is considered under present conditions an advantageous contract for 10 carloads of paper in 1908 at \$2.60 a hundred net, an increase of 70 cents a hundred over its 1906

contract price. On a car of 45,000 pounds this means an advance of \$315, and on the year's consumption of paper, between 9 and 10 carloads, this means an increase of about \$3,000 a year in the cost of white paper alone.

This estimated advance takes no account of the enlargement of the Leader from 8 pages daily to 10 or 12 nearly every day and from 16 pages on Sunday to 24, 28, and 32 pages, but is based upon the increase of the cost of paper of the same quantity and quality.

Every car of paper used in 1908 will cost \$300 more than the same car cost in 1906, and the actual expense to the Leader of issuing the same number of papers of the same size will be \$3,000 more in 1908 than in 1906, without a chance to recover a dollar of this increased cost except by increasing subscription or advertising rates. The enlargement of the paper since 1906 adds just that much more to the cost of white paper, but that may be considered as fully offset by the greater amount of advertising space secured.

The problem with all newspapers is how to meet this burdensome tax from which there seems to be no present appeal. Regardless of whatever effect the general financial stringency may have, the Leader is face to face with an addition of \$3,000 to a single item of its fixed charges, with its modest circulation.

The newspaper from which this extract was taken has about 6,000 daily subscribers. The addition of \$3,000 annually to its fixed charges means that it will cost its owner 50 cents more per subscriber to furnish the paper during the year 1908 than it cost during the year 1906. The editor and proprietor of this paper is a practical newspaper man with many years' experience. He came to Lexington twenty years ago from Canton, Ohio, and established his paper in a strong Democratic community, and from a small beginning it has grown until it is now a very valuable property. The editor is Mr. Samuel J. Roberts, who for the last eleven years has held the office of internal-revenue collector for the seventh district of Kentucky, having been appointed to that position by President William McKinley. He was brought up at the feet of the great protectionist, and when a younger man was employed on the paper edited by Mr. McKinley in Canton. I allude thus personally to Mr. Roberts in order that I may not be suspected of trying to convict the paper trust on the testimony of those who are hostile to the protective theory.

Before proceeding further I desire to read from two of the messages of the President of the United States to the present Congress. In his first message, which came at the opening of Congress, he said:

There should be no tariff on any forest product grown in this country, and, in especial, there should be no tariff on wood pulp, due notice of the change being of course given to those in the business, so as to enable them to adjust themselves to the new conditions. The repeal of the duty on wood pulp should, if possible, be accompanied by an agreement with Canada that there should be no export duty on Canadian wood pulp.

Again, in his message of March 25 last, in which he was urging Congress to prepare for the revision of the tariff by the collection during the coming recess of Congress of information by which to guide the Ways and Means Committee in the performance of their duty, he said:

I am of the opinion, however, that one change in the tariff could with advantage be made forthwith. Our forests need every protection, and one method of protecting them would be to put upon the free list wood pulp, with a corresponding reduction upon paper made from wood pulp, when they come from any country that does not put an export duty upon them.

The recommendations of the President in regard to this important matter—important to every publisher of every book, magazine, and paper of every kind and description, from the Bible down to the smallest weekly publication in the United States—do not appear to have left a deep impression upon the majority of the House of Representatives. Though many wood-pulp bills were introduced by Republican Members, and the Democratic leader has assured the House that at any time thirty Republicans would break away from the House machine and vote with the Democrats on this question that a bill to this end would be passed, only one of them has come forward and offered to do so, and although a petition signed by every Democratic Member of the House, save two who were absent, was presented to the distinguished Speaker of the House, who probably owes as much of his fame to newspapers as to any other source, asking him to recognize any Member of the House, Democratic or Republican, as he might choose, to move the suspension of the rules and to discharge the Ways and Means Committee from the further consideration of this subject and to pass the Stevens bill or some like measure advocated by the publishers of the country, he has refused to do so and will continue to refuse until the end.

The consideration of this matter by a select committee, under a resolution offered by the Speaker himself, was a ruse merely intended for delay and to prevent any real consideration of the subject by the present Congress, upon the theory that one breach in the protection wall might result in a serious attempt at a general revision of the tariff schedules. For, if the publishers of the country were to be relieved from the merciless pillage of the paper trust, no reason could be given why the

other classes of the people similarly pillaged should not have the same relief; but after this matter had been committed to the safe-keeping of the House select committee investigating the paper trust under the resolution introduced by the Speaker, and knowing that it could not be brought to the front again to confuse and embarrass the protection leaders in the House of Representatives, they actually permitted one slight breach to be made in the protection wall. The House, the other day, passed an act introduced by the distinguished protectionist from Missouri [Mr. BARTHOLDT] putting "tea sweepings" on the free list.

It is not possible that one-tenth of 1 per cent of the people of America know what tea sweepings are or the purpose for which they are used. It seems to be the trash or refuse from tea, used in the manufacture of caffeine, the chief seat of which industry is said to be in the district represented by the gentleman from Missouri [Mr. BARTHOLDT]; but it was carefully provided in that bill that these tea sweepings, in order to be placed on the free list, must be denatured and rendered entirely unfit for human consumption. Think of the absurdity of enacting legislation like this in the face of the great clamor from one end of the country to the other for the general revision of the tariff; a revision in the interests of the masses of the people; a revision in the interests of the consumer, who, after all, pays the tariff upon every article affected by the schedules. A few manufacturers of caffeine have received this special favor, while hundreds of thousands of newspaper, magazine, and book publishers all over the country are denied this reasonable and proper legislation, which even the great protectionist President of the United States says is their due and asks a Republican Congress to grant.

I must confess that a great many of the newspapers in the United States deserve little sympathy in their present predicament. If it had not been for the advocacy of a high protection tariff by the Republican newspapers of the United States the leaders of the Republican party could never have secured the enactment of the present unjust and outrageous tariff laws.

The newspapers that supported the Dingley Act and advocated the highest rates of tariff possible may be divided into three classes: Those that actually believed in the theory of high protection; those that supported it because it was advocated by the political party with which they were affiliated, and the other, and perhaps smaller class, that had been subsidized by the protected interests. But they are all in the same boat now, for the paper trust, like all of the brood, has no political convictions. It would just as soon rob a paper advocating high protection as one advocating tariff for revenue only. It would just as soon rob the publisher of a Bible as the publisher of a sporting paper.

Still, the publishers should have the relief they seek, because no country, under any guise whatever, ought to inflict wrong and injury upon any class of its citizens.

The predicament in which the publishers of the country find themselves is a pointed illustration of the evils of high protection. They have discovered at last that the benevolent and mysterious foreigner, who was formerly said to pay the tariff, has suspended payment. Whether this suspension was caused by the late Republican panic, I am not able to say. But they have realized by sad experience—by an experience that illustrates a condition and not a theory—that the consumer pays the tariff taxes.

The publisher of the Lexington Leader, with the addition of \$3,000 per year to the fixed charges of his plant, will take good care, of course, that that amount is made up from the patrons of his paper, as will all of the other publishers. The advertising rates will be increased. Gradually, perhaps, but surely the subscription prices will be increased. The merchant, finding that the rate of advertising has been increased, will likewise increase the prices of his wares in order to meet the additional expense of advertising them. So in a short time the increased price of white print paper will fall upon those who buy newspapers and those who buy the goods and wares of the merchants who advertise with the newspapers.

The paper trust is only one of more than 100 similar concerns that have come into existence since the passage of the tariff of 1897. With the coming of that legislation the American manufacturer found that it was impossible for the foreign manufacturer to compete with him, and, foreign competition having been eliminated by the gracious legislation of the Republican party, the manufacturers of almost every kind of article proceeded to form themselves into a trust by the combination of all the manufacturers of each particular class into one giant corporation and then to raise the prices of their output to an outrageous extent, and thus fleece the consumer of the country at will. This is exactly what the paper trust has

done. Competition excluded by the high rates of the Dingley tariff bill, various manufacturers of paper and wood pulp saw no reason why they should cut each other's throats when they could impose almost any price they chose upon the consumer of wood pulp and print paper without any fear of molestation.

The utterances of the President of the United States in the two messages referred to and the complaint of my friend and neighbor, Mr. Roberts, are both serious admissions against the maintenance of a high protective tariff. For if the removal of the tariff upon wood pulp and print paper will restore the trade in those articles to former legitimate conditions and furnish the American publisher with his stock of paper at a reasonable figure and end the exactions of the trust or "working arrangement" between the manufacturers, then is it not fair to assume that the placing of the tariff on wood pulp and white print paper was the cause of the present conditions about which the publishers so justly complain? And are not the same conditions true with respect to every article of use in America that is manufactured by any other trust or lawful combination? The confederating of capital for useful, legitimate, and lawful purposes is never objectionable. Great enterprises can not be successfully carried on without such confederation; but when capital confederates for the purpose of stifling competition or destroying the great law of supply and demand and of obtaining more than the just measure of its reward, then such confederation is a crime. It is now admitted by the protection leaders that the time has "almost" arrived when there should be a revision of the tariff schedules, but that it would be very unwise to attempt such a revision until after the Presidential election of 1908. To this end all suggestions of revision, including the relief to the publishers, has been sidetracked until after the election. In the meantime the Ways and Means Committee of the House of Representatives will proceed to collect data and consider the tariff, with a view to its revision at a called session of the Sixty-first Congress, provided, of course, that the Republicans have a majority in the House of Representatives.

This proceeding gives the whole matter away. This holdup of the question until after the election gives notice to every manufacturer in America that if the Republican party elects the next President and obtains control of the next House of Representatives, each of their particular cases will have to be passed upon by a Republican Congress, and that it would be wise to contribute something to the campaign fund. This view is borne out by the fact that the House of Representatives a few days ago passed a sort of political campaign publicity bill, to which was added what is known as the "Crumpacker bill," which provided for the reduction of Southern representation in Congress in States where the colored vote has been disfranchised by constitutional amendments, and also a provision placing the control of the Federal elections in the hands of the Federal courts. It is not intended that this bill shall be passed by the Senate, at least not before the next Presidential election.

On January 14 last, when the House of Representatives had under consideration the criminal-code bill, I offered an amendment to the act of January, 1907, which prohibits national banks from making "money contributions" for campaign purposes, and to prevent corporations generally from making such contributions at any election where Federal officers are to be elected. The amendment proposed to strike out the words "a money contribution" and insert the words "any contribution of money or anything of value," which was adopted on a division, but defeated when tellers were demanded by the gentleman from Pennsylvania [Mr. Moon], the chairman of the Committee on the Revision of the Laws, who had charge of the bill.

It was defeated by the votes of the Republican majority, only one of them making any protest, and that was the gentleman from Wisconsin [Mr. Cooper]. But his protest came after the vote had been taken. Under the law, as it now stands, it will be unlawful for any corporation to make a "money contribution" of \$10,000 to the Republican campaign fund next fall, but it will not be unlawful to make such a contribution in stocks, bonds, or anything of value readily convertible into money. The amendment would have given the law some efficiency for good, but might have interfered with "frying the fat" from the trusts and unlawful combinations of capital now flourishing under the high protective-tariff system, which we are assured is to be revised after the Presidential election "by its friends."

The attitude of the Ways and Means Committee toward revision is well illustrated by a recent occurrence at a meeting of the committee when the gentleman from Missouri [Mr. CLARK], the ranking Democrat on the committee, called up the following House bills which were pending before the committee, and by the unanimous votes of the Republican Members the

consideration of all of them was indefinitely postponed. Each of these bills was intended to modify, in some respect, the tariff rates in the interest of the consumer.

Tariff bills pending before Committee on Ways and Means May 18, 1903.

Committee Docket No.	Bill No.	Introduced by—	Articles affected.
1	3	Mr. Thomas, N. C.	Paper and materials.
4	93	Mr. Williams	Works of art.
5	101	do.	Philippine products.
6	102	do.	Hides, leather, and manufactures of.
8	105	do.	Minimum of five-sixths of present rates.
8	105	do.	Shipbuilding materials.
10	107	do.	Coal.
11	108	do.	Reciprocity in hides, leather, and manufactures of.
13	110	do.	Reciprocity with France.
14	112	do.	Rates not exceeding 100 per cent on any article.
15	113	do.	Hides, leather, and manufactures of.
16	114	do.	Watches.
17	115	do.	Antitoxin and diphtheria serum.
18	116	do.	Linotype and composing machines, wood pulp, and white paper.
19	153	Mr. Robinson	Printing paper, wood pulp, and materials.
22	191	Mr. Macon	Philippine products.
24	204	Mr. Clark, Mo.	Wood pulp, white paper, and materials.
27	235	Mr. Shackelford	Printing paper and wood pulp.
28	238	do.	Printing paper, wood pulp, and Linotype machines.
35	273	Mr. Stanley	Articles made in United States and sold abroad.
50	405	Mr. Rainey	Shipbuilding materials, etc.

254	20191	do.	Articles sold cheaper abroad.
274	21403	Mr. Gaines, Tenn.	Pulp and paper.

I call the attention of the committee to the fact that H. R. No. 3857 was introduced by the chairman of the Committee on Ways and Means, the gentleman from New York [Mr. PAYNE]. The title of the bill is, "A bill to amend an act entitled 'An act temporarily to provide revenue for the Philippine Islands and

for other purposes,' approved March 8, 1902." The purpose of this bill appears to have been to regulate the tariff rates so as to give the Philippine Islands some measure of relief from its present exactions. Yet, it was sent to the junk pile along with the other 260 bills, by the votes of the Republican majority. This bill was accompanied to the junk pile by H. R. 112, introduced by the gentleman from Mississippi [Mr. WILLIAMS], which provides, in effect, that no tariff rate shall exceed 100 per cent ad valorem on any article. I append the following table showing some of the schedules affected by this bill and the per cent of duty on those schedules. It will be observed that the rate ranges from 111.85 per cent to 407 per cent ad valorem:

Some average ad valorem tariff rates over 100 per cent under the act of 1897, known as the "Dingley law."

SCHEDULE A—CHEMICALS, ETC.

Paragraph.	Article.	Tariff rate.	Average value per unit.	Per cent.
1	Tannic acid.....	50 cents per pound.....	\$0.41	122
2	Alcoholic perfume.....	60 cents per pound and 45 per cent ad valorem.	2.12	407
11	Borax.....	5 cents per pound.....	.024	230
21	Sulphuric ether.....	40 cents per pound.....	.10	400
21	Fruit ethers.....	\$2 per pound.....	1.05	190
56	Whiting ground in oil (putty).	1 cent per pound.....	.005	200

SCHEDULE B—EARTHS, EARTHENWARE, AND GLASSWARE.

99	Filled glass bottles, $\frac{1}{2}$ pint to 1 pint.	1 $\frac{1}{2}$ cents per pound.....	\$0.013	115
99	Same, less than $\frac{1}{2}$ pint.....	50 cents per gross.....	.34	148
a 101	Unpolished cylinder common window glass, less than 16 by 24.	1 $\frac{1}{2}$ cents per pound.....	.026	150
104	Cast polished plate glass, finished or unfinished, all above 24 by 60 inches square.	35 cents per square foot.	.19	180
108	Spectacles.....	45 cents per dozen, and 20 per cent ad valorem.	.42	127

a See paragraph 187, states \$0.026 per pound, other sizes in proportion.

SCHEDULE F—TOBACCO.

215	All other tobacco.....	55 cents per pound.....	\$0.20	275
216	Snuff.....	do.....	.35	158
217	Cigars, cigarettes.....	\$4.50 per pound and 25 per cent ad valorem.	4.48	125

SCHEDULE G—AGRICULTURAL.

232	Rice.....	2 cents per pound.....	\$0.018	111.85
-----	-----------	------------------------	---------	--------

SCHEDULE H—SPIRITS AND WINE.

289	Spirits from grain.....	\$2.25 per gallon.....	\$0.85	264
294	Bay rum.....	\$1.50 per gallon.....	.66	222
299	Cherry juice.....	60 cents per gallon.....	.38	156

SCHEDULE K.—WOOLEN GOODS.

366	Yarns.....	27 $\frac{1}{2}$ cents per pound and 40 per cent ad valorem.	\$0.11	278
374	Brussels carpet.....	44 cents per yard and 40 per cent ad valorem.	.32	175

SCHEDULE N.

420	Fire crackers.....	8 cents per pound.....	\$0.054	147
-----	--------------------	------------------------	---------	-----

The Republican party has never revised the tariff except to pile on more of it, and if the high protection theory is correct, they are right, because, if protection is a good thing, the more we have of it the better. If the tariff is revised by them again it will be done in the same old way. It is urged that the revision should be made by its friends. The protective tariff has no friends, except its beneficiaries, and its beneficiaries are only those who are enabled to rob the consumer by means of its iniquities. The revision of the tariff by its friends would be as absurd as calling a convention of porch climbers to devise new laws for the protection and security of the home or the assembling of a parliament of bawds to devise means to prevent the social evil.

The Louisville Courier-Journal in a recent issue, under the head of "Incubators of iniquity," in discussing the matter of the Ways and Means Committee of the House of Representatives sitting during the recess of Congress to consider the tariff, assisted by the Senate Committee on Finance:

The Ways and Means Committee of the House of Representatives, captained by SERENO E. PAYNE, standpatter, taking orders from JOSEPH G. CANNON, standpatter, will sit during the recess of Congress to consider the tariff, assisted by the Senate Committee on Finance. This would be hugely diverting were it not so genuinely depressing. His Satanic Majesty sitting to consider improvements in the Sabbath-school system, Friar Tuck preparing a temperance lecture, Robin Hood framing a bill of rights, King Richard III drafting improvements for the Decalogue, Nero writing verses upon the joys of the simple life, or Ananias declaiming against the unrighteousness of the alibi witness would not be more grotesque than SERENO E. PAYNE et al. pondering the problem of revising the Dingley schedules. All Baba and the Forty Thieves acting as a Christian Endeavor Society would be as likely to advance the cause of Christianity as NELSON B. ALDRICH's Committee on Finance and its expert assistants are to collect material that will result in the introduction of a bill looking to the amelioration of the existing tariff law.

The well-defined purpose of the Republican leaders to revise the tariff upward and in the interest of its friends, the manufacturers, may experience a rude shock at the coming November elections. The people are becoming aroused as they contemplate the enormities of the situation; even the newspaper publishers have begun to sit up and take notice. Rumbblings of discontent with present conditions and of a lack of confidence in the party in power is heard in the land. The attitude assumed by the majority in Congress during this session has demonstrated to the tariff reformers, to organized labor, and to the consumers of the country the utter hopelessness of any relief from the ills they complain of, except by driving the Republican party from power. Confederated with and protecting every interest that oppresses the people, and turning a deaf ear to every demand for relief, it is doomed to defeat in November unless "justice has fled to brutish beasts and men have lost their reason."

The Freeland Currency Bill.

SPEECH

OF

HON. WILLIAM A. RODENBERG,

OF ILLINOIS,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, May 26, 1908.

On the bill (H. R. 21871) to amend the national banking laws.

Mr. RODENBERG said:

Mr. SPEAKER: In one of the greatest of Shakespeare's great dramas we find these words of Iago to Roderigo:

Put money in thy purse; follow these wars; defeat thy favor with an usurped beard; I say put money in thy purse. * * * Put money in thy purse. These Moors are changeable in their wills—fill thy purse with money."

While there is nothing whatever to admire in the character of Iago, who, if living to-day, would, by unanimous consent and without roll call, be classified as an "undesirable citizen," yet it would seem that the most conspicuous exponent of latter-day Democracy, the peerless one, William Jennings Bryan, had adopted Iago's advice in toto and made it the guiding star of his political life. Twelve years ago poor and penniless, possessing a modest equity in a modest home, endowed only with a matchless voice and a magnetic personality, he has continued to put money in his purse, until to-day his wealth, it is said, approximates \$1,000,000.

Predatory wealth is still denounced, and soulless corporations are still excoriated by the great commoner, but while the denunciation and excoriation are going on the shekels continue to flow into the coffers of William Jennings Bryan. But "these Moors are changeable in their wills." Now and now only is the accepted time. No opportunity must be lost, no advantage overlooked. Dives must feast and Lazarus can look out for himself.

As proof of this absorbing lust for gold, this overmastering desire for the accumulation of great riches which has taken complete possession of the "tribune of the common people," I insert herewith in the Record an article written by Mr. George R. Crow and published in the Chicago Tribune of May 17, 1908, and which explains why Mr. Bryan manifests such intense eagerness for the Democratic nomination for the Presidency,

although confronted with sure and certain defeat at the polls in November:

BRYAN A GAINER EVEN IF BEATEN—NEBRASKAN ABLE TO PAY HIGH PRICE FOR NOMINATION AND PROFIT COMMONER—\$280,000 A YEAR IS AIM? ORGANIZATION OF "LOYAL" INTO "MILLION" ARMY AT 60 CENTS MEANS A FORTUNE.

William Jennings Bryan could afford to pay \$150,000 or more for the Democratic nomination to the Presidency, even if he knew positively that he would be defeated.

If nominated, Mr. Bryan, I believe, expects the circulation of his weekly magazine, the Commoner, to go to the 1,000,000 subscribers. This would yield him a net personal profit of \$280,000 per year.

Like other shrewd political captains of his party, does he believe that if nominated he will be defeated, but wishes the nomination as an advertisement for his own private ventures, notwithstanding the fact that the Democratic party might stand a good chance of electing Johnson, if nominated? Is a question often asked.

Certainly Mr. Bryan's experiences have not been such as to encourage in him the belief that defeat is impossible.

Like the alert man he is, he is profiting by his experiences of the past, for Bryan knows the financial value of the Presidential nomination. It has enabled him to make an income of \$60,000 a year, exclusive of placing him in the same class with plutocratic life insurance and railroad presidents.

However, the tidy sum of \$60,000 per year is only the beginning toward the colossal amount Mr. Bryan must expect to make out of the Commoner, through using the Democratic Presidential nomination to lure over half a million dollars into his coffers before November 6, 1908.

\$280,000 A YEAR IS POSSIBLE.

If Mr. Bryan's fond hopes, as expressed in circulars now being mailed to advertisers by the Commoner office, are realized, his net profit, derived from the Commoner alone during the year 1908 will be at the annual rate of \$280,000.

It is just possible that this may have something to do with the irrepresible zeal with which he is seeking a nomination to the Presidency, for it is a fact that whether elected or defeated he will be vastly the gainer financially through having had the nomination.

Under these circumstances, perhaps, the recent developments in New York State and elsewhere, which make his election practically an impossibility, do not dismay him.

After reading his interview with newspaper men in New York regarding his income, published in the Chicago Tribune on April 21, 1908, and dated April 20, 1908, one may question his sincerity and his motives, particularly in view of the results of an investigation made by me.

On April 21, 1908, I called at the Chicago office of the Commoner, in suite 711, at 185 Dearborn street. The office is in charge of Mr. J. P. Limeburner, the direct and authorized representative of William Jennings Bryan, the editor and proprietor.

I asked for information regarding the Commoner's advertising rates, its present and past circulation, and the prospects for an increase should Mr. Bryan be nominated. I found the office banking largely on a tremendous circulation as the result of Bryan's possible nomination.

COMMONER'S POWER DECLARED.

On April 23, 1908, I received a letter from the Commoner office, together with the "million-circulation circular," to which the letter refers. The letter was as follows:

"Mr. GEO. R. CRAW,
"401 1/2 Grand boulevard, Chicago, Ill.

"DEAR SIR: Complying with your request of this morning, we are inclosing you herewith matter to show the Commoner is one of the best mail-order papers in the country.

"Inclose you our million-circulation circular. Mr. Bryan seems to be very optimistic regarding reaching that point before the year is over, and the stack of letters I saw coming in to the Lincoln office on my last visit there a short while ago indicate it will reach the mark. There is not a better medium to-day, pro rata cost, to carry your business in than the Commoner. It is one of the papers not affected by the new post-office ruling.

"I believe, however, it is not necessary to explain any further to you regarding the matter, as you fully understand conditions that will make the Commoner a potent force this year for advertisers. It will be a good stroke of policy for you to get in, and get in at once, or else in a short time you will be up against higher rates.

"Hoping we may convince you it will be a good thing for you to use the Commoner, we remain,

"Yours, very truly,

J. P. LIMEBURNER,
"Per B. L."

Mr. Bryan keeps in constant touch with his Chicago office, and its statements regarding the Commoner are as authentic as if they came from Editor Bryan himself.

No one reading Mr. Bryan's "One million paid circulation" circular can doubt that "the brief review of present and coming events" refers to Mr. Bryan's possibility of becoming the Democratic Presidential nominee.

FIGURES ON COST.

Without knowing what it costs Mr. Bryan to publish and mail his paper and a knowledge of the amount of advertising published by him, with what he receives in subscriptions, it would be impossible to arrive at the net income paid him by the Commoner each year, but to a man versed in the "ins and outs" of the publishing and advertising business, the obtaining of the information is comparatively easy.

Taking a number of copies of the Commoner of different dates, I asked the Western Newspaper Union, 65-67-69-71 Plymouth place, for a quotation on a twenty-page magazine, the same as the Commoner, and the next day I received a letter embodying the quotations, as follows:

"Mr. GEORGE R. CRAW,
"401 1/2 Grand boulevard, Chicago, Ill.

"DEAR SIR: We take pleasure in quoting you on printing 150,000 copies of a twenty-page magazine, size 11 by 13 1/2 inches, on the same paper used by Bryan's Commoner, the net sum of \$1,470. If you use regular No. 1 print, price will be \$60 less.

"The price quoted above includes all of the composition, electrotyping, presswork, binding, and mailing complete, you, of course, to furnish us with a proper mail list.

"Should be very pleased to do the work for you, and can guarantee prompt and satisfactory service.

"WESTERN NEWSPAPER UNION,
"R. G. GALUSHA."

HOW PROFIT PILES UP.

I can confidently state that Mr. Bryan is publishing the Commoner at a cost of less than \$1,102.50 each issue, or \$57,330 per year. It costs him \$10,150 per year for postage. Thus the total cost per year of publishing and mailing the Commoner is \$67,480.

The above figure is so high that it will take care of the expense of the Chicago office, the Lincoln plant, and the literary matter published in the Commoner, editorial and contributed.

The nominal subscription price of the Commoner is \$1 per year, but from a study of its clubbing offers I find that a net receipt of over 60 cents per each subscription is maintained by Mr. Bryan, and when he says he has a circulation of 145,000 copies weekly, which he is willing to prove at any time by post-office receipts, I am willing to believe it.

At 60 cents each net this yields Mr. Bryan a yearly revenue from subscribers alone of \$87,000. Subtract from this the cost of publication, which includes all expenses in connection with the publication of the Commoner, together with the postage, and there is left an annual net profit for Mr. Bryan of \$19,500.

Add to this his yearly net receipts from advertising in the Commoner, which, according to figures given me in the Commoner office, approximate \$40,000 in cash for the last "panicky year," and we find that Mr. Bryan's total net income is nearly \$60,000 per year yielded by the Commoner alone. Besides this his lectures and magazine contributions bring him thousands additional each year.

STORY OF EARNINGS INTERESTING.

Under a million circulation the net profit of the Commoner to Mr. Bryan would be at the rate of over \$280,000 per year. In the face of the above facts Mr. Bryan's statement of April 12, made to the press in New York City and published in the Chicago Tribune April 21, is interesting. He then said:

"My income is derived mainly from my lecturing, with some addition from articles written for other publications and something from my own paper, but the amount has been greatly exaggerated.

"I make more speeches for nothing than for pay and devote more time to public work than to private gain.

"My political prominence has been an advantage in that it has given me a larger reading circle and a larger audience, but I could have used the prominence in other ways to greater pecuniary advantage.

"For instance, I was offered \$25,000 a year as counsel for a corporation, but it would have taken me out of the political field. By lecturing and writing I can make what I need in half the time and have the rest for public work."

It might be said that the Nebraskan tries here to make it appear that his income is not as much as \$25,000 per year. He says he can make what he "needs" in half the time that he would have to put in as counsel for a corporation and have the rest for public work.

According to my figures and his statement, what he "needs" must come to about \$60,000, and this amount does come from the Commoner alone. The time put in for public work is an advertisement for those branches of his endeavors which are getting the money.

"RECRUITS" PAY 60 CENTS EACH.

That Mr. Bryan's hope of a million circulation for the Commoner before November, 1908, is not an idle one. I will state that a page in the Commoner of March 27, 1908, tells of "Working for the Commoner 'Million army.'" The members of that "army" pledge their assistance—no money mentioned—to the Democratic party and contribute 60 cents in cash to Mr. Bryan's pocket, receiving in return a subscription to the Commoner for less than a year. And how the Democracy is "biting," as evidenced by the names of hundreds of subscription "army" workers, who send in from two to fifty new subscriptions, accompanied by the cash, at 60 cents per head.

When a man is shrewd enough to inject respectively religion or politics into a money-making proposition he is sure to get the money.

Government Guaranty of Bank Deposits.

SPEECH

OF

HON. JOHN G. McHENRY,

OF PENNSYLVANIA,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, May 14, 1908,

On the bill (H. R. 21871) to amend the national banking laws.

Mr. McHENRY said:

Mr. SPEAKER: Congress has now been in session for a period of six months, with but a few days remaining until it is proposed to adjourn the session.

When we came here in December to take up our duties, we found the country in a combined state of industrial, commercial, and financial panic of a character and intensity such as we had never before experienced.

In the midst of unprecedented prosperity, with our factories, mills, and mines working overtime, plenty of work for every man who wanted work and at fair wages, our farms yielding the largest crops in the history of American farming and selling at prices above the past ten years' average, the financial crisis came to our country and people as an electric shock, paralyzing the wheels of commerce and of all industrial activity, affecting the personal interests of every man, woman, and child in America; bringing want and suffering and hunger to many by depriving them of their only asset and income, their right and opportunity to work.

In the history of this Government never has the Congress of the people been called together at a time when there was a greater need for immediate legislative action to stop a panic of fear which had become world-wide by providing such remedial legislation as would restore public confidence and safeguard the country against the recurrence of a similar condition from similar causes. Never in the history of this Government has Congress so flagrantly violated the trust and confidence of the people, proved itself more incompetent to rise to the occasion, or displayed a more vulgar abuse of political power in refusing absolutely to respond to the demands of the country and the people.

During the five months of our session, we have passed the usual appropriation bills—nothing more. Willing to spend the people's money, but unwilling to help them earn it. In other words, it has taken 391 Congressmen and 92 Senators five months to do what any board of directors of the average bank or business corporation would have accomplished in a couple of weeks, and during these five months we have been willing, with an indifference characteristic of the true Wall street spirit, to permit over 2,000,000 working men to walk the streets without work and enter the soup-house column, which the Republican party has always said could not happen under a high protective tariff and a Republican Administration, and without any evidence of record that the House is willing or intends to even try to ameliorate this condition. But we are told that the panic is over and that we do not need any legislation now. The crisis is passed and the panic is over, it is true, but the business depression is still on and is likely to continue for some time. But of this I shall speak later.

Mr. Speaker, I am here as a Representative of a great district and a great State. In Pennsylvania alone there are to-day over a quarter of a million of people out of employment. It is because of this condition and the seeming tendency of Congress to ignore its duties to the plain people that I find sufficient justification as a member of the Banking and Currency Committee to address the House upon the question of financial legislation.

FEDERAL GUARANTY OF BANK DEPOSITS.

It has become apparent—in this I hope I may be mistaken—that it is the determination of the dominant party to place no adequate currency legislation on the statute books at this session. All legislation with reference to this subject has resolved itself into a question of party policy; the needs of the country or the people have become matters of secondary consideration. Better that the country should suffer than the Republican party should suffer; better that workingmen be out of a job than Congressmen; better to continue the policy of postponement, defer action, and promises by commission, which have so successfully fooled the people during the past years, rather than risk the enactment of laws that might displease the Wall street and banking interests of the country.

So it is needless to discuss emergency currency or any other form of currency legislation at this time, but I want to call the attention of the House and country to one thing that can still be accomplished at this session and which will go a long way toward safeguarding the country against the recurrence of a money panic through which we have just passed, and for the brief time allotted me I will confine my remarks to the subject of "the cause and the remedy."

THE CAUSE.

As to the underlying causes of this panic there is considerable disagreement, but after six months of study, discussion, and hearings, your committee is unanimously agreed upon two fundamental truths: That the cause of this panic is primarily due to a loss of public confidence, and its remedy, therefore, must lie in such measure or measures as shall tend toward a restoration of public confidence.

As to the cause, there are those who think that a panic must come every few years about the same as a pestilence used to come in biblical times, and that panics will come at stated intervals, regardless of any law or condition. There are others who declare that we have had too much prosperity; that we have all been spending too much money; living too high. Others think that it has been brought about by dishonest corporate management, while others believe that it is a Wall street attack upon the Administration; others believe that it is a shortage of money, while others think we have had not only too much of the "big stick," but too much of the brass-band method of swinging it. While I do not believe that any one of these reasons is directly or wholly responsible for the recent panic, yet it is no doubt true that each cause has indirectly contributed its portion in the making up of this general state of public fear, and if I were called upon to define the actual cause of the recent panic I would define it in two words—

"FEAR" AND "GREED."

The people of the United States for the past few months have been in a state of mind such as has never before existed in the history of our country. About one and one-half years ago we began reading statements—mere half-dozen-line statements—from men of high standing in the financial world and who are classed as "captains of industry," saying that a period of retrenchment was about due. It was a new word to the American people. Such had been their progress and success that they had no time to stop and learn what was to them a new thought and a new language. The half-dozen-line statements began to extend to a quarter column and to a column and a half. From the retired captains of industry, statements began to come from the lieutenants, from the merchants, the manufacturers, the bankers, and to this chain was added the editorial admonition that it was time to retrench. But still the American people gave no heed to their masters and failed to learn the meaning of the word.

There are no people so quick to learn or so quick to forget as the American people. They saw our great American farms producing the most wonderful yield in the history of our country and farm products selling at a higher price than the general average for the past ten years. Railroad stocks and bonds, securities of all kinds at the high mark, and Wall street, that dream and hope of gamblers and despair of outside investors, surpassing in its golden harvest the dreams of Cræsus. Panic? No! Impossible with such conditions. We believed the country had outgrown Wall street. We believed in our honesty and energy, and believed ourselves able to cope with any possible condition which might arise; but we had not included in our reckoning the power of public fear.

"THE BIG STICK."

For a period of three or four years the daily newspapers of the country have heralded, almost without intermission, the dishonesty and wrongdoing of various corporate managements. Beginning with the investigations of the great life insurance companies of the country, which hold almost unlimited millions of the people's assets, then the railroads and various trusts came in for their share of condemnation, from the Chief Executive down to the pettifogging politician, and with all this publicity and distrust, with what result? The insurance companies have a greater financial consolidation to-day than ever before. Freight rates have continued to increase to the individual shipper. Prices of trust-made articles have continued to advance, and if fines were levied, the people knew full well that the fines must come from the pockets of the people. So the one result of these various investigations has been to excite in the minds of the people a feeling of general distrust and loss of confidence, not only in their Government or the corporate management of the country, but between individuals and neighbors. We have heard much preaching about the ideals of good citizenship, but the practical tendency has been to drift away from the teachings of the Bible, which gives us that divine fundamental law of humanity, "Love thy neighbor as thyself." In its place has been substituted "Distrust both thy neighbor and thyself."

The greatest asset of any man is character and credit. These are the privileged possessions of every honest man and woman, but they can only be gained, and once gained can only be sustained, through honesty and industry. The greatest asset of this or any other nation is public and individual confidence, which must rest upon the supporting base of the individual character and credits of our citizens, and to the extent that each is dependent upon the other, they both respond to any attack made upon either. So, judging by actual results and not by theories; by existing facts as gleaned from the profit and loss balance sheet of the American people and not from the "mere talk" that filters down from high places, the burden of economic loss, due from loss of public confidence, invariably falls upon the common people.

Instead of working to strengthen and build up public confidence, it would seem that every element of political and financial power which now so completely dominates our country had conspired to its complete destruction. So we find the combined circumstances which had staged the scene with psychological correctness for a general stampede of fear, and when a great institution like the Knickerbocker Trust Company of New York, believed by everybody to be perfectly solvent and which has since proven to be entirely solvent, one of the strongest institutions of the country, closed its doors in the face of thousands of depositors clamoring for their money, the first tremor of fear passed through the American nation, and when during the days following one bank failure after another followed in rapid succession throughout the country the work of the "would be" reformer and Wall street conspirator was complete with the issuance of clearing-house certificates, converting a

whole nation of optimists of unbounded courage into a nation of pessimists and frightened citizens.

PANICS.

In the intelligent presentation of this subject I want to explain my use of the word "panic" and the words "Wall street," as used for convenience in portraying the thought which I have in mind. The failure of the Knickerbocker Trust Company was the one thing needed to produce a crisis. A crisis may or may not be followed by a panic. A panic may or may not be followed by a business depression, but in this instance we had first the crisis and then the money panic, in which everybody wanted to get hold of his own money and put it where he was sure of getting it when he wanted it. After the panic came the business depression, which is still with us and will continue to be with us for several months to come, and if Congress continues this play of party policy, ignoring the demands of the country, we can expect this business depression to continue with us for several years instead of several months.

For convenience and brevity, I will confine myself to the use of the word "panic" exclusively, for that is the word generally recognized by the people as descriptive of any economic disturbance, whether it be a crisis or a panic or depression.

WALL STREET.

In using the term "Wall street" I want to be distinctly understood. I do not belong to that class of political demagogues who are continually raising a hue and cry against Wall street, but I simply use it as a term to express a given character. Wall street, as a medium of exchange, has become so much a part and parcel of our financial system that it is just as inseparably connected with the commercial interests of the country as the grain markets are necessary for the interchange of the farmers of the world.

Through the medium of Wall street—the exchange—hundreds of millions of dollars of gold have been brought into the United States from foreign investors, and whether the gold comes here from Europe through the sale of stocks and bonds or through the sale of farm products the result on our balance sheet is just the same. As a public market place for the sale of stocks and bonds, Wall street has brought many millions of dollars of foreign capital into this country to help build our railroads, factories, and mills, thus giving employment to hundreds of thousands of American workmen.

To the extent of its usefulness Wall street is therefore entitled to full credit, but behind Wall street—the business exchange—we find the MAN—the colossal power of two or three or a half dozen men who to-day hold, under our present financial system, the destiny and prosperity of the entire American people. They have violated no statute law. They have done perhaps what ninety-nine men out of a hundred would do were they similarly situated—a system has grown up and they have grown with it. Wall street has become one of the mediums for the system, and through this medium a few men, with their country allies and their great ally of American fear, HAVE THE POWER ABSOLUTELY TO CREATE A PANIC ANY TIME THEY WISH.

The Wall street type of man is not confined to New York, but is found in every village, town, and hamlet of this country. I will describe him not only as he appears to my mind's eye, but as I find him existing in fact. As a rule he is an elderly gentleman with a benevolent appearance. Various opportunities have come to him in the past for making money and he has grasped them, which is his right and privilege. He has learned the value of economic science, the knowledge of fictitious values and knows the purchasing power of the dollar. He knows that DURING TIMES OF PANIC PRICES FALL and that he can then buy ordinarily twice as much for his dollar in the time of panic as he can during the time of prosperity. He is the man who watches for sheriff's sales and takes advantage of his neighbor's adversity. As a matter of diversion he may give away public libraries or other forms of public charity, which is considered by this class of men as the cheapest form of advertisement and indirect gain. He is the kind of man who, having made his money in a community, refuses to reinvest it for the benefit and upbuilding of the community.

For instance, he would rather invest his money in destructive stock speculation that holds the promise of great return than in constructive enterprise which would give employment to labor. Ordinary 6 per cent interest does not satisfy him. The farmer with a good first mortgage can not borrow from him, because this little Wall street man has learned by experience that if he keeps some ready money at hand, either in the form of cash or credit, there comes a period of opportunity, at least twice every year, for him to buy something at less than its real value and thus increase the purchasing power of his gold. So continued has been his success and so

great his absorption and love for power and gold and self that he has come to believe, and with all sincerity, that he has become the possessor of wealth by order of "divine right," and that the most beneficent charity toward the masses is to limit their earning capacity and to take from them what they earn as quickly as possible.

This type of man is naturally opposed to any form of legislation that will benefit the common people, and it is this same type of man which now controls this Government and this Administration. So when I use the term "Wall street," I mean that it shall apply to a type of man, and not Wall street as a public market and exchange, which I consider an economic necessity to the full development of the business interests of the country.

A FEDERAL GUARANTY OF BANK DEPOSITS.

Under the present national banking law the Comptroller of Currency has the absolute power to post a notice over the door of any national bank at any time and declare the bank closed. If the United States Government is going to take a part in the banking business and assume absolute authority to this extent, I want them to go still further, and when they cause the doors of a bank to be closed, to say to the depositors, We will see that your money is returned to you. When we consider that this thing which we call money is created only by and through the medium of the United States Government, and when we consider how vitally important this money is to the commercial needs of the country and to the happiness and welfare of our people, it would seem to be only fair and equitable and right that our Federal Government should offer every inducement in the interest of commerce and trade to cause the individual holder of this money to deposit it in our various banks in order that it may come into circulation and may be used in the ordinary channels of trade. To-day we have in round figures a total amount of currency in the United States of \$3,400,000,000, or a per capita of \$35. This small amount of money must handle an annual volume of business of \$100,000,000,000.

So it can readily be seen that it is vitally important that we have every possible dollar in actual circulation. Based upon the present deposit basis each dollar of actual cash is supporting at least \$4 of credit.

It has been estimated that there is at least \$1,000,000,000 of currency in the pockets of the people and in the bureau drawers and hiding places at home. While no system can be devised to have all the cash of the country available in the banks, nor is it desirable to do so, but I believe that with a form of guaranty which will satisfy the depositor that his money is safe under any and all conditions our lines of deposits will be increased by many millions of dollars. And each million dollars' increase in our bank deposits gives to the commercial interests of the country an increased business credit of \$4,000,000. In other words, if the deposits of the country are increased to the extent of \$25,000,000, the commercial interests of the country have an additional available credit for active use of \$100,000,000.

IDLE MONEY.

The dollar that is carried in a man's pocket or hidden away in the bureau drawers or under the carpet is entirely useless and is doing nobody any good. Ordinarily speaking, the working man or the farmer who hoards his money at home, who does not deposit it in his home bank, where it can be used for the commercial benefit of his community, is just as much a miser to the extent of his savings as the Wall-street man with his countless millions—with this difference, the Wall-street man has no fears for the future. With him it is not a question of bread and butter or providing a little competence against old age. With the workingman and the farmer the savings mean everything, and he can not be blamed, especially in times of general panic and commercial unrest, for withdrawing his savings from the bank and converting them into cash and taking them home until the wave of panic has passed. Therefore, it should be the duty of this great Government not only to create the dollar, but to regulate the banking interests of the country so as to surround each institution with every possible safeguard and insure the depositor absolutely against loss. After this is done it is then sufficient time to charge the wage-earner with individual selfishness and lack of patriotism in refusing to adopt the public banking house for the safe-keeping of his money.

When we consider, first, that the United States Government alone has the power of creating money, and when we consider, second, that the great majority of this actual money belongs to the farmers, miners, and mechanics, and all wage-earners of the country, we discover that if they did not bring the money which they have earned as a result of their labor and deposit it in the various banks of their communities the business of the country would be absolutely paralyzed and could not be

carried on. Therefore, it becomes important for the great development of our country and in the interest of our whole people that the Government should now assume a function which lies within its power, and which, had it exercised that power prior to last October this recent panic would not have occurred.

I disagree entirely with the economic student and expert who can point with accuracy to recurrent panics at stated intervals in support of his theory that panics are bound to come periodically, and that prosperity is a special panic-breeder. We used to have epidemics of contagious diseases, but have stopped them by the applied science of medical skill. I believe we have reached a sufficient stage of development in the commercial and industrial life of our country to be able to profit by past experience and apply such scientific treatment, through legislative acts, as to make impossible a recurrence of a panic produced by purely artificial causes. I am willing to admit that certain natural forces may combine to cause a panic, but I am unwilling to believe or admit that in a country so highly advanced in civilization and economic science as we are now, or should be, that it can be possible for a cycle of panics and business depressions to come at stated intervals of from five or ten or fifteen years of their own volition.

It strikes me as the most absurd thing imaginable for a great body of intelligent men, such as are represented by the leading financiers, to subscribe to that theory and to pass the word along the line that the "black plague" of panic will be due next year—get ready for it; hide your money; withdraw your orders; stop buying; stop consuming; stop work. There are two terms for which the Republican party must assume total responsibility, both for the authorship and their perpetuation, and these are "stand pat" and "sit tight." You have "stood pat" for the corporate interests of the country for the past ten years, and we now have the spectacle of this great American nation "sitting tight" and in comparative idleness. Over 300,000 freight cars standing idle, and over 2,000,000 people out of employment. Why? Because of crop failure, one of the natural causes of panic? No. Because of wars or preparation for war, another of the natural causes of panics? No; but because a few Wall street men wanted to secure certain business interests and properties, and pursued their usual method of getting them. They did not expect the thing to go so far as it did, but thought they could do what they had done a thousand times before—let the crisis extend until values had fallen sufficient to bring the desired properties under their own control and at their own price, and then stop the panic—but they had not reckoned upon one element, which is absolutely uncontrollable, and that is the element of universal public fear.

So I reaffirm my statement that this panic was one of fear and greed, instituted by the greed of the Wall street man to gratify his own designs and purposes, and the devastation was made complete by a combination of fear of both the bankers and depositors of the country.

THE REMEDY.

In the effort to provide a remedy against future panics, Congress is confronted with one of two propositions: To either make a revolutionary change of the entire banking and currency system of the United States or to approach the task by a process of evolution, correcting each mistake in our present laws as we discover it and removing each cause from the future as it has developed in the past. The appointment of a commission, which it is quite evident will be done, means that no positive action is to be taken with reference to any material change at this session.

THEFORE IT BECOMES NECESSARY FOR US TO CONSIDER THE EXPEDIENT OF DEVISING A REMEDY SUCH AS I PROPOSE, AND WHICH, HAD IT BEEN APPLIED TO THE LAST PANIC, WOULD HAVE STOPPED IT; AND IF APPLIED TO FUTURE CONDITIONS, FUTURE PANICS OF A SIMILAR CHARACTER WILL NEVER OCCUR.

The solution of this problem is exceedingly simple, and we need not so much a statistical knowledge of the banking conditions of the world as we need courage and confidence in one another; as we need to apply modern American methods to meet modern American conditions. In working out a definite plan to help the present and safeguard the future with relation to causes which have produced the recent panic, we have but one thing to keep in mind, and that is to *restore and maintain confidence in the minds and hearts of both the depositor and banker.*

While I am a national-bank man myself, and believe the national banking system to be the finest banking system in the world, yet I feel that our country has outgrown the national banking system as an exclusive system and believe that any national banking law which Congress may enact should include in its special benefits the State banks, trust companies, and sav-

ings banks, while at the same time leaving to them their rights and privileges as separate State institutions. I have prepared a bill along this line, House bill 12862, and ask unanimous consent that it become a part of my remarks:

[H. R. 12682. Sixtieth Congress, first session.]

A bill to restore public confidence and safeguard the people's savings against loss through bank failures.

Be it enacted, etc., That on and after the passage of this act the United States Government shall guarantee all depositors in all banks accepting the provision of this bill against loss for any and all moneys which are now and may hereafter be deposited by them in said banks.

SEC. 2. That all national banks shall be entitled to receive this Government guaranty immediately upon making application in due form, which application must show the solvency of such bank at said time.

SEC. 3. That all regularly chartered State banks, savings banks, and trust companies shall be entitled to receive this Government guaranty: *Provided*, Their financial condition, after examination, shall be approved by the Comptroller of the Currency and the Secretary of the Treasury of the United States: *And provided further*, That the laws of the State wherein said bank or trust company is located shall be made to conform to the requirements of this act.

SEC. 4. That no bank accepting the Government guaranty shall at any time use its surplus for the payment of dividends or salaries.

SEC. 5. That when a guaranteed bank or trust company shall have sustained a loss, through a depreciation of its securities or otherwise, to the extent of reducing its surplus below the amount as shown upon its statement at the time of receiving the Government guaranty, it shall be deemed unlawful for said bank to pay dividends upon its capital stock or increase the salaries of officers or employees until its surplus has been restored to the amount as set forth in its statement at the time of making application for the Government guaranty.

SEC. 6. That any bank or trust company accepting the Government guaranty and having a surplus less than 100 per cent of its capital shall add to its surplus fund from its net profits each year an amount equal to 4 per cent of its capital until its surplus shall equal its capital.

SEC. 7. That if any bank or trust company accepting the provisions of this act shall sustain a loss or losses in a sum or sums greater than its accumulated surplus, or, if from any cause, the deposits are suddenly withdrawn, the Comptroller shall cause the deficiency to be supplied as hereinafter provided. Any bank receiving such assistance shall give to the Comptroller a 6 per cent annual interest-bearing collateral note, depositing with the Comptroller such securities from the bank's files as the Comptroller may choose. Said note shall be paid by the bank in full, with interest, from the first net earnings of the bank.

SEC. 8. That immediately on the passage of this bill, and each six months thereafter, the Comptroller of the Currency shall be, and he is hereby, authorized and directed to levy and collect a semiannual tax of one-tenth of 1 per cent of the capital stock of each national bank, State bank, savings bank, or trust company accepting the provisions of this bill: *Provided*, That all moneys received from said tax shall be set aside from the general treasury fund and used exclusively as a depositors' insurance fund, for the purpose of reimbursing depositors of any failed bank provided for under this bill: *And provided further*, That in the event the above-named tax is not sufficient to meet said losses, the Comptroller of the Currency is hereby authorized and directed to levy and collect such additional tax as the exigencies of the case may warrant: *Provided further*, That when the depositors' insurance fund, as above described in this section, shall have accumulated to an amount of \$10,000,000, then no further assessments or taxes shall be levied for the purposes of this bill until said fund shall have been reduced through the payments of depositors' losses to an amount less than \$10,000,000, or until such time as in the judgment of the Comptroller he shall deem wise to renew the tax, as above provided.

SEC. 9. That it shall be unlawful for any bank to increase its loans or investments or increase its salaries to officials or pay dividends while a 6 per cent Government note is outstanding against it.

SEC. 10. That the law as applied to national-bank reserves, examinations, stockholders' personal liability, and processes of liquidation shall also apply to all Government guaranteed banks.

SEC. 11. That when a bank has received assistance from the Government and given its 6 per cent note as provided for in section 5, the Comptroller of the Currency, with the consent of the Secretary of the Treasury, shall have the right to place a Government bank expert in charge of the bank's affairs for such length of time as the exigencies of the case may require, the expense to be paid by the bank or to become a part of the bank's liabilities. And he shall further be empowered, with the consent of the Secretary of the Treasury, to make such recommendations for the future operation of said bank or banks or take such further or other action in the matter as in his judgment may be deemed necessary or advisable.

SEC. 12. That all moneys received by the Comptroller from the collection of principal or interest from outstanding 6 per cent notes from banks that have received assistance under the act shall become a part of the depositors' insurance fund as provided in section 8, and shall not be appropriated for any other purpose.

Sections 13 and 14 provide for the repeal of the present bank-note circulation tax.

EXPLANATORY SUMMARY OF THE BILL.

In a brief analysis of this bill, which I propose, section 1 makes the acceptance of the measure voluntary and is not compulsory—that is, a bank may or may not join this guaranty fund, as it may deem wise.

Section 3 permits all State banks, savings banks, and trust companies to receive the benefit of this Government guaranty providing their financial condition after examination shall be approved, and that the laws of the State wherein said bank or trust company may be made to conform to the requirements of this act.

Sections 4, 5, and 6 have in view the upbuilding and strengthening of the surplus of each bank and makes the surplus and reserves of trust companies and State banks uniform throughout the country.

Section 7 makes it possible for any bank to meet a run and receive help in time of panic or distress.

Section 8 provides the levying of a semiannual tax of one-tenth of 1 per cent of the capital stock of each bank accepting the provisions of the bill, the money received from said tax to be used as a depositors' insurance fund, and provides for the levying of an additional tax to meet depositors' losses, should it become necessary, and for the suspension of the tax, after a fund of \$10,000,000 has been accumulated, until further needed.

Section 9 is to prevent a bank borrowing money from the insurance fund for the purpose of increasing its loans.

Section 10 places the State institutions under the same supervision as national banks, and will have a tendency to prevent the "kiting" of securities back and forth between national banks and trust companies, which is now the general practice and is one of the indirect causes of bank failures.

Section 11 provides for the removal of the cause of the bank's embarrassment and for the continuation of the business.

Sections 13 and 14 repeal the tax on circulating notes, and which I now recommend should be eliminated from this bill.

CAUSE OF BANK FAILURES.

Banks never fail except for one of three specific causes—violation or neglect of the banking laws upon the part of the officers or directors; bad investments, which is one cause of a hundred, or embezzlement upon the part of the cashier or officers. In either of these cases a failure might have been prevented by a closer surveillance upon the part of the Government. This being true, I hold that the Government is, to a certain extent, an accessory before the fact in every national-bank failure, and the UNITED STATES GOVERNMENT SHOULD EITHER WITHDRAW ENTIRELY FROM THE BANKING BUSINESS OR ASSUME ITS rights and privileges by guarding the business in the interest of the public welfare still more closely.

The national banking business of this country is operated upon a strictly scientific basis and properly officered and the present laws lived up to there is no reasonable excuse for any national-bank failure, and in all the history of American banking we have yet to record the first failure of any national bank where the laws have been rigidly observed.

A BANK THAT HAS ONCE BEEN SUCCESSFUL SHOULD NEVER BE CLOSED.

Banks will make bad loans and meet with losses just the same as a manufacturer or merchant will make bad sales and have their losses, but where a bank is so located as to supply a public necessity and with a line of deposits to make it profitable there is no reason under the sun why that bank should close its doors, and under the operation of my bill there will never be any more bank failures or suspensions.

The application of the proposed law would work with automatic and scientific precision, and if losses have been sustained to the extent of impairing the surplus and capital of a bank, the Comptroller has it in his power to remove the cause and, INSTEAD OF CLOSING THE DOORS, THE BANK GOES ON DOING BUSINESS. There has never yet been a bank failure within the limit of my observation or knowledge but where the cause of the failure being removed, the BUSINESS RE-ORGANIZED, PUBLIC CONFIDENCE RESTORED, the bank has invariably recovered its losses and continued as a dividend-paying proposition to its stockholders.

In providing a Government guaranty there would never be an additional tax levied to meet any loss, for there never would be any extraordinary withdrawal of deposits, and so long as the banker can rely with a reasonable degree of certainty that his deposits will remain at a normal state he can tell with very great accuracy just how far he can extend his accommodations to the merchant and manufacturer and general borrower. He can tell what loans can be safely renewed, as well as what new loans can be made. Our recent panic, as far as the country at large is concerned, was caused more by fright upon the part of the banker than upon the part of the depositor. The average banker is not only an honest man, but a man of the highest integrity in his community and who prides himself upon his being able at all times to give his depositors their money when they ask for it. So, when a condition of panic exists each conservative banker wants to keep his own institution strong, and proceeds immediately to increase his cash reserve, TO CALL IN OUTSTANDING LOANS, AND TO REFUSE TO GRANT ANY NEW LOANS. While in many cases there is no real justification for this procedure, and notwithstanding the harm he works upon his individual community and as an integral part of the banking system of the country contributes his share of harm toward the country, yet he can not be censured, for the reason that he does not know how soon

his depositors may be frightened and line up in front of his window demanding cash, so a form of a guaranty which will satisfy the depositor under any and all conditions is just as essential for the benefit of the banker as it is for the depositor, and still more IS IT ESSENTIAL FOR THE FAIR INTERESTS OF THE BORROWER.

The records from the national-bank examiners' reports show that a tax of less than one-tenth of 1 per cent would have been more than ample to meet all losses to depositors during the past forty years. Since 1865 the average yearly national-bank losses have not exceeded \$850,000, while my bill provides a fund of \$2,000,000 annually. But bankers themselves are generally against this proposition, and argue that it is unfair to tax good banking institutions for the unsound banking of other institutions. That a bill of this kind would encourage poor banking and would relieve the responsibility which the bankers feel toward the depositors and, finally, as the real milk in the cocoanut of this proposition, the men who have built up a large and prosperous banking institution feel that under a Federal guaranty all banks would possess the same element of strength and they, in consequence thereof, would have some difficulty in holding all their patronage.

GOVERNMENT CAN NOT LOSE.

Under this bill the Government and associated banks are first protected by the capital-stock investment; second, by the surplus and undivided profits; third, by the stockholders' liability, representing three times the capital stock, and I would like to ask if any Member in this House knows of any banking institution anywhere that he would not be willing to-day to take its business over upon that basis. This is what we would do under my bill. Instead of liquidating the affairs of a bank and creating losses we continue the business without drawing a dollar from the National Treasury, and APPLY THE EARNINGS OF THE BANK TO REPAY THE LOSSES BEFORE THE STOCKHOLDERS GET ANY DIVIDENDS.

I repeat that this bill would work out with automatic and scientific correctness and that before the Government can sustain a dollar of loss or the individual bankers bear an additional assessment to meet a loss you have, first, all the bank's assets; second, the capital stock; third, the surplus; and, in addition to all that, the stockholders' liability of 100 per cent. As a business proposition I know that you would be willing to take over the banking business of the country to-day upon that basis, and especially so would you take it over if you could have the privilege which you have under this bill of examining the conditions of the bank before it is permitted to receive this guaranty. The general average of bank-stock dividends or net earnings throughout the United States is 15 per cent annually. The annual tax provided herein is 2 mills on the capital stock.

So the argument against the tax falls in the evidence of past history and our general knowledge of the banking business. But even suppose the banks were obliged to bear this small tax. If it can be shown to be in the interest of the public welfare, the tax would be justifiable, though it would seem to be beyond all argument and the widest possible stretch of imagination that the bankers would not receive through the increased deposits which would come into their vaults because of a guaranty of this kind and a larger loaning and earning capacity because of a more steady volume of deposits, sufficient to increase their net earnings very much greater than any possible tax which might be imposed. But in the consideration of this proposition we have the interest of the whole people to safeguard and protect and not the special interest of the Wall street banks.

As to the question of this bill encouraging wild-cat banking, it will have the opposite effect; because each bank in a community will then have an interest in each other bank and will be on guard as to its own affairs as well as its neighbor's affairs. The same argument would be just as reasonable as applied against life insurance, that a man would be more disregardful of his health because his life is insured, or it could be applied to fire insurance, that a man would be more careless of his property because his property was insured. If business history teaches us anything, we have learned that insurance is a fundamental and economic principle, and the question of this insurance is not so much to prevent the loss as to prevent the wide spread of harm which comes from a loss of this character, and the opposition of banks to this bill is not because of a fear of loss to themselves, but because of a selfish fear of a competitor's possible gain.

FEWER BANK LOSSES IN FUTURE THAN IN THE PAST.

This recent agitation for reform, judging from actual results, has been used more as a political asset than for the ac-

complishment of real good to the masses, and has included within its realms various attacks upon the general banking business. True, men in high places have proved faithless to the trust and confidence imposed in them by their business associates and by the general public. Isolated cases of this kind always have existed and always will exist. There is one element of good, however, which will come from this panic and this general business reorganization. Corporate management of all kinds, whether applied to industrial pursuits or to the general banking business, will be cleaner and of a higher personal order than at any time in the past, and that, too, without any change whatever in existing laws.

Losses through national-bank failures will be less in the future than they have been in the past. Men are growing better, and the standard of individual honor among all classes of business men is higher to-day than it ever was before, and no man is willing to forego the good will of his fellow-citizens and bring upon himself and his family the social ostracism of his whole community by taking the speculative chances of violating the laws of the land or the betrayal of the trust of his associates. It is impossible, therefore, to concede that because the possibility of loss is removed from his depositors the banker is going to take greater risks than he ever did before. The banker of the present day has no thought of the depositor's loss at all. He is concerned entirely and solely for his stockholders, and, knowing as he does that before the Government can supply the loss to his depositors that he must first give up the earned surplus of his bank and call upon the stockholders of his bank to pay an assessment of 100 per cent upon their stock, the same degree of conservatism will exist as before, and more so, for the reason that the Comptroller of the Currency will have authority under this bill to remove any officer or director from any bank whose conduct has been in direct opposition to the best interest of the bank. Had this law been enforced, such a condition as was found in the Knickerbocker Trust Company could not possibly have existed.

Again it has been urged that if the Government were to guarantee the banking business it could with the same degree of reason be expected to guarantee the merchants' business, the manufacturers', the farmers', and so forth. The absurdity of this form of argument carries with it its only rebuttal as being unworthy of earnest consideration. Under the provisions of this act the Government assumes no direct responsibility. IT DOES NOT GUARANTEE THE BANKING BUSINESS—it does not release the stockholders' liability. It merely requires the bank to return the depositors' money any time they call for it. It would never pay a dollar out of the people's Treasury and simply acts as a trustee to receive and disburse this insurance fund.

Furthermore, a merchant may fail, but his failure has only to do with himself and his immediate creditors; but when a bank fails it involves the stockholders, the depositors, and the business interests of the whole community. The banking business is not a private business, but is a quasi public function, and it is but fair and right and equitable that the Government should consent to act as a medium for conserving the mutual interests of the stockholders, the officers, depositors, and borrowers of the community.

Now, just one word to the banker who is afraid that his less deserving competitor is going to be given an undue advantage. This applies to about 99 per cent of all bankers, because they all believe that they have the best and most conservatively managed institution. If you will make inquiry into the success of a banking institution, you will find behind that institution an asset which neither law nor government can give, and that is the human energy in the form of the cashier and active officers of the bank. I care not what the competition may be, the same causes which have worked to build up a successful business will continue to hold that business regardless of any and all law. We can see the evidence of this fact in every walk of commercial life. We see one merchant eminently successful and in the same block another merchant sold out by the sheriff. One man will go on a farm and make it pay, while another man may go upon the same farm and with practically the same conditions prove a failure. One man begins the manufacturing business on a small scale, and in the course of time has developed a tremendous business, while, upon the other hand, we see men in the same line of business, with the same opportunities, not meeting with anywhere near the same degree of success.

So the human element—the element of personal equation—will always be the business-getting and business-holding element in the banking business just as well as any other form of business, and a uniform law which will insure the same degree of careful, honest management and place all upon an equal footing, instead

of working harm to any one institution will work a benefit, both directly and indirectly, to all banking institutions.

The argument of Banker Smith that it is unfair to give his competitor across the street, Banker Jones, the same advantage which he has, is the most foolish argument advanced. The man who is in the banking business purely as a question of individual profit, without any regard whatever in the good which he can do his community, is a misnomer, and the sooner he goes out of the banking business the better for himself and for his community, because he is violating the fundamental laws of the banking business and will meet with failure sooner or later, or, at least, will not bring to his community that degree of success which he should and to which his community is justly entitled.

EMERGENCY CURRENCY.

Now, just a word as to emergency currency. No one can tell with any degree of certainty whether or not we have a sufficient amount of currency to meet our legitimate business needs. I am inclined to the belief that with a form of guaranty where we can count upon a fixed amount of money, available at all times, with a fair degree of accuracy, perhaps our present currency is ample. Any ordinary plan of emergency currency without a depositor's guaranty would prove a failure in a time of universal panic. Upon the other hand, a depositor's guaranty law may prove to be sufficient to meet all demands without provision for emergency currency. Of the numerous bills brought before the Committee on Banking and Currency there were but four given any consideration at all, viz, the Fowler bill, the Williams bill, the Aldrich bill, and the Vreeland bill. Of these the most pernicious measure of all, the Vreeland bill, was permitted to come before the House, and as an object lesson for the American people the action of the House with reference to the Vreeland bill was such as to invite the serious thought and consideration of the American people.

Never since the days of the civil war has there been any legislative measure up for consideration of more vital importance to the people of the United States than the present question of currency and banking reform. This subject applies to neither Democrats nor Republicans as a class, but does apply to every man, woman, and child in this country, and here, after six months of panic, in this, the greatest legislative body in the world, we are presented by the leader of the majority with a financial measure, not with the view of affording relief, but with the twofold object of serving a political purpose and of continuing the Wall street monopoly of the money of the country.

A PREDATORY MEASURE.

The Vreeland bill is so cunningly devised as to give a few of the larger city banks absolute control of a proposed issue of five hundred million dollars (\$500,000,000) in greenbacks. Thus we see the Republican party, the gold-standard party, the stand-pat party, going from one extreme to the other of trying the most dangerous experiment of unloading five hundred million dollars (\$500,000,000) of greenbacks upon the American people, with practically no security back of them except the promise of the bank to pay. Such a measure would stand no possible show before a deliberative body after a period of full and fair discussion, and instead of allowing ample time and free speech for the education of the House and country upon the subject, the gag rule is applied, giving to each side two hours of debate and removing all right to amend, upon this vitally important measure. The extreme fright of the Republican managers seems to have caused them to lose all judgment, and, strange to say, they intended to force this bill through merely to strengthen a failing political cause at the next election. As a Democrat, speaking from a standpoint of politics, which has no right to be injected into this consideration, but which has been forced upon us by gentlemen of the other side, I would have been willing to see the Vreeland bill become a law, for with it would have come the absolute disapproval of the great American people. The Vreeland bill is such that not a single country bank would have dared accept its provisions, and any national banking law which does not accord equal rights and privileges to every national bank, whether its capital is \$25,000 or \$25,000,000, is not a just law and will not stand the practical test of the science of banking or supply the wants of the people. The bill simply legalizes clearing-house certificates, lending to the Wall street banks the full authority and power of the people's Government, that the centralization of the banking power of the country may become still more intensified and in times of panic or depression used as a weapon against the people and for the interest of Wall street, because the practical workings of this bill will centralize the issue of so-called "money" to the exclusive use of the stock gambler and will be absolutely and entirely beyond

the reach of the commercial or manufacturing interests of the country.

That there is an element of danger in every form of emergency currency that could be issued there can be no doubt. We can learn but little from the banking systems of the Old World for practical application here, for there is no country on the globe which I am willing to place in the same class with that of America. Take France, Germany, England, Italy—all these countries are developed and with settled business habits. England has \$100,000,000 less currency than she had ten years ago. The needs of their people are entirely different from the needs of the American people. Though a system of currency or finance is successful in France or England or Germany, it can not be said with any degree of certainty that the same system would be equally successful here. Our national banking system has enabled the American people to develop 40 per cent of the entire banking capital and deposits of the whole world. It has enabled such men as Carnegie and Rockefeller to amass fortunes equal to the total amount of currency of our country; and yet it is this class of men who condemn the national banking system as being the worst system on earth.

POSTAL SAVINGS BANKS.

With reference to a Federal guaranty of deposits, I find some men who oppose it, because, they say, it is paternalism, and that the Government has no right to enter into such a contract, and others who object upon the ground that it gives their competitors an advantage of which they are unworthy. TO THIS I WILL ANSWER THAT YOU MUST NOT FORGET THAT ALL LAWS COME FROM THE PEOPLE. FOR A TIME THE POLITICIAN REPRESENTING CORPORATE INTERESTS CAN THWART THE PEOPLE'S WISHES, BUT IN THE END, IN THIS AMERICAN FORM OF GOVERNMENT, WHICH STANDS AS THE GREATEST HUMAN GOVERNMENT IN THE WORLD TO-DAY, THE PEOPLE WILL RULE.

If you have any doubts in your mind as to whether the people want their Government to assume this trusteeship for their deposits, all you have to do is to ask your people and you will be convinced. And I want to warn you that the demand for a Government guaranty is finding voice in a proposed postal savings-bank law, and every local banker must choose between a Government guaranty of deposits and home competition among his fellow-bankers with equal opportunities, or competition with the post-office banker with Uncle Sam as his backer. I will probably be obliged to vote for a postal savings bank if the measure comes before the House, because my constituents want me to do so. But I want to say here and now that I consider a postal savings bank a most dangerous innovation in partisan politics, which will become the most dangerous intruder and competitor in the banking business that any banker has ever yet encountered or even contemplated.

The bitter fight of the Wall street elements to gain control of the treasuries of the large insurance companies in which men were driven to suicides' graves or banished from their country, and many honest men despoiled both of money and reputation in order that special Wall street interests might prevail, would be but a bagatelle as compared to the fight which will take place to secure control of the people's Government and this enormous fund of money which will pour into Washington from the 70,000 post-offices throughout the country.

Suppose that each post-office would receive on deposit under normal conditions an average of \$10,000, and this would be a small average, it would represent a total of \$700,000,000, not in credits but actual cash, or almost one-third of the total available cash in the country to-day. But it is argued that this money will be redeposited in the banks. But, Mr. Chairman, there is an element of chance in this which our people and the industrial interests of the country can not afford to take. Every community needs the money which has been created by the energy of the men and women of that community for its further development and for the local manufacturing and commercial needs. A post-office now receives, say, \$10,000 of the money of that community. It is sent to Washington and taken away from the local borrowers. There would be no method of distribution whereby this money could be returned with equal fairness to all concerned unless the law is made clear and imperative that all money so received shall be redeposited, not in one bank in the town but in all banks in the town, and even with the greatest safeguard with which you could surround such a law the bulk of this money would drain into Wall street, just as the bulk of the \$200,000,000 now in the Treasury goes to Wall street banks for speculative purposes.

Suppose, for instance, a postal savings bank law had been in force last October at the time of the Knickerbocker failure, with the streets filled with people standing for hours with their

pass books waiting to get their money. What would have been the result? All individual depositors in New York City would have withdrawn their accounts and taken their money to the post-office. Not only every bank in New York City would have been obliged to close its doors, but every bank in the United States. A postal savings bank would simply add fuel to the flames in time of panic and place another weapon in the Wall street manipulators' hands whereby this people's Government is made subservient to the interest of the Wall street system, and it is most astonishing to hear the argument advanced that the Government has no right to assume the responsibility of a depositors' guaranty by persons who, upon the other hand, advocate a postal savings bank system, whereby THE GOVERNMENT PLACES ITSELF IN A POSITION TO RECEIVE ALL THE DEPOSITS OF THE COUNTRY AND WITHOUT ANY RESTRICTION WHATEVER AS TO HOW THOSE DEPOSITS SHALL BE DISTRIBUTED AMONG THE BORROWERS.

PROFIT AND LOSS ACCOUNT OF PANICS.

In every disturbance of the industrial or commercial interests of the country, such as take place during a time of a money crisis, a panic, or a business depression, both of which we have had during the past six months, there takes place an economic change. In every business transaction where there is a profit and a loss, one man or interest receives the profit by and through the loss of another person or interest. So in times of panics the volume of money remains the same, but its ownership changes hands and its purchasing power increases because of falling prices. Those who lose in a time of panic are the producers of the country—the farmer, the laboring men of all classes, the small merchant, manufacturer—in fact, every branch of legitimate business or commercial industry suffers with the laboring class; while the only interests which profit by a panic are the individual Wall street interests, such as I have described and which control the money power of the country through the medium of the present banking system and the Wall street exchange.

So it is fully apparent that panics come at stated intervals, because they serve the purpose of the money interests of the country in maintaining a high purchasing value for their money and of preventing the laboring and industrial interests of the country from accumulating more than these philanthropists think is good for them. So we have the spectacle of a new form of American slavery where 85,000,000 people have less constructive or defensive power than a half dozen Wall street men whom I can name. Our 85,000,000 people represent 85,000,000 separate units with their surplus earnings pouring into one centralized base, and it would seem most strange, and yet it is painfully true, that while the 85,000,000 people produce and create the wealth of these United States through their various forms of occupation and by the sale of their labor, yet they delegate with scientific certainty to six men the power to say not only what they shall pay for everything they must buy, but also what they shall secure for the sale of their physical energies in the wages they receive.

UNDER OUR PRESENT SYSTEM OF FINANCE IT MATTERS NOT TO THE WALL STREET INTERESTS WHAT DEMANDS THE PEOPLE MAY MAKE UPON LEGISLATION, FOR SO LONG AS THEY, "THE INTEREST," CONTROL BOTH THE PARTY IN POWER AND THE MONEY OF THE COUNTRY, THEY HAVE THE POWER TO FORCE THE PEOPLE INTO ABSOLUTE SUBMISSION BY TAKING THE BREAD OUT OF THE DINNER PAIL, WHICH SIX FINANCIERS AND SIX POLITICIANS NOW HAVE THE POWER TO DO, ARE DOING AND HAVE DONE TIME AND AGAIN.

Our system of banking and currency is so rigid and the entire fabric so interwoven with our industrial and commercial needs that a severe shock to any part is felt throughout the entire system. We have, in round figures, about \$3,400,000,000 of actual cash in the United States, of which but two-thirds is in active circulation. So the entire volume of business of the United States, totaling over \$100,000,000,000 annually, must be transacted through the medium of our three billion cash, or each dollar must be turned at least from 50 to 100 times each year in order to meet the ordinary business demands.

ENORMOUS DEMAND UPON OUR CURRENCY.

Now, when we stop to consider that Congress is collecting \$1,000,000,000 in cash from the people each year, that the total sum of local and State taxation far exceeds this sum; the vast sums required for railroads, waterworks, electric-light and gas plants, the building and operation of mills and factories, the harvesting and marketing of our farm products, and the building and improvement of homes, we can understand how rapid must be the passage of the dollar between one and another in the prompt payment of business obligations, and how neces-

sary it is that every available dollar shall be deposited in our banks where it may be made available at all times not only for the depositor but for general public use, subject to the rules and regulations of modern banking.

Therefore, when there is an interruption in the passage of the dollar, such as we have seen during the recent money crisis, business halts. If a panic follows the crisis and fear enters the hearts of our people, everybody waits and business becomes paralyzed. Then is when an economic change takes place. Property values fall and property ownership passes from the weak to the strong; suffering and hunger come to those who have nothing to sell but their labor, for they can not sell their labor.

This interruption will follow an extraordinary cause, such as war, earthquake, crop failure, or fire. Suppose, for instance, the great cities of Chicago, New York, and Philadelphia were to be destroyed by a fire, which always represents an absolute loss. The protection by insurance merely distributes the burden of loss; the money of the country would be withdrawn from the commercial needs and used for the rebuilding of the cities, and until they were rebuilt and the money returned to the regular channels of trade we would have a business depression.

During our present depression we have had none of these extraordinary causes, nor have we had any overproduction or excessive accumulation of manufactured products, so the cause must therefore be a purely artificial one and of Wall street origin. Any violent change or withdrawal of bank deposits reacts immediately upon the business interests of the country. So when labor becomes too insistent with its demands or the farmer begins to ask a higher price for his products, and because of these higher prices for labor and the products of labor the national balance sheet of profit begins to turn in favor of the producer, the Wall street interests call a halt, and by causing a withdrawal of fifty to one hundred million dollars from circulation can produce a panic within twenty-four hours' time. Interest rates jump from 6 per cent to 150 per cent. Loans are called; credit refused, regardless of the strength or security of the borrower, and then—the strange fatality of our present system—the people become panic-stricken and, thinking only of self-protection, rush to their banks and withdraw their deposits, thus innocently becoming direct instruments in the hands of Wall street in bringing about their own destruction. And the panic of Wall street greed and public fear is on.

TWO CLASSES OF BANKS.

Under our financial system there have sprung up two classes of banks, which may properly be termed "Wall street banks" and "people's banks."

A banking institution is by no means a private affair, but is a quasi-public institution, and in its individual management and the laws which govern it there are four separate interests to be conserved, viz, the government—either national or State—the stockholders, the depositors, and the borrowers.

It is a matter of deepest regret to observe in the speeches in this House and in the general attitude of the public a growing hostility toward all banks in general. This is a grave error. The banks of our country represent the very essence of our national vitality and the sole medium which has enabled us to achieve our wonderful industrial and commercial progress. They should be held inviolate and sacred not only by the public, but by the officers who have taken a solemn oath to manage them honestly and in the best interest of the Government and the public.

The true mission of a bank is to make a central place of deposit, where the moneys of a community may be collected for safe-keeping and made available for the commercial uses of the community.

The people's bank type of bank manager realizes the true functions of his bank and recognizes his duty toward the community to which his bank owes its existence. If his county or town or township needs money for public improvements, he furnishes it for them. If the local manufacturer needs additional money for the development of his business which gives employment to men, and the security he offers is good, he is taken care of, thus establishing a practical degree of scientific cooperation between the wage-earner and capitalist of mutual benefit. If the farmer or home builder or merchant needs money, and his indorser or security is good, he gets it, and being so favored he can, perchance, increase his own earnings, which in turn adds to the strength of the community, and again demonstrates the true principle of mutual cooperation.

The Wall street banker looks upon his bank as a personal matter, with no other concern than to declare large dividends for his stockholders. He chafes under any and all Government restraint. He denies the right of the public to participate in the benefits which should flow from all banks. If the stock gambler will pay 10 per cent or 100 per cent for money he gets

it, even to the extent of calling the loans of the manufacturer, causing him to close down his plant, throwing men out of employment—the very men perhaps whose productive energy has been flowing into the banks through the deposits of their savings. But this type of banker forgets everything but self-profit, and so filled is he with the “divine right” idea that he eventually comes to look upon the deposits of his bank as being his own personal money and there for his exclusive benefit. This principle seems to underlie every financial measure which has been favorably considered by this Congress, and is most strikingly exemplified by the distinguished Senator from Rhode Island, the Republican leader in the Senate, in his speech, delivered in the Senate on March 20, 1908.

In discussing the question of a Federal guaranty of bank deposits, he says:

The people of the States of the Union are not interested in this question. They are not the depositors. I refer to the common people. The people who deposit in the banks and the people who borrow the resources of the banks are business men who can take care of themselves, and there is no reason why we should run mad in this idea of paternalism.

Whether the distinguished Senator really did not know, or whether, in the heat of debate, he was willing to make such a statement for its immediate effect upon his colleagues, believing that it would go unchallenged, is a matter upon which we will probably never be enlightened.

The statement, as compared with the facts, is but in accord with the usual attitude of the “Wall street” man toward the people. There are to-day 15,000,000 bank depositors in the United States, and with a Government guaranty the number would be doubled. Of the deposits of the average bank, fully 70 per cent is made up of small accounts, representing the individual savings of the people. Banks must look to the “common people” for their support. It is upon the large number of small deposits from which the average bank must make its loans and make its profit. The merchant or manufacturer may have a good, strong balance to-day, but the needs of his business may cause him to check it all out and make him become a borrower to-morrow. Therefore his deposits can not be counted on for loanable funds. Upon the other hand, the small savings of the wage-earner and the farmer usually continue for a definite period undisturbed and, under normal business conditions, continue to accumulate.

THE PEOPLE OR WALL STREET.

The time has come in America when the real issue between “Wall street” and the people must be squarely met. It can not be wholly met by legislation. Neither morals nor honesty can be legislated into men. You can not prevent a hungry man from breaking into your smokehouse at night and stealing a ham by merely locking the door, nor can you prevent a “Wall street” man from violating the law if it is to his interest to break the law.

Both may become lawbreakers, but there is a difference in the punishment. The hungry man who steals something to eat is called “a thief” and sent to jail, while the “Wall street” man who steals a railroad or a bank is called “a financier” and addressed as “My Dear Mr. Carrymon: I will be delighted to see you and discuss with you the issues of the campaign.”

Notwithstanding the fact that this has been a failure of doing nothing, spendthrift Congress, its very inaction and sort of respond to the needs of our commercial and industrial life are destined to bring about a resulting benefit to the American people far greater than any possible legislation, by forcing the people to recognize their helplessness and the utter futility of looking to Congress for relief, of depending entirely upon government or law or a President, and of bringing to their direct attention the absolute and irresistible power which they have within themselves. *The great question of the present and of the future is not one of Democracy or of Republicanism, but whether our 85,000,000 people, representing 85,000,000 working, thinking, earning units, creating by their labor all the wealth of the country, shall be masters of their own destinies and their own Government, or whether they shall be the slaves of the “Wall street” interests. There can be no disguising the fact that the fight is now on between the people and Wall street. The political party which stands for the people will live. The party which stands for Wall street will die, for the people have so decreed.*

The legitimate banking interests and the general business interests of the United States have learned that the interests of the farmer and wage-earner are theirs; that true prosperity must begin with the people and radiate from the people. They have learned that the tariff extracts a toll of \$12,000,000,000 per year from the pockets of the people, transferring this sum into the treasuries of the consolidated trusts of the country. For confirmation of this statement see the report of the last

conference of the manufacturers of the United States. Think what this means—an average direct and indirect per capita tax of \$140 for every man, woman, and child in America. They have learned that the collection of these vast sums not only does not contribute to the profits of the merchant or banker or small manufacturer, but weakens the purchasing power of the people from whose business they must live. They have learned that prosperity can not be created either by the President or Congress, but that it can be destroyed by them through the destruction of public confidence; that the President of the United States may be as wise as Solomon, as persistent in his efforts for good as Moses, and honest as the patriarchs; yet if Wall street controls the lawmakers in Congress, the efforts of the President are void of practical results other than that of getting votes for his party.

The annual collection of these vast sums from the people and their concentration into the hands of a few, the continued weakening of the power of resistance upon the part of the people, and adding to the cumulative power of the centralized, predatory interests have assumed proportions of the most grave concern and can reasonably be viewed as a national menace.

That a change must come there can be no doubt. That \$5,000,000 people will submit to the form of slavery as imposed by the predatory interests for all time is beyond conception. But the change must and will come by evolution, not by revolution. To destroy or to take by force, whether by Executive order or by mob rule, is anarchy. To create, build up, or produce is patriotism and statesmanship, and it is this last-named policy to which the people of the United States are about to address their energies in a practical and scientific way.

PEOPLE'S BANKS.

To this end the farmers and workingmen of Pennsylvania have made a substantial beginning. They are beginning right, and at the bottom. They realize that all power comes from the control of the dollar which they have produced, and they have decided to continue not only the ownership of their dollars, but the control of them as well, by the establishment of their own banks, owned and managed by themselves, in the interests of the people and not in the interests of “Wall street.” They are willing and want their savings to be used for the benefit of their communities, but they are unwilling that their money shall be exchanged for the watered stock or bonds of Wall street or be used by the trusts as additional weapons against them. The movement of the Pennsylvania farmers and miners and producers of all classes is destined to become world-wide in its operation, and eventually the crowning consummation will lie in the establishment of a great central bank, owned and managed by the people, not owned and managed by the Government or the politicians, as the leaders of the present majority party would propose.

The people of the United States, the “common people,” so named by Senator ALDRICH, have on deposit to-day in the various banks and trust companies of America over \$10,000,000,000, or enough surplus to buy control of the Standard Oil, United States Steel, and every great railroad in this country. With the ownership of these and kindred great enterprises would not only come an increased earning, but the ownership and control of the Government would again pass to the people. For the men who control the money of our country will always control our Government, and it is useless to try to disguise this economic and practical fact.

THE POWER OF THE PEOPLE.

The people do not as yet realize their own power. Suppose every bank depositor in the country should withdraw his deposit; what would be the result? I leave it to your imagination. As an illustration of the financial power of the “common people,” suppose some day some one in whom the American people have confidence will say to the people, “Let us get together and pool our forces for mutual benefit. Let each person lay aside the sum of 5 cents each day for a year and found a people's national bank, to be controlled by a board of trustees of public men of the highest honor.” It would mean a capitalization of over one and a quarter billion dollars, or more than the total capitalization of all the national banks in the United States to-day. It would put an end to artificial panics and business depressions. It would permit the business of the country to go on without interruption and forever stop this process of letting the American people go just so far and then pulling them back to begin all over again.

ECONOMIC LOSS TO THE NATION.

If there is one free right of American workmen, it is the right of employment at living wages, but Wall street denies that right.

To-day we have upward of 200,000 men and women out of employment in Pennsylvania. In the United States there are over 2,000,000 workers out of employment, and it fills my heart with pity for these men and women, who are willing to work, begging for work that they may earn an honest living, their employer willing and ready to employ them, but unable to collect his bills or sell his product. Never have our farmers been more prosperous. The wheels of industry were running to the full capacity; everybody laying plans with cheerfulness and with hope for the future. The farmer was selling his crops at good prices and paying off his mortgages and making improvements upon his farm. The wage-earner was busy every day in the week at good wages, laying aside his savings in the bank, preparing to buy a home or making payments upon his home. The very air was filled with happiness and with prosperity when all at once, like a flash of lightning from the clear sky, the panic came, and spread like a pall over this beautiful country. What a travesty upon our boasted American liberty to maintain a financial system that to-day is being used by the powers behind Wall street to force the savings from the people with the same regularity and precision as the flow and ebb of the tide. Think for a moment of the economic loss to this country because of our wage-earners out of employment. Two million of idle workers, representing a daily loss of \$3,000,000 in wages alone, and many times more than this amount in creative wealth, and it is upon the earnings of these people that all business success depends.

THE WAGE-EARNERS SUFFER MOST.

Again, consider the position of the worker from a humane standpoint. All they have to sell is their own physical energy. Each day that they are forced to remain idle cuts off for all time just so much of the only asset they and their families have. The day's wage lost to the worker is gone forever, for he can not do two days' work in one—nature forbids it. Then why should we permit a condition that deprives the worker of his right? Who benefits by it? No one but the Wall street interest. A Federal guaranty of bank deposits would have prevented the recent panic and the present business depression.

I do not claim that a depositor's guaranty will be a panacea for all our ills, but it will be the first step in the dawning evolution of a Government for the people. Give the American people a proper financial system and they will produce such results as will astonish the whole world. But so long as you continue the present policy of a few years of prosperity and then a few years of fright and loss and fear, you will soon convert a progressive nation into a nation of cowards.

Six months ago the business men of this country were going about their business with absolute confidence. To-day they are afraid of the future. A nation of men who walk boldly up to the cannon's mouth without a tremor are to-day frightened and trembling for the future of their wives and children because a little handful of men down in Wall street have their clutch upon the very lifeblood of our whole financial arterial system.

WHY DELAY ACTION?

I have confidence in the honesty and ability of the legitimate bankers of our country. They, more than any other class of men, are responsible for the progress of our nation. For the up-building of communities, the uplifting of humanity, I feel that the banker's calling is a worthy one, and for Christianizing and civilizing influences the banks and trust companies go hand in hand with the church and the press, and I can see no reason why these men, who have built up these splendid institutions and who have given to them their best thought, the best of their lives, imparting to them their personality and their individual honor, why they should be placed at the mercy of a frightened mob when Wall street waves the red flag of panic to accomplish its own selfish end and gains.

The manufacturer and the merchant have become inseparable and important factors in the working out of our scheme of human progress, but they are left helpless between two conflicting forces of absolute power—at the mercy of the fear of the depositor and banker upon the one hand and the greed and avarice of Wall street upon the other. We can not remove Wall street greed by legislative enactment, but we can remove the element of public fear and bring about a stability of available credit by a form of Government guaranty of bank deposits, such as my bill provides.

It is evident, Mr. Chairman, that nothing is to be done at this session to afford relief to the country, but if you refuse, at least, the degree of relief which is here proposed and which could be so easily accomplished, your party must assume the full burden of responsibility, and when Members of the other side are seeking reelection they must explain to the

voters why Congress delegates its most important work to expensive commissions.

Why delay action? Why adjourn Congress until we have decided this question? Why not remain here and do our duty to our constituents and to the country? If you will restore to our people a full measure of confidence, factories and mines will continue to run without interruption, giving steady and profitable employment. The bright young Americans, who are the keenest of all human elements, will continue to market the products of our forests and mines, and bring the gold of the world here. The farmers will continue to increase their production to feed a busy people, and the real kind of prosperity—that which gives to the man who toils a just reward for his labor—will be with us permanently and uninterruptedly.

Vacations of Postal Clerks, Letter Carriers, and Other Employees.

SPEECH

OF

HON. HENRY M. GOLDFOGLE,

OF NEW YORK,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, March 10, 1908.

The House being in Committee of the Whole House on the state of the Union, and having under consideration the bill (H. R. 18347) making appropriations for the service of the Post-Office Department for the fiscal year ending June 30, 1909, and for other purposes—

Mr. GOLDFOGLE said:

Mr. CHAIRMAN: The amendment I now offer ought to receive the favorable consideration of this House. It is designed to give to postal clerks, carriers, and other postal employees a deserved vacation with pay, the maximum to be thirty days. They are, in my opinion, as much entitled to the thirty-day vacation as thousands of other Government employees in various branches of public service, many of whom do not perform as laborious work as these postal men.

The clerks, carriers, and postal employees are among the most efficient and hard-worked men in the public service. In the large cities of this country, especially in the very large ones, the clerks and carriers have for years past been underpaid. Ever since I came to Congress I advocated an increase of their pay. I have been steadfastly a friend of these men, for when I espoused their cause I knew I stood for justice and for the right.

In the large cities of this country living expenses have enormously increased. Year by year the cost has gone up steadily, yet for years the salaries remained the same. Recently, however, Congress did see fit to increase the pay. That increase was richly deserved. It was deserved on merit. It was well earned by these postal men. Yet I regret that the increase was not larger, for these men deserve well of the Government. For one I shall always stand opposed to unnecessary, improper, or extravagant expenditures, but I shall always be willing to vote for decent, adequate, living wages for services faithfully performed.

The question upon my amendment is whether you will grant these men, who in season and out of season have done their duty well, a thirty-day vacation. The community at large recognizes the fact that these men work hard. They get the benefit of that work. In a greater or less degree every man, woman, and child is benefited by the work of these men. It is not too much, I feel sure, to give them a fair vacation. They deserve it. During the year these men are necessarily compelled to work so steadily that they can have but little time to devote to their families. They can not very well take off days for enjoyment or recreation outside of vacation, because they can ill afford the loss of a day's pay. In the course of years, as these men grow old, they necessarily encounter the ills and infirmities incident to old age.

The character of their work tends to sap their strength and vigor. They are not in any pensioned class. They receive none of the good things that seem to come from the Government to many more favored classes of employees who work less, earn less, but seem somehow to have more influential friends. Right here in Washington we see daily hundreds of Government employees occupying what in the language of the street are called "soft places," yet these, and others throughout the land, get their thirty-day vacations, and many the additional "thirty-day sick leave." I do not begrudge it to them. Perhaps they

need it. Some of them well deserve it and rightfully ought to have it. But I do ask you not to deny it to the postal men now that you have been asked to grant it and have opportunity to vote for it.

I believe the adoption of this amendment will go far toward increasing the efficiency of the service. Make these men feel that we have an interest in them, that we are mindful of their comfort and their physical well-being, and you will make of them more willing men in the service. They need the rest this amendment would give them. After the enjoyment of a thirty-day vacation, with opportunity to give to their wives and children the comfort and recreation that they will then be better able to afford them, they will be the better prepared to return to their arduous work. It means, too, better health, greater strength, better mental and physical improvement of the men.

This is a meritorious measure. It will but place these postal men, the clerks, carriers, and employees mentioned in the pending amendment, on the same plane as scores of other employees in the public service.

Now, I earnestly appeal to my friend, the able chairman of the Post-Office Committee, to withdraw his point of order. There is merit in the proposition. It has been suggested that if we do not insert this vacation feature in the bill the Senate will do so. I should dislike to see this amendment ruled out, the Senate adopt it, send it over here, the House yield, as it ought to do, and we then lose the credit which should be ours for doing justice to the men who richly deserve such a vacation as this amendment proposes. I hope the objection may be withdrawn.

Postal Savings Bank System.

SPEECH

OF

HON. CHARLES B. LAW,

OF NEW YORK,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, May 21, 1908.

On the bill (H. R. 21871) to amend the national banking laws.

Mr. LAW said:

Mr. SPEAKER: The subject upon which I wish briefly to address the House is one which I believe has not received, and is not now receiving the serious consideration which it deserves. Legislative bodies generally move in response to the demands of public sentiment, and it happens that the voices of those who would be most directly benefited by the proposed postal savings bank system are rarely heard in loud public protest or demand. The close and sympathetic observer sees them by hard toil and painful economy gathering together a few hundred or perhaps a thousand dollars, and then through insufficient knowledge or information as to what private banking institution to trust, and through consequent distrust of them all, hoarding their hard-earned savings or sending them to their native lands to be deposited where the Government, in which their confidence is supreme, will guarantee repayment on demand.

It can not be doubted that in ordinary times many millions of dollars are thus hoarded, and this is particularly true in times of financial disturbance. It is estimated by the Treasury Department that during the four or five months of the recent financial panic the hoarding amounted to \$300,000,000. This enormous amount was withdrawn from the channels of trade.

These people who hoard their savings because they distrust all private banking institutions have an absolute and abiding faith in the credit of the Government of the United States. Give these people the opportunity to avail themselves of the faith and credit of the Government by a proper postal savings bank system, and the millions hoarded will quickly come forth from the secret hiding places and through the agency of the Government will be turned into the legitimate channels of trade.

If the immigrant who comes to our shores is to be admitted, every possible effort must be made to avail ourselves of the benefits of his industry and thrift. The foreign born of this country accumulate many millions of dollars every year. More than \$70,000,000 was sent by immigrants through our Post-Office Department to Europe during the fiscal year ending June 30, 1907. It is fair to assume that this represents but a small portion of the total savings of these people. It is asserted upon apparently good authority that a very large share of the

amount sent abroad by immigrants is actually deposited in the government savings banks of the countries to which it is sent. It is natural that it should be so, for these people at least have faith in government responsibility. Their reasoning is by no means absurd or fallacious. They reason thus: "I know that some banks are safe and others are not. I do not know how to find out which ones I may trust. I worked very hard to save these few dollars, and I can not afford to take any chance of losing this money, even though I get no interest on it."

It is true that the vast majority of the people who hoard their savings are not able to avail themselves of sources of information as to the reliability of private banking institutions, and the consequent hoarding of their money is not wholly illogical or without reason.

The Government possesses to an extraordinary degree the very information which the possessor of small savings lacks. It has means of knowing in what banking institutions funds may be safely deposited. It has an agent in the Comptroller of the Currency who may at any time, upon request of the Secretary of the Treasury, examine into the condition of a bank where funds have been deposited. It can be provided that postal savings depository funds shall be a prior lien upon the assets of any bank in which such funds are deposited. With all these safeguards the Government runs little or no chance of loss. In effect the Government is really called upon to do little more than to extend to the possessors of small savings the benefit of its superior knowledge as to what banking institutions may safely be intrusted with these funds. If these people had the advantage of the Government's sources of information, there would be far less need of the Government's intervention.

The postal savings bank system is no longer in the experimental stage. It has been established and successfully maintained in many countries, including England, Canada, Austria, France, Italy, and Russia. It was established in England in 1861, and its history there and in all other countries where it has been tried has been one of successful development and extension. No backward step has ever been taken. It is true that the system in all its details employed in any other country might not be practicable here, and that the details of a law to establish the system in this country must be worked out to fit the peculiar conditions existing here. The fundamental principle, however, will be the same.

A bill, admirably calculated to bestow the benefits to be derived from a postal savings bank system, has been favorably reported by the Senate Committee on Post-Offices and Post-Roads. The provisions of the bill are best stated in brief in the language of the report, as follows:

The bill reported provides for the establishment of postal savings depositories for depositing savings at interest with the security of the Government for the repayment thereof, and designates the money-order post-offices and such others as the Postmaster-General may, in his discretion, from time to time designate as savings depositories to receive deposits from the public, and to account and dispose of the same according to the terms of the act.

The depositories are to keep open for the transaction of business every day, Sundays and legal holidays excepted, during the usual post-office business hours of the town and localities where the respective depositories are located, and during such additional hours as the Postmaster-General may designate.

To begin with, the Postmaster-General may, if he deems such course desirable, confine the depositories to post-offices of the Presidential grade, and thereafter extend the system to all other money-order offices as rapidly as practicable.

Accounts may be opened by any person of the age of 10 years, and a married woman may open an account free from interference by her husband. A trustee may open an account for another person. No person can open more than one savings account, except when acting as trustee for another person.

A depositor's pass book will be delivered to each depositor, in which the name and other memoranda necessary for identification will be entered and entry of all deposits shall be made.

One dollar or a larger amount in multiples of 10 cents will be necessary to open an account, but deposits of 10 cents or multiples thereof will be received after an account is opened.

Upon receiving a deposit the postmaster is required to enter the same in the pass book of the depositor and immediately notify the Postmaster-General of the amount of the deposit and the name of the depositor. The Postmaster-General, upon receipt of such notice, is required to send an acknowledgment thereof to the depositor, which acknowledgment shall constitute conclusive evidence of the making of such deposit.

Interest is allowed at the rate of 2 per cent per annum, computed annually, on the average deposit during each quarter of the year. One thousand dollars is the maximum deposit allowed to the credit of any one account, and interest will not be paid on any amount to the credit of an account in excess of \$500.

Pass books must be forwarded to the Postmaster-General on the anniversary of the making of the first deposit for verification, posting, and credit of interest due. Withdrawals may be made under rules and regulations to be prescribed by the Postmaster-General. Deposits are exempt from seizure under any legal process against the depositor, and they are also exempt from taxation by the United States or any State. The name of a depositor or the amount to his or her credit may not be disclosed unless by order of the Postmaster-General.
